First: Driving all over hell's half-acre. A number of years ago I addressed this association on the subject of "Efficiency in Delivery" and at that time I called attention to the fact that by properly figuring your costs you could tell the point distant from your factory at which there was no profit, and beyond which point you were losing money. It is pretty well understood by most manufacturers today that very few of the suburban delivery routes are profitable. There are a few, not many. And there are some cases where it may be wise to run a route at no profit in order to prevent competition from coming too near to your plant, but in general suburban routes are unprofitable. To be profitable they must be within a reasonable distance of your plant, they must sell a good volume of ice cream on the route and the selling price must be in excess of the city delivery price. It would seem to me a wise policy to very carefully consider, before putting on a suburban route,

May 17, 1924.

The Kimball & Colwell Co.,
459 Washington Street,
Providence, R. I.

Dear Sirs: — We acknowledge receipt of your letter of May 14th asking us for our experience with the Frick Ice Machines.

Beg to advise the oldest Frick machine we have in service was installed thirty-one (31) years ago—it is still operating satisfactorily and economically. We have others of their machines, put in at later dates, and they are giving good satisfaction.

The Frick Co. are a good concern, thoroughly reliable in every way and you will certainly make no mistake in purchasing their equipment.

Yours very truly,
THE CUDAHY PACKING COMPANY,

what effect it will have on competition. Your competitor also can put on a suburban route paralleling your route. It would seem wise to give consideration to the fact that once suburban packing service is established in any section, it, of necessity, must be continued during the years to come, because the suburban dealer, having once enjoyed the pleasure of no packing work for himself, will thereafter demand it, and even discontinue the handling of ice cream, in many cases, unless he can have packing service.

Second: Numerous trade stimulus has been tried similar to the Eskimo pie, which proved profitable to manufacturers, but in nearly all other trade novelties the result has been a lack of profit.

THIRD: Free icing service is generally recognized today as unwise and unprofitable. True, free icing service developed and built up the gallonage of the ice cream manufacturers, but the practice is economically unsound because of abuses which have crept in, these abuses being caused by the fact that the dealer has no interest in and is not paying for the service which the ice cream manufacturer is rendering. As long as the dealer takes no interest in the amount of expense which he creates for the ice cream manufacturer, free icing service will be to the ice cream manufacturer an unwise business policy and unprofitable. **A service charge per cabinet hole** is a fundamentally sound business policy.

Fourth: New buildings and improvements added to ice cream plants are very often the cause of increased expenses, because the ice cream manufacturer does not weigh carefully the question of profitableness of this additional capital investment. Many manufacturers feel they would like to have these improvements, and I feel that it is an unwise policy for manufacturers to make such investment unless they first weigh carefully the debts and credits of such investment. Of course, the debits are fixed expenses such—

Interest on investment
Depreciation
Insurance
Taxes

and variable expenses such as—

Labor
Power, et cetera.

In some cases the credits may be estimated in **dollars and cents,** in other cases the credits may be a **better product,** or **more sanitary conditions of manufacturing.** At any rate the addition of new buildings, or any improvements, should be very carefully considered before the manufacturer ties up his capital. Unless he can see clearly that it is profitable to increase the amount of his fixed assets he should refrain from this investment.

Fifth: Credits. Many manufacturers do not give sufficient attention to their accounts receivable. They are too lenient in the way of credits. They permit customers to bluff them by saying that unless credit is extended they will purchase from another manufacturer. The extending of credit requires real character on the part of the manufacturer. It should be remembered that the longer accounts remain uncollected, the greater is the liability of certain developments which will make it impossible for the debtor to render payment. Too much insistence cannot be placed upon the great merit of prompt action when accounts become due. Remember it is generally considered that the success of a business is largely dependent on the character of its "collection service." It certainly is an unwise policy, as well as unprofitable, to extend long time credits to customers. Some manufacturers even make the mistake of loaning money and acting as commerciald bankers for some of their dealers. This is a very dangerous practice and should be decried. It increases your costs and the profitable customer is forced to pay a higher price for his ice cream because of your unwise policy.

Sixth: It surely is unwise policy for manufacturers to neglect to study the best merchandising methods. How can we sell our goods to the best advantage, and at the least possible outlay of money? Do manufacturers generally plan a budget of advertising expense, and consistently live up to it? It would seem to the writer that good business judgment would dictate the wisdom of budgeting your advertising scheme, and not filling your store room with a big investment of advertising matter that simply lays around and is wasted.

SEVENTH: I hesitate to touch on the question of the iceless cabinet, in fact, personally, I have not given it sufficiently careful study to enable me to voice an intelligent opinion, but it seems to me that it represents a large capital investment to ice cream manufacturers, and I do not favor the policy of adding to our investment in dealers' stores. Competition may force us to go into the iceless cabinet, but I believe there is great danger of financial loss to manufacturers unless they give this subject careful consideration, and check their first enthusiasm by careful analysis of all phases of the subject—and it has many.

Trade Policies.

In considering trade policies, aren't we making a mistake in not meeting the new manufacturer wholeheartedly? While we may recognize that it is unwise business policy for him to go into the ice cream business in our territory, we must remember that he believes that

AMONG THE BRIGHTEST THINGS IN THE REVIEW ARE THE ADS—READ THEM.

he has the right to go into any line of business that he sees fit. Unfortunately he may be skeptical of our altruistic attitude. He may be suspicious since our interests are so diametrically opposed to his, and for that reason may doubt the fairness of our counsel. However, an effort to make his acquaintance, and to meet him occasionally in order to talk over matters of mutual interests, will bring better results than the unwise policy of calling him all the names under the heavens, and abusing him to everyone with whom we come in contact. Fairness, honesty and justice in dealings with the new manufacturer will bring better results than the opposite policy.

I have noted the tendency of some manufacturers who are financially strong to attempt to "kill" their competitors by selling ice cream below their costs. That policy seems to me very foolish and very unwise, because if one manufacturer is five times as large as another, the larger manufacturer is going to lose money, in the price war, five times as fast as the smaller manufacturer. No good results can come from price wars. The public is deceived as to the value of the product, and the manufacturer engenders a bitterness that is seldom ever totally erased.

LET me quote from an address by Hon. Nelson B. Gaskill, chairman Federal Trade Commission, in an address which he delivered before a trade organization, on the subject of "Some Aspects of Price Cutting." "Old almost as English law is the maxim that one must not use that which is his so as to injure another. Taking that rule out of its Latin verbiage and applying it to present day conditions, one finds in it very clearly a recognition of the principles of the competitive system. One may not conduct his own business so as to injure another. Selling below cost * * * is the use of the seller's property in a way which clearly injures his competitor."

I might also add that in the same address Chairman Gaskill hammers home a point that I have always considered essential to business success. "I advance the proposition that each individual business unit should ascertain its own cost and fix its own selling price with due reference thereto. I urge upon trade associations the opportunity and the necessity for education in cost accounting methods among their members. * * * Unless cost is known, profit is unknown, and whether a selling price is below cost is a matter of guesswork. The business man who fixes his selling price without accurate knowledge of his production cost, and without keeping above it, is on an industrial joy ride. He is not only in peril himself but he is a constant source of danger to others."

Further quotation from the same address: "Education in accounting methods, the inspiration to use them and to work by the result shown, these are great opportunities for trade association." Quoting further: "No movement within an industry for the elimination of sales below cost can be conducted except in conjunction with and as a part of a campaign for the employment of a proper system of cost accounting. Nor can any movement to suppress sales below cost be put into operation except upon a cost accounting basis. It is easy to condemn selling below cost, it is not difficult to see wherein its evils lie, nor is it particularly troublesome to perceive that it may be unlawful in habitual practice." To quote further: "By the application of the principle 'no sales below cost' by each to his own business is simply the recognition and adoption of the fundamental principles of the competitive system."

One of the trade policies which I find universally condemned by thinking men is the lack of confidence between competitors. I have previously stated, and I repeat, that I believe the average manufacturer is losing the largest possible sale—and I believe the most profitable sale his house can make—when he fails to sell his competitor himself. The great essential in selling is confidence, and each manufacturer should so conduct himself in his business relations with his competitor that he will inspire such confidence as will result in mutual confidence between both manufacturers. Frequently meeting with your competitor with the basic thought in mind "to do to others as you would have others do unto you" cannot fail to bring proper relationship between competitors. The great fear of what your competitor may do can be eliminated. It is pure selfishness in the average man, that causes him to try and "put something over" on his competitor commonly expressed "beat him

to it," with the result that the competitor checkmates him by a move which the competitor thinks properly retaliates. No matter what move you make remember that your competitor can, and may checkmate you, and your action has created a lack of confidence between you which results in price wars and unfair competition.

There are three things that every manufacturer should constantly keep before him. First: Fairness to the public. Second: Fairness to his competitor. Third: Fairness to himself. This does not mean price agreements, but it does mean a fair selling price with a reasonable profit based on your own costs.

Let me at this point call your attention to the code of ethics as adopted by the National Association of Ice Cream Manufacturers. Gentlemen, I fear that this code of ethics is as little studied as our bible, and unless we recognize this code of ethics as the foundation principles which govern our business relationships, we will continue to adopt unwise policies. If we each endeavor conscientiously to live up to the principles stated in the code of ethics, we will be on the straight road to honorable business success.

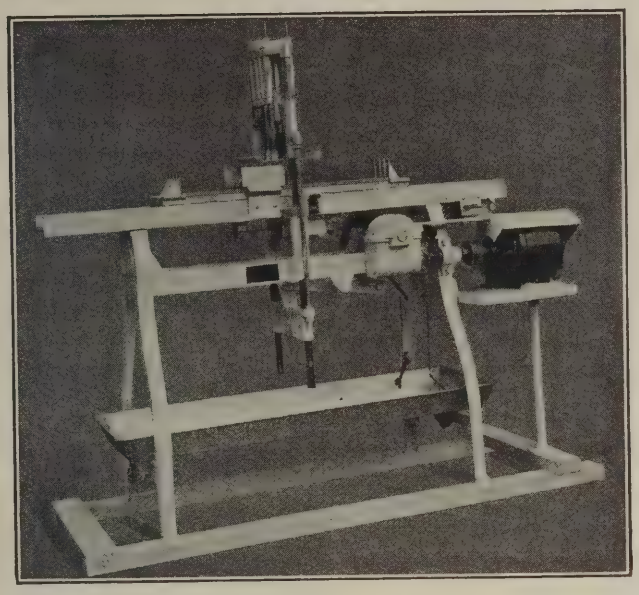
PACIFIC ASSOCIATION PREPARES FOR GREAT JOINT CONVENTION.

With regard to the 1924 convention of the Pacific Ice Cream Manufacturers' Association, which will meet this year jointly with the California and Southwestern States Ic Cream Manufacturers' Association, at the Pacific Slope Dairy Show, December 10, 11 and 12, Secretary Bert H. Walker announces that a very interesting program is assured for his convention.

The convention sessions and exposition itself will be held in the same spot, the million-dollar civic auditorium at Oakland, Cal. Both of the Coast associations of ice cream manufacturers will have headquarters at the Oakland Hotel. The supply men are in charge of the entertainment features of the conventions.

The Pacific Ice Cream Manufacturers' Association is asking the National Association to have one of its officers present to judge the convention on the subject of "National Affairs of Interest to Regional Associations." President Hovey will be unable to attend the convention, but efforts will be made to have other officers present.

SPECIAL TRAIN TO NEW ORLEANS.



With regard to the Special Train, Secretary Loewenstein issued a bulletin last month, in which he said:

"The Illinois Central Railroad has been selected as the Official Route, Chicago to New Orleans, La., on occasion of the 24th Annual Convention, New Orleans, La., November 17-20, 1924, and arrangements have been made for special train to leave Chicago, via the Illinois Central Railroad, Saturday, November 15, operating on the following schedule:

Lv.	Chicago, Saturday, Nov. 15.....	12:45 p. m.
Ar.	Champaign, Ill., Saturday, Nov. 15.....	3:45 p. m.
Ar.	Mattoon, Ill., Saturday, Nov. 15.....	4:40 p. m.
Ar.	Effingham, Ill., Saturday, Nov. 15.....	5:20 p. m.
Ar.	Carbondale, Ill., Saturday, Nov. 15.....	7:45 p. m.
Ar.	Fulton, Ky., Saturday, Nov. 15.....	11:00 p. m.
Ar.	Memphis, Tenn., Sunday, Nov. 16.....	2:00 a. m.
Ar.	New Orleans, La., Sunday, Nov. 16....	11:45 a. m.

"This special train will be composed of modern, all-steel, standard sleeping cars, drawing room, compartment cars, observation car, dining and baggage cars."

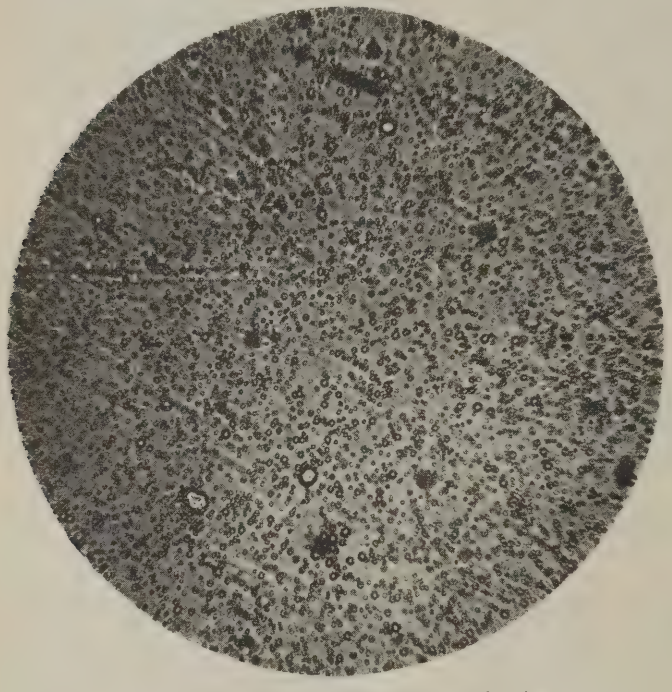
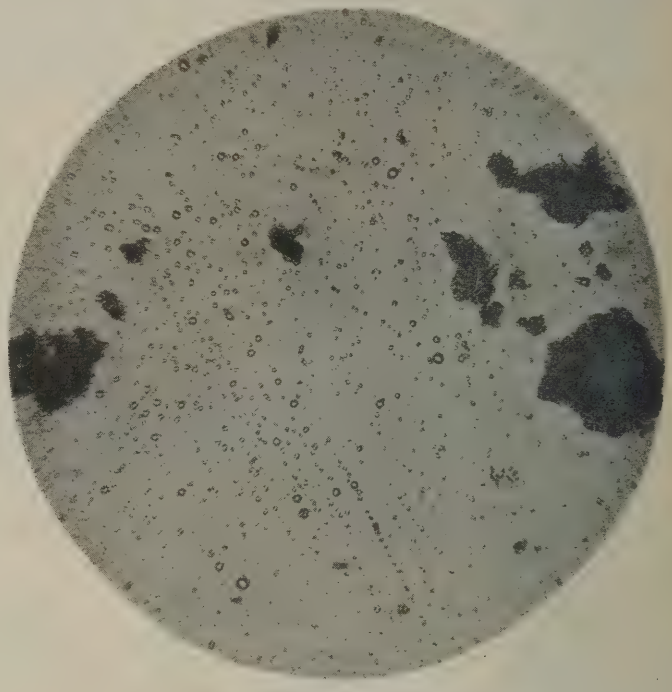
The Outlook For Increasing Consumption

The Way to Greater Gallonage is Through Improving Production



*By PROF. N. M. MORTENSEN**

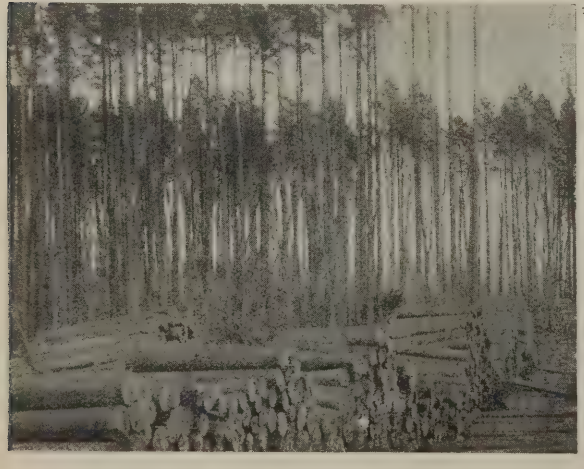
ICE cream has as far back as history relates been considered as a delicacy. In Europe it was served only by the wealthier classes and that at only special functions and it is yet today considered to be the most delicate food that is served even on the table of the king. After the ice cream had been introduced to the United States it was only a short time until the American with his keen eye for business conceived the idea of commercializing the product and thus making it available not merely for the table of the king or of the more wealthy classes but also to those of more moderate means and even to the poor. Where is the boy or girl today in the United States who will not spend his last nickel for an ice cream cone or for an ice cream bar?



Since the commercialization of ice cream an immense business has developed. During the year of 1909, there was manufactured in the United States 80,000,000 gallons of ice cream, which amount increased to 263,520,000 gallons for the year 1922. The increase during the past six years has not been as great as some would wish for and questions such as the following are often asked: "Is it possible to increase the output? Has the consumption per capita reached the limit or is a further increase possible?" or "Is it possible by improving our product to increase the consumption?"

There is no one who has a ready answer for either of these questions as the demand is somewhat different in the different states and even in the different sections of a state, it depends somewhat on the kind of a product the consumers have been educated to eat but as manufacturers we should be ready to meet the demand of the consumers, for it pays to give them what they want. In the present age of keen competition we are possibly inclined to make our products a little cheaper so as to be in better position to meet our competitors.

(Continued on page 148)



Pasteurized cream before homogenization.

Pasteurized cream after homogenization.

* An address before the 1924 Kansas State Convention.

The Choicest Wood for Richmond Tubs

Only the choicest white cedar trees from this gigantic swamp of a hundred thousand acres are used in fashioning the Richmond White Cedar Tub. Only a wood with tremendous moisture resisting qualities could survive under conditions like these. It's this extraordinary quality of wood that makes Richmond White Cedar Tubs so economical.

Order a lot and you'll agree.

IF YOU KEEP UP WITH OUR ADVERTISERS, YOU KEEP UP WITH PROGRESS.

This Fall—

WHEN you are turning over in your mind the various improvements which this season's business has shown to be advisable, consider **this.** That the most important and beneficial change you can **possibly** make is an improvement in the quality of your **Vanilla Ice Cream.**

There is a particular **Vanilla** which fits **your** Ice Cream better than any other. **You** should buy **that** Vanilla. Sethness Company has, by means of a series of freezing tests, determined the particular type of Vanilla Flavoring best suited to each mixture of the various dairy products used in Ice Cream manufacture.

We believe there is room for improvement in the flavoring of every Ice Cream. We will be highly pleased to offer you the result of our labor along this line.

Get in touch with the Sethness salesman in your territory or write Sethness Specialty Department. Both are at your service for the increase of your Ice Cream Volume.

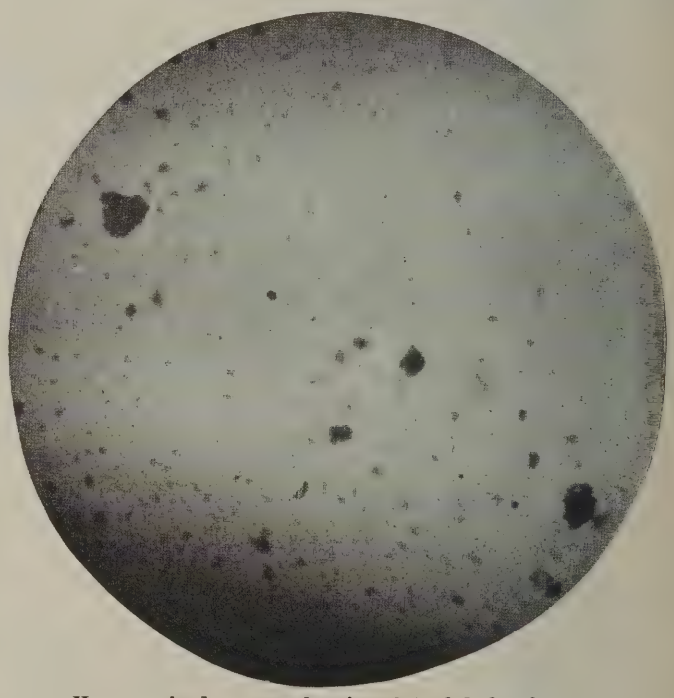
Extracts, Colors and Fruits

CHICAGO



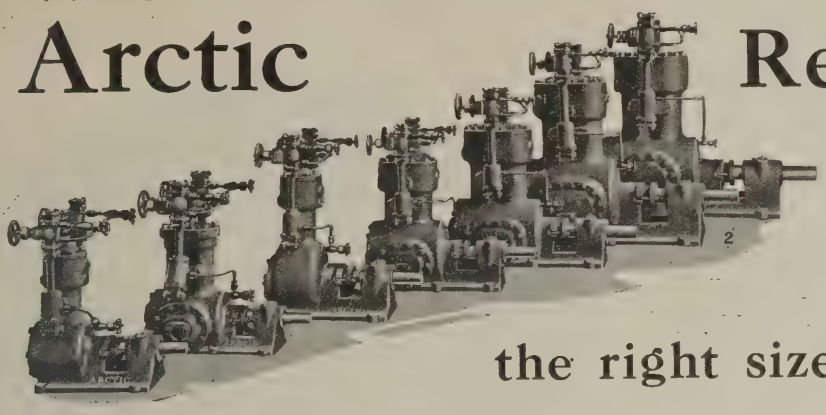
Cosco TRADE MARK *For Forty-four Years the Mark of Quality in Ice Cream Products*

Realizing this condition the manufacturers of ice cream mixes appear in the field.

There are evidently many good mixes offered for sale, but the ice cream manufacturer who buys his mix should first give it a thorough trial before placing the resulting product on the market, as there will possibly be mixes on the market which you might not care to use if you knew of the raw material used for the manufacture thereof. A proposed mix which may be placed on the market is prepared in accordance with the following formula:

Butter	14 to 40 per cent
Non-fatty milk solids	8 to 14 per cent
Sugar	26 to 30 per cent
Binder	.5 to 5 per cent

This mix is to be prepared in the spring months while the butterfat is cheap and it is to be packed in sterilized



Homogenized cream showing fat globule clusters.

tin containers so that it may be stored at ordinary temperatures and shipped long distances by freight. How does this sound to the ordinary consumer? Have your competitors advertise a product made from such a mix and you advertise an ice cream made from delicious, sweet Kansas cream and which product do you think the consumers will buy? A traveling man stopped over in a town where he reported that he discovered only one local product and this was a pesky dog who filled the morning air with a howl which could not be duplicated by the barbarians in the wilds of Africa. We all like to buy local products if they are of the right kind and are we not too often overlooking the advertising value we would obtain by using our local products and advertise it so the consumers would know. In Wichita you want ice cream made in Wichitha and from cream produced in the vicinity of Wichitha. This is because of the local pride which fills every good citizen and which makes it possible to make our city worth while.

MANY improvements have been made in the manufacture of ice cream and it is encouraging to know that the manufacturers are coming back to an ice cream made from cream, because experience has taught them that it is the kind of an ice cream that the consumers want. C. I. Cohee in charge of the quality control de-

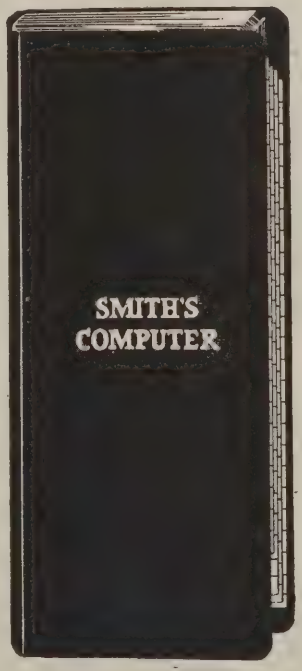
Save Yourself a Lot of Figuring

Price $2.00

Bound in Red Leatheret

Size 4x11½ in.

200 Tables Extending to 100



Smith's Butterfat Computer

Wherever butterfat is figured—one of these books will speed up the work and give **accurate** results. A friend to every cream buyer.

Smith's Computer

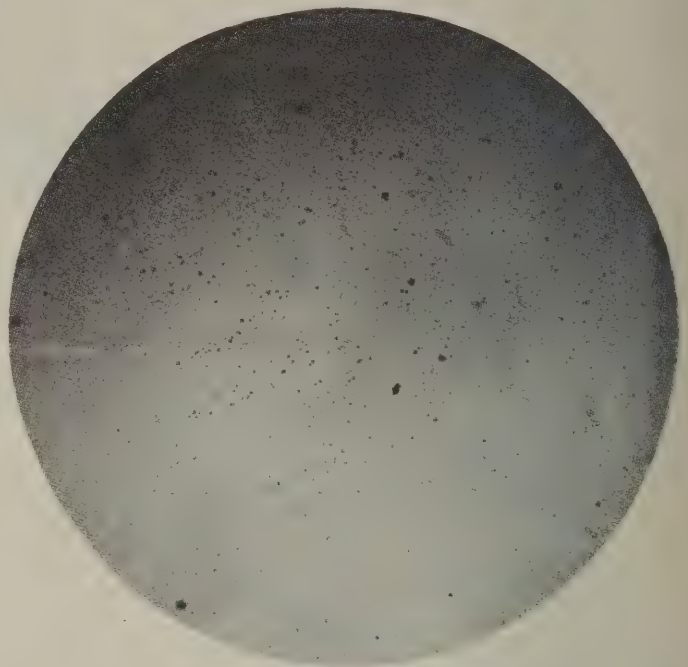
The standard computer for creameries, cheese and ice cream factories. The tables have simplified the work of computing the butterfat in milk or cream and finding the value of the butterfat. It is easy to standardize to any desired test the "mix" for ice cream. It is the cheesemakers' best friend. In fact, it almost does the work of one bookkeeper in many offices.

Sent postpaid anywhere on receipt of remittance.

Price $3.00

Bound in Red Leatheret

Size 4x11½ in.



300 Tables Extending 1 to 500

THE OLSEN PUBLISHING CO. 5th & Cherry Sts. Milwaukee, Wis.

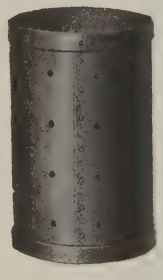
partment of the Philadelphia Inter-state Dairy Council recently made the statement that in spite of the Pennsylvania eight per cent butterfat standard the Philadelphia ice cream will contain from 12 to 22 per cent butterfat, and he furthermore stated that due to this fact the per capita ice cream consumption is greater in Philadelphia than in any other city. This is in harmony with results obtained by the dairy division in Washington, published in bulletin No. 1161 which is in part summarized as follows: "The effect of fat on the palatability of ice cream is indicated by preference in 82, 10.4, nd 7.6 per cent of the cases in favor of ice cream containing 18, 15, and 12 per cent of fat respectively." From this it will appear as if the consumer would prefer to have an ice cream containing a rather high fat content and relatively less of other solids, but it is not fair to make a sweeping statement to the effect that such results would be obtained everywhere in the United States for as already referred to we have no uniform standard for ice cream and it is, therefore, the problem of the individual manufacturer to decide on a standard most suitable to his customers.

It is generally recognized that the flavor is the most important factor in determining the quality of ice cream and next in importance is the texture. There is a quite general relationship between flavor and texture, inasmuch as ice cream of a high fat and relatively low content of solids not fat has a light and creamy texture while an ice cream low in fat and high in other milk solids possesses a texture which is rather heavy and more or less soggy. The former type of ice cream readily melts when exposed to a relatively high temperature while the latter may at times stand up indefinitely at room temperature.

In considering the body of ice cream the following factors should be taken into account: (1) The air cells; (2) The milk solids of the cream; (3) the fillers added to the mix. Each of these factors influences directly or indirectly the texture, the firmness and the keeping quality of the ice cream.

The same mix after it has been agitated in the ice cream freezer for 2 minutes. Regular process of freezing.

It is well known to everyone that if we were to freeze water in an ice cream freezer the resulting product would be extremely coarse. If we before freezing added to the water a sufficient amount of sugar, egg albumin and possibly a small amount of gelatine the resulting product would have a fine texture resembling ice cream



Cream as above after mixing with other ingredients. The fat globules have been reduced by agitation.

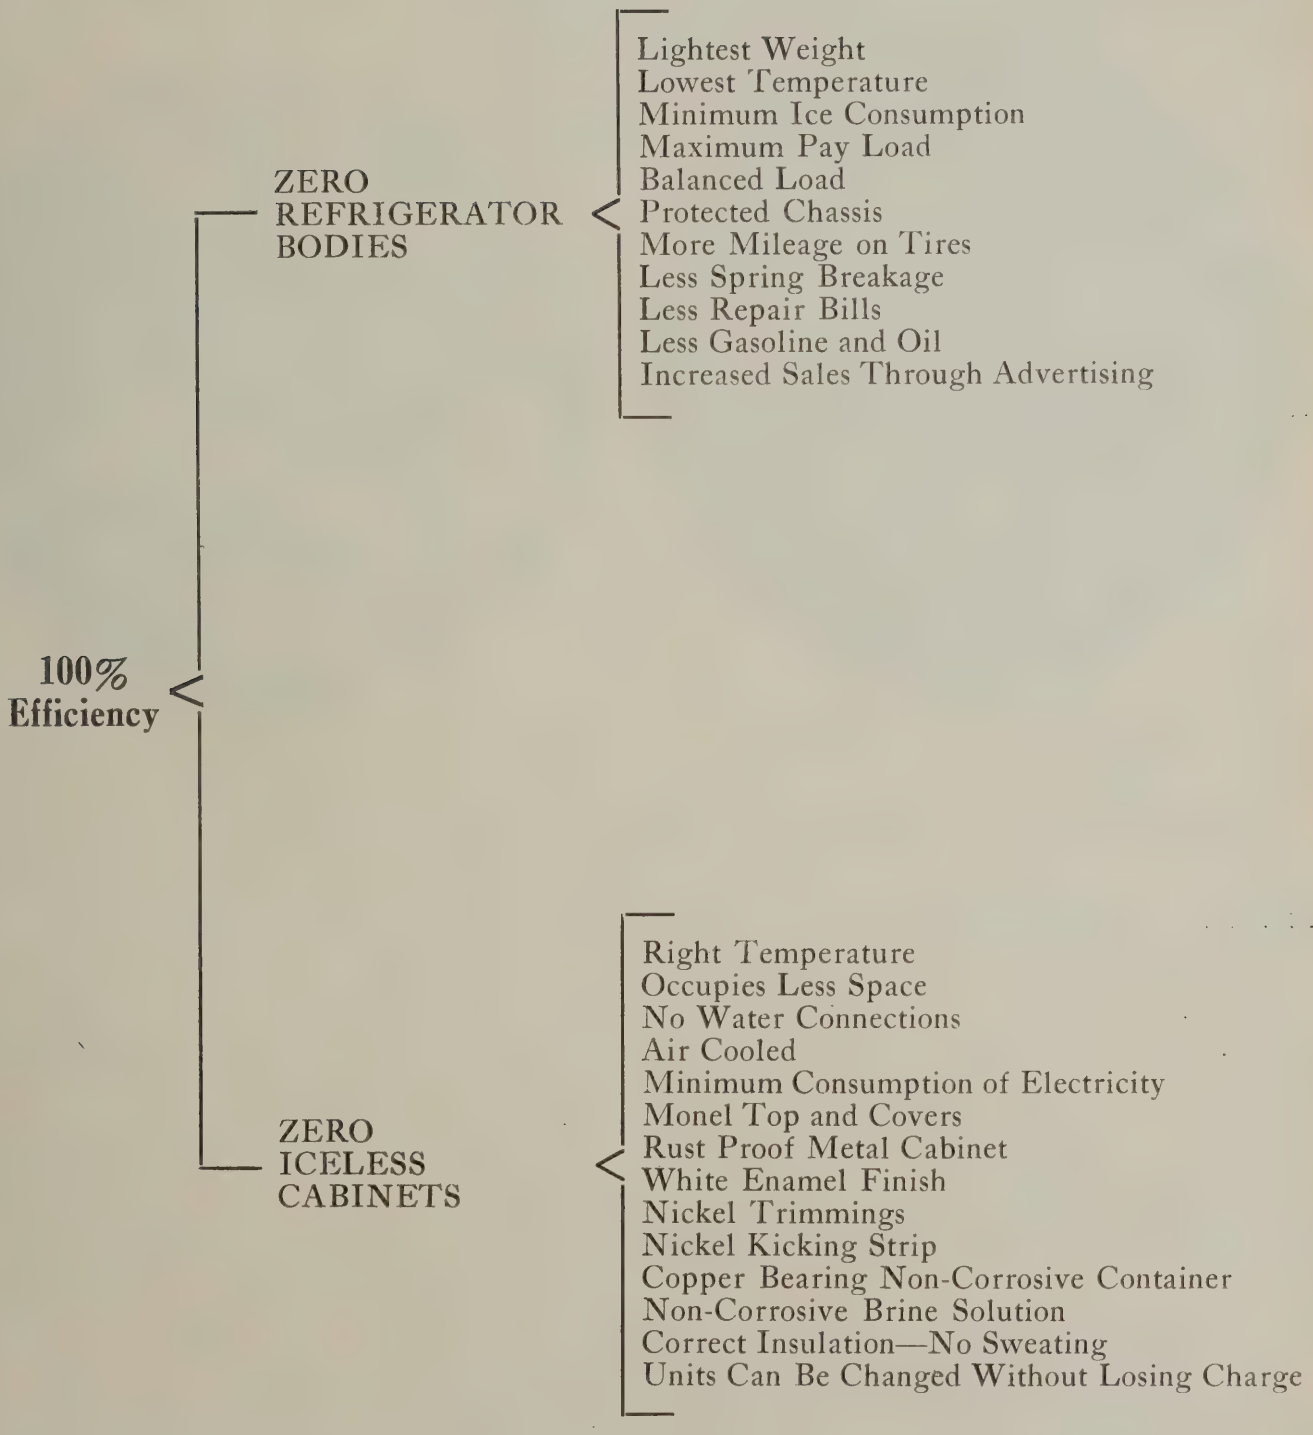
because the water has been divided into such a fine state of division, so that the ice crystals formed during the process of freezing have become so small, they will readily melt on the palate without producing the sensation of coarseness.

The maker who desires to produce a smooth ice cream must either prepare a special mix containing more than

Wall Super Service Steel Cylinders

Made to last longer. From one piece of 16 gauge galvanized steel, with only one seam, securely riveted. Other gauges to specification. Top and bottom have smooth one inch bands formed by rolling the metal tight back upon itself.

MEMBER



Made to specifications for replacements or for new cabinets. And both first cost and yearly cost are less than that of inferior cylinders made in local tinshops or in your own plant.

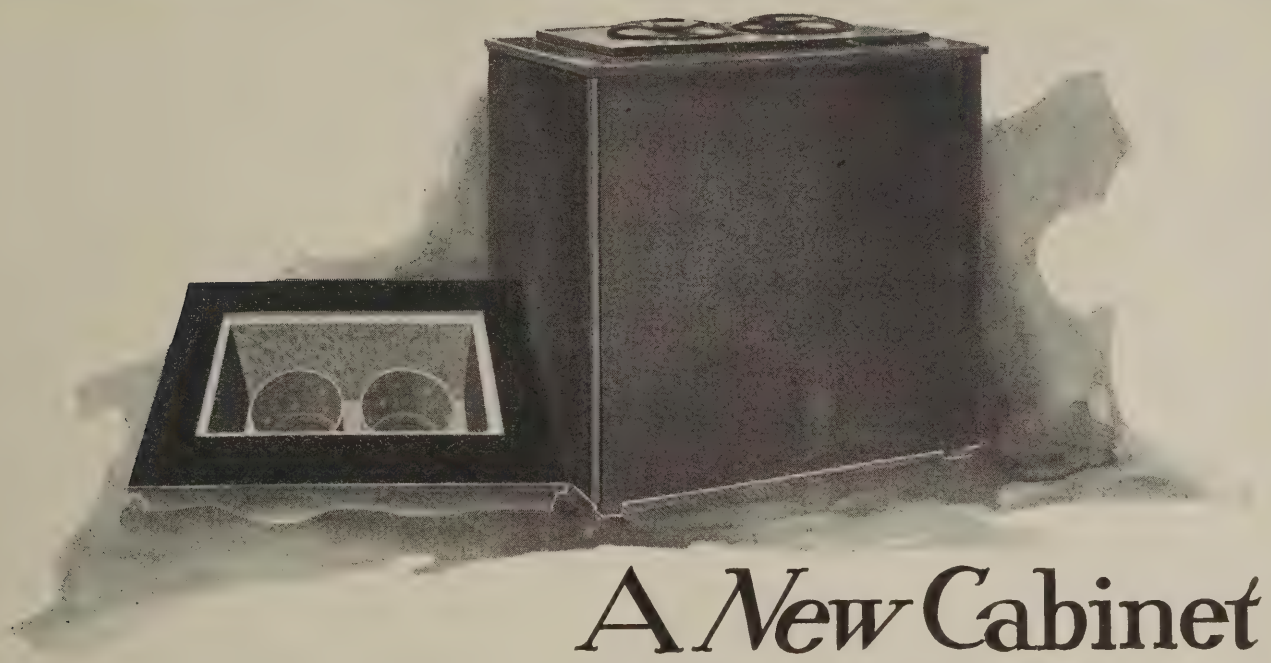
the normal amount of non-fatty milk solids or treat the mix in a special way, or both. A mix containing a high per cent of milk solids other than butterfat produces an unusual smooth texture because the milk solids absorb the water which has become divided into extremely small portions. Some of the manufacturers have during recent years been inclined to go to the extreme in that respect, producing an ice cream which is soggy, sticky and even at times appearing slimy. An ice cream of that kind does not meet with favor of the more critical consumers.

Ice cream from homogenized cream.

Ice cream from cream not homogenized.

Those who are not adding additional milk solids or a comparatively small amount most necessarily give more attention to the treatment of the mix.



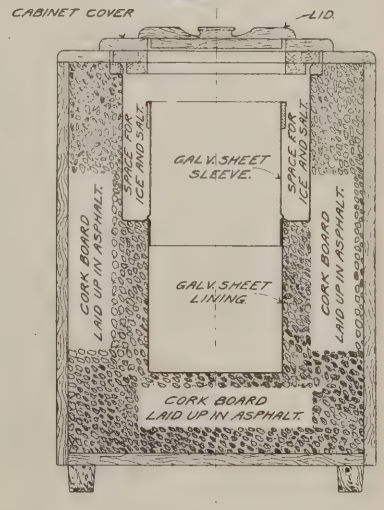
DURING the freezing process a considerable amount of air is incorporated into the mix, the air is beaten into the mix in the form of very small air bubbles or cells. The size of the air cell plays a big part in the final results. A small air cell is stronger than the larger, as the pressure within decreases as the air cell increases in size. You have possibly experienced at times that an ice cream of light and fluffy texture would settle in the container; such as an ice cream contains relatively large air cells. They are not strong enough to withstand the pressure from above. They collapse and the cell walls consisting of several crumble together, forming a coarse particle, and as a result thereof ice cream which has settled in the container has always acquired a coarse texture.

The size of the air cells is also of importance for the reason that a great portion of the mix is taken up, forming the walls around these numerous air spaces. The ice cream maker is usually obtaining the same overrun from day to day which means that the amount of air incorporated into the ice cream is nearly constant. The finer we have the division of the incorporated air the more mix will be required to form the air cell walls and there will be less of serum left in a free state. The maker who is interested in producing a smooth ice cream should so standardize and treat his mix that the greatest amount of the serum will be fixed, with only a small amount of the liquid remaining in the free state.

The size of the air cells is governed primarily by the viscosity and the specific gravity of the mix. As both the viscosity or the specific gravity increase the resistance toward the incorporation of air and as a result it is into the mix or ice cream in smaller volumes and more finely divided, it is for that reason that more time is required to secure the desired yield when the mix is of higher viscosity or higher specific gravity.

Homogenization of cream or ice cream mix is the most important factor for the increase in viscosity. There is yet much to be known about the effect of homogenization, but it is so far understood that the increase in viscosity by homogenization is primarily due to the breaking up of the fat globules and to the clumping together of the fat globules. By breaking up the fat globules there is more of the serum that becomes fixed, as we take for granted that there is a concentration of serum around each globule, by increasing the number of globules, total surface of the fat globules becomes greater and more of the serum becomes fixed. The clumping together of the fat globules during the exposure to the high pressure results likewise in that more of the serum becomes fixed by being uncased as minute particles between the fat globules.

The size of the fat clusters increase as the pressure of homogenization increases. If cream homogenized at a high pressure is added to hot coffee a feathery looking substance will soon appear on the surface. This consists of fat with a certain amount of other milk solids. It is brought to the surface so readily on account of the larger size of the fat clusters. The pressure of homogenization may be reduced so that a feathery substance will not be noticed on the surface of hot water and coffee. This was demonstrated at the dairy department of the Iowa State College several years ago. A commercial market milk and cream business was operated by the department and a twenty per cent cream was sold as coffee cream. The difficulty was experienced during the spring of the year when a considerable portion of the milk received from the farmers was produced from fresh cows, this contained rather large fat globules, and after the cream had stood for some time there would be a separation in the bottle. It was decided to carry on work that would lead to some remedy and it was most natural first to determine the possibility of homogenizing the cream at such a pressure that the



A *New* Cabinet that *will* cut Costs 50%

THE New Jamison Ice Cream Cabinet—built by the makers of the Famous Jamison Cold Storage Doors—is ready. Ready to cut the ice and salt costs of operating your ice cream cabinets in half. Over 700 Jamison Cabinets are doing exactly that right now in the city of Washington—and have done it for over a year.

This new cabinet—built on an entirely new principle of cabinet construction—has now passed every test of service—**it has positively proved its economy of operation.** It is now ready for general distribution. It has the Jamison stamp of approval—**it is backed by an unconditional Jamison Guarantee.**

Striking differences in construction make this new cabinet vastly superior to any other on the market. Note carefully the cross section. Instead of the usual space for ice and salt extending the full depth of the cylinder chamber, the cylinders in the Jamison Cabinet are surrounded with cork board insulation over half way up. Less than half the salt and ice required by all standard cabinets is used. Instead of the usual 2″ insulation, the cylinder chamber is encased with 6″ cork board insulation across the bottom and up to the ice space—and with 4″ insulation from the ice space to the top of the cabinet. We positively guarantee the Jamison Cabinet not to give off moisture along the sides or at the bottom.

The new Jamison Cabinet can now be secured in standard sizes of one-hole, two-hole, three-hole and four-hole cylinders of 5 gallons each, and in special sizes to order of five-hole and six-hole of 5 gallons each. Complete details of construction, together with prices, promptly sent on request.

No other Cabinet Like it

Cork board insulation surrounds the cylinder more than half way to its top. Double layers of cork board insulation are used on the sides to the depth of ice space and triple layers extend from ice space to bottom and across bottom of cabinet. Insulation is tightly sealed at seams with asphalt.

viscosity of the cream would not be much increased and so that it would act as normal cream when added to hot water or coffee and at the same time the pressure should be sufficient to cause uniformity, so the last portion of cream from a bottle would be the same as that taken from the top. The pressure found to be satisfactory is below 700 pounds per square inch.

It would seem reasonable to expect that there should be some definite relationship between the pressure of homogenization and the final viscosity of the mix, but most ice cream makers have found that such relationship is not always to be relied upon. For the purpose of studying the factors responsible for such variations, work was taken up by Prof. F. F. Sherwood and H. Smallfield and Hyde of the dairy department of the Iowa State College, and it was found that the most important factor responsible for such irregularities was the agitation of the cream or mix after homogenization by agitating at the fat clusters were broken up and as they were reduced in size the viscosity of the mix decreased. It is, therefore, of utmost importance that the cream or mix after leaving the homogenizer is cooled with the least possible agitation and that it enters the freezer at nearly freezing temperature in order to maintain the highest possible viscosity during the freezing process.

It has been our experience that a gelatine of good quality serves as a most excellent stabilizer due to its protective colloidal action. It naturally increases the viscosity of the mix, thus causing the incorporation of smaller air cells. It also increases the strength of the air cell wall due to the increased viscosity thereof.

NATIONAL SUPPLY ASSOCIATION WILL ENTERTAIN MANUFACTURERS AT NATIONAL CONVENTION.

The Association of Ice Cream Supply Men, which is in complete charge of entertainment and social features throughout the period of the National Association of Ice Cream Manufacturers' annual convention in New Orleans, announce that the four convention days will be replete with events of interest.

The unique attractions of New Orleans will be utilized to the full by The Association of Ice Cream Supply Men in arranging and carrying out its program.

Beginning Monday, November 17, and continuing through Thursday, November 20, the opening and closing dates of the convention, the supply organization's schedule of entertainment will continue. Nothing will be planned or undertaken that will interfere with the convention sessions of the ice cream manufacturers, but all other periods of each day will be occupied.

Important features of the program include a national reception for the ice cream industry Monday evening, November 17; provision of entertainment at the annual banquet of the National Association of Ice Cream Manufacturers, Tuesday evening, November 18, and a special entertainment, details of which will in large part be kept secret until that evening, on Wednesday, November 19.

The Association of Ice Cream Supply Men reports that a considerable response has been made from its membership to the opportunity offered to supply companies of pledging support to the National Association of Ice Cream Manufacurers' project for national advertising of ice cream to increase consumption.

Not all the membership of The Association of Ice Cream Supply Men have yet responded.

MIXING LIQUIDS

Hundreds of manufacturers are now using

"HY-SPEED"

Portabale Electric Mixers with

"PUSH-PULL" PROPELLERS

Why?

Because any tank can be used for mixing.

Individual mixers can be started by snapping switch when needed.

No overhead shafting, belting, exposed gears, starting boxes, installation expense or large electric bills.

"Push Pull" propellers also mix better and faster.

OUR DAIRY-EXPOSITION SERVICE AGENTS.

Many friends of The Olsen Publishing Co. commented upon our two young service agents at the National Dairy Exposition, shown in the accompanying illustration.

Maybe you saw these chaps dashing too and fro as our friends called for service.

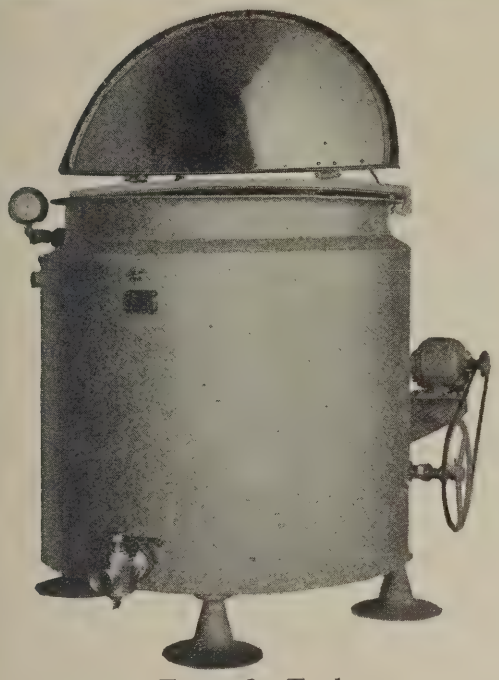
We stated, prior to the dairy exposition, that the sole purpose of our booth would be to serve our friends in the industry. After all, that is the merchandise of a publishing company—service. We lay much stress upon it. Under no circumstances could we have justified a booth at the exposition simply from the profits from subscriptions and literature sold. But it was our way to show our friends that we are ready to co-operate with them at all times. These lads were a part of our dairy exposition service, just the same as our Daily Dairy Ink was published for that purpose.

NATIONAL DELEGATES INVITED TO PACIFIC CONVENTION FROM PANAMA.

Delegates to the national convention at New Orleans in November should make their plans to attend the joint convention of the Pacific Ice Cream Manufacturers and the California and Southwestern States Manufacturers, to be held at Oakland, Cal., December 10 to 16, inclusive, in connection with the Pacific Slope Dairy Show. At least, that is what is urged by Bert H. Walker, the extremely energetic secretary of the Pacific association, in a letter to The Ice Cream Review, received as this issue is ready to go to press.

It is generally understood that the dairy and ice cream interests of the West are behind the great Pacific pageant this year in earnest, and they promise to show the entire country something that will be an "eye-opener," to quote from Secretary Walker's letter.

Mr. Walker points out how it will be especially convenient for national delegates, who take the Panama trip, to continue their journey from Panama on around to Oakland, arriving there the day of the opening of the show and the joint convention.



"What we want," reads the Pacific secretary's letter in this connection, "is for the men who attend the national convention at New Orleans to take the boat trip, via the Panama Canal to San Francisco; the trip on the United Fruit Steamer Liner will get you there the day the convention opens. The committee will be on hand to exchange your sea legs for perfectly normal land legs on arrival."

Officials of the National Association of Ice Cream Manufacturers have been personally invited.

TOO LATE FOR THIS ISSUE, BUT IT'S HERE.

After the advertisement of The Glacifier Co., Somerville, Mass., had been printed in this issue, a request was received to change the advertisement so it would read, "On Oct. 1st the new express rate was effective throughout the United States." When you read the Glacifier ad. read it as above, and overlook the names of states listed.

GLASCOTE

Type "J" Tank

You either visited the Milwaukee Dairy Show or have since been informed of the wonderful progress made in Dairy Equipment in the past year, more especially in the field of Glass Coated apparatus.

The Glascote Company has developed many new and economical features that have been previously considered impossible in this type of equipment but records made and customers satisfied beyond their expectations are the proofs of economical, sanitary operation with the resultant dairy product of quality to present to your consumer.

As the source of supply of Glass Lined apparatus is so limited you cannot afford to overlook The Glascote Company when in the market for your requirements of sanitary dairy equipment, as quality and simplicity of operation are points to be investigated.

THE GLASCOTE COMPANY

EUCLID, OHIO

Sanitary Ice Cream Truck

The Sanitary Ice Cream Truck facilitates handling cream from freezing to hardening room.

Will handle any size can in common usage. Avoids accidents in handling, as the operator does not touch the cans until he reaches the hardening room.

The truck can also be used in taking cans from the hardening room.

One man with truck will handle the cream from the freezers as fast as it will flow, no helper being necessary.

Substantially built to stand usage, nothing to get out of order. Can container revolves on a thrust roller bearing and is easily turned.

Made in two sizes. Style A, capacity six 5-gallon cans. Over-all dimensions, diameter 28½ inches; height, loaded with 5-gallon cans, 26 inches.

Style B, capacity four 5-gallon cans. Over-all dimensions, diameter 23 inches, height loaded 26 inches.

PRICE, STYLE A $50.00 **PRICE, STYLE B $45.00**

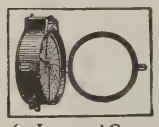
The FACTS *in the* CASE

1—Pen Pressure and Position Adjustments



2—Fountain Pen Point

3—Fixed Pivot

4—One Size Chart

5—One Turn Chart Holder

6—Improved Case

Inside the case you will find the reason for the extraordinary ruggedness and accuracy of TAG Recorders. By reason of a patented cam arrangement, the TAG is the ONLY Recorder with uniform chart graduations for ALL ranges. A special seasoning process prevents "setting" of the spiral spring. The development of a single-piece welded bulb and of a capillary tube of exceptionally fine bore are other TAG achievements. The following distinctive structural features also contribute to TAG superiority.

1—Pen pressure adjustment and pen position adjustment, the latter providing an exact and convenient means for correcting accidental bending of pen arm.

2—Fountain pen point writes a clean sharp record line and requires less frequent filling. The non-corrodible pen arm is inverted so that ink cannot run down into operating mechanism.

3—Accuracy of time indications is assured by mounting pen arm on a FIXED pivot so that pen point will always follow radial lines of chart (with clock stopped). Positive pen-arm stops, specially designed clock, convenient clock starter-lever are other features.

4—By standardizing on one best size of chart, manufacturing costs have been reduced making possible unusual refinement of construction at the usual price.

5—Improved chart holder, secured to case by light chain, is attached and removed with a single turn. Charts are printed in green ink on specially seasoned high quality ledger paper.

6—Improved case construction incorporating moisture-proof feature, if desired.

TAG DIAL-INDICATING Thermometers embody the same improved construction and operate according to the same reliable principles as TAG Recorders. The exceptionally easy reading dial is a feature.

PROGRAM

Southern Association of Ice Cream Manufacturers

(Continued from Page 9)

Entertainment.

On Saturday, Nov. 15, at 8 p. m., the Southern Association of Ice Cream Manufacturers will give their annual banquet.

This year a very novel entertainment will be provided. Something unusual in the way of a program will be offered.

You cannot afford to miss this hit of the season. Please secure your tickets early so the committee may know how many to provide for.

The Rotary Club of New Orleans invites all visiting Rotarians to meet daily with the local members at the Round Table at the St. Charles Hotel, and on Wednesday, November the 19th, a special luncheon for ice cream manufacturers will be held in Kolb's Tea Room. This is the regular Luncheon Rotary Day. Ice cream manufacturers from far and near will address the assembly.

Entertainment Tendered by the Dixie Flyers.

Friday, November 14.

12:00 m. —Buffet luncheon served in the Athenaeum.

12:30 p. m.—Ladies' luncheon, by Ladies' Auxiliary, Hotel De Soto.

8:30 p. m.—Louisiana Jamabalaya???????

to 1:00 a.m. Vaudeville — Dancing — Refreshments, etc., to be held in the Athenaeum. Henry W. Stern, Master of Ceremonies.

Saturday, November 15.

1:30 p. m.—Buffet luncheon, served in the Athenaeum.

2:00 p. m.—Ladies, Orpheum Party (matinee).

Sunday, November 16.

8:00 a. m.—All day boat ride on steamer Capitol, to Ellington plantation, where visitors will witness cane cutting, cane grinding and sugar making. Refreshments will be served on board.
Continuous dancing. Music by the famous Gold Band of the steamer Capitol.

Boat leaves foot of Canal St., 10 a. m.; arrives Ellington plantation, 1 p. m. Leaves Ellington plantation, 3 p. m.; arrives New Orleans, 7 p. m.

FOOTBALL, SATURDAY, 2:30 P. M.

To the lovers of this sport, a high-class exhibition will be the contest between Tulane University, **"The Greenbacks,"** and the University of Tennessee from Knoxville. Not less than 12,000 people will be in attendance. Street cars marked "Freret" pass Tulane Stadium. Tickets on sale at Porter Clothing Co. and D. H. Holmes Co.

NOTES OF THE TRADE

News of Interest Concerning What Our Readers and Advertisers are Doing to Develop the Industry. We Invite Correspondence Relative to New Products and New Equipment.

RIEF JOINS JAMES F. DREW & CO.

ANTON RIEF.

Anton Rief, formerly of the Joe Lowe Co., has been appointed representative of James F. Drew & Co., 320 Broadway, New York City, it was announced at the National Dairy Exposition. Mr. Rief, who has become widely known in the six years he has been engaged in the ice cream industry, will tell the story of Drew's egg yolk to ice cream manufacturers of the Northern states. The company will be represented at New Orleans. James F. Drew and his product are familiar to ice cream manufacturers in all parts of the country. Drew's egg yolk will produce a better ice cream that will increase winter gallonage, the head of the firm claims.

* * *

GELATINE USERS HAVE DIFFERENT VIEWS.

"As compared with a few years ago, users of commercial edible gelatine, particularly the ice cream and candy manufacturers, look upon the use of gelatine in their product in an entirely different light today," according to Joseph H. Cohen, vice-president and general manager of the Atlantic Gelatine Company of Woburn, Mass.

"It wasn't so very many years, if you will recall, that these manufacturers admitted in an undertone that they used gelatine in their product. Nor should the blame be laid on the door of these manufacturers who have found the use of gelatine necessary in their product. Rather was that the fault of the gelatine manufacturers for in past years gelatine manufacturers and their salesmen talked to the ice cream manufacturer on the basis of gelatine being a binder and an agent that gave body to his product.

"Today we know different and the commercial user of edible gelatine also knows different, for much has been done in recent years by the manufacturers themselves to inform not only gelatine users, but the public, of the food value of gelatine. Facts that have come to light as revealed within the past few years regarding the actual values of gelatine used in foods are the main reason," stated Mr. Cohen further, "for gelatine users today are glad to acknowledge that they have used gelatine in their products. Many of them are even going so far as to capitalize this fact in showing the consuming public that thei rproducts are therby given a greater dietetic value."

* * *

ESKIMO PIE SEASON GETS EARLY START.

The Eskimo pie season is opening up earlier this year than usual, according to M. C. Walters, secretary-treasurer of the Fortune Products Co., who is calling on the trade selling "thinflo" chocolate coating to the manufacturers of Eskimo pies. The reason for the season opening up earlier this year is that manufacturers feel need to develop more volume to offset the cool summer just past.

Judging from the number of orders coming, Mr. Walters expects this winter to be the best season Eskimo pie has had yet. Writing from Greenville, S. C., he reported that cotton now being picked will get good prices that will work for increased prosperity in the Southern states.

* * *

WINNER RESIGNS FROM CHERRY-BASSETT-WINNER ORGANIZATION.

There has been a recent change in the Cherry-Bassett-Winner organization, which involves the retirement of H. T. Winner, vice-president of the organization.

Mr. Winner, being desirous of entering other fields, filed his resignation with the company on September 15.

The Cherry-Bassett-Winner Co., in looking over the field for a successor to Mr. Winner, were able to make arrangements with W. S. Hamilton, who for many years has been connected with the machinery sales department of the J. G. Cherry Co., at Cedar Rapids. Mr. Hamilton is peculiarly fitted to this position, officials say, because of his very intimate knowledge of the Cherry line, for which the Cherry-Bassett-Winner Co are sales agents in a very large section of the Eastern territory.

Mr. Winner has not as yet definitely decided on his future connection, but has several propositions under consideration and will doubtless make a definite decision at an early date, we are told.

* * *

NEW PFAUDLER PRODUCT WANTS A NAME.

The Pfaudler Co. wants a name for a new member of its family of dairy equipment. The company is offering money for good suggestions. The company recently perfected a 100-gallon pasteurizer (aging tank, storage tank, buttermilk tank, etc.), which is said by officials to be a further application of the well-known Pfaudlerette. But it must have a name. This is demanded for the sake of simplicity, convenience, etc. It is the company's intention to let someone in the trade name it. The Pfaudler Co. has named three executives to act as judges. Anyone not an employee of that organization is eligible to submit a name. Prizes will be awarded for the three best names offered, though the first-prize name will be the one to be adopted. The company will pay $50 for first prize, $25 for second prize, and $15 for third prize. Names now being used for the Pfaudler equipment are: Pfaudlerette, Pfaudlerizer, Elyria 300 Special, and Elyria Junior pasteurizer. Contestants are privileged to send any number of suggestions.

JOHN WOOD
ICE CREAM CANS

Electric Weld

You can't find a better can for the money — and we retin them at a price below that of a soldered can.

OVER 1,000,000 NOW IN USE

general sales manager to be succeeded by H. E. Horton, for the past two years Western and special representative of the company. Mr. Horton will have active direction of the company's business.

Mr. Lund's announcement of his retirement was made in the following letter:

October 24, 1924.

Editor The Ice Cream Review:

Please be advised that effective November 15th, I am retiring from the active management of the Eskimo Pie Corporation, although I am still retaining a substantial interest therein.

Eskimo pie has enjoyed a tremendous business this year compared to past seasons. It is ably backed by a directorate of successful business men thoroughly financed in every way. N. E. Horton succeeds the position of general sales manager and will have active direction of the affairs of the company.

Mr. Horton needs no introduction to the ice cream fraternity as he has been identified with Eskimo pie for the past two years as Western and special representative of the company.

You can be assured that Eskimo pie will be able to carry on not only the present program and keep pace with the rapid increase of Eskimo pie but are in position to commandingly lead it.

I wish to thank you for the splendid co-operation of the many kind things said in the interest of Eskimo pie during the past two years in which I have been associated with the business. I will possibly attend the National convention at New Orleans and look forward to meeting a representative of your company. I then expect to go to California for a reasonable rest after which I will again become identified with the ice cream industry in what myself and associates believe to be one of the greatest national possibilities for the ice cream manufacturer and we shall avail ourselves of the opportunity of carrying to the industry this new project through the medium of your journal.

Yours very truly,
ESKIMO PIE CORPORATION,
C. O. Lund, General Manager.

ELECTRIC TRUCKS BEING SOLD ON AN ECONOMY BASIS.

There are many reasons why electric trucks are best suited to city delivery conditions which are similarly the reasons why the use of electric trucks is consistently increasing, according to the Society for Electrical Development, Inc., 522 Fifth Ave., New York City. The outstanding reason, however, is their economy, according to this society, a bulletin from which declares:

"That electric trucks save users 20 to 35 per cent—or more—on their delivery costs is no myth. Personal interviews, operating cost sheets and testimonial letters from electric truck users the country over shows this to be a fact."

A folder produced by the Electric Illuminating Company of Boston, "The Other Reasons," lists the following so-called advantages:—"Electrics are best for city traffic because they stop easily, start easily, accelerate quickly and thread their way through congestion without difficulty. They take up a minimum of floor space in garages and are best for limited quarters. Electrics are so strongly built that a disabling accident to one of them is more than rare. Electrics have controlled speed; drivers cannot joy ride or drive recklessly; yet their speed is adequate in city work, they actually cover more mileage through their other advantages. They have no radiators to fill or forget, to freeze in winter and boil in summer. They have no gears to shift. Electrics will average more days in service and fewer days in the repair shop than gas trucks. They are noiseless, odorless and clean."

NEW GIFFORD-WOOD CATALOG.

We are in receipt of a beautifully illustrated catalog issued by the Gifford-Wood Co. of Hudson, N. Y., manufacturers of ice and material handling equipment. This catalog is over 200 pages with more than 150 pages of illustrations, many of these being plants manufacturing butter and ice cream and handling fluid milk.

The Gifford-Wood line includes many items used for the handling of various kinds of materials. Their catalog, No. 100, is a book well worth having.

ZIPP'S

HIGHEST QUALITY for 38 YEARS

ORANGE FREEZE

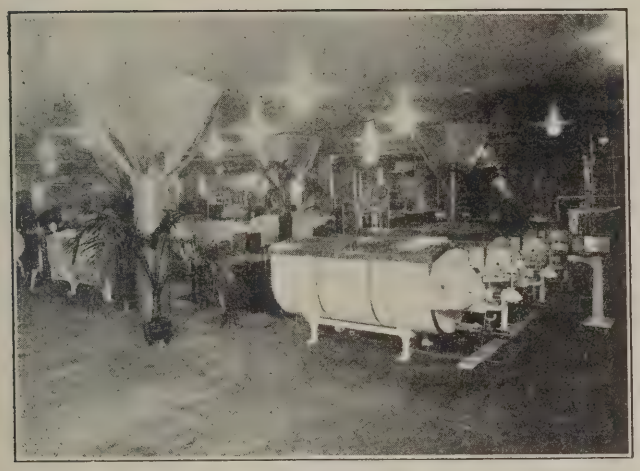
For imparting that true orange flavor to your Ice Cream, Ices and Sherbets it has won its FAVOR through its FLAVOR.

ORANGE is becoming a more popular flavor every year.

THERE IS A DIFFERENCE IN ORANGE FLAVORS.

You have tried the rest, now try the BEST.

Our scientific process eliminates that Terpeny flavor, yet retains the whole orange flavor so commonly lost in terpeneless flavors.



Come in for a demonstration, as seeing is believing.

ADVERTISING IN THE ICE CREAM REVIEW IS A GUARANTEE OF MERIT.

OHIO MANUFACTURERS TO MEET IN JANUARY.

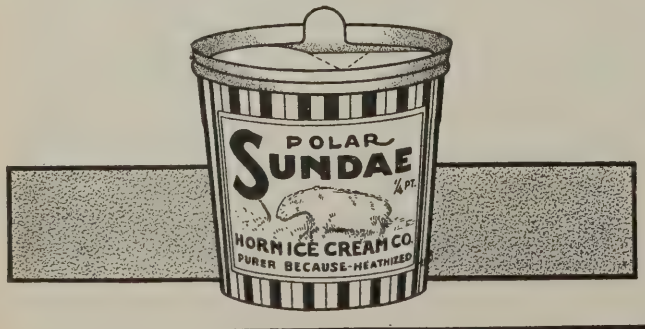
The next convention of the Ohio Association of Ice Cream Manufacturers will be held at Cleveland some time in the last week of January, 1925, it was announced late in October by Secretary Wentworth. Convention headquarters and specific dates will be announced in the next issue of The Ice Cream Review, as also further information concerning the convention, which will be one of the most important state conventions of the year. The Ohio association has a splendid record of successful convention.

OHIO FIRM REORGANIZES.

The Meinert Co., Toledo, O., with capital of $30,000, was formed to incorporate the business of J. H. Meinert & Son, makers of ice dream and fancy cakes, which has heretofore been conducted as an individual and partnership business. The company has been in business in the city for more than 50 years, and has been located at its present place of business for more than a quarter of a century.

The address is 2126 Monroe St. Adolph Meinert heads the business. He says the company expects to open several sales rooms in various parts of the city.

We regret that space does not permit publishing all exhibits at the National Dairy Exposition. There will be another series in the December issue of The Ice Cream Review.



The Perfect Package for Packaged Sundaes—

This attractive paper package will increase your sales volume—bring added profits. Used extensively by Ice Cream Manufacturers everywhere. Made of pure white paper—unwaxed. Nest when empty. Furnished printed in one or more colors with your own label.

WASHINGTON — MAINE

News From Far and Near

CALIFORNIA — FLORIDA

North Little Rock, Ark.—Articles of incorporation for the Clark Ice Cream Co., 311 North Main St., were recently filed by W. H. Clark, who is president of the company, and others. The company is capitalized for $12,500.

Philadelphia, Pa.—Abbott's Alderney Dairies plan interior alterations to its ice cream department at Third and Lombard Sts., from drawings prepared by William H. Timm of Philadelphia.

Redding, Calif.—Frank Avella, proprietor of the Quality Ice Cream and Ice Co., recently was host to Redding business men and to members of the chamber of commerce.

Toledo, O.—J. H. Meinert & Son, ice cream manufacturers, was recently incorporated for $30,000 under the firm name of Meinert Co. Address Adolph Meinert, 2126 Monroe Street.

Brooklyn, N. Y.—The Perfect Ice Cream Co. has been incorporated with a capital of $5,000. The directors are Freda Malton, 203 Maujer St., and Abraham Bronstein, 747 Vermont Ave., Brooklyn. Attorney is J. A. Whitehorn, 188 Montague St., Brooklyn.

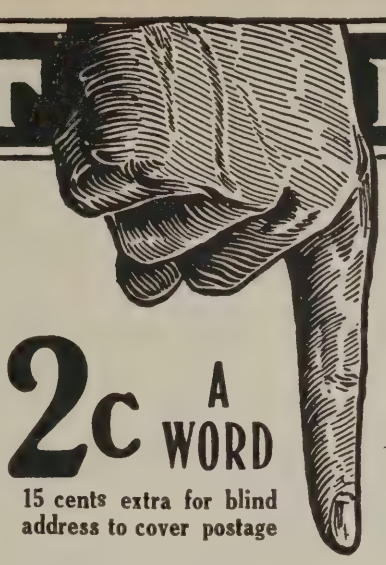
Chicago, Ill.—The Excel Ice Cream Co. has been incorporated with capital of $10,000 to manufacture, buy, prepare and sell ice cream and ices, milk, cream, etc. The inporporators are George Butler, Esther P. Butler and William Lister. The company is located at 1566 Elmwood Ave.

Okeechobee, Fla.—New machinery is being installed by I. L. Wingate, after which his plant will have a capacity of 200 gallons of ice cream daily.

Seymour, Ind.—The Seymour Ice Cream Co. has been sold to J. Ralph Thompson by William B. Gallemore. The business was estimated at a value of $100,000. The business was built up by Mr. Gallemore in the past 16 years.

Anderson, Ind.—The Hoard Ice Cream Co. has purchased a large site and plans to erect an ice cream factory on it.

Pocatello, Ida.—The American Ice Cream Co. recently filed articles of incorporation. The capital stock is reported as $25,000. Directors of the company are W. W. Clark, J. M. Christensen and P. L. Young, all of Pocatello.



PARDON US, GENTLEMEN; MISTAKES WILL HAPPEN.

The Brooks Cabinet Company advertisement in this issue, on page 66, was printed with an omission in specifications. Specification number two should read: "Corkboard Insulation sealed with hot Asphaltum, in all sides." The paragraph in red, bottom center, should read as follows: "There is a Brooks Cabinet for every need. Metal Lined, Tub lined (all wood), Brick and Combination."

The Exhibit of the Mojonnier Bros. Co., Chicago, Ill., at the National Dairy Exposition.

WANT DEPARTMENT

2c A WORD

15 cents extra for blind address to cover postage

HELP WANTED

HELP WANTED—Manager of our ice cream department who is capable of putting out a fine grade of cream. Our output is now 50,000 gallons a year and there is room here to double it. We want the man who can do that. This is an excellent opportunity for a capable man. Address: R-651, The Ice Cream Review. 11-24

SALESMEN!

I want a dozen or more live wire salesmen calling on city milk dealers to handle a side line.

I want men who can tell the truth, all of it, convincingly, in a straight-forward manner, men who are not afraid to go direct to the head of the firm.

Each salesman may cover his own regular territory without conflicting with other lines. Ours is a product that sells milk—builds business for the milk dealer, and makes a profit for him while doing it. My own personal record is 100% sales to milk dealers whom I wanted to sell. Address: R-633, The Ice Cream Review. 11-24

POSITION WANTED

POSITION WANTED — As manager in good sized ice cream plant in town of 25,000 and up, preferably in Middle West. Ten years experience in ice cream manufacturing, theoretical knowledge as well as practical, good education, aggressive, forceful and yet command respect of employees. Address: R-555, The Ice Cream Review. 12-24

NOTICE—Are you starting a new factory, or running an old one that seems to be slipping from the loss of customers? You may need an up-to-date production man to reorganize your factory. A man that can fill the bill and assure results by giving a new plant the right kind of start, or restoring the pep to an old plant, is available. Outline your problems and I will tell you how I can help and what it will cost. My past experience assures you of references that are the best. Answer this ad for results. Address: R-650, The Ice Cream Review. 11-24

POSITION WANTED — By ice cream maker with several years experience. Understands mixing, freezing, pasteurizing, etc. Have general creamery and milk plant experience. Neat, steady and reliable. Best of references. Can come on short notice. Address Box 153, Genoa, Wis. 11-24

POSITION WANTED — By ice cream maker with 2 years experience and three months' dairy course. West of Mississippi preferred. References furnished. Am employed now, but can leave at any time. Address: R-654, The Ice Cream Review. 12-24

Are Your Profits Satisfactory and Your Business Sound?

GENERAL MANAGER for ice cream plant and creamery, will develop and manage one to your satisfaction. A schooled and trained manufacturer with years of experience, producing quality and quantity dairy products at a profit. References are leaders in the industry. As efficiency expert increased one firm's profits $21,000.00 a year, another $12,000.00. Turned a $3,000.00 monthly loss to a $1,000.00 month profit. Directed changes netting one firm $9,000.00 yearly. This year perfected process for producing 100% pure butter oil from cream or butter that will solve future problems of shortages and surpluses and its use will reduce cost of ice cream mix 3 to 8 cents a gallon. An expert on sanitation. Uses the popular cost accounting system. Very strong on sales and advertising. Successful in putting sick plants on their feet. Will consider any proposition carrying opportunity or accept connection on try out, or give special services, or will take interest and connect permanently. Confidentially discuss your situation. If interested will see you. Address: R-668, The Ice Cream Review. 12-24

It Pays to Advertise

Orders for this Department must reach our Office not later than the 25th of the month. Orders received after that date will be carried over to the following month's issue.

FRESH FIG ICE CREAM PROVES POPULAR.

The Galveston Ice Cream Co. introduced at the Galveston Fair, this fall, what was probably the first fresh fig ice cream manufactured in the United States. This kind of ice cream was originated by L. M. Kelsey of the Galveston Ice Cream Co. He announces that fresh fig ice cream is a huge success. Although preserved figs have been used in ice cream in various parts of the country, the Galveston product is manufactured from fresh San Leon figs, and Mr. Kelsey expects it to become a favorite all over the country. He says that it has been proven that figs can be prepared so that they can be shipped and kept fresh at all times. Mr. Kelsey stated that the sale of fresh fig ice cream has been more than double the sales of all other kinds of ice cream combined for his firm.

IT is the opinion of observant supply men who know conditions in this industry the country over, that, regardless of varying local factors of competition, milk and cream supply, dealer co-operation, area or character of population served, etc., etc., no ice cream manufacturer has exhausted opportunities for profit who has not tested to the full the possibilities of a truly intensive effort to stimulate consumer demand.

DECEMBER 1924

OUR best wishes go "out across the plains and the mountains" to our friends on the Pacific Coast. They will meet in Oakland early this month to gain new ideas, swap experiences and see a good dairy show. Our cover page is dedicated to these good fellows this time and we hope that you, Dear Reader, no matter where you live, will keep in mind that "Oakland is Calling You."

MANY manufacturers foolishly neglect their equipment this time of the year. This is probably true of trucks. It is a very unwise practice. Along about next January the average manufacturer will come to himself and realize that it is time to get ready for another campaign. He then will give attention to his trucks.

Delivery conveyances have an importance greater than some people understand. It is not quite as bad now as it used to be, but still too many men in the ice cream business are failing to realize how much it means to their success to make a good impression upon the public. Your truck can be a great advertisement for you. It passes thousands and thousands of people every day. It is likely that many people this winter will notice ice cream deliveries much more pointedly than during the summer. For with the mercury at low ebb, it naturally attracts attention for a truck laden with ice cream to whizz down the street.

Keep your trucks in good repair, well painted, well tired and well equipped. People unconsciously think of your ice cream in accord with whatever impression they have formed of your business through their limited contact with it. The public is closer to your trucks than to any other phase of your business.

A WESTERN subscriber writes as follows:

"Quite recently manufacturers of iceless cabinets have been spreading propaganda among dealers in ice cream in this section to the effect that with their equipment it is not only feasible but profitable for the individual to make his own ice cream and eliminate the manufacturer. They tell the dealer that the large packers in ———— propose to make ice cream mix which they will ship to the dealer at a delivered price of seventy cents per gallon; that it is only necessary for the dealer on receipt of this mix to run it through an agitator or mixer and then pour it into cans which are set in the iceless cabinet for hardening."

We sincerely trust that such propaganda has not had wide circulation. Probably over-zealous salesmen have been responsible for the spreading of such misinformation. Surely no one with a knowledge of the ice cream industry would encourage dealers in ice cream to follow such a program. Such advice, if followed, would lead only to trouble in the industry and losses for the individual.

Many dealers will, of course, lend an interested ear to any proposition which promises them a lower price for ice cream. It is the privilege of any retail dealer to make his own ice cream if he so elects, but it is unfair to lead him into it without letting him understand some of the problems he will have to meet.

In most states he will have to observe certain sanitary laws governing the manufacture of ice cream. In some states a separate room is required for the purpose.

Then some morning he will receive his mix and will find it has begun to "turn" and he will not know what to do with it. A shipment may be delayed and be actually sour when it reaches him.

He would get little or no overrun and his customers would go elsewhere for their ice cream. Then he would find the job of making ice cream a tedious one, especially during the busy season. Last, but not least, he would have no ice cream manufacturer to take his troubles to or to blame for them.

It seems incredible that anyone familiar with the science and problems of ice cream making would spread such propaganda. We are sure that none of the reputable manufacturers of iceless cabinets will approve of it.

SHE was a very little girl and she gazed into a certain jewelry store window, just before Christmas, with all the longing that little girls have experienced since old Santy's first sleigh ride. But she suddenly gulped hard and walked across the street and bought her mother a pair of stockings, spending for this Christmas present all the money she had been able to save for several months.

Now, that was one of the bravest little soldiers in the world — just as brave as Marshal Joffre, or any other hero. For there are different ways of being brave. There's an ice cream manufacturer who deserves a place in the hall of fame with people of courage. He was in the midst of a price war, with everybody around him taking part. He didn't cut. He started to several times, but didn't.

Later on it was all over. The casualty list showed one man out of business and two reeling under heavy losses. The manufacturer who stuck to business was the only one in his territory that made any money.

Monuments are not erected to all heroes, but most of them get their rewards in some way.

ICE CREAM manufacturers can pass along to their dealers a very interesting story that is told about an Indiana man who got the agency for a well-known automobile. The factory was quite startled when this man, beginning in the winter time when business in his line was supposed to be at a standstill, began sending in order after order. The factory was unprepared to ship the automobiles on such short notice in winter. When the sales manager asked the dealer if he would lay off taking orders, the dealer immediately replied that he was not the "laying off kind."

The president of the automobile company, far from being a dumbbell, fired the sales manager and followed up the idea of the new live wire agent to sell automobiles all the year around. That firm now sells more automobiles during January, February and March than many competitors sell in the summer time.

If the ice cream industry ever gets the kind of dealers who will not lie down and quit every time the frost falls, we shall find the public eating considerably more ice cream in the winter time than the entire industry used to make in the summer months. Putting over anything is merely a matter of refusing to believe it can't be done. In other words, as someone else once put it, "We know this thing is impossible and can't be done, but if we don't watch out, some nut will come along and do it."

WEARY but happy pilgrims returning from the New Orleans conventions tell us that "a wonderful time was had by all." A brief report of both meetings and the Dixie Flyers exhibit will be found elsewhere in this issue.

WHAT of the future of the National Dairy Exposition? This is a question which must soon engage the serious consideration of the men who are guiding this great annual dairy demonstration. How to serve the industry best will be the thought uppermost in the minds of these men.

For the first time in its history this year's show was divided, exhibits of special interest to producers and consumers being held at the state fair grounds, while the dairy products manufacturing and machinery exhibit was put on at the Milwaukee city auditorium.

All who were especially interested in the auditorium exhibit agree that it was a pronounced success. The arrangement was highly pleasing to the exhibitors and their customers were also pleased. On the other hand, all agree that the show at the fair grounds was a disappointment all around in spite of the fact that it was the best show ever staged and the best advertised. It carried a wonderful interest appeal, but the audience was not there.

The success of one branch and the complete failure of the other should make it possible to draw conclusions that will be valuable in considering the future conduct of the show. The good business man adjusts his business policies as experience dictates. He gives his customers what they want. The men who are guiding the affairs of the show should profit by the experience of 1924.

They have the experience of many other years to help them, too. We believe it has been decisively proven that city people will not go out of the city to examine exhibits at a fair ground's show. They are looking for entertainment and it is the unusual thing that gets their attention. Even so, it must be brought to them if they are to be interested in large numbers.

There is nothing sensational about a dairy show. The dairy cow and all that she represents is too close to everyday life to excite unusual interest. For many long years we have been trying to figure out how to get "gate receipts" at the show, and we are just about where we were when we started.

There is a growing conviction in the minds of many of our folks in the industry that the time has arrived to make a radical change in the conduct of the show. They argue that experience teaches that "gate receipts" in large figures are impossible. This means small interest on the part of consumers and if they are not reached the show has failed in one of its big objects.

What to do? Frankly, we believe it will be extremely difficult to again interest exhibitors of dairy products manufacturing machinery and supplies in a state fair grounds show. They want to keep their wares where customers can more easily reach them and without paying an admission fee. They were well pleased with the 1924 arrangement.

These men realize, however, that all branches of the show must prosper. A house divided against itself cannot stand. These men will be found willing to do everything within reason to insure the continued success of

the show, just as they have done in the past. They would like to see the show represent all branches of the dairy industry, and all held under one roof, but they don't like to see it held out in the country.

Possibly the solution of this big problem will be found in an entirely new plan of promoting the show. A plan of co-operating with the breed associations and state fair officials might be worked out whereby the message for the producer may be carried to him. The farmer who needs that message most has never attended the show. This may mean an all year round effort.

The appeal to the consumer might follow along the same lines, carrying the message to him instead of trying to induce him to visit the state fair grounds to get that message. He has told us he will not make the trip, so a different plan naturally suggests itself.

Just how to reach the consumer is a problem which may be solved by trying some new plan of attack. Possibly he, too, can best be reached by co-operating with the various health agencies that are now in the field. The wonderful exhibit put on at the last show by the National Dairy Council and the federal and state departments might well be carried about the country and brought close enough to the consumer to attract attention and interest. The "Feeding the Family" feature of the last show is a move in the right direction, but we believe it must get to the consumer in a different way. He has told us that he will not visit a state fair grounds to see it.

In every city, large and small, there are agencies that will gladly co-operate in the right sort of health appeal. There are also business interests which will help finance such efforts. Possibly herein lies the solution of this problem of reaching the consumer. We are firmly convinced that some plan of carrying the show's message to the men who have never visited the show offers the best solution.

Under some such arrangement the show's message will go nearer the home of both producers and consumers and will make it possible to reach thousands instead of hundreds.

The dairy manufacturing interests, with their exhibits and conventions, might well be cared for as they were this year. They will be found loyally supporting any plan for reaching producers and consumers. They realize that the more dairy products there are produced the better their interests are served.

In connection with the annual exhibit of dairy machinery and supplies there might be shown the result of the year's efforts along the lines suggested. Then would be the time to "sell" the leaders in the industry on the program carried out during the past 12 months and to get their support and suggestions for the future.

It should be possible for the leaders in the industry to sit down together and work out a plan for the future that will serve the industry better. If these men will be guided by experience, laying aside all selfish interests, they can inaugurate a plan which will mark the beginning of a new epoch in the history of dairying in this country. We believe they will do it.

DETROIT gets the 1925 convention of the National Association of Ice Cream Manufacturers. Detroit is a good convention city and we want to prophesy right now that the 1925 meeting will be the "best ever."

BULLETIN OF EVENTS

Texas Ice Cream Manufacturers' Association—Annual Convention, Dallas, December 3, 4, 5, 1924. Secretary, A. J. White, San Antonio.

Georgia Ice Cream Manufacturers' Association—Annual Convention, Augusta, Ga., December 2, 1924. Convention headquarters, Richmond Hotel. Secretary, Sam Marshall, Marshall Ice Cream Co., Albany, Ga.

American Dairy Federation—Annual meeting, Auditorium Hotel, Chicago, Dec. 3, 1924, at 10:30 a. m. A. M. Loomis, 630 Louisiana Ave., Washington, D. C., Secretary.

National Dairy Council—Annual meeting, Auditorium Hotel, Chicago, Dec. 4, 1924, at 10 a. m. M. O. Maughan, 910 S. Michigan Ave., Chicago, Secretary.

National Dairy Association—Annual meeting, Auditorium Hotel, Chicago, Dec. 5, 1924, at 10 a. m. W. E. Skinner, 910 S. Michigan Ave., Chicago, Secretary.

Indiana Manufacturers of Dairy Products—Annual convention, Indianapolis, December 4. Secretary, R. L. Hammond, 306-07 Chamber of Commerce Bldg., Indianapolis.

Oklahoma Association of Ice Cream Manufacturers—Annual Convention, Tulsa, December 8-9-10. Secretary, W. M. Hawk, Tulsa.

The Association of Ice Cream Manufacturers of West Virginia—Annual Convention, Clarksburg, December 9 and 10. Convention headquarters, Hotel Waldo. Secretary, C. F. Jamison, Huntington, W. Va.

Dairy Products Association of Kentucky—Annual convention, Paducah, Tuesday, December 9, 1924. Convention headquarters, Palmer House. Secretary, Carlton Ball, 206 Republic Bldg., Louisville.

Association of Ice Cream Manufacturers of Iowa—Annual convention, Des Moines, December 9, 10 and 11. Convention headquarters, Fort Des Moines Hotel. Secretary, P. W. Crowley, 512 S. & L. Bldg., Des Moines.

Pacific Slope Dairy Show—Exposition under the auspices of the California Dairy Council with co-operation of dairy councils of the Western states and dairy divisions of the agricultural colleges and departments of the Pacific Coast states, Oakland, Cal., December 10 to 16, inclusive. Secretary-manager, Sam H. Greene, 216 Pine St., San Francisco.

Pacific Ice Cream Manufacturers' Association—Annual convention, Oakland, Cal., December 10, 11 and 12. Secretary, Bert H. Walker, Tacoma, Wash.

California & Southwestern States Ice Cream Manufacturers' Association—Annual convention, Oakland, December 10, 11 and 12. Secretary, Jay Kugler, 57 Post St., San Francisco.

Supply Men of the Pacific Coast Ice Cream Manufacturers' Association—Exhibition in connection with joint convention of Pacific Northwest, Pacific Coast and Southwestern States, City Auditorium, Oakland, Cal., December 10, 11 and 12.

Kansas Association of Ice Cream Manufacturers—Annual convention, Topeka, December 16, 17 and 18. Convention headquarters, Hotel Kansa, Topeka. Secretary, B. T. Perkins, Pittsburg, Kans.

Louisiana Association of Ice Cream Manufacturers—Annual convention, New Orleans, December 21. Convention headquarters, Hotel DeSoto. Secretary, N. F. Manning, Monroe.

Arkansas Ice Cream Manufacturers' Association—Annual Convention, Little Rock, January 6 and 7, 1925. Convention headquarters, Hotel Marion. Secretary, Charles Hooberry, Pine Bluff.

North Carolina Ice Cream Manufacturers' Association—Seventh Annual Convention, Charlotte, January 13-14, 1925. Secretary A. E. Dixon, Fayetteville.

Louisiana Association of Ice Cream Manufacturers—Annual convention, January 13 and 14, 1925. New Orleans, La. Secretary, N. F. Manning, Monroe.

Mississippi Ice Cream Manufacturers' Association—Annual convention, January 15, 1925. Convention headquarters, National Park Hotel, Vicksburg, Miss. Secretary, N. D. Brookshire, Meridian.

Illinois State Dairymen's Association—Annual convention, Carbondale, Ill., January 20, 21, 22, 1925. Geo. Caven, 136 West Lake St., Chicago, Secretary.

New England Association of Ice Cream Manufacturers—Annual convention, January 21-22, Hartford, Conn. Convention headquarters, Hotel Bond. Secretary, W. P. B. Lockwood, 51 Cornhill, Room 401, Boston, Mass.

Ohio Association of Ice Cream Manufacturers—Annual convention, Cleveland, during last week of January, 1925. Convention headquarters, not announced yet. Secretary, W. A. Wentworth, 509 Outlook Building, Columbus, O.

Colorado Association of Ice Cream Manufacturers—Annual convention, Pueblo, January 27 and 28, 1925. Convention headquarters, Congress Hotel. Secretary, E. L. Carlson, C. G. Carlson Ice Cream Co., Denver.

Michigan Dairy Boosters—Exhibition in connection with convention of the Michigan Allied Dairy Association, Lansing, February 2, 3, 4, 5 and 6, 1925. Exhibition headquarters, Kerns Hotel. Secretary, C. J. W. Smith, 502 Lenox Ave., Detroit.

Michigan Allied Dairy Association—Annual convention, Lansing, February 2, 3, 4, 5 and 6, 1925. Convention headquarters, Michigan Agricultural College. Secretary, R. F. Frary, Lapeer.

Ice Cream Manufacturers' Association of South Dakota—Annual convention at Sioux Falls, February 3, 4, and 5, 1925, in conjunction with the State Dairy Association convention. Convention headquarters, Hotel Cataract. Secretary, C. C. Totman, Station A, Brookings.

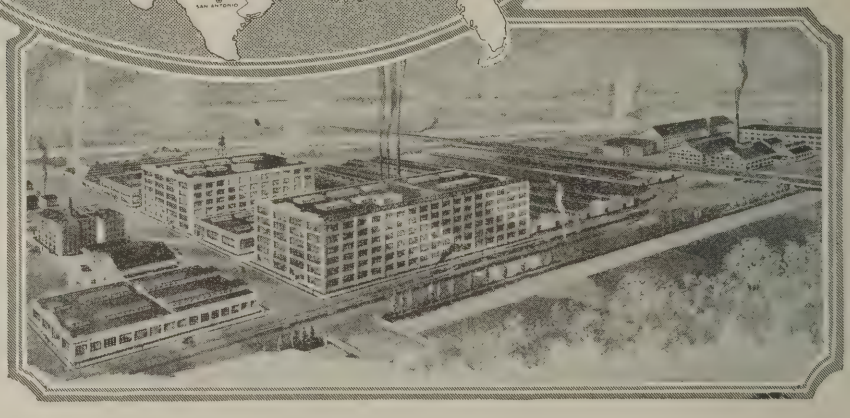
Sound Reasons

Frigidaire Cabinets Are 30 Inches Wide

Frigidaire Cabinets are built 30 inches wide and 30 inches high for convenient installation behind the fountain, as illustrated. There is a Frigidaire Cabinet for every need—4 and 6 hole sizes in single row, also 4, 6 and 8 hole sizes in double row. Air-cooled or water-cooled compressors are optional. No extras to buy. Every Frigidaire Cabinet comes complete ready for installation.



Frigidaire Distributors In All Principal Cities

Over 2500 Dealers and Servicemen Located in Smaller Towns and Cities

Where Frigidaire Ice Cream Cabinets Are Made

At Dayton, Ohio, is the largest institution of its kind in the world—the Delco-Light Products Factory. Here Frigidaire Electric Ice Cream Cabinets are made. In this great manufacturing plant is the organization that produced the Delco-Light home electric plant now endorsed by hundreds of thousands of enthusiastic users, many in remote parts of the world. This same organization is now producing the complete line of Delco-Light Products—including Frigidaire Electric Ice Cream Cabinets—products that are dependable and can be counted on to give the unfailing service to which users are entitled.

DEPENDABLE

Frigidaire

for Installing Frigidaire!

FRIGIDAIRE Ice Cream Cabinets are *"Backed by General Motors."* This means a great deal to all far-sighted and progressive manufacturers of ice cream, who see in the electrically operated ice cream cabinet a permanent development that helps reduce operating expenses and builds for them a bigger business.

In order to pay dividends, an investment in electrical refrigeration must be made in *dependable* equipment capable of rendering long years of service with a minimum of upkeep expense. And that is exactly what the phrase "Backed by General Motors" means when applied to the Frigidaire Ice Cream Cabinet. It is a Cabinet that is *"dependable."*

Frigidaire Cabinets are made by the Delco-Light Company, a subsidiary of General Motors Corporation. Inquiry will show that products of this Company have always enjoyed a high reputation for superior quality and dependability. Today many thousand domestic type Frigidaires in use are giving satisfactory service.

The same successful mechanism and principles of refrigeration that make the domestic type Frigidaire a success have been put into the Ice Cream Cabinet. Delco-Light and General Motors engineers worked together in building an electrically operated cabinet for ice cream that will give the dependable service characteristic of all Delco-Light products.

The good-will and good reputation of the Delco-Light Company and the General Motors Corporation, can be protected only by giving you and every other purchaser a product that will give you full measure of service.

Frigidaire Electric Ice Cream Cabinets *are dependable.*

The Building of a Price List for Ice Cream

Methods of Arriving at Proper Prices on Basis of Business Costs

*By JOHN F. JOHNSTON**

MANY different systems are in use for pricing ice cream so that fair allowance can be made for differences in customer gallonage, and perhaps for large differences in service demands. Many of these systems were developed in a logical way, but in practice they have been so altered by competition and otherwise that they can no longer be checked or analyzed. That they do not meet the situation is quite evident from the present agitation for service charges, etc., so that it seems entirely in order to give a little study to the theory of price building as applied to the ice cream business.

With this in mind, the writer has worked out what might be termed a master price list, something entirely free from all competitive considerations, and valuable as a check against actual prices no matter how obtained or applied. For the purpose of illustration, an example is worked out using the figures given by C. L. Turner on page 80 of The Ice Cream Review for March, 1924. By a slight rearrangement of the figures given in the "average" column, the following items are obtained—Production—.75, Overhead—.05, Selling—.08, Delivery —.35.

These results would be consistent with a business of the following general character, the details of which are believed to conform closely to average practice.

Average monthly gallonage	20,000
Number of delivery routes	5
Number of regular stops	200
Number of cabinet holes serviced	800
Total monthly production expense	$15,000
Total monthly selling expense	1,600
Total monthly overhead expense	1,000
Total monthly delivery expense	7,000
Average total cost per gallon	1.23

No two businesses are exactly alike, and allowances must be made for local conditions, but for a general and fairly accurate illustration of the method it will be correct to split the overhead cost equally between selling and production, thusly:

Production cost per month	$15,500
Selling cost per month	2,100
Delivery cost per month	7,000

IT IS further possible to split delivery costs into two parts, the first to cover the cost of actually delivering the ice cream (selling), and the second, to cover the actual cost of re-icing the ice cream after it has been sold (servicing). As in the case of overhead, conditions vary, but in general it will be found that about 20 per cent goes for selling and 80 per cent goes for service, thusly:

Production cost per month	$15,000
Selling cost per month	3,500
Service cost per month	5,600

Turning now to the development of a price per gallon on the basis of the last grouping of costs, it is plain that the only thing necessary is to properly distribute these total costs over the total gallonage, and further, that each of the three items of cost requires separate consideration. The production cost should, of course, be spread evenly over the total gallonage to get the cost per gallon. The selling cost should be spread over the number of stops in accordance with their relative expense as measured by their monthly gallonage. The service cost should be spread over the number of cabinet holes in use by the various stops with due allowance for large or small holes. The final step is to gather together the costs per gallon for these three items and prepare a convenient table.

SCHEDULE "A." In the case of production cost the work is very simple and the result is $.78 per gallon.

SCHEDULE "B." In the case of selling cost some explanation is required. A study of daily experience will show that for selling only the expense of a large stop as compared with a small stop is not in proportion to the respective gallonage because so many items of expense are about the same for both stops. Conditions will determine the proper ratio, but a very reasonable assumption is that the 300-gallon stop will require three times as much attention as the 30-gallon stop, and that the average stop from the gallonage standpoint will be the average from the standpoint of expense. The arithmatic of the problem is very simple but somewhat lengthy because the final answer must satisfy four independent conditions as follows:

(a) The average stop (100 gals.) must cost $17.50 per month.
(b) The 300 gal. cost must be three times the 30 gal. cost.
(c) The intermediate stops must be in proportion.
(d) The total for all stops must equal $3,500 per month.

If the distribution of stops according to gallonage is known, as of course it is any particular business, the proper tabulation will appear about as shown:

Actual No. of Stops	Av. Gals. per Stop	Cost per Month for Selling	Cost per Gal. for Selling
60	30	$11.40	$ .38
58	60	14.00	.23
41	120	19.25	.16
25	200	26.30	.13
16	300	35.00	.12

SCHEDULE "C." It seems reasonable to charge for service according to the number of cabinet holes of average size demanded by the customer. It will be found that including fountains the average size hole is so close to five gallons as to make the error of little importance for the purpose in hand. In this example the cost per hole works out to be $7.00 per month. It is very easy to make a table showing the cost per gallon for service in terms of the customer's monthly gallonage and the number of cabinet holes used, thusly:

Monthly Gallons	Number of Cabinet Holes in Use								
	1	2	3	4	5	6	8	10	12
30	.23	.47	.70	...	...	...	...	...	...
60	...	.23	.35	.47	.59	...	...	...	...
120	...	...	.18	.23	.29	.35	.47	.58	...
200	...	...	.11	.14	.18	.21	.28	.35	.42
300	...	...	...	...	.12	.14	.19	.23	.28

CONCLUSION. By combining schedules "A," "B," "C," into one, the final tabulation is secured which shows the actual cost per gallon for each particular combination of monthly gallonage and cabinet holes. If, as indicated by Mr. Turner, the average profit per gal-

You've been waiting for this Fountain

The Only Self-Contained
Electro-Mechanically Refrigerated Fountain
Requiring No Hand Icing

1. The well known Nizer Refrigerating Mechanism built in. Mechanically simple; extremely efficient; low operating expense. Cuts in and out automatically; no thermostat.

2. Ice Cream kept in perfect condition —never salty, off-flavor, or soft. Storage capacity double that of old style fountain of same size. Shrinkage loss eliminated.

3. Perfectly refrigerated bottle storage compartment maintained at 36° to 40° with atmosphere so dry that labels stay on bottles. Ideal storage conditions for fruit, whipped cream, or other perishables.

4. Soda and drinking water served so cold as to please the most critical taste. Patented Walker Thermo-Siphon System of brine circulation *automatically* ices coils without freezing them.

5. The name "RUSS" is a guarantee of scientific insulation, first-class workmanship and highest quality material in frame, cabinets, finish, trimmings and fittings. Every fountain is set up and operated in plant before shipment, and certified to buyer for maintenance of three separate, correct fountain temperatures.

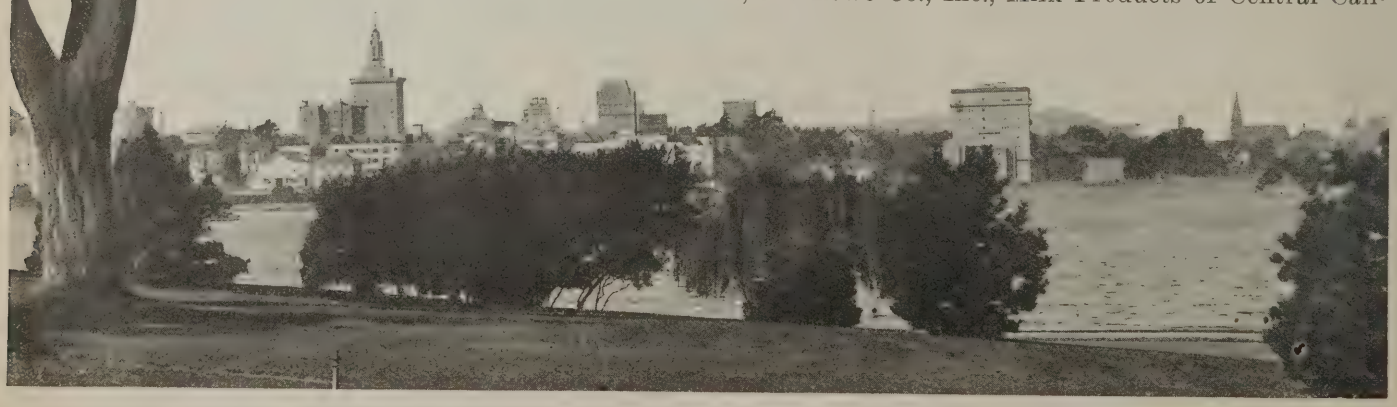
Oakland is Calling Pacific Ice Cream Men

All in Readiness for Great Joint Convention and Show, December 10, 11 and 12

STEPS have been taken for what is expected to be the greatest ice cream event in the history of the Pacific Coast. Word comes from Oakland that all is in readiness for Pacific Slope Dairy Show, to be held December 10 to 16, an important feature of which will be the great ice cream exhibit to be staged by the Supply Men of the Pacific Ice Cream Industry. The exhibit will be in connection with the first joint convention of ice cream manufacturers ever held on the coast.

The California and Southwestern States Ice Cream Manufacturers' Association and the Pacific Ice Cream Manufacturers' Association will merge their forces and draw together the biggest gathering of ice cream men ever held in one city west of the Rockies.

The Pacific Slope Dairy Show, now in its fourth year, has grown in size and scope until it can be compared only with the National Dairy Exposition at Milwaukee. The educational and machinery exhibits are a case in point. At the first show 9,000 feet of space was sufficient for this feature; this year 35,000 feet will be required.



Word comes from Bert H. Walker, secretary-treasurer of the Pacific Ice Cream Manufacturers' Association, from his office at Tacoma, Wash., that the ice cream men of the Northwest will turn out in great force. Officials of the California and Southwestern States' Association advise The Ice Cream Review that a record-breaking attendance is the outlook for their part of the program. Hotel Oakland will be convention headquarters. The sessions and shows will be held at the million dollar civic auditorium, which is in easy walking distance of the hotel. Officials of the National Association of Ice Cream Manufacturers have been invited to attend although President Hovey notified the gentlemen on the coast some time ago that it would be impossible for him to attend, other officers and directors are expected.

That this event will be a real eye-opener as to the magnitude of the allied dairy industries of the entire Pacific coast is the opinion of Bert Walker. "We want to tell the whole wide world there is going to be a convention, dairy show and exhibition of machinery and supplies that will be a revelation to those who attend."

The supply men have seen to it that their exposition shall dominate the Pacific Slope Dairy Show, which will be held at the Municipal Auditorium, Oakland, to coincide with the convention dates. They also have provided a number of entertainment features, dinners, theater parties and the like which will fully occupy the more leisurely moments of the convention delegates.

There has been an immense demand for commercial exhibitors' space this year and the manufacturer and supply man of the milk dealer trade is going to be on hand in great numbers. Many of them are coming a long way. The head of one of Oakland's leading hotels told Robert E. Jones, manager of the show, that sixty days in advance of the opening date he had booked seventy-five room reservations from East of the Rocky Mountains.

Some of the commercial exhibitors to make early space reservations in their section of the show include: Canavan Motors Company, Wood Brothers, Superior Metal Products Co., The J. B. Ford Co., Menasha Printing Co., York California Construction Co., International Harvester Co., General Laboratories, Fred C. Mathews Co., The 400 Products Co., Golden States Milk Products Co., Jordan Hill Co., George W. Prising Co., Inc., De Lavan Pacific Co., Sealright Co., Premier Machinery Co., Joe Lowe Co., Inc., Milk Products of Central Cali-

Manufacturers of Northwest and Southwest to Meet Jointly

Beautiful Oakland Civic Auditorium will be Scene of Ice Cream Exhibits, which will feature Pacific Dairy Show

fornia, R. A. Simpson Manufacturing Co., Illinois Pacific Glass Co., Lee, Greefkins Co., Tuttle Cheese Co., Creamery Package Co., M. Getz & Co., Inc., Jensen Creamery Machinery Co., Certified Dairies, The Pfaudler Co., Magnus Calif. Fruit Co., Taylor Instrument Co., Pacific Coast Glass Co., Red Rock Creamery, The Impruv Mix Co., Cyclops Iron Works, Pacific Dairy Machinery Co., W. L. Cochrane Co., O. J. Weber Co., The Nizer Corporation, Vulcan Iron Works, The Bristol Co., Kemper-Thomas Co., Russ Manufacturing Co., Detroit, Drayer and Hanson.

MEMBERS of the Pacific association have arranged to gather at Seattle and make the trip to Oakland together on the steamship Ruth Alexander, sailing on December 6, which will bring them to the convention city in ample time for the opening date. More than a dozen business and technical subjects are to be discussed at the three open joint sessions. Prof. M. Mortenson, head of the dairy division of the Iowa College of Agriculture, will discuss "Factors Responsible for Desired Texture in Ice Cream," which with the discussions is expected to occupy one entire afternoon. Other papers include "Are We Selling Ice Cream or Service?" by J. M. Bonner of the Miller Ice Cream Co., Oakland; "The Public Interest—Getting and Keeping It," A. A. Comey, Globe Ice Cream Co., Los Angeles; "Legislation, Present and Future," Dr. J. J. Frey, superintendent Dairy Industry Division, California State Department of Agriculture; "Ice Cream from the Retailers' Standpoint," R. C. Thompson, manager San Francisco Pig 'n Whistle Stores. These are but a few of the topics for papers and discussion, for many others are yet to be announced.

FOR the first time at any show, ice cream will be scored at the Pacific Slope Dairy Show under a standard approved by the American Dairy Science Association. Prof. Grover D. Turnbow, superintendent of dairy products at the show, has returned from Milwaukee, where he attended the sessions of the Dairy Science Association of which he is a member. He brought back with him the findings of the association which have been embodied in the following score card:

Items	% Allowed for perfect score
Flavor	45
Texture	25
Bacteria	20
Color	5
Package	5
Total	100

Entries containing less than 10 per cent or more than 14½ per cent of butterfat, or less than 34 per cent of total solids, shall be disqualified and no score shall be reported. Bacteria—For entry with a count of 50,000 or less per cubic centimeter, judges shall allow 20 points. They shall deduct one point for each 25,000 additional bacteria per cubic centimeter.

Prof. Mortenson will be the presiding judge in the ice cream scoring.

THE Oakland Civic Auditorium which will house the dairy show is one of the greatest exposition buildings in the West. It overlooks the beautiful park fringed banks of Lake Merritt with a vista of handsome homes just beyond. The hotel and business center of Oakland is a few short blocks away.

Visitors to the dairy show will find much to choose from among the delights of sightseeing. The famous University of California with its stately grounds and buildings and student enrollment of 25,000 is in Berkeley, four miles from the auditorium, and Mills College, a noted institution for women, is in Oakland. Just across the bay, thirty-five minutes' away by trolley and ferry, are the theaters and gay amusements of San Francisco.

Within the limits of Oakland are four golf courses, one of them municipally owned. A golf tournament is among the features included in the program of one or more of the conventions

The people of Oakland, acting through their chamber of commerce and luncheon clubs and

AMONG THE BRIGHTEST THINGS IN THE REVIEW ARE THE ADS—READ THEM.

Outline of Events of First Joint Convention

California and Southwestern States Ice Cream Manufacturers' Association and Pacific Ice Cream Manufacturers' Association

Complete Program Appears on Page 138

PROF. M. MORTENSEN, head of the dairy department of the Iowa College of Agriculture at Ames, Ia., and one of the porld's highest authorities on ice cream manufacturing, will be one of the principal speakers.

Prof. G. D. Turnbow has consented to accept an assignment on the program to talk upon "Economical Application of Electrical Energy."

Among the other papers and talks on the program, which is about completed, will be "Refrigeration for the Dealer," which will be given special attention by nationally-known authorities. The convention will have a complete report on everything that may happen about mechanical refrigeration at the national convention to be held this month in New Orleans.

"Legislation—Present and Future," is another very important subject that will be handled by Dr. J. J. Frey, chief, bureau of dairy control in California; "Constructive Merchandising" by K. L. Carver, general manager, Crescent Creamery Co., Los Angeles; "What a Dairy Council Can Do for the Ice Cream Industry" by Sam Greene; "What Does it Cost" by Ed Burt, Crystal Ice & Storage Co., Portland; "Competition in Business" by Carl Plaut, Oakland; "Efficient Delivery Service" by F. L. Sargent, National Ice Cream Co., San Francisco; "The Public Interest—Getting and Keeping It" by A. A. Comey, Globe Ice Cream Co., Los Angeles; "Are We Selling Ice Cream or Service?" by J. M. Bonner, Miller Ice Cream Co., Oakland; "Relation of Buyer and Seller" by J. C. Capron, Menasha Printing & Carton Co., Los Angeles; "Cost of Distribution" by George Duncan, Foster & Kleiser, San Francisco; and an address on national association affairs by an officer of the national association.

While the show is planned to cover the entire dairy industry in all its branches, the ice cream branch of the industry will dominate on account of the joint ice cream convention and the participation of the ice cream supplymen.

This will be the biggest ice cream show ever held in the West.

Most of the members of the Pacific association have planned to gather from all parts of the Pacific Northwest at Seattle on December 6 and make the trip to San Francisco by boat as a big family party.

(Continued on page 162)

SPEAKING OF OAKLAND—
Says Mr. Go to Mr. Slow

Says Mr. Go to Mr. Slow,
"Just give me your attention;
Our crowd has planned on something grand
For the joint ice cream convention."

Says Mr. Slow to Mr. Go,
"That listens good, but, say,
My business soon would go to ruin
Were I to be away."

Says Mr. Go to Mr. Slow,
"Let's write for reservations.
Come meet the boys—let's make a noise—
Forget these small vexations."

Says Mr. Slow to Mr. Go,
"I'll pass it up this year,
For creditors and competitors
Will keep me plugging here."

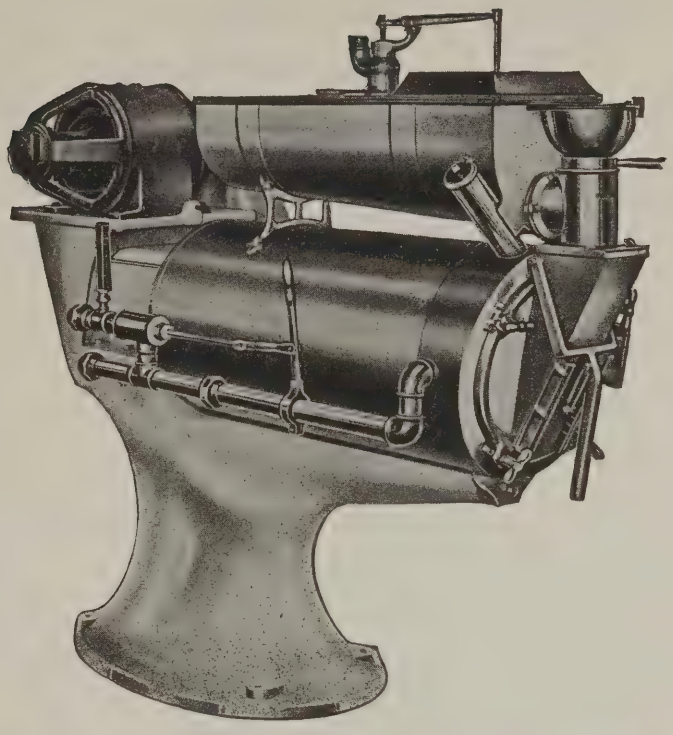
Says Mr. Go to Mr. Slow,
"To Oakland let's go hopping;
They want us all in that big hall
When things begin a-popping."

But Mr. Slow refused to go
And take a brief vacation,
While Go caught an idea or two
And brought back home the bacon.

ALLOW US TO PRESENT.

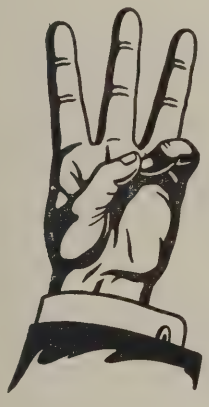
All Westerners who have looked over the photos of the "big chiefs" of the Pacific Ice Cream Manufacturers' Association, appearing on page 139, are well aware that a certain smiling countenance is absent from this group. The fact of the matter is too many "Walkers" in the cut cabinet is the reason for the likeness of H. J. Walker,

BERT H. WALKER,



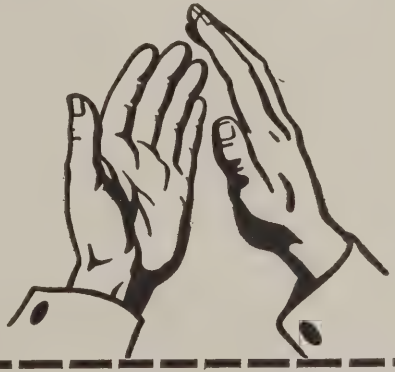
vice-president of the Russ Mfg. Co., appearing where we intended to present Bert H. Walker.

Mr. Walker's host of friends on the Pacific Coast would recognize him anywhere and anytime, but for the benefit of the few who might not have had the pleasure of meeting the secretary of the Pacific Association, allow us to present Bert H. Walker, widely known among ice cream men in all parts of the country, and held in highest esteem by his associates.



Mr. Walker has worked untiringly toward encouraging a record attendance at the joint convention, and if the show is the success that is anticipated, not a little credit will be due to his sincere co-operation and willingness to serve his association to the utmost.

SKILLFUL hands are constantly at work, building Emery Thompson horizontal and vertical freezers, packing and handling, unpacking and locating, turning on the power and turning in the mixture, pouring in flavors and drawing off the frozen cream—all at work to make merited profits.



EMERY THOMPSON

WE ARE thinking of three great divisions of area that contribute to Emery Thompson sales. Naturally, our own continent comes first. Scarcely a hamlet but Emery Thompson made ice cream is served. It's a **quality** product. From a few of the nation's largest factories using Emery Thompson horizontals to the small shop tucked away in a city with scarcely room for one vertical, we serve a wide domestic trade. Then as you sail the Atlantic the majority of passenger ships have their own private Emery Thompson ice cream freezers. And, to satisfy your taste as you enter some foreign country you will find Emery Thompson freezers making your favorite dessert! Recent large orders from abroad prompt us to suggest the **world wide** and growing distribution of the reliable Emery Thompson.

OVER 1000 managers are, in their minds at least, "clapping their hands" because of the profitable performance of Emery Thompson freezers—and we frequently get the repeat order encores!

Indiana Manufacturers to Meet This Month

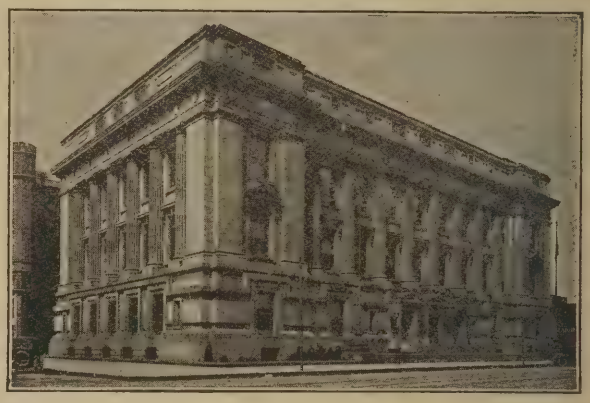
Large Attendance Expected at Annual Gathering

THE annual meeting of the Indiana Manufacturers of Dairy Products Association will be held at the Claypool Hotel, Indianapolis, on December 4. The butter division, ice cream division and market milk division will meet together in one general meeting. The day's program will be devoted to the discussion of problems confronting the industry and this will be followed

Claypool Hotel, Convention Headquarters.

by our annual banquet and dance. The evening's program will be in charge of the Hoosier Wild Cats.

The program in detail is as follows:



9:00 a. m.—Registration.
9:30 a. m.—Address—Dr. C. W. Larson, Chief of Dairy Bureau, Washington, D. C.
11:00 a. m.—Address—Prof. K. L. Hatch, University of Wisconsin, Madison, Wis.
12:15 p. m.—Luncheon.
1:30 p. m.—Address—Prof. W. P. Dearing, President, Oakland City College, Oakland City, Ind.
3:00 p. m.—General business session and election of officers of the general association and divisions.
6:30 p. m.—Annual Banquet and Dance.

HOOSIER hospitality has a particular significance in Indianapolis. Here at the center of population, where it is easiest for people to come to a meeting from all points in the country, they are accustomed to being hosts for conventions.

They have done it so often in Indianapolis that they are used to it and like it. Some of them like to be on reception committees; others really are specialists in making arrangements for the meeting places; a few of them have a particular knack for getting an unusual amount of publicity, not only in the Indianapolis papers, but in the papers all over the country, about a convention held in that city.

Indianapolis averages more than one meeting a day throughout the year. Ask any Shriner, any veteran of the Grand Army of the Republic, any member of the Purchasing Agents' Association of North America, or the National Association of Credit Men, the American Association of Optometrist or any one other of the score or more large organizations which have met in Indianapolis whether or not Indianapolis has both the facilities and the ability to handle the largest as well as the smallest meetings.

CHECK with such trade organizations as the American Society of Florists and the National Association of Steel Treaters as to the facilities in Indianapolis for staging a gigantic national exhibition.

Indianapolis City Hall.

And the city is particularly popular with dairy manufacturers, not only in Indiana but also in surrounding states. No doubt there will be many ice cream men present from Illinois, Iowa and Ohio.

Once a year the eyes of the entire automobile world turn to the Hoosier capital for the premier speed event, the international sweepstakes race. Sometimes as many as 150,000 people pour into this city from all parts of the world for this single day's event.

* * *

INDIANA ICE CREAM MANUFACTURERS MET LAST MONTH AT INDIANAPOLIS.

A meeting of the ice cream division of the Indiana Manufacturers of Dairy Products was held at Indianapolis on November 5, 1924. The meeting began with a luncheon at which 44 men were present. The meeting proper was called to order at 1:30 p. m. by W. R. Coffroth, chairman. T. Carpenter of the Louisville & Nashville Railroad spoke concerning the convention of the national association. I. L. Miller of the pure food and drug department spoke on "A Fat Standard for Ice Cream." Mr. Miller explained the standard as recommended by the American Pure Food & Drug Officials' Association and also spoke on the hearing at Washington. Mr. Miller said he favored a 10 per cent fat standard.

The remaining time was devoted to a round-table discussion of iceless cabinets. L. A. Forsyth of the Nizer Corporation and C. S. Wheeler of the Frigidaire company spoke concerning their respective cabinets. E. L. Lory of the Knight Soda Fountain Company spoke on the iceless fountain and told of work being done in that field.

The secretary read a letter from L. W. Roszell of Peoria, Ill., in which he set forth his opinions and the opinions of the manufacturers of Illinois concerning iceless cabinets. Mr. Roszell said ice cream manufacturers should not be called upon to furnish the cabinet as a

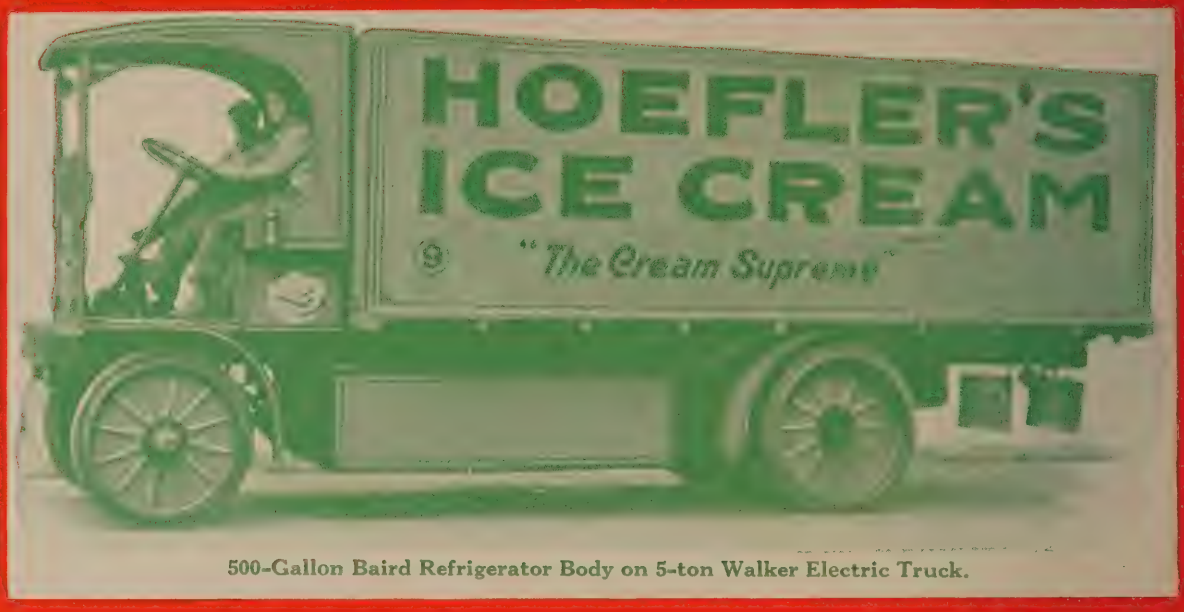
SAUGERTIES - NEW YORK

From FREEMAN DAIRY COMPANY, *Flint, Mich.*

MONTGOMERY-WASHBURN COMPANY,
Saugerties, N. Y.

Gentlemen: The twelve Jackets for the Flint Plant have arrived, and are very satisfactory. Will you please make the shipment to Lansing at once, if you have not already done so, as our plant needs these Jackets very much.

Inasmuch as we have found the Jackets that you sent us at our Flint Plant to be very satisfactory, we shall send you our order within a few days for all of the Jackets that we shall need.



Yours very truly,
FREEMAN DAIRY COMPANY,
By Homer H. Freeman.

From LAKE SHORE ICE CREAM CO., *Erie, Pa.*

MONTGOMERY-WASHBURN COMPANY,
Saugerties, N. Y.

Gentlemen: We have been using your Jackets for six or seven years, and have received good service from them. We are now shipping Ice Cream in Jackets, and the shipments leave us about six in the morning, and arrive at destination about three in the afternoon. We made shipment all during the hot weather, and did not have any complaints. Our customers have all been satisfied, as it has been the means of their saving considerable money in express charges. If you care to refer any of your prospects to us, we would be glad to answer their inquiries.

Very truly yours,
LAKE SHORE ICE CREAM COMPANY,
W. A. Dart, Secretary.

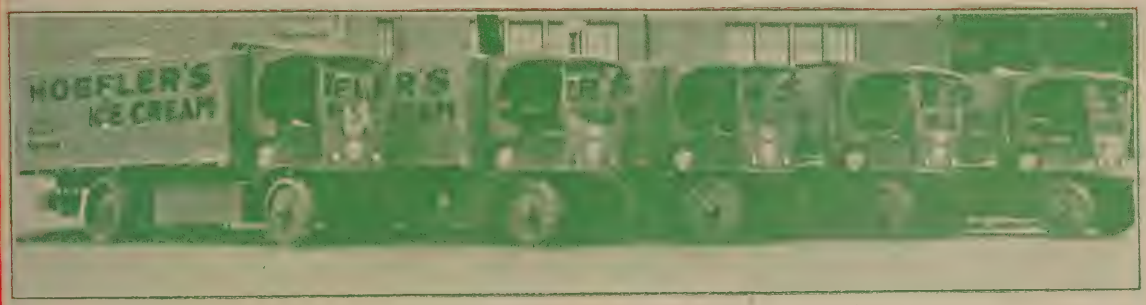
500-Gallon Baird Refrigerator Body on 5-ton Walker Electric Truck.

A Proved Refrigerator

BAIRD REFRIGERATOR BODIES will save you money. There could be no stronger proof of this fact than that hundreds of ice cream manufacturers, large and small, find it profitable to replace other bodies with Baird Refrigerator Bodies, and to continue to use Baird Refrigerator Bodies.

For instance, the Hoefler Ice Cream Company of Buffalo and its associated companies are now using thirty-four Baird Refrigerator Bodies. We will be glad to refer you to users of Baird Refrigerator Bodies in your particular vicinity of whom you can easily inquire by telephone. Their enthusiastic recommendations constitute the proof rather than the mere promise of satisfaction.

How the Baird Body Saves You Money



1 By maintaining a constant temperature of 3° below zero for 48 hours or more on one icing. Soft cream hardens in a Baird Refrigerator Body. Its perfect insulation cuts ice and salt consumption several thousand pounds a week.

2 By its light weight it effects great economies in gasoline, tires, and chassis depreciation; your truck is delivering more ice cream with one-half the body-weight. As every piece of wood and insulation is thoroughly waterproofed, no moisture is absorbed and the body always remains light.

3 By its ease of operation it adds 30% to the efficiency of the truck. Ice and salt are loaded from chutes. The body can be loaded in the afternoon for the next day's deliveries. All compartments being accessible from the sidewalk the operator serves more customers per day.

4 Durability and extra years of service are built into each Baird Refrigerator Body by every method known to modern engineering. Wearing surfaces and linings are of thick metal and easily replaced when worn. Welded seams permanently resist vibration and eliminate leaks.

5 Cleanliness. Absolutely no brine is dripped on the chassis, on the street, or in the garage.

500-Gallon Baird Refrigerator Bodies on 5-ton Walker Electric Trucks

Five of the thirty-four Baird Bodies now being used by the Hoefler Ice Cream Company of Buffalo, and associated companies.

Body — *Improved!*

FOR SERVING ICELESS CABINETS we build special Baird Refrigerator Bodies to carry ice cream only. But remember that every Baird Refrigerator Body of the ice-and-salt type can be easily and inexpensively adapted at any time to serve iceless cabinet routes. By installing one of our refrigerating units in what was formerly the ice compartment, and altering the ice door, this compartment is made into a second ice cream compartment, thus doubling the ice cream capacity of the body.

This alteration can be made at your garage and at very little expense. Thus this aspect of the iceless cabinet problem need not worry Baird users.

Improvements in Baird Refrigerator Bodies for 1925

IN the mechanical construction of Baird Refrigerator Bodies for 1925 several new and important improvements have been incorporated. Thicker sheet metal in the linings insures still greater endurance. The ice cream compartment is braced inside with an angle-iron frame, welded together. Hatch covers have been lightened. Waterproofing is by an improved method. Provision is made to dispose of sweating behind the linings.

Baird Refrigerator Bodies were always best, and are constantly beng made better. From this fact comes their wide and good repute, and our steadily increasing business.

Record Attendance Expected at Texas Convention

Officials Report Everything in Readiness for Meeting at Dallas this Month

TEXAS ice cream manufacturers are rearing to go. Members are eagerly looking forward to the annual convention of that association. The convention will be held in one of Texas' most popular cities, Dallas, December 3, 4 and 5. Reports of officials indicate a record attendance, and Secretary A. J. White of San Antonio believes the program will be one of the best ever prepared for a Texas convention. President W. M. Wortman, who was elected at the 1923 convention, has sent out from his place of business at Waco, a circular letter, in which he urges all the manufacturers of the Lone Star State to turn out in great force.

Jefferson Hotel, Dallas.

Rex Beach, the well-known author, in a recent novel staged in Texas, said that if a New Yorker were to reach Dallas at night on his first visit to this city, upon awakening in the morning he would have to rub his eyes to make sure he was not still within sight of Broadway.

It is a frequent habit of visitors to refer to Dallas as "the New York of the Southwest." They get this impression, they say, from the skyline with 100 buildings from 5 to 29 stories in height and outranked in impressiveness only by New York; also from the character of office buildings and hotels; also from the speed at which people walk, and the general traffic moves, and from the volume of business transacted and the "tempo" of business and industry.

In size, Dallas is well down the line, but "Give us time," Dallas people say. the 1900 federal census gave Dallas the rank of 86th among the cities of the nation; the 1910 census changed this to 58th, and in 1920 the federal census gave Dallas the rank of 42nd. If this rate of gain is maintained by Dallas and all larger cities, the 1930 census will place Dallas as the 31st city of the nation in population.

DALLAS is larger than the federal census would indicate. Its city limits were but 23 square miles, and this was all that was considered in population of 158,976 given out by the 1920 census. Greater Dallas, a radius of some six miles from the city hall, has a population of about 215,000, and it is growing at the rate of about 15,000 a year.

But even with 215,000, the business transacted by the city would indicate a far greater population. In 1922 Dallas ranked 15th among the jobbing centers of the nation, 24th in postal receipts, 16th in volume of parcel post business, 13th in volume of second-class mail matter, 21st in bank debits to individual accounts and 23d in bank clearings. In 1922 Dallas ranked 26th in volume of building permits among all cities of the United States, and for the four-year period ending Deccember 31, 1922, Dallas had some $62,000,000 worth of building permits to her credit, earning the rank of 18th in volume and second in per capita valuation for the four years.

COLORADO CONVENTION DATES ANNOUNCED.

The convention of the Colorado Association of Ice Cream Manufacturers will be held at Pueblo on January 27 and 28, 1925, according to announcement by Secretary E. L. Carlson of the C. G. Carlson Ice Cream Co., Denver. Earl B. Darrow of the Pueblo Ice Cream Co., Pueblo, is president of the association.

Congress Hotel will be convention headquarters, and tentative plans point to a very well attended convention. According to the secretary, many important topics will be discussed and he urges every member to be present.

The Colorado association, although the youngest association in the ice cream industry, has accomplished much real service in its effort to promote co-operation among the ice cream manufacturers of the state. The association was formed about a year ago and in the spring of this year a special meeting was held, at which time The Ice Cream Review was designated the official organ of that body.

Sky Line View of Dallas.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

A Christmas Greeting to the Ice Cream Trade

THE BOWEY BUILDING

Old 1924 will soon pass into the discard and we want to express our appreciation to our many loyal friends in the Ice Cream Trade for their generous patronage during the year just closing, and as the Holiday Season is approaching we take this opportunity to wish them a genuine, old-time joyful Christmas and a happy, prosperous New Year.

Oklahomans Ready for Lively Convention

Large Attendance Indicated, Officers Report, and Good Program Assured

REPORTS to officials indicate a large attendance for the annual convention of the Oklahoma Association of Ice Cream Manufacturers, which will be held at Tulsa December 8, 9 and 10. An interesting program has been announced by Secretary W. M. Hawk, who believes the 8th annual of the association will be the greatest one yet.

Manufacturers are particularly interested in Tulsa at this time. That city has just completed its seven and one-half million dollar Spavinaw water project, and since it already has been noted as one of the fastest growing cities in the United States, it should grow even faster now, the secretary believes. But in the face of this phenomenal growth, according to the secretary, "the Tulsa ice cream manufacturers have kept ahead of the enormous demand."

The convention will be featured by addresses by such prominent ice cream authorities as Prof. A. D. Burke and Prof. A. C. Baer of Oklahoma Agricultural and Mechanical College; Paul C. Mojonnier of Chicago; George W. Boedeker of Dallas, and others.

THE morning of December 8 will be taken up by registration. The annual convention preliminaries will be disposed of in the afternoon session of that day. J. S. Harris will make the response to the address of welcome by Wm. Holden, secretary of the Tulsa Chamber of Commerce. Among the topics to be descussed are "Iceless Cabinets," "Packaged Goods and Its Possibilities," and the "Advancement of the Ice Cream Business in the Past Few Years."

Entertainment features will be put on by the Oklahoma Wolfhounds. On December 9 there will be a noon luncheon by courtesy of the Tulsa ice cream manufacturers.

The program follows:

December 8, 1924.

10:00 a. m.—Registration.
Meeting of Executive Officers.

2:00 p. m.—Address of Welcome—Wm. Holden, Sec'y Tulsa Chamber of Commerce.
Response—J. S. Harris, Sapulpa.
President's Address—J. B. Porter, Tulsa.
Report Secretary-Treasurer—W. M. Hawk, Tulsa.
Report of Committees.
Appointment of Committees.

6:30 p. m.—Banquet and Entertainment—Courtesy—Oklahoma Association.

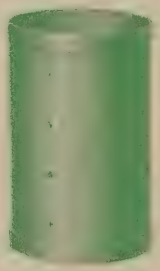
December 9, 1924.

10:00 a. m.—Adress—Ice Cream Manufacturing—Prof. A. D. Burke, A. & M. College.
Address—Packaged Goods and Its Possibilities—Paul C. Mojonnier, Chicago.
General Discussion.

2:00 p. m.—Advancement of Ice Cream Business in the Past Few Years and its Future Possibilities—Prof. A. C. Baer, A. & M. College.
Address—Iceless Cabinets—Geo. W. Boedecker, Dallas, Tex.
General Discussion.

4:00 p. m.—Program in Charge of Oklahoma Wolfhounds.

6:00 p. m.—Dinner and Entertainment — Courtesy Oklahoma Wolfhounds.



December 10, 1924.

10:00 a. m.—Business meeting—All members.
Noon Lunch—Courtesy Tulsa Ice Cream Manufacturers.

TULSA, Okla., the recognized oil capital of the world and the metropolis of the state, is situated in the northeastern part of Oklahoma at the junction of the old boundary line of the Osage, Cherokee and Creek Indian Nations, on the banks of the Arkansas River, the largest waterway and water-shed in the Southwest. The site of the city of Tulsa is beautiful and picturesque, the city being bisected by the Arkansas River and lying just south of the beautiful hills of Osage Country. It is built in the foothills of the Osage Range and in the valley of the Arkansas.

The elevation of Tulsa is 750 feet above sea level; the mean temperature is 60 degrees; the normal rainfall is 36 inches, distributed throughout the growing season of the year. The climate in the Tulsa trade territory is conductive to successful stock raising because of the mild winters.

Wall Super Service Steel Cylinders

Made to last longer. From one piece of 16 gauge galvanized steel, with only one seam, securely riveted. Other gauges to specification. Top and bottom have smooth one inch bands formed by rolling the metal tight back upon itself.

Made to specifications for replacements or for new cabinets. And both first cost and yearly cost are less than that of inferior cylinders made in local tinshops or in your own plant.

SINCE 1864

One in 1922 leads to a second in 1924

And now the Best Ice Cream Co. writes: "Find ABC Refrigerator Body more economical, and a great time saver."

The first ABC Refrigerator Delivery Truck Body bought by the Best Ice Cream Company, of Syracuse, N. Y., went into service in 1922. In the spring of 1924, increased demands for Best Ice Cream made necessary the purchase of an additional truck—and a second ABC Refrigerator Truck Body was mounted on it.

A few months later, Mr. F. J. Schupp, manager, wrote us:

"The ABC Refrigerator Branch Delivery Body purchased from you this year is giving very satisfactory service. We find it more economical in the transporting of cream than the old ice and salt packing, and a great time saver. Are able to deliver cream to our plants at Oswego, Fulton and Rome in perfect condition. Can load 600 gallons of bulk cream besides bricks and specialties such as Arctic Sweethearts and pies. The ABC Refrigerator Delivery Body purchased from you in 1922 is still working out very nicely."

Each year more and more ice cream manufacturers equip their delivery trucks with ABC Refrigerator Bodies—*and for a reason!*

Less ice and less salt are required to keep ice cream, milk and other perishable products at the exact temperature desired. All brine is retained in the tank and circulated again and again thru coils of heavy iron pipe. The waste of good, cold brine is eliminated by a one-piece seamless brine tank—an exclusive ABC feature.

ABC Refrigerator Truck Bodies are adaptable to any type or size of truck chassis from 1-ton to 7-ton capacity.

The Season's Greetings.

A Merry Christmas and a Happy New Year to All.

It's rather early in the month for such a salutation, we know, but in our organization we try to carry this spirit throughout the year, so perhaps it is not inappropriate now.

You who are buyers of the Bischoff Chocolate Coatings and Cocoa Powders, or have other business relations with us, know that our aim is to provide cheerful, friendly service to all—all the time.

Those of you who read our advertisements, but as yet are not acquainted with us personally, are also invited to share this season's greetings with us. Absorb that Christmas spirit. We have it in abundance not only in December but during every other month in the year.

Think.——Do.——Smile.——Be Cheerful.

ESTABLISHED 31 YEARS

ILLS OF YOUR DELIVERY TRUCKS.
By F. A. Whitten.

Dirt and carelessness are the greatest enemies of a truck engine. It will react to cleanliness and care with almost human instinct. Therefore, the truck owner who would get the best results from his engine will supply the truck with a good driver and see that the power plant is kept as clean as a hound's tooth.

Whenever anything is wrong with an engine, the power plant will make it known in an unmistakable manner. Its audible noises are its method of making known that all is not well. Some of these noises are readily recognizable, and the average driver knows at once what the difficulty is, and, frequently, how to cure it. If he cannot locate the trouble, take the engine to a "doctor" at once. Instant attention likely will save a much larger repair bill for the dairy manufacturer, and the expense of a lengthy layup of the truck.

Most engine ills are caused by dirt and improper lubrication. Good oil should be purchased from a reliable concern, and used regularly. If the engine is kept clean any leak in the lubricating system can be detected at once. The better motor trucks now on the market are equipped with air cleaners. These, by removing the dirt and grit from the air before it goes into the carburetor, greatly lengthen the life of an engine. Tests have shown that the greater part of the so-called carbon in cylinders is composed of silica, or road dust. These dirt particles hold the unburned atoms of oil to the walls of the cylinder and help carbon collect. They also enter the lubricating oil, scoring cylinders and wearing bearings.

One of the sources of engine trouble is due to worn cylinder walls. These wear most at the top, causing the cylinders to become tapered and, therefore, permitting oil and gas to leak past the piston rings. A lengthy, and costly, operation of re-boring and the use of oversized piston rings are required where the cylinder walls are cast en bloc.

On a few makes of trucks removable cylinders are used. In the latter case a new sleeve, or wall, can be quickly inserted when necessary. These sleeves also keep perfectly round longer as thy are of one thickness throughout their entire circumference and, when heated, expand in a circle. Bloc cast cylinders have varying thickness and get out of round.

Drivers should retard the spark whenever a fuel knock is heard and advance it when conditions no longer require it. Engines should not be allowed to idle for long periods. The small trouble of starting the motor will be more than repaid by better engine performance. Use air cleaners and keep the engine clean. This latter is most important and can be accomplished by wiping off the engine daily with a clean rag, a few moments' time that will pay dividends.

Georgians Meet at Augusta This Month

Members are Looking Forward to Lively Convention

MEMBERS of the Georgia Ice Cream Manufacturers' Association are planning to follow up the highly successful Southern convention with a record Georgia convention. The ice cream manufacturers of the South's Empire State have been aggressive in the affairs of the Southern association for some years, having on many occasions produced presidents and other officials for that body.

But Georgians claim credit for their own association work. The record of the Georgia association is an enviable one in every way. It has done much to promote the best in business practices in its ice cream industry.

The Georgia Ice Cream Manufacturers' Association in 1922 succeeded the Tri-State Association of Ice Cream Manufacturers, composed of Georgia, Alabama and South Carolina. M. J. Costa, past president of the Southern association, was head of the group body. J. D. Kinnett was elected president at the re-organization meeting in Macon that year. He was re-elected at the Athens meeting in 1923, together with Sam Marshall of Albany, secretary, and W. C. Ray of Columbus, vice-president.

The Georgians will meet this year in Augusta for the first time. The meeting will be held December 2. Members of the association who attend the Southern and national conventions—and that includes the majority—were talking up their convention at New Orleans in November. There was assurance that a lively convention was in prospect. The Richmond Hotel is convention headquarters.

NESTLED on the dividing line of the famous Piedmont Plateau and Atlantic Coastal Plain, with strong progressive banks, excellent farming territory, thrifty merchants, sundry manufacturing industries, second largest interior cotton market in the world, Augusta—among the oldest cities of the South—despite adverse financial, economic and agricultural conditions in recent years, is today a City Triumphant—radiating prosperity, exuberating happiness and reflecting abundance.

Population.

Augusta is the county seat of Richmond county, with a population, including suburbs, of 60,000.

Banks.

The 1920 government census recorded the city proper as containing 52,584 people. This shows an increase of 28 per cent over 1910. The United States census for 1920 shows over 90 per cent of this population to be native-born Americans.

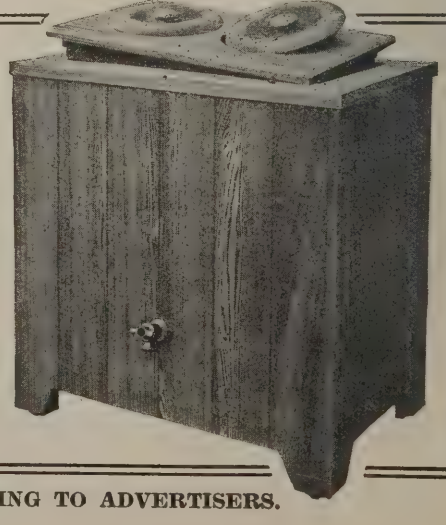
Banking institutions have on deposit more than $18,000,000, and resources exceeding $21,000,000. Debits for 1922 were $312,496,000, and those for 1923 were $370,154,000. Each succeeding year since 1920 has shown a steady advance in financial circles. Deposits and savings accounts reflect a marked upward trend this year as compared with previous years, concrete evidence of substantial recovery and a promise of a greater future than this city has ever experienced. Ability of Augusta's bankers is shown in the growth of the institutions they govern, and weathering recent storms in which many in the country crashed on the rocks.

Commercial Houses.

One of the city's greatest assets is that it is among the largest wholesale and distributing centers in the Southeast. Of the 3,800 business centers, more than 120 are wholesale and jobbing houses. Traveling salesmen representing the respective concerns work through a large and rich nearby territory.

AMONG the many manufacturing plants in the city are cotton mills, iron and steel works, candy factory, creameries, cotton waste mill, railroad shops, brick, tile and kaolin plants, lumber and wood-working plants, bedding factory, pottery and veneer plants, flour mills, oil mills, automobile tire and rubber plants, insecticide, fertilizer and stock feed plants (the largest east of Memphis), silk and paper mills, and other industries furnishing employment for its people.

There are in Augusta and immediately adjacent to it 11 cotton mills with an invested capital of $7,000,000, and an annual production valued at more than $25,000,000. These mills operate 385,000 spindles and consume over 110,000 bales of cotton annually. Also the largest dyeing and bleaching plant in the South.

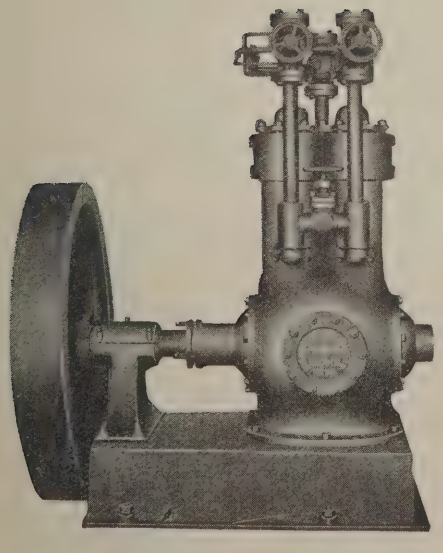


Six railroad line stapping the great ports of the South Atlantic and large commercial centers of the country with favorable freight rates into and out of Augusta and a steamboat service on the Savannah River places the city in an advantageous and unique position as compared with other inland cities. Ships on demurrage frequently accept freight from Augusta at rates that are lower than be secured at the ports. These many assets to industrial development have combined with great water power from the river to further the city' commercial interest.

Substantial Construction

THE VERTICAL CASING made of Gulf Cypress, backed by a strong frame, reinforced with galvanized iron, positively prevents warping and splitting. BROOKS CABINETS will give you long and continuous service, at the lowest possible cost per year.

1925 CATALOGUE ON REQUEST



BROOKS CABINET CO., NORFOLK, VA.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

Will you continue *to support this burden?*

Profitable manufacture of ice cream hinges on the efficiency, economy and sanitation of the refrigerating system.

The Ice Cream Manufacturer today who struggles along under the burden of the old style ice and salt methods is courting disaster. Operating costs and losses will crush him in the end.

The great expense of ice-and-salt make its use prohibitive. It is unsanitary and mussy. It is not dependable. "Soft Cream" must be re-hardened at extra cost and in that process the quality must be sacrificed. From every angle ice and salt prove unsatisfactory and unprofitable.

Contrast these disadvantages and losses with the operation of Baker System Refrigeration.

Your production costs can be reduced from one-quarter to one-half, depending upon your present cost for ice and the price of electric current in your town. Your operators can have absolute control of the correct temperatures at all times—to freeze and harden any mix. You can have a clean, dry, sanitary plant that is both a sales stimulant to the public and an efficiency stimulant to the employees. Whether your plant is large or small, Baker System Refrigeration will put greater ***certainty*** into your business—which in reality is greater ***profit***.

Baker System Refrigeration aids the ice cream industry. But, a business man wants proof! We have it for you in our special bulletin "Dependable Refrigeration for Ice Cream Plants". Full of facts, illustrations and drawings. It is yours for the asking and no obligation whatever. Write for Bulletin 65 today.

Baker System Refrigeration

BAKER ICE MACHINE COMPANY, Omaha, Nebr.

Topeka will be Scene of Annual Convention

Officials Anticipate Record Convention December 16, 17 and 18

KANSAS association invites all manufacturers to their annual session. The Kansas Association of Ice Cream Manufacturers' annual convention will be held at the new Hotel Kansas, Topeka, Kans., December 16-17-18. Officials say they are now sure of one of the best sessions in the life of the organization. They are assured of the best hotel service possible by one of the best hotels in one of the best cities in Kansas, "the best

OFFICERS OF THE KANSAS ASSOCIATION OF ICE CREAM MANUFACTURERS.
W. H. Hammond, president; J. F. Crum, vice-president; B. T. Perkins, secretary.

of all states," according to Secretary B. T. Perkins of Pittsburgh, Kans.

A strong program is being arranged, he says, consisting of round table discussion led by Prof. A. C. Baer of Oklahoma, N. E. Olsen of Kansas, and Geo. J. Chapman of Missouri. A half-day is to be given to discussion and arguments on mechanical cabinets. Nels Darling, of national reputation, has been secured for a business address and the after dinner address at the annual banquet.

The Jackrabbits' organization, which is the "pep" of the organization, and is appreciated by all manufacturers, is putting forth every effort in preparing their part toward making the convention a success. They have been given one complete evening to expend their energy in showing the manufacturers a jolly, good time.

THE Topeka manufacturers are sparing no expense or time in arranging the best possible entertainment that can be provided for the pleasure of the visitors in attendance during the time not in session, according to reports from the convention city.

The matter of entertaining the ladies is being given special attention. Committeemen promise them that if they will spend their full three days, they will be well repaid. There will be something new for all. It is the determination of both organizations, as well as all the committees and Topeka manufacturers, that no one shall go away feeling they do not wish for another convention at Topeka.

"We, therefore, extend an invitation to any and all who are interested in the manufacture of ice cream to be with us," declares Secretary Perkins. "Those acquainted with our methods know that in the state or out of the state, being a member or not a member makes no difference, we are glad to have you come and be with us."

IOWANS READY FOR CONVENTION.

Officials are ready for the opening of the annual convention of the Association of Ice Cream Manufacturers of Iowa, which will be held at Des Moines, December 9-10-11. Fort Des Moines Hotel will be convention headquarters. Secretary P. W. Crowley is expecting a large attendance. An interesting program has been prepared. The Poodle Dogs will give their usual whang-doodle in this convention. A number of entertainment plans are in their hands.

DAIRY COURSES OFFERED AT AMES.

The second term of the six-months' dairy course begins January 5, 1925, and closes March 20. A student desiring to enter the six-months' course must be at least 17 years of age, and must have satisfactorily completed the eighth grade of the public schools or its equivalent.

Students may enter the six-months' course in either fall or winter quarter. Men of considerable practical experience may not care to take more than three months' work. For such students we recommend the winter quarter.

The ten-day short course for experienced buttermakers, ice cream makers, and creamery managers is given ment in reference to this course will be made later.

For further information, address the Dairy Department, Iowa State College, Ames, Ia.

The Choicest Wood for Richmond Tubs

Only the choicest white cedar trees from this gigantic swamp of a hundred thousand acres are used in fashioning the Richmond White Cedar Tub. Only a wood with tremendous moisture resisting qualities could survive under conditions like these. It's this extraordinary quality of wood that makes Richmond White Cedar Tubs so economical.

Order a lot and you'll agree.

NORTH WALES PENNSYLVANIA

West Virginia Manufacturers to Meet at Clarksburg December 9 and 10

ICE cream manufacturers of West Virginia are making extensive preparations for their annual convention, which will be held December 9 and 10 in Clarksburg. Secretary C. F. Jamison advises The Ice Cream Review that officials have reasons to believe this will be one of the association's best conventions. He points out that the association has been holding regional conventions among the ice cream manufacturers of the state during the recess of the annual convention and have educated members to the importance of attending conventions and meetings of this character.

Hotel Waldo will be convention headquarters. J. H. Randolph of Parkersburg is president of the association and G. W. Shetler of Wheeling is vice-president. The directors are the above named officials and the following: S. B. Haffner, Elkins; J. J. Schmidt, Charleston; P. D. Woods, Bluefield; W. H. Bonner, Morgantown; J. T. Swager, Clarksburg, and E. E. Livesay, Lewisburg.

Clarksburg lays no flattering claims to greatness; its place in the state and nation is substantial and unquestioned, and with a unity of vision that has developed among its citizens, it will continue to be an attractive community for commerce and the building of homes.

The city is located on the main line of the Baltimore & Ohio Railroad, 276 miles east of Cincinnati and 275 miles west of Washington. Branch lines of this railroad radiate in all directions—the West Virginia Short Line operating to Wheeling and points west, the West Virginia and Pittsburgh branch to Richwood, Charleston and points south, while the Monongahela Railroad branch gives direct connections to Pittsburgh and the north and west.

The Monongahela West Penn Public Service Company also operates a passenger and package-freight service over 65 miles of interurban lines to Fairmont, Weston and intermediate points, with its principal terminal at Clarksburg.

The main north and south and east and west improved state highways intersect at Clarksburg.

From a population of 9,210 in 1910, Clarksburg has grown to 27,869 in 1920, an increase of 202.9 per cent. Considering one or two outlying suburbs, it is estimated that there are 33,000 people residing within what is known as the local street car first zone.

KENTUCKY MAKERS TO MEET IN PADUCAH.

Annual Meeting of the Dairy Products Association of Kentucky to be Held on Tuesday, December 9, 1924.

All aboard for Paducah! That beautiful little Kentucky city will play host to the dairy products manufacturers of the "Blue Grass State" when they meet in annual convention early this month. All who know the good people of that section know that the right hand of fellowship will be working overtime and that everybody will enjoy a most profitable and enjoyable day.

According to a letter received from General Secretary Ball the forenoon will be spent in visiting the points of interest in and around Paducah and following lunch, a general meeting will be held at which time J. W. Pirtle of the Bureau of Agricultural Economics, United States Department of Agriculture, has been invited to address those present.

After the adjournment of the general meeting, each of the three auxiliary divisions will convene for discussion of their peculiar problems.

A meeting of the board of directors will conclude the entire program.

The evening will be spent at one of the local theaters, and the party will then leave Paducah on a mid-night train. The Illinois Central Railroad will provide a special Pullman, leaving Louisville on the evening of the 8th, and returning on the morning of the 10th, which will take care of the Cincinnati, Lexington and Louisville representatives.

Our Kentucky folks cordially invite their friends in other states to join them.

ARKANSAS MANUFACTURERS PREPARE FOR CONVENTION.

The annual convention of the Arkansas Ice Cream Manufacturers' Association will be held at Little Rock, Ark., January 6 and 7, according to recent announcement by Secretary Charles Hooberry.

Hotel Marion will be convention headquarters, and according to officials, this will be the biggest and most important gathering in the history of the Arkansas association. The secretary, in a communication to all members, stresses the importance of this event and advises that no member "can afford to miss it."

Officers of the Arkansas association are as follows: R. L. Hargrove, Texarkana, president; G. A. Meyer, Stuttgart, vice-president; and Charles Hooberry, Pine Bluff, secretary and treasurer.

CRANE ICE CREAM COMPANY

23rd AND LOCUST STREETS

PHILADELPHIA

June 5, 1924.

Lathrop Paulson Company,
2459 W. 48th St.,
Chicago, Ill.

Gentlemen:-

A week ago we installed the new LP hydraulic ice cream can washer in our plant and have since used it daily. This can washer has fulfilled all our expectations.

It is easy to operate and the material is of the best quality. It delivers an absolutely clean and dry can and lid. Since we started using this can washer not a single can has been returned from the filling room. Also we have operated it at a 600 per hour speed.

We are not afraid to recommend this can washer very highly.

Very truly yours,
CRANE ICE CREAM COMPANY.
Production Manager.

AL/CL

L.-P.

ICE CREAM

Can Washer and Drier

Fast, Efficient and Fool Proof.

Washes All Sizes of Cans and Covers from 20 qts. Down to 4 qts. Small Cans May Be Washed Together with Larger Ones Increasing Capacity to 1200 per Hour.

Cans Are Fed in and Delivered at the Same End of Machine.

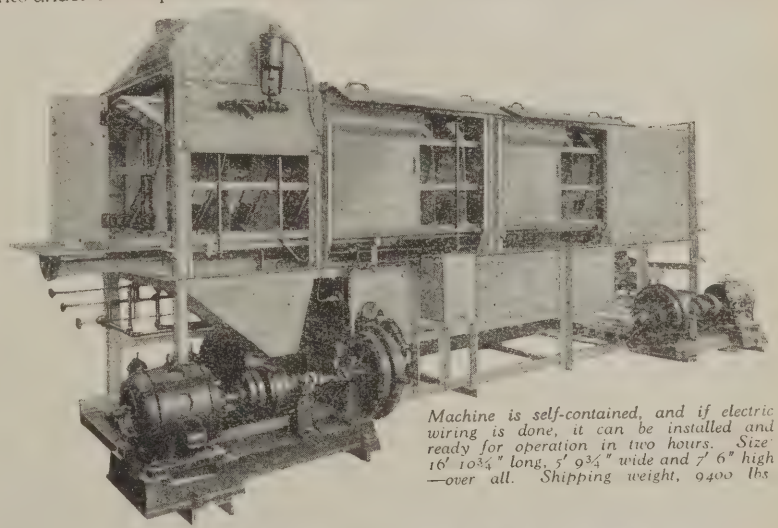
This machine embodies many of the L. P. features of efficiency, simplicity and durability which characterize L.-P. equipment.

600 Cans and Covers or Brick Pans Per Hour

Absolutely Clean, Sterile and Dry

THIS machine has two speeds—600 and 300 per hour. At the 600 speed it will efficiently wash, sterilize and dry all ordinary city and shipping cans, and at the 300 speed it cleans, sterilizes and dries the dirtiest of cans. Handled at 600 per hour, cans, brick pans and covers come from the machine **absolutely clean, sterile and dry.** Cans are washed on outside as well, freeing the cans, lids, pans and covers from brine. This machine eliminates the necessity of washing cans and covers separately. Cans which have been stored and coated with oil do not have to be brush washed. They come out ready for service, or may be piled in storage racks without danger of rust. The machine will also handle brick tanks up to 12-qt. size.

Each Can Receives 17 Distinct and Intensive Treatments



All cans are placed in machine upright. They are first thoroughly rinsed with preliminary tempered water, which thoroughly flushes out the cans, freeing them from refuse. This rinse water is caught in a separate tank and carried away. They are next washed inside and out with six separate intense soda solution treatments under 40 lbs. pressure; they are then entirely freed from soda and thoroughly drained before receiving six clear hot water washes, which are followed by scalding hot unused water rinse. Next comes the steam, inside and out, thoroughly sterilizing the cans, lids, pans and covers. They then pass over two hot air jets (the same as are used on all L.-P. Can Washers) and are delivered absolutely dry and ready for immediate service.

Only two men are required to operate the machine at maximum speed, and one man can handle the work efficiently at the 300 speed.

There are two powerful pumps operated by 10 h.p. and 7½ h.p. motors in separate units. No other power required.

The machine is sturdily constructed and heavily galvanized. Temperatures are thermostatically controlled. Soda solution is automatically controlled by L.-P. patent Soda Regulator.

This machine has passed its experimental stage. It has stood the most rigid tests in actual operation, and is sold on a results-guaranteed basis. Write for full information and names of users.

Machine is self-contained, and if electric wiring is done, it can be installed and ready for operation in two hours. Size 16′ 10¾″ long, 5′ 9¾″ wide and 7′ 6″ high —over all. Shipping weight, 9400 lbs

And a Little Child Shall Lead Them

Edith Ashcroft, Fourteen Years Old, Kingston, Who Selected the National Ice Cream Slogan, Believes in Ice Cream and Her Slogan

WELL, look who's here! Used to surprises, are you? That's fine, for in that case you will be able to stand up under this blow. Got a good grip on yourself? All right, sit steady, here goes: Absolutely the very best story in connection with the slogan campaign is the story of the young lady who thought up the winning slogan. You remember that attractive slogan as described in the November issue of The Ice Cream Review, "Serve it—and you please all." Many of use at that time were wondering what smart person thought up this slogan. We all knew, in a vague way, that it was a certain lady living in Canada. That was a surprise enough in itself to know that someone living in Canada should be the one to tell American ice cream manufacturers how to advertise their products. But the real surprise is the young lady herself.

MISS EDITH ASHCROFT.

Here she is! Miss Edith Ashcroft, fourteen years old, "at the top of her class at the Collegiate, and as bright as a new dollar." At least, that is the information we gather from some person connected with the Ashcroft family, who answered The Ice Cream Review's letter inquiring about Miss Ashcroft. Miss Ashcroft is the daughter of Dr. Robert Garside Ashcroft and Dr. Edna Earle Ashcroft of Kingston, Ontario. Has a sort of intellectual family sound, hasn't it? Well, we certainly can believe there is something intellectual about the family, all right.

IT WILL be recalled that in the November issue of The Ice Cream Review it was stated that Miss Ashcroft had won two other prizes offered for slogans. The other prizes were offered by the Gainsborough Hair Net people and the Monarch Coffee Co. These prizes were won before she was 14 years old. The photograph shown here is a recent one. Study it. But for goodness sake, don't let it fall in the hands of any of the college professors, Philadelphia lawyers, learned psychologists, cross-word puzzle experts, Martian scientists, students of revolution, doctors of law, mah jong experts, etc., for everyone of them would feel like walking out behind a barn and kicking himself in the slats, biting himself in the arm and barking like a dog.

The situation is simply this: The National Association of Ice Cream Manufacturers went out after a slogan. They advertised in the leading publications of the land. They scoured this entire continent, going to every hamlet in America, looking for the slogan they could use in their business. They got a suggested slogan from a person in Canada. That slogan wins. The winner is a 14-year-old girl. It is the third time she has won a prize of this kind.

SO IT is, gentlemen of the ice cream industry, whatever campaign is conducted in connection with the promotion of ice cream on a national scale, we cannot get around the fact that a little child shall lead us, a little child 14 years old, at the top of her class, bright as a dollar, and no respector of persons, doctors of philosophy, college professors, mah jong experts, or what not.

By the way, here is what the young lady herself had to say about her thoughts in connection with the slogan—extremely interesting reading, you will agree:

204 King St., Kingston, Ont., Nov. 1, 1924.

Mr. Goins:

In reply to your question, as to how I arrived at my slogan: "Serve It—And You Please All," I felt, at first, that it would be impossible to convey, in six words, even a small part of the desired message, viz.: that ice cream was pure, wholesome, nourishing, delicious, good for everybody all the year 'round, etc.

After numerous attempts, I decided that a picture of an attractive looking plate of ice cream, with a six-word sentence indicating, indirectly, the merits of the article and suggesting its use, would be the best solution.

As I stated in my 25-word explanation of my slogan, any food or delicacy which pleases all MUST be pure, delicious and nourishing, and suitable to serve all the time. This is particularly true of ice cream.

In arriving at my slogan, I naturally thought of such appropriate and successful slogans as: "Save the surface and you save all" (with the paint brush); "Chases Dirt" (with the old Dutch woman); "His Master's Voice" (with the phonograph and the fox terrier).

My slogan, too, can be used by any member of the Association for any form of advertising—newspapers, magazines, posters, street cars, window displays, store cards, letterheads, envelopes, etc.

This is the third time I have been a prize-winner in na-

BELIEVES SLOGAN OF INESTIMABLE VALUE.

Will A. Schwindeler, chairman of the national advertising committee of the ice cream manufacturers' association, notifies The Ice Cream Review that he believes the slogan recently adopted will be of inestimable benefit to the advertising committee, "for we may be in a position to use this in a way that our membership will derive the most benefit in our advertising campaign."

"We feel that if such products as oranges, prunes, sauerkraut, bread, etc., are able to make such tremendous strides through a national advertising campaign, we, who have a far more pleasing product to sell, should be able to do at least one-third as well. Should we be able to do this, we would increase the consumption of ice cream at least two hundred million gallons per year, and this can be accomplished by educating the American public to eat one additional dish of ice cream each week."

Mr. Schwindeler's statement was issued before the national convention at New Orleans, and at that time, of course, he did not know just what the association would do toward instituting a national advertising campaign.

tional contests. I am a student in Kingston Collegiate Institute, am top of my class, and expect to enter Queen's University. My father and mother are osteopathic physicians, and we all believe in ice cream and in my slogan.

NOW, this story has a moral to it; it proves something. It proves that most of us don't know much about human beings. Just ignorant. The next time anybody wants to work up a slogan for any kind of a proposition, why bother about advertising in all the expensive national publications? Just write a letter to Miss Edith Ashcroft, 14 years old, "a very clever girl—top of her class at the collegiate, as bright as a new dollar."

Save your money. That's all.

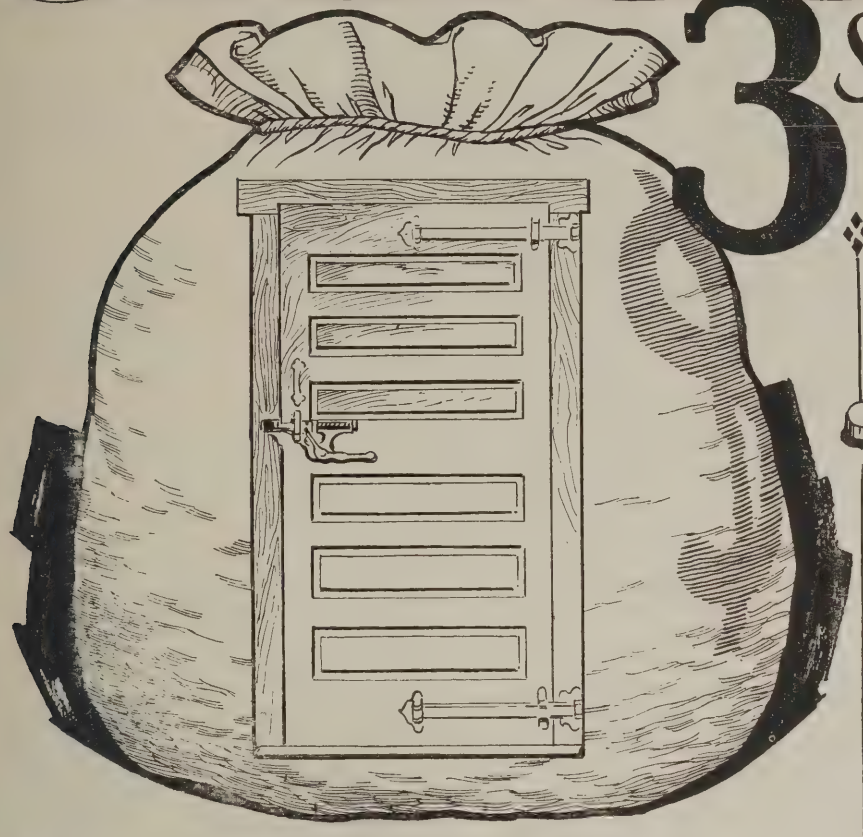
SALES MEETING HELD BY PENNSYLVANIA ORGANIZATION.

Salesmen, state supervisors and plant managers of the Smith & Clark Co., ice cream manufacturers of Hazleton, Pa., discussed plans for sales distribution of Smith ice cream for the coming season, at a convention held at the home offices late in October. The company in 1924 exceeded any other year's record in the entire history of the company, according to C. J. Smith, general sales manager of the Smith & Clark Co. This was made possible despite the fact that the past season was cool and rainy to a larger extent than in many years. He briefly outlined production, advertising and general sales plans for the ensuing year.

Co-operation with the dealers was touched upon by the speaker. He said that the success of the Smith & Clark So. is largely due to dealer co-operation. The company has made considerable growth in late years. Today it is one of the largest ice cream manufacturing concerns in the state of Pennsylvania. It maintains a fleet of 65 trucks.

Winter consumption is a matter that came in for much discussion at this convention. The growth of the company's business is largely attributed to quality ice cream, the speakers declared.

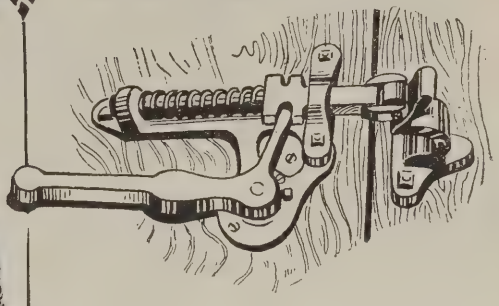
NEW PLANT.



The Riceland Ice Cream and Creamery Co., Crowley, La., recently began the construction of a new building on West Third St. and Avenue F. The company will erect a building a story and a half high, 50 by 70 feet. The extra height is given so the plant may be operated on the gravity principle.

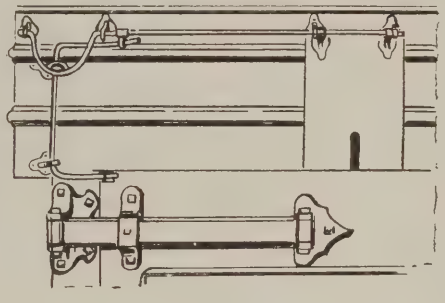
Among the new equipment to be purchased will be a twelve-ton refrigerating plant which will add much to the cleanliness of the new plant. As the type of construction had not yet been definitely decided upon, an estimate of the cost of the plant could not be ascertained.

The creamery and ice cream plant was started by Pat Farrell in 1923 and later was enlarged by the Riceland company after the Farrell interests were purchased by A. F. Horn, local ice manufacturer, and by employees of the Farrell plant.



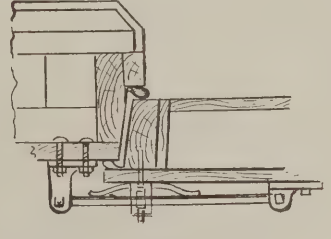
NEED ANY HELP ?

An advertisement placed in "The Review" Want Department will put you in touch with just the kind of help you are looking for. Give "The Review" a trial—it's the best way to get results.



3 Strong Points

Remember—YOUR PLANT IS ONLY AS GOOD AS ITS DOORS. And your doors are only as good as the hardware. Jamison Hardware is heavier, and better designed.



Automatic Self-Tightening Fastener

Tightens instantly when the door is slammed—the harder the slam the tighter it grips. No slackening in the latch—no chance for recoil or rebound. A patented Jamison feature.

Adjustable Spring Hinge

Practically indestructible because of great size and strength. Note the long reach. Adjustable spring pressure forces the door tight against the seals of contact. Only Jamison Doors have this hinge.

Multiple Seals of Contact

Jamison Doors are doubly sealed—two seals of contact all the way around. They are LEAK-PROOF and therefore—LOSS-PROOF.

Keep Out the Heat Keep *In* the *Profits*

THERE simply isn't room for heat and profits in your cooler rooms. One or the other must suffer. One or the other must get out and stay out. And with the cooler door rests the important decision of—**WHICH?**

For many years past, Jamison Cooler Doors have effectively kept heat **OUTSIDE** in the refrigeration plants of the largest packers in the world. The Jamison 3 **STRONG POINTS**, coupled with the unusual weight and strength of the doors themselves combine to give unequaled door efficiency—**ALL THE TIME.** Also important—it is a fact that **A JAMISON WILL OUTLAST ANY OTHER DOOR BY YEARS.**

There are reasons almost without number why Jamisons should be the **DOORS FOR YOU.** Our catalog presents them in a way that will interest you. Send us your name and you'll have a copy by return mail.

Feeding Kiddies Ice Cream at Home

Health Expert Proves that Ice Cream is Essential Daily Diet for Children, and Urges it as Home Diet

IT HAS been fairly well established that ice cream is a real health food on which kiddies will thrive, being particularly adapted to building up the constitution of sickly youngsters. Many different experts have made out a good case in favor of ice cream for the adults, but the kiddies' side of the matter has been promoted in earnest in recent months.

Experiments in infant feeding of ice cream have been recorded in past issues of The Ice Cream Review, all cases being extremely favorable to the ice cream industry's claim to help merit its products.

Comes now Dr. Harvey H. Weiss, health officer, who reports a very interesting experiment, in which ice cream was proved to be wholesome for children. The experiment was directed in co-operation with the chamber of commerce and the board of education of Cumberland, Md. This was carried out in connection with a general campaign for greater use of milk and milk products. This part of the campaign in nutritive tests was conducted in one of the schools, milk being used as a basis. This test resulted in a manner so satisfying that it was decided to use other milk products also, largely because there were a great many children who did not drink milk.

It is particularly in the case of children who do not like milk that ice cream serves a highly useful purpose, although it has been conclusively shown that kiddies who do enjoy milk can obtain the very best results from eating ice cream in addition to their regular supply of the lactic fluid from glasses.

WITH regard to the children who do not like milk, ice cream was chosen as the vehicle of experiment. Children for the first test were selected from the second grade of Columbia St. School, Cumberland, Md. There were 46 children—25 boys and 21 girls. Six to eight was the average age. Of this number, 19 were found to be undernourished children, after being weighed and measured. In other words, there were that many children who were more than three pounds below normal weight for their age and heighth. Ten of the children were boys and nine were girls.

One-fifth of a quart of ice cream was given to each child every day for nine consecutive weeks. Three o'clock in the afternoon was the time when the ice cream was served. The experimenters served plain vanilla ice cream throughout the test. At the end of the nine weeks, the children were weighed, with the following results:

One child gained four pounds.
Two children gained three and one-half pounds.
Three children gained two and one-half pounds.
Nineteen children gained two pounds.
Five children gained one and one-half pounds.
Ten children gained one pound.
One child's weight remained the same.

Two children did not attend regularly and, therefore, did not finish the test.

ATTENTION is called to the fact that a girl or boy, between the age of six and eight years, will normally gain about twelve ounces in nine weeks. Analyzing the figures of the test show that every child but one in this class room gained more weight than the normal gain for nine weeks. Indeed, these children gained sufficient weight in that period to bring them up to normal, out of the under-nourished class. In most cases the gain from eating ice cream was treble that of the normal gain for the same period.

Definite proof of this was furnished by the control class, which was composed of children of the same age who did not get ice cream during the nine weeks.

The weights of these children also were taken at the beginning, and after nine weeks none of them had gained more than one pound; the majority had gained less than one-half pound.

AS HIS conclusions in the case, Dr. Weiss states that the gain in weight as a result of the feeding of ice cream was sufficient to realize the importance of ice cream as a valuable addition to the diet of children. If one-fifth of a quart of ice cream fed five days a week will double the normal gain of a child, the same amount fed every day in the year will keep that child well nourished.

"What ice cream will do for a child it will also do for adults," Dr. Weiss states. "It is a food for all the people. The children enjoyed the ice cream and were always eager for three o'clock in the afternoon. Parents reported that the children from Friday to Monday were anxious to get back to school."

The principal reported that the second grade had the best attendance record of any class in the school. These facts show the children like ice cream and don't have to be coaxed to eat it.

Dr. Weiss states further that parents should not class ice cream with candy, as ice cream is not a luxury, it is a food. "Children should be encouraged to eat it at home," he says. "It helps build bone and muscle and makes more healthful children," he continued. "What can be done in a school with ice cream can be done at home."

Wheel Dried Gelatine

You can't Judge the Inside of a Cantaloupe nor a Sheet of Cork by the Outside

Novoid is the only corkboard that eliminates guesswork in buying. You don't have to wonder about its inside quality. For what **was** the center while baking is the outside when it reaches you, permitting inspecting without dissecting.

It is moulded and baked in sheets 24 inches wide by 4 inches thick, and then cut into sheets 12 inches wide by 2 inches thick—after baking. Thus a buzz saw is the X-Ray that reveals its inner condition. It enables you to **see** that the core is as well baked as the surface of

NOVOID CORKBOARD

With ordinary corkboard you can only **hope** it is properly baked inside. With Novoid you **see** and are sure.

Hence Novoid Corkboard provides indefinitely better insulation, and greatly outlives ordinary corkboard that is carelessly baked, likely to be "green" inside — quick to crumble and disintegrate.

It will pay you to get sample and booklet if you're contemplating cold storage construction or repairs. May we send them?

CORK IMPORT CORP.
345-349 West 40th Street
NEW YORK CITY
BRANCHES IN LARGE CITIES

THESE suggestions, which have received little attention in ice cream circles in the past, point the way to extremely promising lines of action toward getting ice cream in the home. Many leaders in the national association can see from this example a chance to educate parents toward encouraging children to eat more ice cream. And getting ice cream into the homes of children means more ice cream for every member of the family, adults alike. Parents will take readily to Dr. Weiss' declaration that ice cream helps to build bone and muscle and makes more healthful children.

TRUCKS SPEED UP LONG ISLAND RAILROAD SERVICE.

By successfully using motor trucks for the transfer of less-than-carload freight between the western terminals of its lines, the Long Island Railroad has, in the last few days, not only demonstrated the practicability of this much-discussed step, but has also indicated the benefits which will accrue to both shippers and the general public when nation-wide motorization of railroad freight terminals becomes a fact.

A 5-ton truck operated by the Motor Haulage Company of Brooklyn, under a contract with the railroad, is now making one round trip a day between the Long Island City, Bushwick Ave. and Flatbush Ave. freight terminals of the system. As five days were formerly taken for the transfer of goods by rail between these points, four days are thus saved to shippers and consumers through the present use of trucks.

Following the example of the Pennsylvania Railroad, the Long Island at the same time started carrying all local less-than-carload freight on its North Shore Division by motor truck. One 5-ton truck was first used, but another was found necessary after the first three days of operation. The two trucks are now making daily round trips over the Whitestone and Port Washington branches of this division.

One "Zone Station" has been established on each branch and to these the through freight trains carry full carloads. From these "Zone Stations" (at Flushing on the Whitestone branch, Bayside on the Port Washington branch) the trucks carry all package freight to stations located between them and the branch terminals. All slow-moving "peddler" freight trains are thus eliminated, greatly expediting the movement of the through freight.

The use of trucks in both the terminal and North Shore areas is being tried as an experiment for 90 days, and if the final results come up to present expectations the railroad will consider the extension of freight haulage by truck to other branches.

GLAD THANKSGIVING DAY.

We do not count the calories that in the turkey lie,
Nor figure up the vitamines in Grandma's pumpkin pie;
No balanced ration bothers us, to take our joy away,
When we gather round the table on the glad Thanksgiving Day!

We may be eating too much starch and not enough of fat,
The proteids may predominate, but what care we for that?
The divers dietetic laws we really can't obey,
When we gather round the table on the glad Thanksgiving Day!

Proportions may be incorrect in this most bounteous feast,
But yet the laws of nutriment don't bother us the least,
And we forget the food experts and all the things they say,
When we gather round the table on the glad Thanksgiving Day!

—Elsie Duncan Yale.

Co-operation Means Common Success

American Nation Founded Upon Principle of Organization and Co-operation

*By J. H. ORVIN**

GENTLEMEN, as a small man in the ice cream industry, I wish to thank you, particularly the larger manufacturers, for the privilege of expressing my views before this great assembly. I believe that it is the duty of the small manufacturer to express himself, as it is chiefly by our expressions that we are judged. I have chosen for my subject "Co-operation." I am intensely interested in that subject, as it is only through co-operation that we can hope to put over any subject of interest to the ice cream industry that might come up for discussion at these meetings.

During that critical period following the Revolutionary War, when our country was rocked to its very foundation time and again in its desperate struggle to establish a new republic, it seemed to many loyal patriots that a free government could not stand.

Shortly after Washington's administration, in the year 1798, about 126 years ago, a man who signed himself "A Laborer," wrote what he called "The Key of Liberty." This extraordinary document, for such it has been called by noted historians, did not secure publication in its own day, and has only recently been unearthed in an old farm house in the state of Massachusetts, where it has lain for more than a century.

Writing crudely, in the simplest of language, this earnest patriot sets forth the basic principles of a free government.

* Manager Orvin-Kent Ice Cream Co., Monroe, Ia.

And what does he say these basic principles are? Organization and co-operation—that without these two essentials a free government could not stand. But, to use his own expression, with co-operation of all the people, free government could and would "build such a strong and lasting foundation that the gates of hell could never prevail against it."

And as well as I can understand the workings of our government, and what it has required to make it what it is today, it seems to me that the remedy held forth by this early writer, even though it were never published and remained hidden away from the world, has been carried out in detail.

With the result that today our government stands out as the greatest in all the world.

Now, my friends, if it required co-operation to build our great government, even from its very foundation, AND IT DID, for there is not one of us but knows that if co-operation were to cease today, this great government, wonderful as it is, would crumble from the earth—

Does it not stand to reason that co-operation is one of the first essentials to any enterprise? It seems to me from what I know and have been able to gather with regard to the ice cream industry that co-operation is the only redemption for this great industry. There has been too much independent **operation**, and too little **co-operation** among its members in the past.

What is co-operation? By co-operation do we mean an annual get-together for the sole purpose of finding out all we can concerning our fellow manufacturers' plans for the future, so that we will be that much better prepared to work havoc against him? Or is it accepted by some of us as an excuse to get together, clasp each other around the neck, and laugh and cry away the sins and wrongs that we have done one and other in the past? Only to forget the convention and all of our promises the minute we get back home, on our old stamping ground, making a bee-line for the first corner drug store, to whisper a discount, a rebate, two tubs of cream for the price of one, or some other interesting piece of information into the dealer's delighted ear?

I am not advancing this as your definition of co-operation. Webster tells us that co-operation means "the act of working or operation together to one end."

If our co-operation goes no further than the convention hall, it will play a mighty small part in helping us

DIXIE ADVERTISING

will help you put over the biggest nickel proposition that ever came to you ~

THE big season for 5c DIXIES has come! While DIXIES are an ideal all-the-year-round proposition, they will make the *biggest* profit for you during the coming four or five months.

When your bulk gallonage drops, let DIXIES fill the breach.

We are not theorizing. DIXIES—their packing, freezing, and the best way to put them on the market, has been tested and tried with tremendous success.

DIXIE Advertising will do its share. In every community where the distribution will be sufficient to supply the demand, DIXIES will be introduced to the public by attractive and striking newspaper advertising. Copy is prepared and ready to release promptly. The amount of advertising in each city will be in proportion to territorial sales based upon the demand that can be expected.

DIXIE Advertising, because of the number of communities in which it will eventually appear, will be national in its effect. Every ice cream company which packs DIXIES will therefore benefit not only from the local advertising but through the transient consumers from other advertised sections. There is a further opportunity for you to tie up closely with DIXIE advertising by running space over your own signature in the same newspapers. This can be done at a moderate cost; we will be glad to supply suitable electrotypes.

DIXIES are now successfully sold in Washington, D. C.; Pittsburgh, Scranton, Wilkes-Barre, Pa.; Baltimore and Cumberland, Md.; Buffalo, N.Y.; Boston, Mass.

Ask us for the details of these DIXIE success stories!

Write for our Special Folder. It gives complete details of the almost limitless possibilities of the Big DIXIE Idea. ~ ~ ~ Ask for it now—and have our representative call on you.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

NEW ENGLAND ASSOCIATION OF ICE CREAM MANUFACTURERS.

The October meeting of the association, held at the American House, Boston, on October 22, was one of the best meetings held by the association.

The subject of Mechanically Refrigerated Cabinets is so important that President Platt invited all New England manufacturers to the meeting. Fifty-eight ice cream manufacturing concerns were represented by 96 men. One hundred and thirty-eight sat down to luncheon. A large number of manufacturers gathered the night before. There were two sessions of the meeting, one at 10 a. m., and the other at 2:30 p. m.

F. B. Ruoff, Nizer Corporation; W. D. McElhinny, Frigidaire Co.; J. E. O'Connell, Housing Co.; Mr. Palmer, Liquid Carbonic Co., and A. B. Mackay, John J. Grothe Co., explained their policies of sales, as well as the benefits derived from the use of mechanically refrigerated cabinets. They were asked questions as to costs of operation, installation, etc.

After reading the contracts in use in different parts of the country, contracts were drawn up by a committee and submitted to the meeting. It was voted to accept the report of the committee as progress and have the secretary send each member a copy of contract for suggestions and criticism.

Several manufacturers urged that competitors do not use the cabinets as a sales-getting device with other's customers where they had not taken care of their own customers. It has been found that this always leads to trouble.

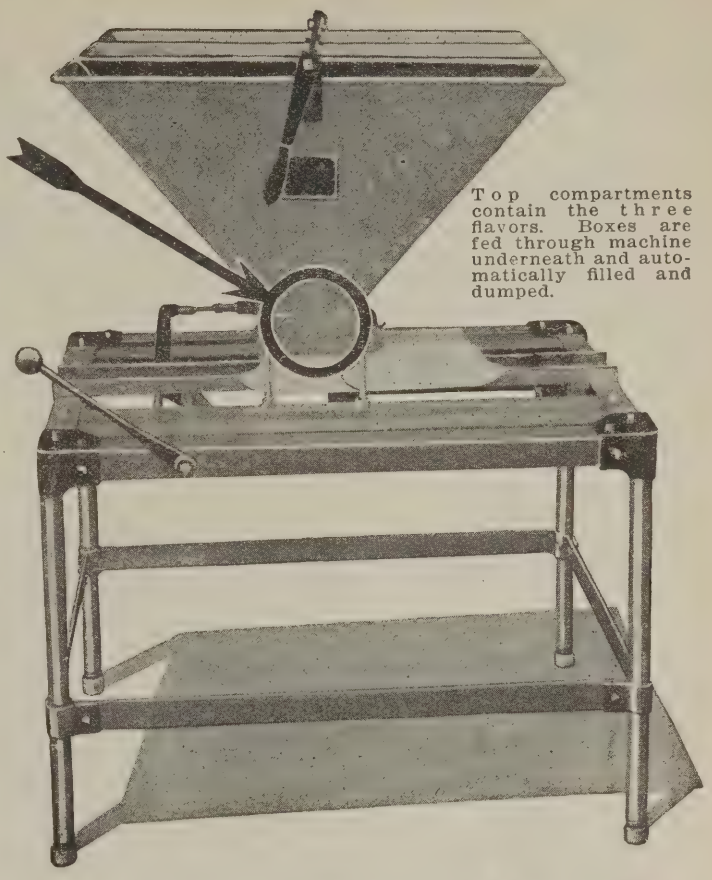
President Platt announced the following new members: Active—E. Greenwich Creamery, E. Greenwich, R. I. Associate—International Folding Paper Box Co., Brooklyn, N. Y.

A statement was made relative to Mr. Gurdy's illness, and it was voted to send him flowers and a letter of condolence. President Platt told some of his experiences on his recent trip to Europe.

It was announced that the 1925 annual meeting would be held at the Hotel Bond, Hartford, Conn., on January 21 and 22. Make your reservations now.

The secretary announced that one full day would be given on the national program at New Orleans to mechanically refrigerated cabinets, and urged members to attend. Special cars leave Boston Nov. 14.

Mr. Kenison stated that a plan for nationally advertising ice cream is to be considered, and urged members to get behind it when asked.



Those who missed this meeting certainly were the losers.

W. P. B. LOCKWOOD, Secretary.

PINELLAS DAIRY BUILDING HANDSOME PLANT.

The Pinellas Dairy Co. has virtually completed its $140,000 creamery and ice cream plant at St. Petersburg, Fla., of which H. Rifely is president and manager. Officials say the new structure is to be one of the most modern and best equipped plants of its kind in that section of the country. The plant is four stories high, built of reinforced concrete, and the actual construction will cost in the neighborhood of $90,000, officials say. The investment in equipment is around $50,000.

You can't afford to miss a single copy of The Ice Cream Review. Did you send in your renewal?

Top compartments contain the three flavors. Boxes are fed through machine underneath and automatically filled and dumped.

Increase Your Profits

BY INSTALLING a Roger's Automatic Ice Cream Brick Maker.

The Roger's machine operates at **four gallons a minute.** It puts ice cream in packages either solid or Neapolitan bricks. It performs its work with **far less trouble and expense** than solid bricks could be packed in the old way.

It produces a perfect three-layer brick at one operation; saves refrigeration, labor, and time; produces uniformly perfect bricks of better quality, and avoids handling.

It also supplies the public demand for "individuals"; separately wrapped — packed six, seven or eight to the quart in one, two, or three flavors. It fills a quart package at the same speed, whether with individuals or in bulk.

The Roger's Brick Maker means less labor and many extra sales in any ice cream plant —better investigate.

"The HOUSE with the GOODS and the SERVICE"

Department B

GOWING COMPANY Syracuse N.Y. U.S.A. GD DIETRICH INCORPORATED

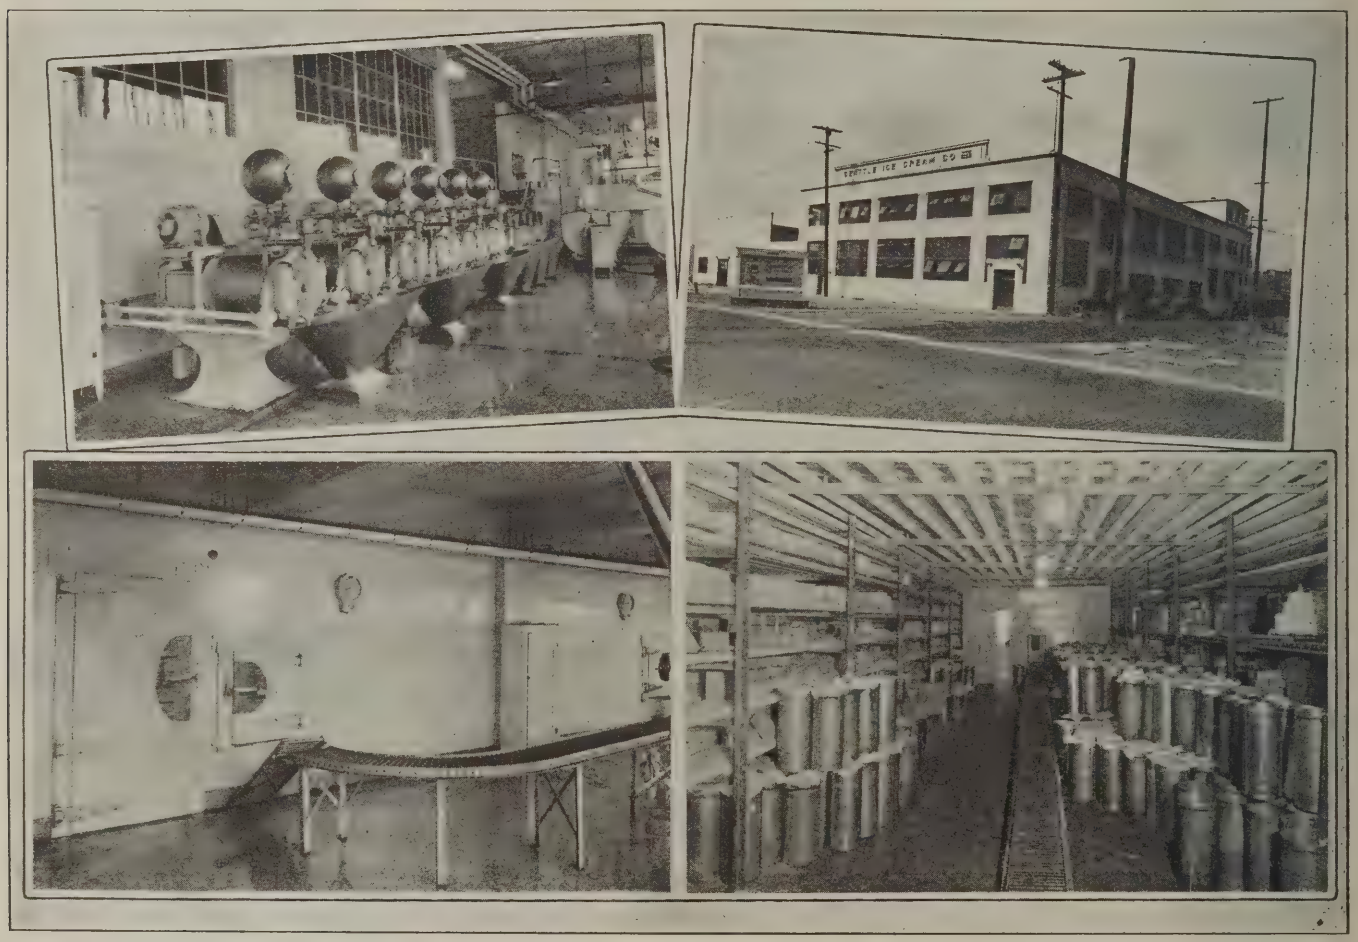
"Everything for the Handling of Milk and its Products"

Seattle Plant is a Northwestern Beauty Spot

"Safety First" is Password of Quality Adopted in Half-Million Dollar Plant of Seattle Ice Cream Co.

"PURITY PALACE" is the trade name applied to the magnificent plant of the Seattle Ice Cream Co., Seattle, Wash., which is one of the beauty spots of the ice cream industry in the Northwest, a section that has been rapidly developing along the most advanced lines in ice cream production in recent years. Seattle Ice Cream Co.'s half million dollar plant was completed last spring.

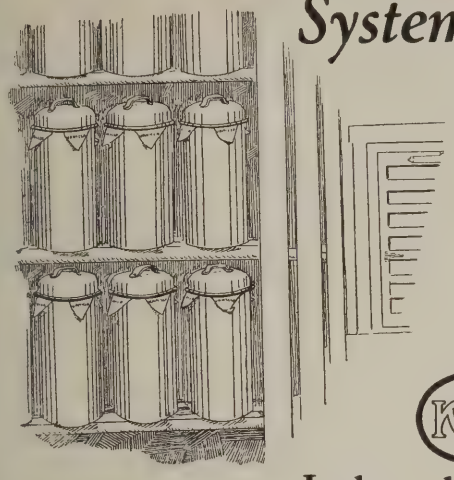
"Safety First" is the password adopted by the company which is prominently displayed in the corridors of this handsome plant. This trade cry is used by officials to impress upon the employees the importance of purity and sanitation in all phases of production. The company's slogan is "Your Surety of Purity." These slogans are mentioned here just to show the importance the company places upon quality ice cream, that officials believe to have been more than justified by success in the eight months' operation in the new plant.



This electrically operated plant has a capacity of 15,000 gallons of ice cream a day. The company has acquired a creamery at Montesano, where they test all cream supplies entering into its ice cream before shipping it to the Seattle plant.

The enthusiasm of Seattle people over this splendid plant was expressed in the words of a newspaper reporter who in writing about the plant said: "There is such a thing as being on guard as to the food that shall keep a city the healthiest city in the world! And here it is—just this vast building with all its wonder-exciting equipment. It is not only a sentinel of health, its every little and great part studied to be the last word in sanitation engineering, but it is also a great machine actually to make health."

SAMPLES of shipments are made in the receiving room after they arrive over a quarter of a mile on spur tracks. Approximately 10,000,000 quarts of milk are received in a year. The cans are shunted off in the vast cooling rooms for a rest after testing. A peep into the laboratory reveals an immaculate room with a most modern, scientific testing equipment. It is this laboratory that the officials call the "high court of quality." Next step finds a visitor facing a stupendous arroy of highly specialized machinery and vessels for weighing, pasteurizing, viscolizing, cooling and aging the mix.



The nine freezers are located on the mezzanine floor in a great while tiled room. Each freezer has a capacity of eighty quarts of ice cream in ten minutes. The ice cream travels by gravity from the freezer through hoppers to the floor below where it is packed into scrupulously sterilized cans and stored in the hardening rooms.

There is a separate department for brick ice cream. Three freezers are assigned to making bricks. There are more than ten miles of refrigerating pipe in the harden-

Why
You Will Want To Make
Mapleine Raisin Ice Cream

Mapleine Raisin Ice Cream is a profitable flavor that is bound to become popular. At least, all those who have tried this combination say it will be a winner. The soft, mellow delicacy of Mapleine's flavor, blending with the raisins—you'll want to try it!

How to Make it

To make 10 gallons of finished ice cream, soak 4 pounds Sunland Thompson's Seedless Raisins in water and bring to a boil just long enough to thoroughly soften the raisins. Then drain off water and add raisins to the ordinary mix after primary freezing. Do not chop, grind or crush raisins. Flavor with 2 ounces Mapleine.

Costs considerably less

From the cost standpoint, you will find it extremely advisable to manufacture and feature Mapleine Raisin Ice Cream in place of the expensive "fancies." Mapleine and Raisins for 10 gallons of ice cream cost only 45c—4½c a gallon. Very little compared with what your nut and crushed fruit flavors cost, is it not? Less even than chocolate and strawberry!

The public knows Mapleine

Another point to consider—in featuring Mapleine Raisin Ice Cream you simply cash in on the national demand for both Mapleine and raisins. Mapleine is advertised in most all the leading women's magazines and has been for years. It is almost as well known as vanilla and liked by the big majority. And — the whole country knows the food value of raisins, so what better flavor could you get behind than Mapleine Raisin Ice Cream?

Jobbers sell Mapleine or write us

MAPLEINE

ing rooms. Fourteen carloads of cork were used in lining the walls of the hardening rooms.

There is a special department for fancy ice cream. Officials expect this to be one of the "show places" of the plant eventually. Experts are on hand to produce ice cream for most any occasion.

THE company's engine room is its pride. Synchronous type of motors drive the ice engine units, furnishing a capacity of 200 tons of refrigerating a day. The ice making plant has a capacity of 70,000 tons of ice a day, and a capacity of the vat hall, 50 feet square, is greater than 1,000 tons of ice. The salt room often contains more than 500 tons of salt at one time. It is distributed about the plant by monorail electric crane, which picks up ten sacks of salt at one time and passes them to any place on the shipping platform.

The Seattle Ice Cream Co. was begun 25 years ago. At that time Seattle's population was around 43,000. The city was just a small port of little importance. This plant grew from a very small room in a local ice plant. The first ice cream was manufactured with the aid of a hand freezer. It was just as laboriously delivered. Today the company has a fleet of 24 automobile trucks. Some time later the company moved into a rented building. In 1910 the next move of its expansion was made and the Seattle Ice Cream Co. took up quarters in its own plant. Here the business outgrew its quarters, and the present new plant was made necessary. F. V. Fisher, president and general manager of the Seattle Ice Cream Co., is one of the most prominent men in the ice cream industry of the Northwest.

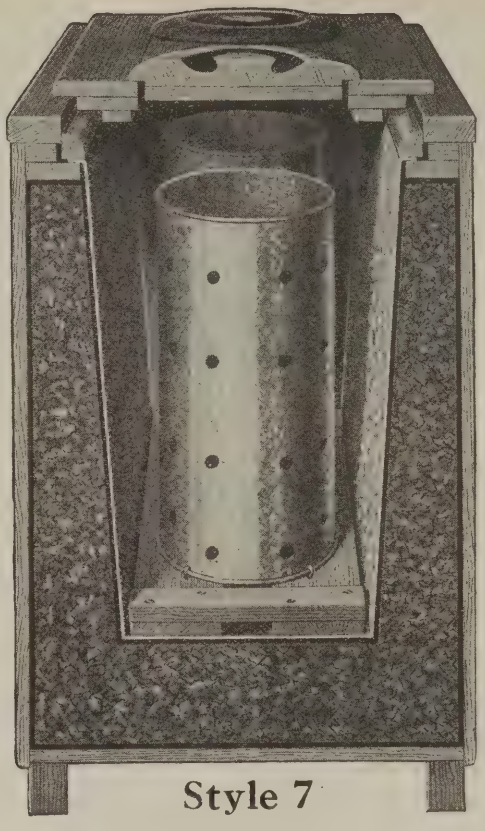
THE BUILDING OF A PRICE LIST FOR ICE CREAM.

(Continued from page 10)

lon is taken at .10, it is easy to add it in, and secure a price list with which to compare actual prices.

Monthly Gallons	Number of Cabinet Holes in Use. 1	2	3	4	5	6	8	10	12
30	1.49	1.73	1.96	....	....	....	....	....	....
60	....	1.34	1.46	1.58	1.70	....	....	....	....
120	....	....	1.22	1.27	1.33	1.39	1.51	1.62	....
200	....	....	1.12	1.15	1.19	1.22	1.29	1.36	1.43
300	....	....	....	....	1.12	1.14	1.19	1.23	1.28

The correctness of this price list is proportionate to the correctness of the assumptions entering into its calculations, but as the exact influence of each assumption is known, and as each of them can be verified with considerable accuracy, it would mean that the final result is worthy of considerable confidence. The advantage of such a logically constructed price list is that it parallels actual cost factors, and that it includes them all—making unnecessary any talk of service charge, and automatically encouraging the dealer to get along with as few cabinet holes as possible. In practice it would be necessary to work out the tabulation in greater detail, and perhaps to adjust it so that prices came out in even nickels for gallonages within certain limits, so as to avoid too many prices.



A few weeks ago Vagabond walked into a cafe on one of the side streets of New Orleans, run by an "Irish" friend of mine named Isaac Goldberg. I noticed a sign across the back end of the cafe—in flaming letters—"200 per cent American." I called the proprietor over to my table and asked him to explain, and he said:

"Vell, mine frient it's like dis: De Klu Klux Klan is one hundred per cent American and dey hates de Jews and de Negroes—and Me, Mine golly, I hates EVERYBODY."

WORLD'S LARGEST MANUFACTURERS OF ICE CREAM CABINETS

Advertising Importance Of Trucks

Value of your Motor Trucks should be capitalized to the limit

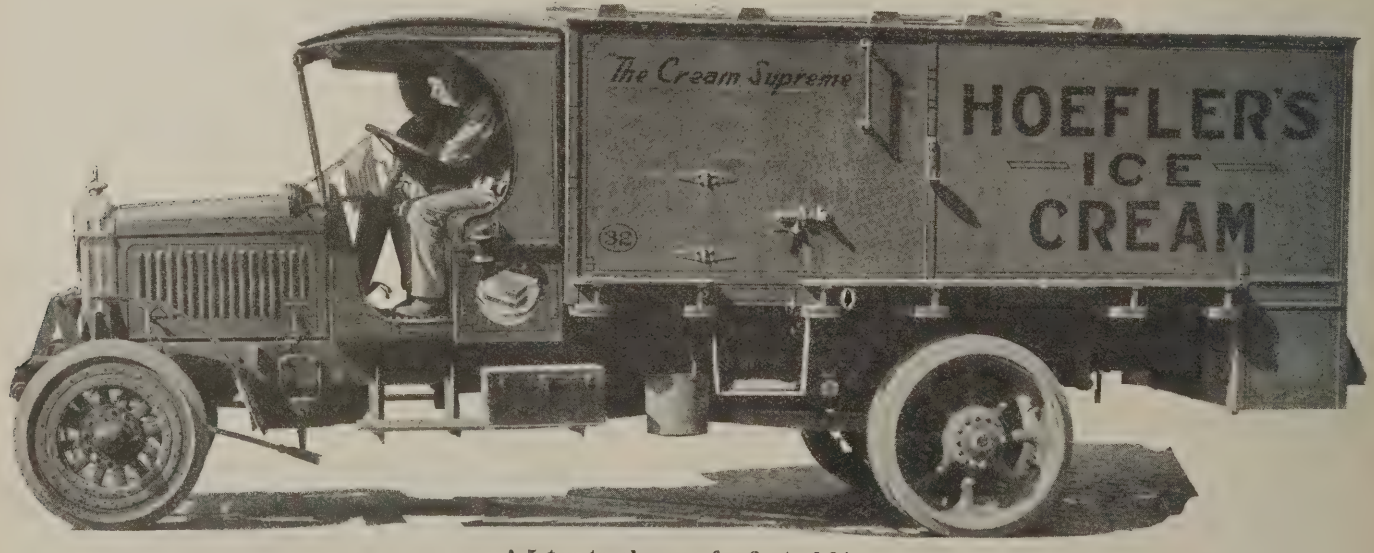
AUTHORITIES agree that in extending ice cream distribution, advertising plays a major part in widening territory and increasing sales.

In advertising ice cream, practically every applicable method is being used with varying degrees of success. Virtually everyone in the industry has tried newspaper

A 3½-ton truck in Pittsburgh, one of four.

advertising, roadside signs, dealer signs and fountain accessories, bill boards and what not.

However, one of the most effective advertising mediums that has great publicity value but which is often overlooked is the motor truck. Motor truck delivery has become standard practice almost universally, and from a straight utilitarian standpoint alone they have fully justified the large investment which they represent throughout the ice cream industry.



But, in addition to being an unusually economical means of delivery, the advertising value of the modern motor truck should be capitalized to the limit.

THE very nature of the motor truck and its duties virtualy makes it a traveling sign board, 20 odd feet long and 8 to 10 feet high. The size is, of course, multiplied by the number of trucks in the fleet and its advertising value is infinite as throughout their daily travels the trucks occupy space that could not be bought at any price.

Consequently, it is simply good business to give special and serious attention to body design, color scheme and cleanliness as these three factors separately and in combination radiate the prestige of the name and products your trucks carry.

It is in a sense another version of "the clothes make the man," as well built, high-grade truck equipment, attractively painted and kept clean reflects the factory methods of the ice cream manufacturer.

What has been done in this respect is shown in the accompanying illustrations showing a number of Atterbury trucks which are doing their full share in advertising quality ice cream and sanitary manufacturing methods. And now, while your delivery equipment is being overhauled or replaced, you will find it worth while to standardize on high-grade trucks, well finished in clean, attractive colors that will immediately associate your name and your products with supreme quality and absolute cleanliness.

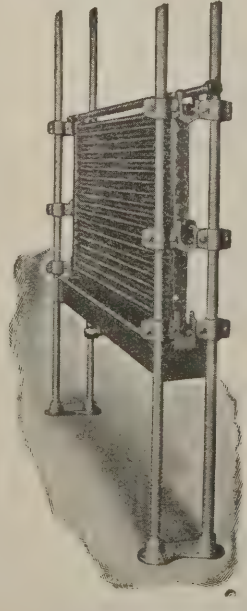
Efficiency and Simplicity Combined In Model "A-B" Plant

Anheuser-Busch Ice and Cold Storage Co. Remodels Old Buildings Into Remarkable Plant

"BUILD us a plant combining maximum efficiency with the utmost simplicity for the manufacture of a high-grade ice cream." This order, given by officials of Anheuser-Busch, Inc., was strictly followed in the designing and equipping of that company's ice cream plant in the Bronx.

Since prohibition the parent company, Anheuser-Busch, Inc., St. Louis, Mo., has been improving and enlarging its many subsidiary plants throughout the United States, converting many into ice making plants and cold storage warehouses. The company has large ice cream plants in New Orleans and Oklahoma City, and success at these points induced consideration for an ideal installation at the New York plant.

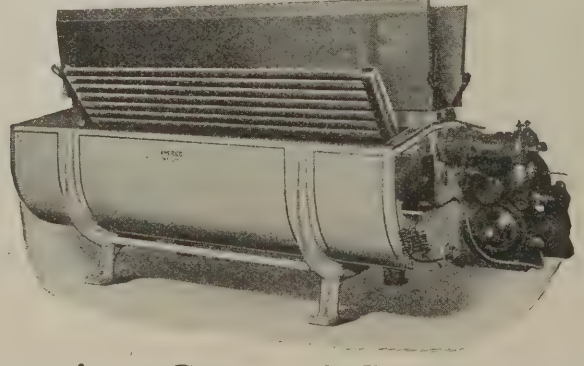
GUS. G. KINDERVATER.



The Anheuser-Busch policy of manufacturing quality products is typified in this modern ice cream plant. The equipment is most modern. The delivery system consists of a fleet of electric trucks with brine circulating truck bodies. The highly efficient sales organization, under the able direction of Gustav G. Kindervater, general manager of the company, fortifies the manufacturing department to meet any competition where quality product is made.

COURTLAND P. DAMPIER, well known in the ice cream industry, is the superintendent. Mr. Dampier has devoted a lifetime to the study and manufacture of ice cream. He was in charge of the Anheuser-Busch New Orleans ice cream plant, and previously was connected with a number of prominent manufacturers throughout the United States. The quality of the cream and success of the company is largely due to his able direction.

C. P. DAMPIER.



It was decided to remodel one of the present cold storage buildings at the Bronx branch, 979 Brook Ave. The choice was very fortunate in that the building, being five stories high, permitted the installation of a purely gravity system, thereby reducing the pumping or raising of dairy products to the minimum. The building used is approximately 45 ft. wide by 70 ft. long; the length facing Brook Ave. The entire Brook Ave. side was virtually torn down and new large units of steel sash installed. All floors were refinished, and wherever dairy products are handled the existing floor was thoroughly waterproofed, a cinder concrete fill laid down and finished with an inch of white marble highly

polished terrazzo. A 6-inch sanitary cove base is provided at walls and a similar cove at the curb. The floors were pitched 4 inches in every 10 ft. to Brayman type drains with brass frames and strainers and lead aprons.

This careful consideration of a usually neglected item has been enthusiastically endorsed by all who have seen the plant and especially appreciated by the employees when the daily cleaning-up time is due. The ample pitch and generous size drains permit the floors to be dried immediately regardless of the amount of water used in washing.

THE interior of the building carries out the spotless effect of the entire plant in its treatment of walls, ceilings and floors. Everything is spotless white except for a gray dado finished off by a wide black band. The tanks and all equipment are painted white and all piping is silvered. The whole scheme is suggestive of purity and sanitation, which, together with the highest of quality forms the policy of the company. The plant was designed for a 2,000-gallon per day output. By careful management and longer working hours this capacity can readily be increased to 5,000 gallons without the need of additional equipment. Only the highest grade and most modern equipment embodying all the latest features is used, making this probably one of the most economically operated plants in the country.

It has repeatedly been remarked by visitors competent to judge, that the amount of labor employed for the quantity of cream produced is probably the least they have ever seen in any plant.

In the design of the plant the original ideas of efficiency and economy of operations, as well as strict sanitation were carefully adhered to. All dairy products necessarily received on the first floor are dumped into a 100-gallon closed vertical glass-lined tank. Cream is 100-gallon glass-lined receiving tank and from there pumped up to several storage tanks on the fifth floor. The pumping apparatus consists of a sanitary milk pump connected to a 2-hp motor. This pump discharges the milk into a 2,000-gallon closed vertical glass-lined tank. Cream is pumped to a 1,000-gallon tank of the same type. Both tanks are brine jacketed, insulated with 2 inches of corkboard and covered with an all-welded steel housing. Agitation is by an impeller type agitator driven by a

STARTING from the storage tanks, the downward progress of each ingredient is directly perpendicular. As will be noted on the plans, all apparatus is placed in the north end of the building, one directly below the other, minimizing the amount of piping used and keeping all connections vertical. From the storage tanks the dairy products are piped directly to the pasteurizers, where all ingredients are added and pasteurized.

The pasteurizer, which extends through the fifth floor, is suspended from a Toledo scale. This arrangement permits all products to be weighed directly in the pasteurizer, therefore eliminating a weigh tank. All connections are necessarily made flexible at some point and the scale is carefully calibrated to take care of any drag there may be due to the various connections. A 500-gallon Pfaudler cylindrical pasteurizer is used jacketed and insulated the same as the storage tanks and provided with an agitator driven by a 2-horsepower motor.

From the pasteurizer the mix goes directly to the 400-gallon, 2-valved homogenizer, equipped with a 20-horsepower motor, where it is homogenized at a high pressure and discharged over a special covered flat tubular cooler, all nickel fitted and finished with a white vitrified enameled trough and legs. The cooler is both

Dartnell Cut Sales Costs $35,000 a Year

With Hooven Automatic Typewriters

It is now just a year since The Dartnell Corporation of Chicago dismantled a force of thirty salesmen which it employed in the sale of its service to sales executives, and put Hoovens on the job.

During the past year, with three Hooven Automatic Typewriters, Dartnell sales have increased forty per cent. Not only were more subscribers to the service secured during the twelve month period, but they were secured at a cost of $2.05 a subscriber as compared with a cost of $18.00 a subscriber under the old selling plan.

What Hoovens Are—and What They Can Do

You don't have to revolutionize your business to put Hoovens to work. You don't have to even hire an operator, because the Hooven is so simple that any bright telephone operator who is an accurate typist can learn how to write real personal typewritten letters—the same identical letters that your personal stenographer writes for you.

With Hoovens you can write thousands of genuine letters, with carbon copies that you can use to follow up; with the name of the man you are writing to and other special information written right into the letter at the same time the letter is written. A Hooven never tires. It never stays home. It never comes down late. It never slackens. It keeps on writing all day long, at the rate of from 100 to 300 individually typed letters a day.

Hoovens not only save you the salaries of from three to ten typists but they make it possible for you to systematically work carefully selected lists of prospects in a way that COMMANDS attention. A careful check of the returns between individually typed letters and process letters by a publishing house on magazine subscriptions shows that where the process letters pulled slightly less than two per cent returns, the Hooven pulled better than twelve per cent.

There are many ways that Hoovens might be used in your business to help salesmen; to cut sales costs; to develop inquiries; to work the small town account; to secure special information; to intensively work select lists of preferred buyers. It will cost you nothing, and place you under no obligation whatsoever, to let us draw up a Hooven plan for your business just as we drew it up for Dartnell.

Hoovens are Making Thousands of Dollars for Hundreds of Concerns—Perhaps They Can Do As Much for You

water and brine cooled and of a capacity of 7,200 pounds per hour.

The two 1,000-gallon mix aging tanks on the floor below immediately under the cooler, are also glass lined cylindrical Pfaudler tanks, brine jacketed, insulated and finished the same as the storage tanks on the fifth floor.

From the aging tanks the mix flows by gravity directly to the freezers on the floor below.

Much attention was given to the type of freezers and to the connections and equipment used. After careful consideration it was decided to install two 100-quart freezers for bulk cream, and three 40-quart freezers for packaged cream.

All freezers are direct connected to motors; the 100-quart freezers to 10-horsepower motors, and the 40-quart freezers to 3-horsepower motors. Both bulk freezers discharge into a double glass-lined insulated hopper, through a Monel metal spout to a special can-filling valve at which cans are filled and placed directly into the hardening rooms.

The three smaller freeezers discharge into individual glass lined insulated hoppers through Monel metal spouts directly into the brine jacketed hopper of the Mojonnier packaging machine.

A careful study made in the choice of equipment, method of installation and proper refrigeration used, together with the skill of the ice cream superintendent, C. P. Dampier, in blending and mixing the ingredients result in the remarkable achievement of making a batch of cream in from five to six minutes with brine temperature as eight degrees F.

On the floor with the freezers there is a refrigerated fruit storage room in which fruit is kept at a temperature of approximately 35 degrees F.

The filling room on the main floor is separated from the can washing room by a metal glass partition, as shown on the first floor plan. In this room are the Monel metal insulated spouts coming from the hoppers on the floor above. Three of these spouts feed the Mojonnier packaging machine and one of them, from the double hopper, feeds the special can filling valve.

The packaging machine has a capacity of from 900 to 1,200 packages per hour and is so arranged that it can be rolled aside and a table of suitable height placed under the spouts to fill either special brick moulds or bulk cream if necessary.

Due to the limited headroom and to the layout of the plant the hardening rooms were arranged with direct expansion pipe shelves operated as a flooded system. A hot gas line is connected up to the discharge header so that the rooms can be very readily defrosted when necessary. As will be noted on the floor plan, there is a vestibule and can-passing doors at the filling end, and a can-passing vestibule with a capacity of about 150 gallons of cream at the platform end of the hardening rooms.

This arrangement minimizes the loss of refrigeration due to the constant opening and closing of doors necessary in the daily routine of an ice cream plant. The walls, floors and ceilings of the hardening rooms are, of course, properly insulated with corkboard as is also the fruit storage room on the floor above. All cork insulation work was done by the Armstrong Cork & Insulation Company.

The ice cream can washer, with a capacity of five cans per minute, and the milk can washer handling three cans and covers per minute, are arranged on this floor to minimize handling of cans.

The milk cans as they come in are immediately emptied into the receiving vat, washed and stacked, ready to send back to the dairies.

The ice cream cans are washed as soon as received, stacked on can trucks and wheeled in position ready to be filled at the valves.

A modern, completely equipped Mojonnier laboratory is on the fifth floor, readily accessible to where the ingredients are mixed. This room is in a group together with a lavatory and the superintendent's office.

On this floor is also a large dry storage room in which sugar, cocoa, nuts, etc., are kept, weighed and properly blended and proportioned.

Part of the fourth floor is used for the stonage and repairing of ice cream cabinets.

On the third floor are stored brick boxes, carryout pails, parchment covers, cans, etc.

The ice used for the packing of ice cream is made by the Anheuser-Busch Ice & Cold Storage Company, and

THE priceless ingredient of any product is the honor and integrity of its maker. If you can depend on the reliability of the House from which you buy, you can be assured of satisfaction.

Into the composition of DERYCOTE Tub and Can Enamel, The National Paint & Varnish Co., has put that dependability and reputation achieved from twenty-one years of satisfactory service, and distribution of "paints for specific purposes."

The National Bundle Tyer Co.

BLISSFIELD, MICH.

is stored in the ice storage room, which is conveniently situated next to the ice cream plant.

WHEN ice is signalled for from the platform, a cake of ice is immediately dumped into a Creasey ice crusher, elevated to the proper height by a bucket conveyor and discharged into a horizontal double chain flight conveyor about 75 ft. long, which, in turn, discharges into a cross conveyor at right angles. The cross conveyor is provided with gate openings and flexible spouts to discharge the ice to the waiting trucks.

The Creasey ice crusher has a capacity of 25 tons per hour and is driven by a 5-horsepower motor. The bucket conveyor is driven by a 5-horsepower motor and both flight conveyors by a 7½-horsepower motor, the speed of the conveying equipment being timed to take the crushed capacity of 25 tons per hour.

A fleet of Electric Walker trucks, equipped with bodies specially made by Anheuser-Busch, Inc., St. Louis, are used for distributing the ice cream to their trade in the city. Mack trucks being used for the more distant stops.

The trucks are all of five ton capacity, each equipped with 42 cell, 25 plate ironclad batteries, which are charged every evening in the plant by a 25 k.w. generator, through a battery of Cutler-Hammer charging panels.

The salt, which is purchased in carload lots is dumped from the cars directly into a concrete boot, where a bucket conveyor picks it up and takes it up to a bin in the covered driveway.

In the engine room a compound ammonia compressor is installed to supplement the present equipment used for ice making and cold storage in taking care of the refrigeration needed in the manufacture of ice cream. The compressor is a horozontal, two stage machine, 11x8x12 running at 200-revolutions per minute, and direct connected to a 100-horsepower Ideal synchronous motor.

Two horizontal shell and tube brine coolers connected up to three pumps of 60 gallons, 100 gallons and 150 gallons per minute capacity in two different systems supply the cold brine for the plant. The freezers and tubular cooler requiring low temperatures are connected to one system and the tanks and cold storage room to the other. The electric lighting and power wiring is run in conduit, all circuits being protected by Cutter Electric Co.'s urelites and branch circuits by square D switches.

All brine and ammonia piping is covered with Armorak sectional covering, and all steam mains with 85 per cent magnesia covering.

The plant was designed by Ophuls & Hill, Inc., consulting engineers, and erected under their supervision.

All building work was done by the Equity Construction Co. of New York, under the supervision of the engineers.

⚜

Most people complain when the weather is excessively warm.
Ridiculous!
Complaining never got anybody anything.
Most people say they are glad that summer—the broiling season—is about over,
But not I!
The hotter the day the better I like it.
I am truly sorry that summer is gone.
I wish the calendar was so arranged that
July would always follow August,
And vice versa.
Three hundred and sixty-five days of summer!
That would suit me to a "T."
No, I am not insane,
I sell ice cream!

The Refrigeration Media

By F. B. FULMER

(Continuation of an important topic by a recognized authority.)

IN THE early stages of the refrigeration industry many substances were used for the circulating media, but time and experience has eliminated most of them, except in some special case and under exceptional conditions. There are many substances which may be used as a refrigerant, but most of them have some inherent objection, so that in the United States ammonia is used in upwards of 90 per cent of the mechanical refrigeration that is produced. There are four other substances which are used to some extent, carbon dioxide, sulphur dioxide, methyl chloride and ethyl chloride. The last three named have of late been put to use in the small units like the mechanical household refrigerator and the iceless ice cream cabinets.

In dealing with any substance used as a refrigerant there are several features to be considered, as all of these have some bearing upon the ultimate economy of operation. By using a substance that may be changed from a liquid to a vapor state, advantage may be taken of the latent heat of vaporization. As an illustration, a comparison may be made between ammonia and air. Under a given set of conditions one pound of ammonia will have a refrigerating effect of 478 B. T. U. and the refrigerating effect of the one pound of air will be only 12 B. T. U. owing to the fact that the air contains sensible heat, but has no heat of vaporization. In the case just illustrated the comparison of air with ammonia is very small, the ration being about one to forty, hence if air was used as a refrigerating media, in order to effect a certain amount of work in a given time, the compressor would have to be excessively large, hence the cost of installation would be prohibitive.

The possibility of using a certain media for a given refrigeration problem depends upon several factors. The most important consideration entering into the selection of a suitable refrigerant are the temperature and pressure ranges, the cost of the installation and working fluids, the chemical properties, and the physical properties. The factor of the critical pressure is an important one: If the media used had a critical pressure, of say, 90 degrees F. and the mean temperature of the water available for the condenser was of nearly the same point, it is evident that not very much refrigeration work could be accomplished.

WITH all of the refrigerants used there is a certain relation existing between the pressure under which the media is allowed to evaporate and the temperature of the evaporizating gas. In order to accomplish econom-

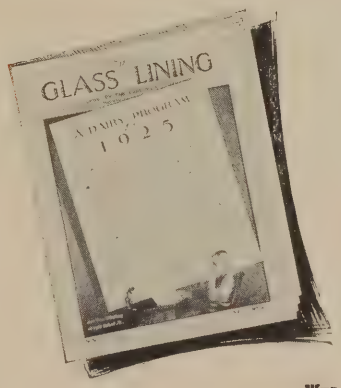
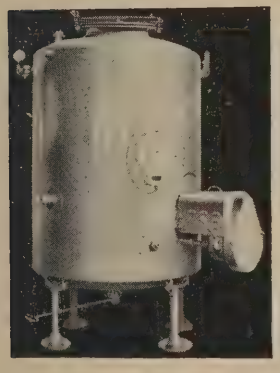
Real Profits in the Milk Business

Progressive Dealers Have Increased Their "Spread" to a Larger Margin



When Aladdin rubbed his magic lamp, the genie appeared to do his utmost bidding—in fact if Aladdin had wanted 5,000 or 10,000 gallons of milk transported from Bagdad to Timbuktu, the genie would have done it. Charges?—There would have been none. But strangely enough here is a case in modern civilization where we can dispense with the genie and get the same results. A big glass bottle on wheels—a Tank Car—will do this very thing, transport milk enormous distances,—and at a ridiculously low figure. There is no secret about this. Let us send you a new Car Tank booklet, which is fresh from the printing press.



BULLETIN!

"THE GLASS LINING"

"THE GLASS LINING" for November-December is now ready for distribution. Concerns who would like to know what Glass Lined Equipment is doing in the field, will be interested in receiving copies.—No charge and no obligation. The current number contains among others, an article entitled, "Are You Thinking of Bigger Sales for 1925?" Whether you have any definite plans or not you will be interested in some of the programs as laid out by various of America's greatest dairy plants.

BULLETIN!

Storage Facilities Speed Up Receiving

When Using Truck Tanks Six Times as Much Milk Can Be Handled

A recent U. S.-Department-of-Agriculture survey at 12 Minnesota plants indicated that where truck tanks were used to deliver the milk to the plant, and where it was received in glass lined tanks, 6 times as much milk could be handled per man hour. Furthermore, there was no can expense, and no labor item for can-washing.—The cut at left shows new insulated Pfaudler Milk Storage Tank.

Let us send you literature describing units in which you are interested

ADDRESS:

THE PFAUDLER CO., Rochester, N. Y.

Originators and World's Largest Makers of Glass Lined Steel Equipment

Branches in Main Centers

Factories at: Rochester, N. Y., Elyria, Ohio, and Schwetzingen, Baden, Germany

Pfaudler

NAME OUR NEW 100 GAL. UNIT FOR US AND WIN

$50.00

$25 SECOND PRIZE
$15 THIRD PRIZE

Here are a few points, to suggest a line of thought:

Built on a production basis it sells for a very low price — only $325. f.o.b., Elyria, O.

It can be used for pasteurization of milk and cream, handling buttermilk, for ice cream aging, and in fact, as a general utility tank.

Other special units now manufactured by us bear the names, "Pfaudlerette," "Pfaudlerizer," "Elyria Junior Pasteurizer," "Elyria 300 Special," etc. Do not be influenced by these names, however. Originality will be a factor in awarding prizes. Any number of names may be submitted. Anyone is eligible to submit a name except employees of The Pfaudler Co. or other persons interested in the sale and promotion of its equipment. Three executives of The Pfaudler Co. will be the judges and prizes will be awarded for the three best names submitted, the first only being used.

If more than one contestant submits any prize-winning name, the full amount of the prize will be awarded to each such contestant. All names must be in by 12 P. M., December 31, 1924.

ADVERTISING IN THE ICE CREAM REVIEW IS A GUARANTEE OF MERIT.

The Convention

Manufacturers amazed by "Kist" Program. Two smashing "Scoops." Greatest events in the history of the ice cream industry.

SPREADING before the amazed vision of visitors to the National Convention the most complete, comprehensive and impelling advertising and merchandising service ever offered the ice cream industry, "Kist" Service won its way to the hearts of every fortunate manufacturer there to see and hear.

Plans for the continuation and expansion of the regular Kist service could hardly be believed by many. And the fact that it was all *free* seemed almost too good to be true.

Thrill After Thrill

Many new features were introduced—and the preliminary announcement of *two tremendous "Kist" scoops.*

One is a novelty method that has simply swept into favor wherever introduced—revolutionized the ice cream buying habits of community after community—made ice cream eaters of those you never before counted as part of your great market. But "Kist" service has made this novelty yours—*really* yours—freed from the shackles of outside control but protected by the shield of exclusive rights. You are going to make thousands and thousands of dollars on this proposition, Ice Cream Manufacturers of America. It's ready—and it's yours!

Another Surprise

That was "Scoop No. 1."

And then there was the other great "Kist" scoop. Just as splendid, even more different, and opening new fields of profit; fields that do not encroach on your present ones, but seize great sales for you where only other industries formerly profited.

Get the News

We want you to know about these things. One at a time, to be sure, for we want you to get Scoop No. 1 first—absorb it and seize its opportunities. So use the coupon on the opposite page. Fill it in and mail it. It will bring you the Big News of the Convention, if you were not there or if you were there and did not get in on the inside show.

Don't hesitate—some other manufacturer may get ahead of you and secure exclusive rights in your territory. Do it now.

GET THAT

Sensation!---

Were you there? Have you heard all the news? Do you know the excitement that caused all the buzz along the corridors of Hotel Roosevelt, Convention Headquarters? If not—read every word of this. There's a surprise awaiting you!

This Cabinet stops needless ice and salt waste

Cuts unnecessary charge from ice cream manufacturers' overhead—turns fixed expenses into added profits

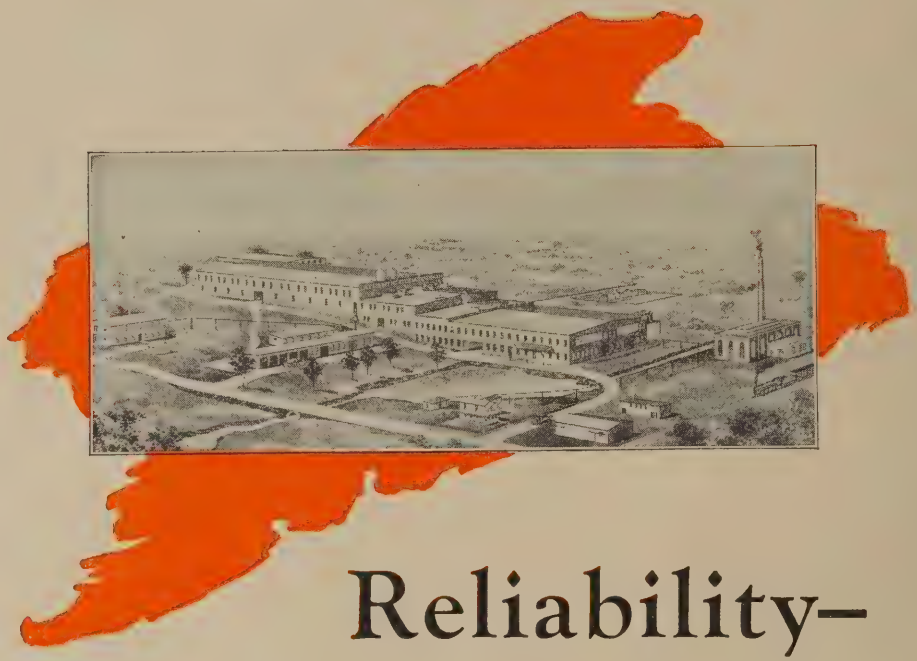
This diagram explains why A-B Ice Cream Cabinets will give 48-hour service from a single icing should emergency require. Notice how cream compartments and ice and salt chamber are fully protected against warm outside air. No wonder A-B Ice Cream Cabinets save ice — save salt — save money!

Here is an ice cream cabinet that will save more ice, more salt and more money for you than any other pack cabinet you can buy.

You see why as you examine the A-B Cabinet inside and out. Square, perfectly dry cream compartments are surrounded on all four sides by the ice and salt chamber, which tapers downward from a broad, easily filled throat at the top to a narrow bottom.

Cold air is kept in and warm air out by a novel insulating material, which graduates from a thick section at the bottom of the ice chamber to a thinner section at the top, as shown by the accompanying diagram.

Even the lid is fully insulated, yet it is feathery light. In fact, the whole A-B Cabinet is exceptionally light—10% to 15% lighter than ordinary pack cabinets—hence will place no strain on your floors.



Full details and prices gladly furnished on request. Write for them now. Get the facts about this cabinet that stops needless ice and salt waste.

CO-OPERATION MEANS COMMON SUCCESS.

(Continued from page 40)

attain that end toward which we are striving. These convention assemblies, with their utterances of business ethics and high ideals, are inspirational and absolutely essential as it is here that the foundation of co-operation is laid.

But co-operation must go farther. It must go with us, hand in hand, day by day, throughout the year and all the years to come, if we are to attain what we plan to attain in the convention hall.

Ice cream has been known for many years, but the secret of making ice cream was known at first only to a few, and it was kept a secret, being handed down from generation to generation. And it was only in recent years that it has worked itself into the hands of the few broadminded men who have made out of the ice cream industry what it is today.

And only through the elimination of this deep secret idea, which can be achieved only through co-operation, can we hope to put this industry on the high plane it is capable of attaining.

For instance: I know an old bottler who has a formula for a certain drink of his own. It is admitted by all to be a mighty good drink. But this old man is so afraid that someone is going to get hold of his formula for this drink, that he will not even hire any help, doing only what little he can do himself. He has his little factory completely barricaded, and keeps two big bull dogs to help him guard his secret from the world. This old man will die before long, and with him will go his secret. And while he has been in the business for 16 years, during which time hundreds of other bottlers have grown independently rich, you could buy all this old man's worldly goods for only a few hundred dollars.

Which goes to show we cannot build a brick wall around ourselves and live alone and prosper. If we prosper, our fellow manufacturers will also prosper. And while we believe that in the ice cream industry all those who have been inclined to feel as the old bottler feels are gone. Should there be one left, however, I want to say to you, my friend, that you have never done one thing that helped to build up the ice cream industry; and the time has come when sound business principles must be adhered to, which is going to one of two things for you: It will either make a man out of you or put you out of the business.

The time has come when the ice cream manufacturer must stop, check up, change up, take stock, and get down to solid business principles, if the industry is to grow as it is capable of growing.

We cannot run our factory under these changed conditions in the same old haphazard way as heretofore. And this change can be met only through proper co-operation. It is only through co-operation that the ice cream industry can hope to come into its own. In all other lines of endeavor success can largely be traced to co-operation. Doctors, lawyers, merchants, plumbers, carpenters, machinists and bricklayers, even common laborers, have their unions.

Friends, the ice cream industry has just been touched upon. It is still in its infancy. And if the ice cream manufacturers will co-operate in the same spirit that the doctors, lawyers, plumbers, brickmasons and others do, I believe that there will be built an industry so vast that it will exceed even the most optimistic and enthusiastic ambitions of any ice cream manufacturer of today.

Now, my friends, in conclusion, allow me to ask you to call to mind that old, old saying—that sometimes we may get a good point from a fool.

American Cities Classified for Future National Shows

Supply Association Will Consider Detroit, Buffalo, Cleveland, Philadelphia and Atlantic City for 1925 Exposition, if Held

THE success of expositions in connection with a national ice cream convention has been so pronounced as to make ice cream manufacturers look forward to the exposition as a regular convention feature every year. The Association of Ice Cream Supplymen some months ago explained its action for not staging an exposition in connection with the New Orleans gathering of ice cream men.

A letter from Roberts Everett, secretary of the supply men's association to Vernon F. Hovey, president of the National Association of Ice Cream Manufacturers, recently announced by an association bulletin, throws some interesting light on future national expositions. In this letter Everett outlines an investigation conducted by the supply association with regard to facilities for future combined conventions of the national association with national expositions. This investigation led to the grouping of cities on the following scale:

"A" group: Buffalo, Detroit, Philadelphia, Cleveland and Atlantic City. He points out that these cities are put in a group because of being slightly more favorably equipped than might be termed cities included in "B" group, which are Chicago, Cincinnati, New York and Milwaukee. He lists such cities as Indianapolis, Louisville, Minneapolis and Boston as being in "C" group.

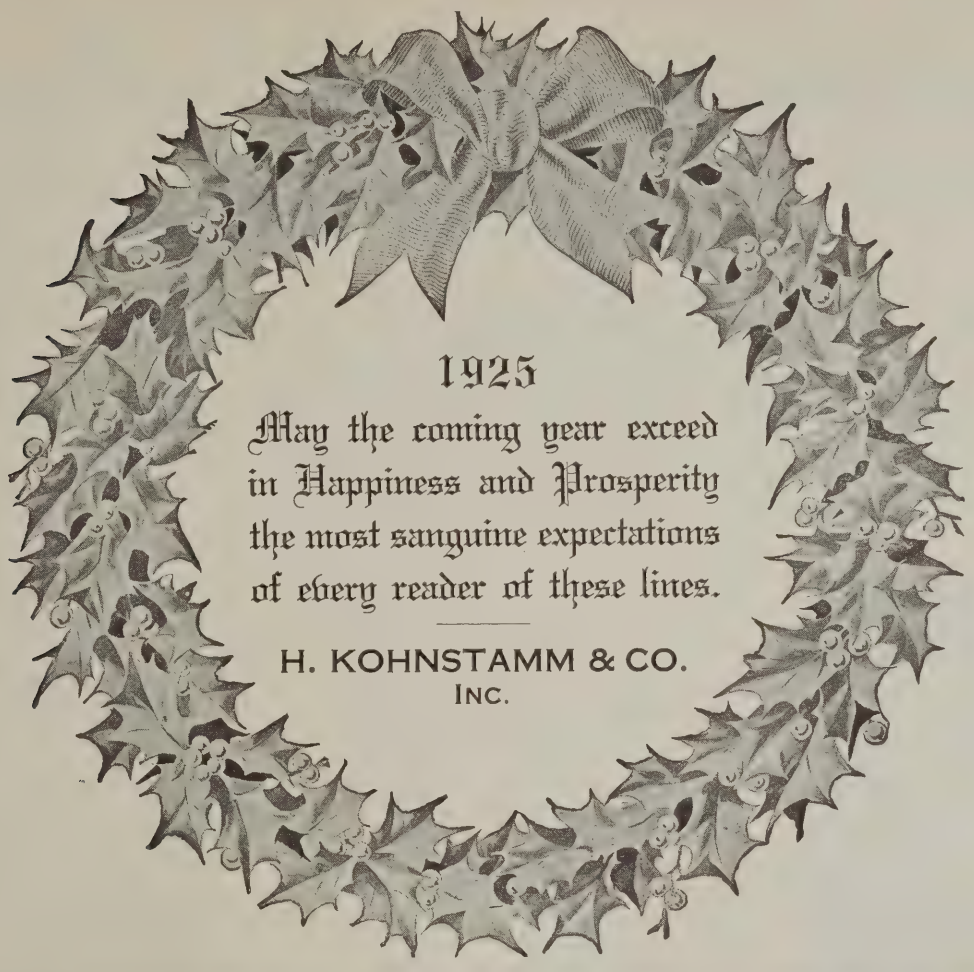
"The Paper and Box House for Ice Cream Men"

46 Portland St. Boston, Mass.

THE supply association's secretary explains that both hotel and exposition building accommodations are considered in determining the class of these groups. On the basis of the 1923 convention attendance, there is no city in which a certain amount of hotel congestion will not occur in connection with the combined events, he points out, adding that there will have to be doubling-up in rooms to a certain extent in any city in the country.



In group "A" the investigation shows that there can be expected the least physical inconvenience with respect to housing of guests, housing of exhibits, going to and from exposition and hotels, according to Everett. The cities included in group "B" are those cities in which it has been found that there must be some inconvenience with respect to housing of guests and exhibits, etc., that cannot quite be overcome by careful arrangements and preliminary planning, it is stated.

The group "C" cities are those only to serve at a pinch by sacrifice of some desirable features by either one or both of the organizations. "In all the cities in this group," Everett's letter states, "an attendance equal to that in Cleveland would mean the allottment of a percentage of out-of-town visitors to private homes or to hotels (as in Boston) of very questionable comfort. In one or two of the cities in this group it would also be necessary to curtail slightly the natural size and growth of the exposition. In two of them elaborate and costly special taxi services would have to be organized and run."

THE investigation resulted in the decision that no other city, except those mentioned in the above groups, will be considered for a 1925 combined national convention and exposition. It will be noted that all of the cities mentioned in class "A" groups are eastern cities, except Cleveland, in the middle West, the scene of two startling triumphs scored by the association in ice cream exposition. Manufacturers who have been hopeful for a large national convention in the West find their hopes confined to the city of Milwaukee or Chicago, in class "B."

Southern manufacturers who have been hoping that a large national exposition would be staged in their part of the country some time, have their hopes confined to Louisville, which is in class "C," or Memphis and St. Louis, not classified but indexed for future consideration. Some manufacturers in the South would be glad to see an exposition at St. Louis in a pinch, but doubtless no city would be quite so popular among Southern manufacturers as Atlanta, Birmingham, New Orleans, Memphis and St. Louis are considered because they are building large auditoriums.

THIS decision gives some light as to the probable scene of the 1925 convention. There is little doubt that of all the cities listed in class "A" Cleveland is the most popular among ice cream men, because of the very successful expositions held there in the past. However, Detroit, Philadelphia and Atlantic City have their attractions. Manufacturers who are acquainted with conditions in Buffalo and Milwaukee, would hardly classify Buffalo ahead of Milwaukee in exposition facilities.

KEEP UP YOUR SALES

Chocolate Malted Milk Brick Will Do It!

Don't let the cooler months bring a slump in your ice cream production. Keep up your sales curve by offering a new and distinctive frozen dainty—something new and attractive to develop fresh interest.

Malted Milk Ice Cream had been tried without success until a formula was made with THOMPSON'S Entirely Soluble Malted Milk (doubled malted).

Thompson's MALTED MILK "DOUBLE MALTED" REG. U.S. PAT. OFF.

By the use of Thompson's in the manufacture of ice cream, the distinctive malt flavor and aroma was at last achieved and Malted Milk Ice Cream has become a commercial success.

New Orleans Serves as Host to "National"

Twenty-fourth Annual Convention of National Association of Ice Cream Manufacturers Well Attended and Highly Successful in Every Way. National Advertising Question Arouses Great Interest

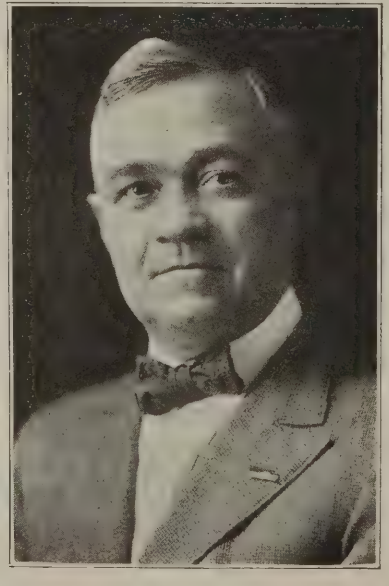
New Orleans, La., November 20, 1924.

(Special to The Ice Cream Review.)

A national co-operative advertising program involving a half million dollars was launched by the National Association of Ice Cream Manufacturers in twenty-fourth annual convention here. A report rendered by Will A. Schwindeler, St. Louis, chairman national advertising committee, asking for initial appropriation of $50,000, was adopted on production basis. This carries provisions for raising remainder of amount necessary through pledges by individual members of one-half cent a gallon on production basis. Mr. Schwindeler will go before state conventions this winter to raise funds. Convention officers were re-elected with exception of J. Weller, Rochester. Madison Lewis was elected treasurer. Appointment of secretary was left to President Hovey. The association voted to increase directors from thirty to forty. Detroit is next convention city. About forty delegates registered for seventeen day cruise to Cuba and Panama. The association is favorably considering matter of test laboratory for ice cream cabinets.

V. F. HOVEY,
President,
Schenectady.

THE 1924 convention of the National Association of Ice Cream Manufacturers will go down in ice cream history. It was a most eventful convention. It was a most colorful occasion. The attendance, considering the remote point of the convention city, lived up to the fondest expectations. The matters discussed consisted of the most vital factors confronting the industry today—advertising, automatic refrigeration, cost accounting, standardization of equipment, ice cream standards, and various other topics pertaining to the urge of the day. A large share of credit for the attendance goes to The Association of Ice Cream Supply Men. The advertising the convention received from this source reflected its importance in the large number of delegates who referred to this good advance work. The national supply association also contributed largely to the delegates' pleasant stay in the Crescent City by splendid entertainment features, notably the reception the first evening of the convention.



New Orleans ice cream people figured largely in the social success of the convention. Through their efforts the city of New Orleans more than lived up to the reputation of Southern hospitality.

PRESIDENT VERNON F. HOVEY found the advance work well out of the way, thanks to the energetic activities of the able secretary, N. Loewenstein, when he reached the convention city. He found Mr. Loewenstein had been there several days in advance and that all was in readiness for what delegates regard as a most momentous convention.

The usual local courtesies marked the opening of the convention. W. W. Campbell, vice-president of the association, and widely popular among his Southern neighbors, responded to the address of welcome in a speech entitled, "We are Happy to be in New Orleans."

N. LOEWENSTEIN,
Secretary,
Chicago.

Ex. Com.,
Buffalo.

Detroit Is Next Convention City

1925 Meeting to Be Held in the Automobile Metropolis. Old Officers Re-elected With Exception of Treasurer. Big Fund to Be Raised for Advertising. On to Panama!

THE advertising matter was brought up the morning of the third day of the convention. It was presented following a series of conferences held by Chairman W. A. Schwindeler's national advertising committee.

The convention hall was appropriately decorated with advertisements from leading national periodicals in which various other industries have effected greater sales outlets in this way. This was topped off by a magnificent banner showing the association's newly adopted trade slogan—"Serve It—and You Please All." The design was about three feet in diameter, the letters being large and impressive. The entire stage of the hall was lined with national advertising posters.

An atmosphere of nationalization had been built up during the convention. Since the selection of New Orleans for the 1924 convention, a step taken at Cleveland last year, it has been easy to see that the industry has well under way a movement to bring about more widespread co-operation. The Southerners helped carry out this plan by attending in large numbers, many getting new visions of possibilities through lining up and working with the national body.

And with this high touch of national color, the members were all the more in the frame carefully to consider such a broad and sweeping proposition as that which the advertising committee unfolded.

Chairman W. A. Schwindeler came out of a conference with his committee on the morning of Thursday, November 19, with the following report to present:

RECOMMENDATIONS OF THE COMMITTEE ON NATIONAL ADVERTISING.

Your committee recommends that an immediate effort be made to start a national co-operative advertising campaign on ice cream. That pledges of one-half cent per gallon be secured from our members, with the understanding that if these pledges cover approximately 40 per cent of the estimated gallonage represented by the ice cream manufacturers' association, and provided that an equal sum be raised by the supplymen's association, that a contract be then entered into with F. W. Gentleman of the Gardner Advertising Company to handle this campaign.

We also recommend that this matter be handled by a committee of six, represented by three members of the National Association of Ice Cream Manufacturers and three members of the Supply Men's Association, and that that committee be authorized to assume full control, with the advice and counsel of the advertising agency.

We also recommend that a sum of $5,000.00 be appropriated by the National Association of Ice Cream Manufacturers, to be used in the preliminary work of this campaign. This sum to be returned to the association when our fund is raised.

Respectfully submitted,
W. H. SCHWINDELER.

It is not to be understood that national advertising occupied most of the convention sessions. A program of importance such as that rendered at the 1924 convention necessarily involved considerable discussion. But the most of the work connected with national advertising was carried on out-

side the convention hall. When the matter was formally put before the convention the rough edges of the program had been worked out, and the delegates had before them a carefully thought out working plan for the most ambitious undertaking in the industry's history.

The convention had heard some excellent addresses on iceless cabinets. This matter was gone into more thoroughly and more comprehensively than at any time in the past. Cost accounting was a subject in which Mr. Bolitho of the International Association of Milk Dealers explained the exceedingly good work his association had accomplished and hoped to do in the future. Standardization was an important topic of discussion.

But the half-million dollar advertising campaign found interest in that proposal at high pitch.

THE background of the proposition of national advertising for the ice cream industry consists of a series of activities covering a period of four years. It was in 1920 that efforts in that direction began. Representatives of the National Association of Ice Cream Manufacturers and The Association of Ice Cream Supply Men at that time began a searching inquiry into possibilities in this direction. Expert advice was enlisted. Developments convinced investigators that the ice cream industry was emerging into a stage of development that made it necessary to look to co-operative advertising for continued expansion. Advertising experts have been energetically gathering facts and figures since that time.

Probably the most outstanding figure in the matter of co-operative advertising was Will A. Schwindeler of St. Louis, for several years one of the industry's leading exponents of co-operative effort, and chairman of the committee on national advertising. The association's consideration of the matter followed several conferences in which Mr. Schwindeler sought the best possible advice as to the benefits which the ice cream industry might expect from such a step.

The association's consideration of the matter followed action in which the Southern Association of Ice Cream Manufacturers expressed itself as being in sympathy with the idea. This was expressed after W. A. Schwindeler had appeared before the Southern convention, this gentleman having traveled to New Orleans in advance of the national gathering. Addressing one session of the Southern convention, Mr. Schwindeler related steps that have been taken thus far and outlined to the members what might be accomplished for the industry's common advancement through national advertising. It has previously been related in The Ice Cream Review how the slogan committee of the national association, headed by E. C. Sutton of Buffalo, extended its efforts over the breadth of the continent and other parts of the world to uncover a slogan which would tell the ice cream industry's story. This slogan, as announced exclusively in the November issue of The Ice Cream Review, has been adopted, the slogan being, "Serve It—and You Please All."

WE HAVE been told that the ice cream industry cannot take its place in the highest ranks of food commerce until the industry carries out a program of widespread publicity that will enable the public at large, particularly the housewives, to understand the food importance of ice cream. Many progressive ice cream manufacturers have for years been using slogans of their own Among them is that adopted by E. B. Geisel, manager of the Anheuser-Busch Ice Cream Co., New Orleans, this gentleman having repeatedly advertised his product as "America's Greatest Food Dessert." Another catchy trade-cry is that of a northern manufacturer who has told the consumers that "It's a Food—Not a Fad." Many others similarly descriptive of the merits of the product have been adopted by progressive ice cream manufacturers.

Twenty-fourth Annual Convention, National Association of Ice Cream Manufacturers, at New Orleans, November 17, 18, 19, 1924.

Thus it is that the national association, in taking up this important matter at New Orleans, found itself with much of the preliminary work out of the way. A working program was in sight when the delegates assembled in the convention hall on November 19 to hear the matter presented.

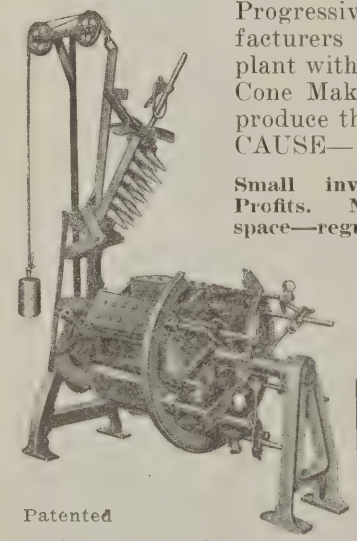
THE matter was put before the delegates in a highly inspirational way. They had before them facts and figures that had been gathered over a period of four years. It was shown that if only 40 per cent of the members of the ice cream industry contribute their nominal share to this enterprise, the work can be carried on in a highly effective manner. Just how conservative are the expectations of the advertising enthusiasts is indicated by the fact that the matter has been handled on the basis of this industry's chances of achieving just one-third the results achieved by such outstandingly successful organization as the walnut growers.

It was brought to light that in 1900 the average man, woman and child in the United States consumed 37.5 oranges. By 1921 each consumed 60.7 oranges. This amounted to an increased per capita consumption of

On The Job at New Orleans

National Officers and Convention Figures that Participated in Great New Orleans Convention

ADVERTISING IN THE ICE CREAM REVIEW IS A GUARANTEE OF MERIT.



23.2 oranges, or nearly two dozen. The valuation of the 1909 crop was placed at $22,000,000, and in 1919 this had increased to $109,000,000. Although part of this increase is attributed to the changing value of the dollar, when it is considered that the 1919 dollar is worth but 50 cents on the 1909 dollar, from a purchasing standpoint, it is seen that our 1909 crop valuation of $22,000,000 is equal to $44,000,000 on the present dollar market.

It was national advertising which played such an important part in the orange industry's growth, the delegates were told. They also were reminded that the citrus industry increased 386 per cent in the period between 1909 and 1919. And this despite the fact that the population of the United States increased during that period only 15.4 per cent.

This matter was gone into in great detail by the different speakers, who included Will A. Schwindeler, F. W. Gentleman of New York, who has been connected with the association's efforts in this direction since the movement was inaugurated; G. W. Kenison of Lawrence, Mass.; T. J. Bolitho of Chicago, E. C. Sutton of Buffalo, Chas. C. Parlin of Philadelphia, S. T. Nivling of Rochester, C. B. Harper of Columbus, Herry L. Fogleman of Chicago, Ray E. Walz of Buffalo, and others.

THERE is little doubt that these discussions exhausted virtually every angle of the matter. They covered the experiences, in co-operative advertising, of the bread, citrus, cranberry, lemon, cement, brick, florist, and various other industries. Even sauerkraut was seriously brought out as a shining example of what can be accomplished in this way. It was shown that industry was made to show an increase of 275 per cent, largely because of national advertising.

NEW FIELD Opens for Ice Cream Manufacturers

Progressive ice cream manufacturers should equip their plant with the "Philadelphia Cone Making Machine" and produce their own cones BECAUSE—

Small investments net big Profits. No extra labor or space—regular salesmen solicit orders — helpers bake cones. Fresh, Crisp, Delicious Cones increase ice cream consumption.

This machine saves time, space and positively produces a better cone at less cost than any other machine on the market — Write for details today.

Patented

Consists of revolving tumbler containing six sets of moulds of 12 cones each baking 72 cones each revolution.

THE PHILADELPHIA ICE CREAM CONE MACHINERY AND ART METAL WORKS.

68 N. Fourth St. Philadelphia, Pa.

But the important matter is, what does all this mean to the ice cream industry? It means, according to the plan recommended by the national advertising committee, that the ice cream industry is in position where it cannot benefit nationally by individual advertising of any particular brand of ice cream. The first step is the common brand. That has been provided through the slogan contest. Co-operative effort, the convention was told, is the only way by which the ice cream industry has "the opportunity to use the power of suggestion in a perfectly natural and logical way that will materially increase the consumption of ice cream without the necessity of establishing a new habit on the part of the people."

"To make people eat more ice cream every day would be merely to satisfy a natural desire," the delegates were told. "The market is there, the willingness is there, and it only remains for the suggestion to be forthcoming, in an attractive form, to meet with ready acceptance."

THE ice cream industry was assured by speakers that if it should publish each week in national mediums an attractive advertisement in colors, suggesting a certain definite kind of ice cream for the following week, or certain days thereof, the American people would readily fall in with the suggestion and a market would be created for a vast amount of ice cream which will be eaten in place of other foods, desserts and confections now served throughout the land."

Scattered efforts were shown to be futile insofar as material expansion is concerned. But the point was emphasized that "a carefully worked out schedule of different ice creams, arranged suitable to seasons, could be exploited in the manner indicated, with the result that millions of American homes would watch each week for the suggestion for their ice cream for that week."

"These beaptiful advertisements," according to one speaker, "would continually call attention to the many delightful ways in which ice cream could be purchased and consumed; all forms of packaged ice cream, including individual portions as well as pints and quarts, ice cream cones, chocolate-covered ice cream bars, and tempting ice cream sodas for consumption at the soda fountain and in the home.

"Such advertising would, of necessity, have to appear in one or more of the great national weeklies. Fortunately, these weeklies are ideally timed, so far as their appearance is concerned, for a purpose of this sort. All of them are dated Saturday, but usually appear in the homes and on the newstands on Thursday, which is just about the right time for the housewife to get the weekly suggestion."

THE local manufacturer's angle of the matter was brought in one statement in which it was declared that after the campaign has been running for a few weeks the local ice cream man would know with a fair degree of certainty how much of the weekly special he should make. By making a leader of these specialties, it would be possible for the manufacturer profitably to sell them for the same price he charges for standard flavors, or at the most for a slight advance, it was indicated by the convention addresses.

The development of a substantial special order business, which at the higher prices for the special orders would be extremely profitable to the ice cream manufacturers, was a point stressed; for instance—

Quality Program Features Great Southern Convention

All Southern States Represented at New Orleans—Quality Standards Endorsed—Co-operation in National Advertising Pledged—Lexington in 1925

NEW ORLEANS, La., Nov. 20. (Special to The Ice Cream Review).—They called those of their kind together, these ice cream men of the South, and from the mountains to the sea they came to answer the roll call of service at the Southern ice cream industry's greatest convention. A job well done was the verdict as the last Pullman coach pulled out of New Orleans with manufacturers determined to make Southern ice cream a watch-word of quality. They were in a hurry to get away. They have business with Santa Claus. They came to their convention city at the end of a year fraught with heavy problems. They have gone with the inspiration that the Southern ice cream industry faces great opportunities for expansion. They would have gone earlier, but they had guests. They remained to participate with members of the National Association of Ice Cream Manufacturers in putting on the finishing touches to what was in many respects one of the most colorful occasions this industry has ever experienced.

That in brief tells the story of the twelfth annual convention of the Southern Association of Ice Cream Manufacturers. It was featured by the endorsing of the association committee's recommendation for a quality standard. The symbol of quality, adopted for trial by the association at Little Rock last year, was put in effect in 1924. Satisfactory results have been so strikingly indicated the association wasted no time in placing its stamp of approval on this measure. It provides for its membership to meet approved quality standards, and members are given the privilege of using in their advertising matter the symbol of quality, which was pictured in a past issue of The Ice Cream Review.

Lexington, Ky., will be the scene of the 1925 convention. Lexington's invitation, presented through an enterprising delegation from the Blue Grass state, was accepted over invitations from a half dozen or so other cities, including Atlanta, Savannah and Jackson, Miss. The state of Texas, for the first time largely represented at a Southern convention, was received into the association fold. George L. Boedeker was named director for that state. The association last year received the state of Oklahoma, naming J. B. Porter of Tulsa, director.

S. N. Sutton of Vicksburg, Miss., was elected president to succeed W. J. Barritt of Tampa, Fla. Fred Scanling of Atlanta was re-elected delegate to the national convention. Among the directors elected were: N. D. Brookshire, for Mississippi; D. W. C. Yarborough, Alabama: P. Perry, Arkansas; W. J. Barritt, Florida; A. E. Dixon, North Carolina; F. C. Walters, South Carolina; Harry Cuscaden, Kentucky, and W. E. Drake, Tennessee. J. D. Kinnett of Macon was elected vice-president.

Caught when they were not looking

Here is the way some of the Southern Association Delegates
Looked to Some People During New Orleans Convention

QUALITY PROGRAM FEATURES GREAT SOUTHERN CONVENTION.

(Continued from page 76)

THERE was a record attendance when President W. J. Barritt called the convention to order. The usual convention preliminaries were followed by a message in which President Barritt pointed out avenues for greater development of the industry through the spread of the spirit of co-operation. Attention was directed to the fact that although certain states showed smaller representations this year than in past years, it was the association's most representative convention, and the total attendance probably was the greatest on record. S. N. Sutton's interesting address on specialties brought out results which show these things have a proper place in the industry when properly handled. John Kloecker showed why some manufacturers are wisely carrying advertising. The salesmen should be called together, the speaker said, and should be shown all details of each advertising campaign, it being carefully explained what that campaign is costing, what the firm hopes to realize from it, and what the salesmen can do toward making it a success.

"Show them that you expect them to help you cash in," urged Mr. Cuscaden.

Drivers, he said, should be educated to carry out as far as possible the good relations between manufacturer and dealer. They should be educated to exercise care in delivering their product, that the dealers' places of business may not be soiled. But more practically to the point, from the ice cream manufacturers' viewpoint.

"Teach drivers to take better care of your equipment; let them know that you have real money tied up in your equipment."

The Southern Association of Ice Cream Manufacturers and The Dixie Flyers at the Twelfth Annual Convention, New Orleans, November 14 and 15.

several flavors and why others are not, and on the whole, showed the manufacturer cannot go wrong by sticking fairly closely to the basic merits of ice cream, building for quality regardless of other policies, if any.

That great Southern orator Ben C. Brown of New Orleans electrified his audience with one of the most remarkable addresses ever delivered at a Southern convention. His subject was "Our Magic Chance." Many delegates took from this speech a deeper understanding of possibilities for their industries through more closely co-operating, more earnestly striving to uphold quality, and through steadfastly guarding against unfair and unwise business practices.

"Less suspicion and more trust and confidence" was the keynote of the address, the end of which found Mr. Brown receiving an extraordinary ovation that lasted for several minutes.

HARRY CUSCADEN of Louisville won renown years ago for his belief in the spirit of co-operation. His speech on this subject at the 1924 convention went into the matter more thoroughly than even this able orator ever did before. Co-operation among all branches of the ice cream organization, drivers, factory hands and salesmen, was the burden of his song. He asked that employees be taught to save, to take an interest in their own affairs that they might be educated to taking greater interest in the affairs of their employers. He recommended that each group of the plant be encouraged to take pride in making a good showing for its department.

He showed how the co-operation of employees can be utilized in getting the best possible results out of

He recommended three prizes to be awarded for efficiency, basing the winners on points of personal appearance, minimum number of accidents and general spirit of co-operation.

The discussion of proper standards, participated in by such foremost members as M. J. Costa of Athens and S. S. Dent of Memphis, brought out evidence that a happy medium in this proposition means much to the future of the industry. Either extreme is unwise, it was shown, and manufacturers were given reasons for so keeping up their standards as to retain the confidence of public officials and the general public.

Saturday's program was featured by addresses on mechanical refrigeration. The speakers gave the delegates more surprises than they thought possible. They included: George L. Boedeker of Dallas, Harry Helmar of Atlanta, W. E. Drake of Nashville, George K. Brown of Chattanooga, Louis C. Chamberlin of Detroit, and R. F. Calloway of Dayton.

The upshot of the general discussion following the speeches was that automatic refrigeration is a matter worthy of careful consideration by manufacturers who know their own requirements and will base their actions according to what is best for their business and the industry, and not through a desire to "put something over the other feller."

An official of the Southern association himself expressed the sentiments of the majority of the delegates when he stated that he had never so fully had his eyes opened to possibilities of mechanical refrigeration, declaring that he had come to the convention fully prejudiced against this new-comer to the industry and now is prepared to look at the matter with an open mind.

Southern Exposition Breaks Previous Records For Dixie

Manufacturers Are Shown Splendid Exhibits by Dixie Flyers, Who Uphold Reputation for High-Class Entertainment

THE Dixie Flyers made good again. This was nothing more than expected, though it is doubtful if many manufacturers fully expected to see such a splendid trade exhibit as that provided in the Athenaeum building. There were 110 booths in the hall. They were small, but they represented virtually every phase of the ice cream manufacturing industry.

The convention sessions of the Southern association were held in the same building. The Flyers served buffet luncheons between sessions. They entertained the manufacturers at a delightful reception the first evening of the convention. They provided fun for the large number of ladies present.

So successful was the exposition that it was decided to continue it through the national convention instead of closing the show at the end of the exposition, as once was reported would be done.

The Flyers made history of their own. Their annual meeting was featured by the adoption of a new constitution that places the organization on a better working basis.

Harry A. Benners, exponent of this new constitution and central figure in the magnificent exposition, was honored by unanimously being re-elected president. He was given a great ovation at the close of each of the sessions. Fred Robinson, for several years one of the Southern supply industry's most popular member, was elected vice-president, succeeding F. W. Hooton of Birmingham. P. N. Miller, long familiarly known as "Pete" was re-elected to the post of secretary, a position he has held off and on for ten years. The new position of treasurer was created at this convention. Byron Morris of Jackson, Miss., a veteran member of the organization, was elected to the post. F. W. Hooton was elected director for one year, Gordon Moumblo of Chattanooga for two years, and A. R. Fernald of Detroit for three years. Moumblo was re-elected chaplain.

The new constitution follows:

CONSTITUTION.

Article 1, Name.

This organization shall be known as "THE DIXIE FLYERS."

Article 2, Objects.

To promote the welfare of the ice cream, milk and allied industries of the South.

To promote good fellowship among its members and to

co-operate with the Southern Association of Ice Cream Manufacturers.

Article 3, Memberships.

Section 1—Accredited salesmen and sales managers of firms or corporations and whose firms shall be registered as members of the Dixie Flyers and published as such selling equipment or supplies for the ice cream, milk, or dairy industry in the South, shall be eligible to membership.

Section 2—The annual dues shall be $10.00 per year for each member.

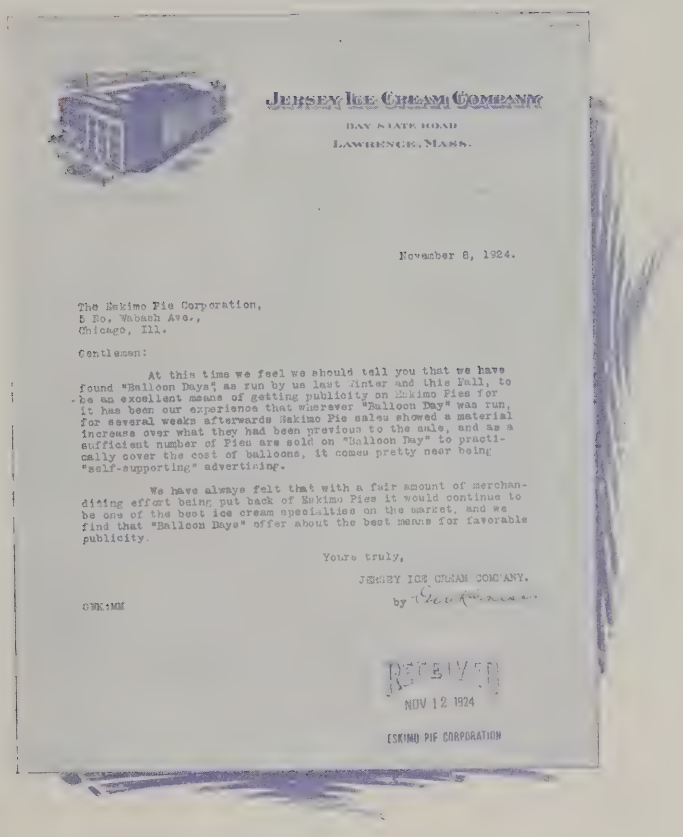
Article 4, Officers.

Section 1—Officers shall be: President, vice-president, secretary, treasurer, and 5 directors.

The president, vice-president, secretary, and treasurer to be elected at each annual meeting. Two of the five directors to b elected for a period of one year. Two to be elected for a period of two years and one to be elected for a period of three years. All of the officers and directors to hold office until successors are duly elected. The office of secretary and the office of treasurer to be two separate and distinct offices and not to be held by one person.

Section 2—Government of this body shall be invested in the board of directors.

Section 3—The meetings of the board of directors may be called by the president at any time and the president may at any time submit propositions by mail to the board of directors individually, for action by majority vote.



Section 4—Any member owing back dues or otherwise indebted to this body or who has been dropped from membership for any reason shall not be eligible to floor space for exhibition purposes or any privileges of the meetings, nor re-instatement to membership if any indebtedness has not been paid in full or if the person has been dropped for other causes he can not be reinstated except on the two-thirds vote of those present at an annual meeting of the DIXIE FLYERS.

Section 5—The duties of each officer shall be those customarily attendant upon the bearers of such titles.

The treasurer shall have custody of all money collected and will make all disbursements and shall keep the proper records and dully account for money received and expended. All checks to be signed by treasurer and countersigned by the president.

Mr. Kenison Tried It!

JERSEY ICE CREAM COMPANY
BAY STATE ROAD
LAWRENCE, MASS.

November 8, 1924.

The Eskimo Pie Corporation,
5 No. Wabash Ave.,
Chicago, Ill.

Gentlemen:

At this time we feel we should tell you that we have found "Balloon Days" as run by us last Winter and this Fall, to be an excellent means of getting publicity on Eskimo Pies for it has been our experience that wherever "Balloon Day" was run, for several weeks afterwards Eskimo Pie sales showed a material increase over what they had been previous to the sale, and as a sufficient number of Pies are sold on "Balloon Day" to practically cover the cost of balloons, it comes pretty near being "self-supporting" advertising.

We have always felt that with a fair amount of merchandising effort being put back of Eskimo Pies it would continue to be one of the best ice cream specialties on the market, and we find that "Balloon Days" offer about the best means for favorable publicity.

Yours truly,

JERSEY ICE CREAM COMPANY.

ADVERTISING ICE CREAM IN POETRY.

Probably no one in the ice cream industry is more alive to publicity oportunities than is A. A. Comey, vice-president and general manager of the Globe Ice Cream Co., Los Angeles. A week seldom passes that Mr. Comey does not hit upon some clever idea for advertising ice cream, either in the public print, on the theatrical stage or through the radio.

Mr. Comey recently took to the air with the story of ice cream when he had the following poem broadcast over Station KHJ, the Times, Los Angeles:

THE DISH OF ENCHANTMENT.
Dedicated to the Globe Ice Cream Company.

There is one dish that has been created
That folks, old and young, seem to crave.
They serve it on every occasion
For man from his cradle to grave.
It somehow possesses the magic
To make his eyes glisten and beam
With anticipation of pleasure.
That dish of enchantment—ice cream.

If tumbles and bumps made him tearful
When he was the smallest of chaps,
Or he mourned 'bout the loss of his marbles,
Or his kite string had broken perhaps,
No matter how great was his grievance,
His mother would always atone
With, "Here! honey-boy, don't you cry, dear,
I've bought you a nice ice cream cone."

O, the thrill of his very first party,
When he was the proud little host;
He loved all the games and the frolic;
But I know what pleased him the most.
His new suit bought for the occasion?
The cake with the candles agleam?
Why! these wouldn't make a real party
Unless he was served with ice cream!

Then passed the few years of his school-days
When along came the measles and mumps,
And such like to keep him in exile.
For weeks he'd be down in the dumps.
He hated the sight of the doctor
Who came every time he was ill
And ordered some old bitter doses
And made him take pill after pill.
Until he was feeling much better,
Then the doctor and angel would seem
With a voice like the sweetest of music
When he'd ask "Would you like some ice cream?"

No event in his life so romantic
As that when he first played the beau
Escorting his dear little sweetheart
Downtown to a fine picture show.
How thrilling to sit there beside her,
A dear little maid of sixteen;
But came the real bliss of the evening
When he treated his love to ice cream.

His wedding day! Ah, that was heaven!
At the altar he knelt by the side
Of the girl he would cherish forever
His sweetheart, his now blushing bride.
Then followed the rice and the kisses
All mixed in with love's golden dream
And yes—with the breakfast served later
His favorite dish of ice cream.

There's a smile 'bout his lips when recalling
How his dear little wifie did cry,
When her first dinner guests she invited
Then made a sad mess of her pie.
He told her 'twas only a trifle
And soon she was happy and gay
Her first dinner party successful
For ice cream and cakes saved the day.

O, many events followed after
Which memory holds in his heart,
And somehow the serving of ice cream
Played ever an important part.
'Twas ice cream they served at the christening
Of Johnie and Mary and Will
And they in their turn had their parties
When ice cream appeared on the bill.

As years passed his children had flitted
To build little nests of their own.
Were he and his ever true helpmate
Then left by their hearth all alone?
No. They were hospitable ever
And warmly their friends they would greet.
Their fireside always was cheery
And ice cream they served as a treat.

When old age has fallen upon him
And his meals were so hard to digest,
He missed not the pastries and puddings.
For him the dessert he loved best
Was ever that dish of enchantment
O'er which he would linger and dream,
For back through his life each sweet memory
Was closely allied with ice cream.

October 28, 1924. MOTHER TREVOR.

Ten States Pay Homage at Silver Jubilee of Illinois Ice Cream Manufacturers

Approximately 300 Delegates Celebrate Occasion at Convention Marked by Splendid Program and Elaborate "Sideline" Features

REPRESENTATIVES of ten states gathered at Chicago, October 28 and 29, to participate in the celebration of the Silver Jubilee of the Illinois Association of Ice Cream Manufacturers. The twenty-fifth anniversary was observed at a convention that stands out in the annals of an association long noted for snappy conventions. It contained all the program interest of past Illinois sessions with added features that made it probably one of the most elaborate affairs ever staged in the ice cream industry. Delegates frequently remarked that they had to pinch themselves to realize they were attending a state convention; it had all the side trimmings of a national gathering, many never seen at a national convention, and still others never before seen at any convention.

Manufacturers of Wisconsin, Indiana, Michigan, Ohio and Missouri, neighbors of the men of "Illini" and long accustomed to sitting in with them at convention time, were on hand in goodly numbers. In addition there were manufacturers from Pennsylvania, Colorado and North Carolina. Approximately 300 delegates registered, Illinois, of course, turning out a large number of manufacturers to shake hands over a silver candlelight symbolizing 25 years of co-operation. There were 40 visitors. It was a triumphant occasion.

Many delegates remarked at the good cheer radiated at the convention. While opinion was divided as to whether this was due to the fact ice cream manufacturers of the middle West made money this year despite unfavorable weather conditions or to the natural joy one would expect to note at a silver jubilee, all were agreed that the association had behind it a record of which all members could well be proud.

And other records are in the making. Completing one span of 25 years at that time, the association started in on another span with a convention that officials believe marked a new beginning point for constructive association work in the state. The convention itself was rich in evidence that the association has accomplished much for the ice cream industry of the state through bringing the manufacturers into pathways of good understanding, thereby bringing about a high plane for the conduct of business.

MANUFACTURERS of Chicago stand out to the front in connection with the social features. Although on a smaller scale, the side trimmings of the Illinois convention were of the same high-class order as those provided at national conventions. The banquet on the first evening was the principal entertainment feature. The banquet was provided by the Chicago District Ice Cream Association, of which T. C. Tiedebohl is president and H. O. Shedd is secretary.

These gentlemen and other Chicago manufacturers dug deep into their pockets, and nothing was too good for the visitors. Hospitality unsurpassed in any section of the country was the order ofthe convention.

The banquet was opened by the famous "How-do-you-do" Boys of Chicago radio fame. These gentlemen called attention to the importance of the occasion in the opening verse of their song—

"How do you do, Illinois Ice Cream Association?
How do you do?
"How do you do, Illinois Ice Cream Association?
How are you?
Your smiling faces we see,
Happy and full of glee;
'Tis your Silver Jubilee—
How do you do?"

THE spirit of the occasion was well expressed in the address of one of the association's feature speakers, Hon. Ross A. Woodhull, who has the distinction of having been the first president of the association. Speaking straight from the heart, without manuscript, he concluded with the hope that "in the years to come you all can retire and reflect upon your business career with the satisfaction of sufficient wealth to spend your latter days as you want to and with the satisfaction that you have given to the industry just as much as you have taken out."

The achievements of the association were referred to when Mr. Woodhull asked Illinois manufacturers "to recognize the great benefits that can result from close teamwork." "And," he added, by way of re-assurance, "I bespeak for the officers the support of the membership and for the membership the loyalty of the officers which has been established in precedent by the officers who have gone before; and I wish for this association continued success, constructive policies that not alone the ice cream industry may develop to greater extent and to a greater degree but that through the development of the industry a great service to the consuming public may be rendered."

(Continued on page 88)

Summary of Silver Jubilee

Officers and directors were reelected as follows: President—Zean G. Gassman, Vice-president—John C. Cherry, Secretary—Nathan Loewenstein, Directors: Edward Klinenberg, Theo. E. Thompson, Lyle Roszell, Treasurer—E. L. Joehl, National director—Fred W. Holmes.

Next convention, Chicago. The 1925 convention will be for three days instead of two, as in the past.

The Ice Cream Review was thanked in resolutions "for the beautiful souvenir number issued in connection with our meeting."

General topics covered: Mechanical Refrigeration, Cost Records, Cost Accounting, Motor Truck Delivery, Co-operative Advertising, Recent Studies in the Manufacture of Ice Cream.

Lookin' On At Illinois Association's Silver Jubilee

Some of the Highlights Flashed on Convention and Banquet Floor at 25th Convention October, 28 and 29

THE twenty-fifth annual convention was formally opened by President Zean G. Gassman at 11 o'clock the morning of October 28. The room assigned the association was overflowing when Dr. Kilcourse, Chicago health officer, delivered the address of welcome. Dr. Kilcourse is chief of the bureau of food inspection of the Chicago department of health.

The response was delivered by T. C. Tiedebohl, president of the Chicago District Ice Cream Manufacturers' Association, who declared "the ice cream industry today has established itself among the leading food products, and its value as a food and delicacy is constantly spreading throughout the entire country."

Secretary N. Loewenstein then submitted his annual report. It showed the association to have 95 active members and 57 associate members. Treasurer Joehl's report showed the finances of the association to be in good shape. The address of former President Woodhull was followed by luncheon.

The afternoon session found the convention in a larger room. It was found that the first speaker for that session, Mr. Ohlhaver, scheduled to speak on "Service Charges," had been called away. For that reason the subject of refrigeration was taken up. The president called upon one of the association's most popular speakers, Ed. Klinenberg of the People's Ice Cream Co., Chicago. He had "nothing to say against any machine now on the market," but he was opposed to "the way the machine is offered to the ice cream manufacturer." He wanted the practice of giving away iceless cabinets discontinued.

President Gassman called upon George Thompson of the Thompson Ice Cream Co., Chicago, to talk about "the big brother" of the refrigerated cabinet—the refrigerated soda fountain. Mr. Thompson said there are three important factors in the ice cream industry. First, the procuring of the ingredients and materials from which ice cream is made. Second, compounding of these ingredients into a wholesome palatable product. Third, the very important matter of so preserving the finished product that it will reach the ultimate consumer in good condition.

Speaking of the third factor in the ice cream business, he said:

"The cost to our company for ice and salt for the year of 1923 was six and a fraction cents per gallon and we estimate that the cost of carrying goods in the storage boxes in our customers' stores was three cents per gallon and in taking care of the fountain from six to sixteen cents per gallon. Surely, we are all anxious to find something that will improve these conditions.

"When results are considered it is safe to say that 80 per cent of our ice cream is sold over the fountains, and if your storage is costing you only three cents as compared to six to sixteen cents in the fountain, why not save the six to sixteen cents refrigerating the fountain.

"Let us take, if you will, any of our first-class drug stores. The owner has invested thousands of dollars in beautiful fixtures, tile floors and because it is almost compulsory he puts in a soda fountain, nice to look at, when first installed but what happens? The ice cream truck pulls up at his store every day, bucket after bucket of salted ice is carried into the store packed and pounded into the fountain, using a hard wood tamping stick. Results: Soiled fixtures, soiled floors, the fountain reeking with moisture, temperature on the ice cream from zero to anywhere above. More results: Proprietor of store dislikes the ice cream business and more or less everything connected with it, even to the paying of his ice cream bills.

"We have pioneered far enough with the refrigerated fountain to feel confident that when properly constructed and equipped with the right refrigerating machine it will give far less trouble than the old salt and ice outfit, carrying practically a uniform temperature on your ice cream at all times. The consumer getting the ice cream as you have made it which will undoubtedly increase consumption, aid sales, and make a real friend and co-worker of the dealer.

"The fountain manufacturers of Chicago are all working on a number of different types of refrigerated fountain. I feel confident that the majority will work satisfactory."

THE president then asked Mr. Klinenberg his opinion of the matter, and the latter again stated he was "against any manufacturer of ice cream going into the ice machine business." The president called for a general discussion. Mr. Burdresser of Milwaukee asked about giving credit to the dealer who buys the cabinet. Secretary Loewenstein replied by saying it was unfortunate that Lyle Roszell was not present, but that the committee on mechanical refrigeration, appointed at the preceding convention, had investigated all factors entering into the refrigerated cabinet matter, and had decided that a proper allowance would be about five to seven cents a gallon where the dealer put in the equip-

ment, serviced it himself and paid for the power and the water.

Mr. Hart of Litchfield at that juncture said: "Would you believe that if the dealer would pay for his own cabinet, that it is really the thing to have? Have you got that far with it? I take it from Mr. Thompson and Mr. Klinenberg that iceless refrigeration in the stores is all right if we can get it financed right. Do I understand that correctly?"

"I wanted to convey the idea," replied Mr. Thompson, "that I don't think the iceless cabinet saves you much, if any, money. If you take care of the cream for three cents a gallon with ice and salt in a stock box, why pay for an expensive cabinet?"

At that juncture the president asked Charles Stewart of Decatur to read Mr. Ohlhaver's paper on "Service Charges."

"In my opinion," it was brought out in this paper, throwing additional light on this subject, "it is going to be very necessary for the ice cream manufacturers to devise some universal plan for a service charge, which is the only way that I can see that will eliminate the customer who is requiring more service than the profit on his purchase. If the same conditions prevail elsewhere as in our community, there are two-thirds more dealers handling ice cream than there were back two or three years ago and our gallonage does not total up any more at the end of the season.

"Over two years ago I started an investigation as to the possibility of a plan whereby we could place a service charge that we might be reimbursed for the expense of caring for the 'free boarder' or eliminate hi mentirely. This was taken up at our Fox River Valley Association meeting a year ago and again this year, at which time we thought that it could be handled to a good advantage. A number of plans were discussed and one adopted, but due to a member who had not been in the business over two years, upset our two years' work along this line and I think that I was the only one around here who carried out the service charge this last summer. I understood that some of the Rockford association members put a service charge into effect.

"The plan adopted by us is as follows: Any customer using less than 5 gallons a week was charged $1.50 per week; those using less than 10 gallons a week were charged $1; those using less than 15 gallons a week 50c. For those using 15 gallons or over a week, there was no charge.

"At first our larger customers did not understand this plan and objected somewhat, but after it was explained how it protected him due to the fact that all charges were automatically wiped out unless it would be a few weeks in the winter months, when he would have only a small charge, if any, and that he could well afford to pay for it acts as a business builder for him.

"For every gallon of ice cream that is sold by the so-called 'free boarder' takes just that much business from some legitimate dealer, and he would again come back to his own where he was four or five years ago. As you know, our large stops have not used anywhere near the ice cream in late years that they have heretofore, and when the large customers thoroughly understand that this is a business-getter for them, they will fall in line and boost the plan.

"There is still another plan to this 'free boarder.' He will want two or three flavors at the same time, and he is not in a position to sell out any one of them. It allows the ice cream to get in an unsaleable condition, as the convenience for caring for the ice cream in these places is not what it should be. This condition is a detriment to the business as a whole.

"I will agree with you that it is hard at first for the manufacturer to cut off at least half of his stops; but I am sure if it was taken up by all, there would be a great benefit derived by the manufacturer, for his gallonage would be just as large at the end of the season and you know what that means in eliminating expense. The consumer, even though he was compelled to walk a little farther for his ice cream, would be better pleased due to the conditions I mentioned above."

The chairman of the committee on mechanical refrigeration, Mr. Roszell, who had come into the room during the discussion, then was called into the discussion by the president. He said the refrigerated problem is "one of the elephants in our circus." He then read as follows copy of bulletin the committee had issued after a series of conferences with manufacturers who had studied the matter from every angle:

"Pursuant to a preliminary report as covered in bulletin 43, your committee on mechanical refrigeration begs to submit herewith its conclusions in this matter:

"No. 1. After thorough and deliberate consideration of all points involved on the subject of mechanically refrigerated cabinets and equipment, it is the finding of your committee that no installation of such equipment should be made or paid for in any instance by ice cream manufacturers, nor should manufacturers endorse any notes for dealers in the purchase of such equipment.

"No. 2. Your committee is further of the opinion, that no service nor service charges, nor installation costs or costs of any kind should be borne by ice cream manufacturers on mechanically refrigerated cabinets installed by retailers."

"In other words, gentlemen," the speaker continued, "we took the attitude that your obligation to the retailer ceased

Remarkable Advantages of Nizer Ice Cream Cabinets Due to Unusual Design

THE attention of the leaders of the ice cream industry today is being directed earnestly to the selection of the best type of iceless cabinet. It is gratifying to this Company to know that the vast majority are standardizing on Nizer equipment. The principal reason for this, we believe, should be interesting to everyone in the industry.

Nizer design is unusual—unconventional. The Nizer engineers, when they started their work in 1919, found it necessary to discard many of the mechanical features, which until then, had been generally used. They strove for simplicity. They invented new methods and designs. They knew that new standards had to be set for reliability and efficiency. They succeeded remarkably.

Among other new features are these: the unreliable electric thermostat was replaced by the Nizer dual pressure control; the inefficient old types of electric motors, which had to be changed to meet varying local conditions, were replaced by one universal motor of nearly twice the efficiency; the time-honored, multiple-cylinder, high-speed compressor was replaced by the Nizer single-cylinder slow-speed compressor; the practice of sticking cork insulation together with asphaltum was rejected because cabinet conditions are different from hardening-room conditions—Nizer cork insulation is wedged together.

In brief, from the very first, the Nizer cabinet set new standards — standards which are not equaled today—standards which anticipate the general engineering development of the next several years.

The result of this advanced engineering is a degree of reliability and operating efficiency beyond comparison.

You will be wise to select your iceless cabinets with great care.

when you delivered your product to him in good shape, that you were no more entitled to buy him a refrigerated cabinet than you were a soda fountain or set of tables or chairs or to pay his rent. I think that our committee, after giving this thing very, very careful consideration and getting the expression from all manufacturers, fully covered the sentiment of manufacturers, especially at this time. If there has been any change of sentiment I don't know it, I haven't heard it.

"No. 3. From all available statistics, your committee feels that in the matter of allowance on the price of ice cream to dealers who have installed such equipment or contemplate installing same that the actual saving of ice and salt for the packing of the equipment is the only saving that can be effected and that this ranges from 5 to 7 cents per gallon. In view of the desirability of encouraging the installation of refrigerated cabinets by retailers, it is the opinion of your committee that an allowance of not to exceed in any case 10 cents per gallon is a fair and reasonable allowance.

"Your committee felt that this was a worthy step forward in the ice cream business, should be encouraged, but not at the expense of the ice cream manufacturer. For that reason, though, I think the maximum saving that we got on our questionnaires was seven cents, the manufacturers felt that they could contribute to this extent, to the extent of boosting the installation of these cabinets on the basis of about three cents a gallon.

"There isn't any question but what the refrigerated cabinet is a step in the right direction, coupled up with the refrigerated fountain it is a further step in the right direction. The question is where the ice cream man wants to draw the line on his participation in this forward movement. That's the thing you fellows have to figure out.

"Your committee is of the opinion that a complete refrigerated unit composed of storage cabinet and fountain, is desirable equipment and will have a tendency to increase the per gallon allowance to the retailer by reason of the greater saving on the part of the manufacturer—the complete installation of a cabinet and a fountain so that you don't have to deliver any ice or salt to that stop or render any service. That would be of distinct advantage to us as manufacturers, but where you've got to maintain the dual service of packing the fellow's fountain, putting his ice cream in the refrigerated cabinet, your saving is very materially reduced.

"Such dual service is now necessary in many instances by reason of the fact that a refrigerated cabinet alone in a dealer's store does not eliminate the necessity of icing the fountain by the manufacturer, thereby reducing or eliminating any saving in service to the manufacturer.

"No. 4. Your committee has not exhaustively gone into the merits or demerits of the equipment on the market and is of the opinion that ice cream manufacturers are not called upon to recommend any particular equipment to their dealers.

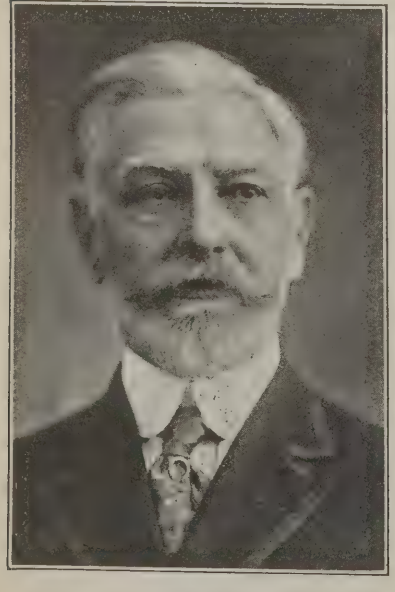
"In other words, we are not called upon to tell John Smith whether he should buy one make of cabinet or another make any more than whether he buy one make of fountain or one certain make of automobile. We don't care whether he buys a Ford or a Dodge; that's up to him, it's his responsibility, not ours. Let him figure that out.

"Your committee desires it to be understood that it feels that the mechanically refrigerated cabinet is a progressive step in the distribution of ice cream—I don't think there is a man in the room here that will take any exception to that statement.

"—and the further development of this innovation in the ice cream business should be encouraged, but it feels plainly obligated to set forth the facts as they exist at this time, with reference to the general subject of refrigerated cabinets.

"There is a wide difference of opinion as to the most desirable refrigerant used in the various machines on the market. There is a question as to the practicability of these machines operated by novices as would be the case in installation in retail stores—the point of liability in case of an accidental discharge of gases or refrigerant, in the event of loss of life or loss in business. There presents itself the question of the small retailer making the investment in this mechanical equipment and its subsequent influence upon the manner of paying his bills.

"Whether or not the small fellow can afford to buy it or not, whether he's got any business to tie himself down to an investment of this sort.



"While desirable and deserving of fullest co-operation, it must be borne in mind that the development of mechanically refrigerated cabinets must be along lines consistent with the continued sound and economical distribution of ice cream.

"I say this thing is a great step forward but it's got to be taken by degrees; you can't take the whole dose at one swallow and keep it on your stomach.

"Your committee emphatically denounces as unfair trade practice any attempt by any ice cream manufacturer to use the installation of mechanically refrigerated cabinets as an inducement to secure customers from a competitor or for the purpose of attempting to tie a retailer up with a long time contract which has in practically all cases proven unenforcible, and has no other significance than that of a sharp trade practice carrying a distinctly unpleasant reaction."

"We have an investment in our business of $250,000 in our ice cream business," the speaker continued after mentioning certain abuses, "It will cost me $250,000 to put in refrigerated cabinets for all my customers. I'm not going to be sucker enough to put as much money in refrigerated cabinets as I've got in the rest of my business! I'm not going to increase my capital account by 100 per cent. Not on your life!"

R. R. Rutledge of the J. D. Roszell Co., Peoria, took up the discussion of uniform cost accounting, declaring that one of the greatest evils in the business is so many ice cream manufacturers do not know what their product really costs. He said with some manufacturers this condition existed because they have some other business they are running in connection with manufacturing ice

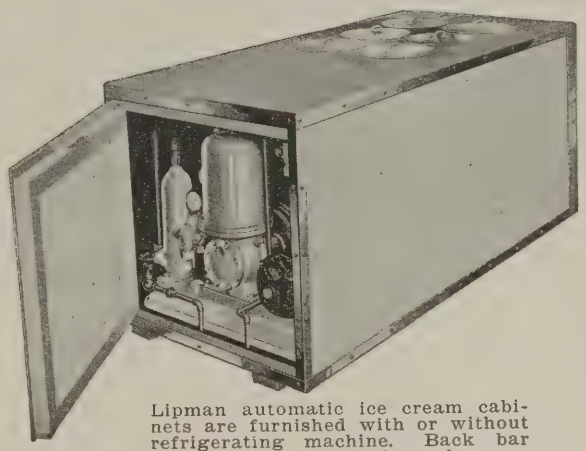
Don't "Freeze Out" Your Ice Cream Profits—

Banish the irritating overhead of icing service —with its ice, salt, time and trouble — by providing your dealers with a Lipman Full-Automatic Ice Cream Cabinet.

Not only will it eliminate a lot of useless expense that "freezes out" your ice cream profits, but it will enable you to increase your sales as well. Your dealers will sell more ice cream and will suffer no loss in volume by poor refrigeration.



Our engineer in your section will gladly give you an unbiased estimate at no obligation whatever to you.

cream. Speaking of financial accounting, as the speaker called it, he said this has been more or less standardized, and a balance sheet of one firm can be compared with the balance sheet of another with some degree of satisfaction, but—

"When it comes to comparing cost sheets, we sometimes wonder if we are talking about the same line of business. One firm will class a given item of expense under one heading and another firm will class this same item under an entirely different heading, another will have no definite classification of expenses, another will leave out vital and important items of expense.

"A uniform cost accounting system does not mean a system of uniform costs. There is a big difference. A uniform cost system is all right and means the setting up of honest cost standards on a sound, uniform basis, but if it is used for the purpose of setting up a system of uniform costs you have something that is all wrong and illegitimate.

"There have been numbers of cases where so-called uniform cost systems have been introduced by so-called cost accountants, that have not been used for the honest determination of costs or for efficiency and economies in operations, but for the purpose of fixing or raising selling prices."

This Illinois association has no idea of using a uniform cost system for any such purpose, the speaker declared. He said, the records of the supreme courts show that other trade associations have done so to their sorrow and financial loss. And then, too—

"It must be remembered that an individual can do almost as he pleases with his own business, but when he enters into an agreement with his fellow competitors to do the same or similar things, that is another story. What is legitimate in the case of the individual may turn out to be criminal conspiracy if done by two or more individuals or firms acting together.

"One pitfall of a uniform cost system is that a few firms will figure their costs properly and honestly, and will get correct results, and the others will take it for granted that if Mr. "A" and Mr. "B" can manufacture ice cream for say 90 cents per gallon, that he, Mr. "C" can do it for 85 cents. Mr. "A" and Mr. "B" will establish their selling prices on the basis of 90 cents actual costs. while Mr. "C" will set his selling price on a mythical cost of 85 cents, and then trouble begins, and everything is all upset."

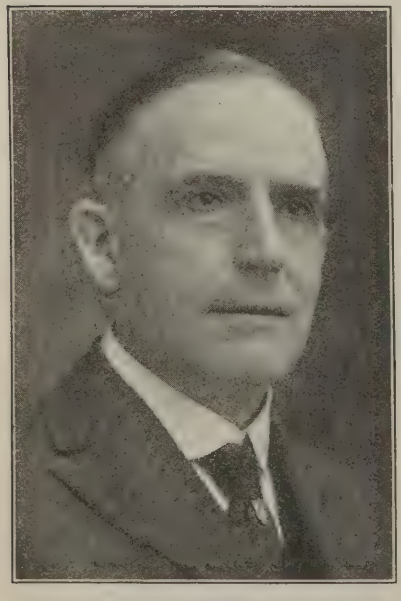
No two plants will operate on exactly the same costs, item for item, it was pointed out. You might build two ice cream plants from exactly the same blueprints and specifications, operate them on exactly the same volume in the same city and under the same executive, and superintendent, and you will not get the same costs item for item, though you may arrive at a very similar **total cost.** For—

"One plant will have the edge on the other in some way, but if the two plants are operated on the same system of costs it will enable the management to find the shortcomings and good points of each.

"When the time arrives when we have all adopted some uniform cost system, and we hope that time will not be far off, and when we begin to get reports of what other members are accomplishing, we will then be able to check ourselves up, and locate our good points and our shortcomings and correct them."

HISTORY was projected into this stage of the convention when the president called upon F. W. Holmes of Manteno to discuss the early career of the association. He told how "two fellows named Allen and Sinclair, great fellows to hobnob together," had much to do with the first meeting.

He mentioned other pioneers in the association, including the Volberding Ice Cream Co. of Watseka, F. R. Jackson of Sterling, L. V. Orsinger of LaSalle, William Ohlhaver of Aurora, Mr. Wintrode of Danville, the Roszells of Peoria, and others. There were thirteen delegates at the first meeting.



"We are not taking any glory to ourselves," said Mr. Holmes, "but we are glad that out of this small beginning this wonderful state and national have grown."

At the Wednesday morning session the president announced that interest in the subject of mechanical refrigeration was so large that it was decided to hold in the convention room that morning the discussion of the mechanical refrigeration committee.

When the chairman asked how many manufacturers of refrigerated cabinets were present the following stood up:

C. D. Haven, Vilter Manufacturing Co., Milwaukee; James L. Nelson, C. Nelson Manufacturing Co., St. Louis; E. A. Fisher, Frigidaire, Dayton; T. L. Valerius, Nizer Corp., Detroit, and Jerry Tniison.

These gentlemen later were joined by Messrs. For-

syth and Chamberlain of the Nizer Corp. Jim Nelson was the first called upon, but he stated that he had not at that time gone into the business on a national scale. He replied to a question from Ed. Klinenberg by stating that his sales were to the ice cream manufacturers.

CONFUSION that exists regarding cabinets was pointed out by E. A. Fisher, who said that in every section there seems to be a different idea as to how these cabinets should be handled. If the ice cream manufacturer wishes to buy the cabinets himself, they can be sold to him at a no-service charge, he said. In one section, he said, manufacturers will "not have anything to do with you if you want to sell cabinets to the dealers," and in another section, the ice cream manufacturers want to buy the cabinets and distribute them among the dealers.

The ensuing discussion was participated in by Messrs. Roszell, Lide, Credicott, Haven, Klinenberg, Hawkinson, Schwindeler, Courtright, Doyle, Carlson and Valerius. The regfrigeration people discussed their side of the matter and in turn were cross-examined by the manufacturers.

Regarding a question propounded by John Cunningham of Chicago, Chairman Roszell asked the former his investment in old-style cabinets, to which Mr. Cunningham replied, "About $100,000.

"You tell me it will take, in round numbers, $500,000 to equip you to handle this proposition," said Mr. Roszell. "The interest and taxes on that money is 7 per cent. Anybody will admit that. That's $35,000. We're not agreed on depreciation, but we'll assume it's 20 per cent. That's another $100,000. That's $135,000. Now, we are going to spread that over a period of a year, not going to charge off all those old cabinets we have—we'll carry the load for five years. We've got to charge off $20,000 of it the first year." This process showed it would cost the member 15½ cents a gallon, a total of $155,000, to install iceless cabinets. Figuring the saving, this was reduced to 8½ cents a gallon. Mr. Courtright thought the saving would be greater, to which Mr. Roszell agreed that it might be possible, if the member could put in the cabinets overnight, without encountering the drawbacks to the dual service pending entire installation.

MR. BREEBY brought up the matter of insurance covering the cabinets. Mr. Carlson of Colorado replied that his broker told him one can handle the matter either through a blanket insurance policy to cover all these cabinets in customers' place of business or through the method of stipulating the location of the cabinets and insuring them under a group policy. The latter method gives the advantage of building construction, he said. He said the blanket rate is a little higher.

The discussion of cabinets took up the whole morning, causing the postponing of the regular morning program. This program was taken up at the afternoon conference. The first address was on "Motor Truck Delivery" by W. L. Hart of the Litchfield Creamery Co., Litchfield, Ill. Being located in a small town, this company's truck problems are mostly of the long-haul type. In dwelling on what is probably the greatest problem in modern business, transportation, the speaker brought out a point showing where the manufacturer in the large city and the one in the small town have exactly the same problems and the same things against which to guard. He warned against covering too great a distance in the laying out plans, and said this should be done so time would be saved. He has found a light truck best suited for trips of 20, 30 and 40 miles over country roads in all sorts of weather.

He spoke of the harm that comes of letting prospective buyers see ice cream delivered in a dirty, rusty and splattered truck, for—

"**with all the fine things we can truthfully say about ice cream, * * * a great many times they are prompted to buy ice cream by suggestion coming through the eyes in the way of attractive advertisements and catchy slogans. "That being true, he felt that with trucks beautifully lettered," the manufacturer is appealing to the public to eat more ice cream.

Continuing this discussion, the president introduced H. S. Allen of the Allen Candy Co., Pontiac. Mr. Allen stated that because of the poor year just passed, it is a little difficult to figure whether the amount of 20 cents a gallon over the shipping rate is sufficient or not. In figuring the delivery costs and expenses, the cabinet investment and interest on money invested in trucks, depreciation, etc., did not leave any margin. There was no profit in this method of delivering at 20 cents a gallon over shipping price, he said.

But he felt pleased with the proposition of delivering in trucks for the reason that in his locality he had few good railroad connections and a great many transfers after the first ten or twenty miles out. He pointed that as the years go we shall have more hard roads. He would not recommend getting off the hard roads very much "with any trucking system at any cost."

METHODS of saving money in repairing trucks were outlined in a paper by C. H. Snow of Bloomington, read in Mr. Snow's absence by George R. Courtright. Taking up practices in operation, this paper pointed out it had been found that a good way to reduce tire cost is through consideration to proper co-ordination of

loads and tire sizes. This company had found that a 2,500-pound load and a 5-inch tire virtually cut in two the tire costs as compared with a 3,000-pound load limit and a 4½-inch tire. As a general policy, it is Mr. Snow's belief, a load limit 25 per cent higher than the truck's rated capacity and the first oversize in tires, especially on rear wheels, will be found most economical. He said keeping trucks equipped with mileage recorders will enable the manufacturer to make monthly gasoline mileage computation, which will, "show you many things." By means of this check, it was stated, this company has located such faults as dragging brakes, improperly adjusted carburetors, retarded ignition, and similiar minor troubles "that might have gone on for some time if not indicated by some more definite means than a driver's occasional remark about "lack of pep." As a result of this check the company removed all dash carburetors from Ford trucks. It was found that invariably drivers would open up the needle valve to facilitate starting and then forget to restore the leaner mixture. The change increased gas mileage one to two miles a gallon.

IN SPEAKING of the future of the ice cream industry, H. J. Credicott of Freeport pointed out conditions in the butter market that would largely influence the ice cream situation, in its bearing on cost of material. He said that regardless of the price of low grades, the top grades will be help up at a relatively high figure. He advised those manufacturers who laid in sweet butter last summer in anticipation of hot weather to study the situation and "get out from under as quick as you can." He said the export demand may help the situation. Lower prices may increase consumption and thereby help to build back the strength of the market. But on the whole he did not think it was a rosy situation for the butter people.

The product ice cream men make has been recognized by the government as food, and the manufacturer must not fail to keep that product up to the standard as set by the government, the convention was told by J. W. Merrigan, Jacksonville, Ill., speaking on "Our Responsibility."

Dr. H. E. Van Norman, president of the National Dairy Association, congratulated the association upon having passed its twenty-fifth milestone. C. J. Stewart of Decatur spoke on "Competition or Co-operation." F. J. Bridges of Chicago, speaking on "Bulk Ice Cream versus Packaged," said the Hydrox Corp. had made a very aggressive effort to popularize brick ice cream for several years, but at this time brick sales in proportion to bulk are not as large as it was four or five years ago. Many different combinations in flavors this year has made the percentage of brick to bulk run eighteen per cent higher than usual. The fountain is where the ice cream dealer does his best ice cream business, the speaker said. He thought ice cream manufacturers should make every effort to help popularize the fountain.

Along the same line, the convention received a speech from John H. Mulholland of Philadelphia, who extended the greeting of the Association of Ice Cream Manufacturers of Pennsylvania and New Jersey, and then went on to tell how Philadelphia, with its wonderful annual gallonage of 18,000,000, makes about 5 per cent brick ice cream. They have never educated the public to buy brick ice cream, Mr. Mulholland said; the old method of carrying the dish passed some years ago, but it has been managed, "by some means or another," to deliver bulk ice cream to the consumer anyway. He said the Crane Ice Cream Co. of Philadelphia, developed a dish to hold a quart of ice cream. It is lined with parchment

and contains their advertisement. The cream is taken from a can with a spoon made for the purpose. It is called "ribbon" ice cream. He said there are more servings in a quart of ribbon ice cream than in a quart of ice cream "pounded into the pail." Mr. Knobbe of Chicago did not believe such a plan would work in that city.

In discussing possibilities through national advertising, M. D. Munn, president of the National Dairy Council, told the convention that during the past twelve months there were consumed about 80 dishes of ice cream per capita, which showed, he said, that there were 285 days during the year when ice cream was not eaten at all. He was speaking on averages, of course. He cited the cement industry as a striking example of benefits from co-operative advertising, showing how they had nearly doubled business in cement after one year of such a campaign. They built a marget for cement by telling the public what it is, how it is used, etc. The speaker was sure that not one woman in ten thousand really knows that she is serving a wholesome food to her child when she responds to its pleadings by buying the child ice cream. He reminded the ice cream men that they have hidden their lights under a bushel as it were by failing to let the public even hear of some of the different kinds of ice cream.

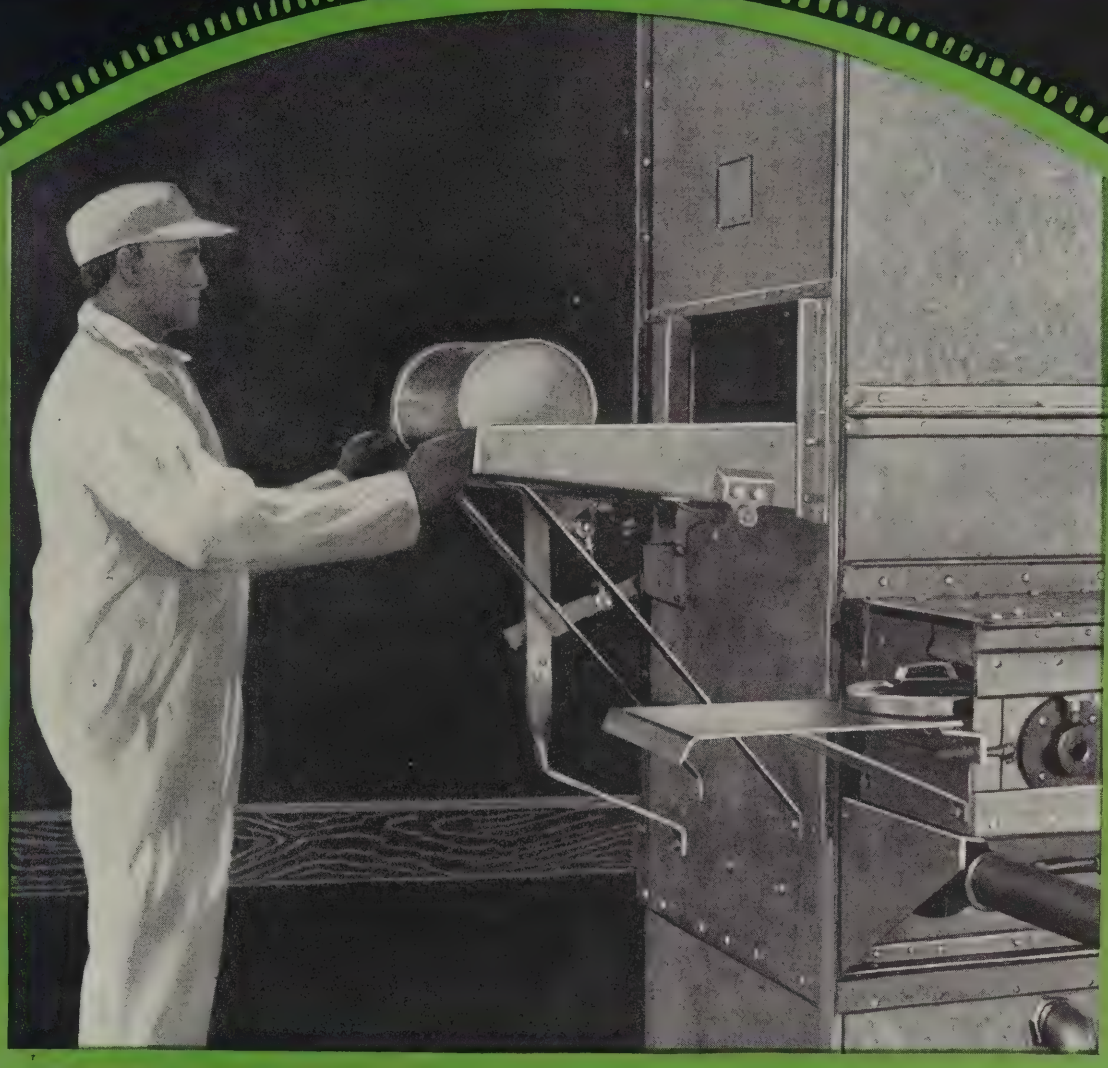
W. A. Schwindeler of St. Louis, past president of the Illinois association, and chairman of the advertising committee of the national association, outlined the work of a committee. This speech was fairly well covered, however, in his report at the national convention, and is taken up elsewhere.

"The Relation of Gelatine to the Bacteria Content of Ice Cream" was the subject of P. H. Tracy, first assistant in dairy manufacturing at the University of Illinois.

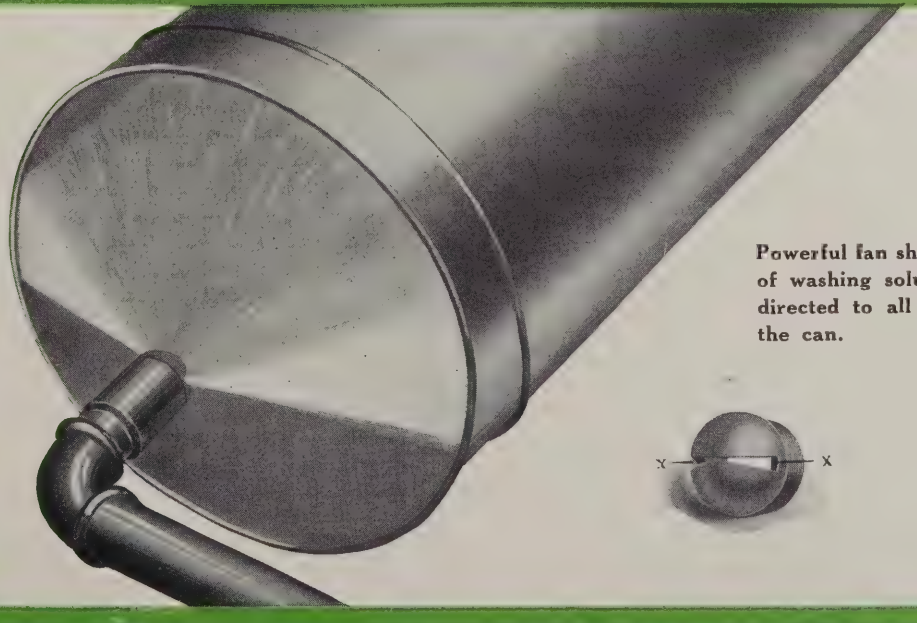
An exceedingly interesting address was delivered by Dr. H. A. Ruehe, chief in dairy manufacture and head of the department of dairy husbandry at the University of Illinois. His subject was "Results From Recent Studies in the Manufacture of Ice Cream."

THERE was a general discussion as to group meetings for the year. Secretary Loewenstein read a telegram in which the officers of the Southern Association of Ice Cream Manufacturers extended congratulations and best wishes for "a real silver jubilee." The president announced that 40 manufacturers from outside the state attended the convention. The convention gave a rising vote of thanks to the Chicago manufacturers "for the splendid manner in which they deal with us every year," this on motion of J. W. Merrigan.

The same gentleman was kind enough to ask for a rising vote of thanks to The Ice Cream Review for the Silver Jubilee number issued in connection with the convention. The rising vote was tendered. The nomination of officers resulted in the association rewarding the old officers and entire directorate with another term. The Chicago manufacturers, through Mr. Thompson, invited the association to meet in that city in 1925, and the invitation was accepted. Ed. Klinenberg pointed out that the time of convention is very short, and he asked that next year's convention be for a duration of three days.



* * *



Convention Notes.

Among the Indiana manufacturers attending the convention were: V. J. Kelley and M. B. Morgan of the LaFayette Ice Cream Co., LaFayette; A. A. Burris, Tip Top Creamery, Vincennes, and Roy S. Atkinson, Evansville Pure Milk Co., Evansville.

Fig. 882. Double Volute Pump, built especially for Power Washing Machinery. The impeller of this pump is designed to suit the jets of the machine so that proper water velocity, volume and pressure are obtained.

1200 Clean, Sterile Ice

THE R&A Ice Cream Can Washer has almost unlimited capacity. On low speed it will handle 300 five-gallon cans per hour, while on high speed it will handle 600.

Small size cans are washed nested in the large ones, thus doubling the capacity.

During ordinary days it can be run at low speed, but on rush days it can be speeded up to handle 1,200 assorted large and small size cans per hour—nearly 10,000 cans per eight-hour day.

At the Hoefler Ice Cream Company last summer on rush days, two men with an R&A Machine washed in one day the same number of cans that would ordinarily require four men three days, using their old three brush washer.

Covers, molds and slabs are handled on an endless chain separate from the cans. Both cans and covers may be washed at the same time.

...Can Washer

R&A Medium Duty Can Washer---Rotary Type

Washes, Sterilizes and Dries Milk Cans

MANY improvements that add to its utility and convenience have been added to the R&A Medium Duty Can Washer—the machine that most of the largest plants have standardized upon.

Among the many new features are:

1. New crank type handle that moves the cans one position and locks them—must be tripped to release it. Prevents "spinning" machine and insures thorough washing of cans.
2. Control valves mounted on convenient panel and each plainly marked.
3. New locking device that securely holds can carriers in place.
4. Special attachment for washing small cans.
5. New twin pump unit with fan attached. May be driven by motor, turbine or belt.
6. New fresh boiling water rinse supplied by small pump thoroughly sterilizing each can.

This machine washes, rinses, sterilizes and dries from four to five cans per minute. One operator does the whole job—dumps and weighs the milk, feeds the cans into the machine and removes them.

RICE & ADAMS CORPORATION

Rice & Adams Corporation, Main Office and Factory, Buffalo, N. Y.—Branch Offices and Warehouses, New York, Boston, Chicago.

And so the prodigal came home again. That was "Bill" Schwindeler. The former president of the Illinois association was given a heart-warming reception.

* * *

Among the Michigan manufacturers were: Bob White, White Ice Cream Co., Flint; Fred Fleming, Fleming Ice Cream Co., Bay City; N. E. Ulassis and Earle Williams, A. E. Williams Ice Cream Co., Saginaw, and LeRoy Wilson, president of the Michigan association, Port Huron.

* * *

Missouri was well represented at the convention. Among the gentlemen from the "Show Me" state were: Charles Newman, J. E. Patrick, G. Paristel, John A. Beclser, B. M. Lide, Jr., and George Gilliam.

* * *

Badgers turned out in good force. Among the Wisconsin men were A. H. Kramer, Madison; N. G. Sonnann, Kenosha; Adolph O. Vetter, Milwaukee; R. Burdesser, Milwaukee; Chas. Touton, Janesville; Ernest A. John, Madison; Arthur Graeszel, Milwaukee; Edward Hunchliffe, Burlington, and Charles E. Wright, Beloit; J. D. Hughes, Milwaukee; H. A. Haas, Madison; E. C. Johnson, Burlington; F. E. Caughy, Madison; A. W. Johnson, La Crosse, and Ernest Bareman, Kenosha.

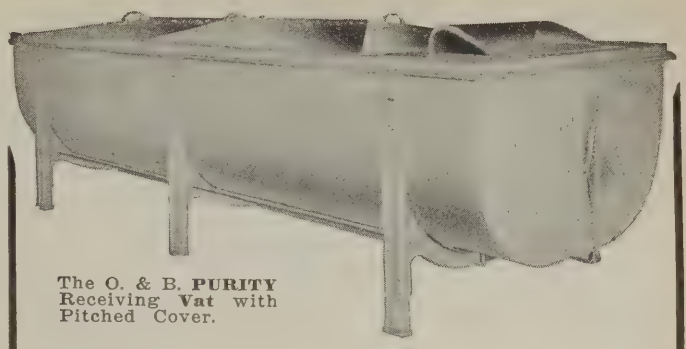
* * *

Arthur E. Dixon, secretary of the North Carolina Ice Cream Manufacturers' Association was on hand to extend the congratulations of his association. Manufacturers from other states included H. W. Gentleman, Omaha, Neb.; W. E. Telling, Cleveland; Edward W. Neuman, York, Pa., and Edward Carlson, Denver, Colo.

⚜

WISCONSIN'S LEADING ICE CREAM COUNTIES TABULATED.

J. Q. Emery, Wisconsin state dairy and food commissioner, has compiled a tabulation showing ice cream production in each Wisconsin county during 1923. Milwaukee county, of course, leads, producing, in 1923, 2,305,537 gallons of the total 6,000,000 gallons of ice cream made in the state.



Tabulation of leading ice cream counties in the state follows:

County	Gallons	Value
Brown	359,229	383,530
Chippewa	85,627	91,851
Dane	423,221	478,223
Eau Claire	50,218	51,129
Fond du Lac	226,244	226,802
Jefferson	131,333	124,263
Kenosha	135,251	151,630
LaCrosse	232,818	263,544
Marathon	77,556	76,282
Milwaukee	2,305,537	2,527,209
Outagamie	129,236	147,466
Rock	295,858	317,135
Sauk	135,945	134,541
Winnebago	212,262	217,679

Officers Re-Elected By Penn.-Jersey Association

Convention Features Natural Standards, Cost Accounting, Weight Standards, and Iceless Cabinets

TOPICS related to national standards, selling by weight, comparative costs of operation tabulation, minimum weights standard, refrigerated iceless cabinets and national advertising were among features at the annual convention of the Association of the Ice Cream Manufacturers of Pennsylvania and New Jersey, held at Newark, N. J., October 14, 15 and 16.

It was a convention such as the association is famous for, largely attended. Officers and directors were re-elected. Choice of a convention city was left to the board of directors, which was expected to choose a Pennsylvania meeting place, under the alternating custom. Approximately 400 delegates attended the convention. This was the largest assembly of ice cream men since the formation of the body, according to Secretary J. W. Neuman.

Ice cream should contain products of the same standard as certified milk, the convention was told by Health Officer Craster, who urged careful supervision of elements used and of conditions under which ice cream is manufactured. He recommended physical examination of employees, careful inspection of cows, and observance of strict rules of sanitation.

N. M. Thomas, president of the salesman's club of the Association of Ice Cream Supplymen, delivered a speech that was one of the features of the closing session of the convention. It was illustrated by graphic charts on freezing ice cream. Motion pictures showing growing, gathering and curing of Mexican vanilla beans were shown by David Michael of Philadelphia.

"The Place of Ice Cream in the Diet," was the subject of Dr. Charles H. Kimberly of the Dairy Laboratories, New York City. Time and temperature features in freezing ice cream was discussed by Thomas Hall, an ice cream manufacturer of Harrisburg, Pa.

Usual convention preliminaries featured the opening of the convention on October 14—address of welcome, president's address, secretary-treasurer's report, and convention announcements. Mayor Breindenbach of Newark was on time to welcome the delegates.

Ladies of the convention were entertained. The last morning of the convention was preceded by an informal banquet and dance at the Robert Treat Hotel, this being the finishing touch to what officials regard as one of the best conventions in the history of their association.

The officers and directors re-elected are as follows: President, E. E. Rieck, Pittsburgh; vice-president, W. E. Hoffman, Tyrone; secretary, J. W. Neuman, York; treasurer, E. Walker, Warren. Don Wiseman, Erie; Thomas Hall, Harrisburg; Wilbur Scott and George M. Brink, Philadelphia; Joseph T. Castle, Irvington, and W. H. List, Newark, constitute the directorate.

TRIAL ORDERS

We will be glad to submit samples of any of our grades, sufficient for practical or laboratory tests, without charge. Trial orders are shipped subject to customer's approval with privilege of return if for any reason found unsatisfactory.

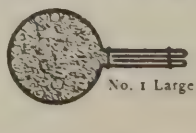
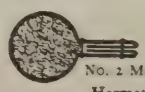
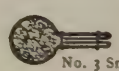
TO ERECT CREAMERY AND ICE CREAM FACTORY.



The Kaufman Creamery Co., operating plants at Pratt and Liberal, Kan., has completed plans for the erection of a modern tile structure at Dahlhart, Tex., for the manufacture of butter and ice cream. The Kansas company recently purchased the Dahlhart Creamery from Wm. Piehl, and will occupy this building until the new one is completed.



Roy C. Kaufman reports that the building will cost approximately $5,000 and will be 35 feet by 60 feet. It will be constructed of tile. The plant will be fully equipped.



The pant is expected to be completed early in the spring. It will have a capacity of 200 gallons of ice cream daily and will be equipped to manufacture 1,000 pounds of butter daily. W. E. Packer will have active charge of the business and has moved to Dahlhart for that purpose.

OAKLAND IS CALLING PACIFIC ICE CREAM MEN.

(Continued from page 13)

through a special hospitality committee, plan to extend certain graceful courtesies to the Pacific Slope Dairy Show visitors.

OAKLAND, directly across the bay from San Francisco, is a popular tourist center. Independence Square is the site of the beginning of this city, and the old Spanish bull ring, where, before the conquest and for some years thereafter, the Californians and the earliest American settlers gathered for sport. Idora Park, at Fifty-sixth and Telegraph Ave., claims to be the largest amusement park in the West.

Lake Merritt, along Fallon St., between Twelfth and Grand Ave., is a salt water lake covering 160 acres. Along the shores of this lake are beautiful private homes and parks, the latter furnishing various attractions. The city hall, with its massive tower, is a striking landmark and the tallest building in California. A fine view of the surrounding cities and country may be seen from the dome of this building.

The Oakland Mole, considered a marvelous engineering feat, is constructed for two miles out into the bay, at the terminus of which is a large building thoroughly equipped with all conveniences and requirements necessary for handling all passenger trains from the North, South and East. All passenger trains are made up at this depot and all passengers to or from San Francisco are transferred by ferry boats.

Where Packaged Sundaes are Sold — It dominates

Selected by the leaders in the ice cream industry as the better package. Millions used annually. Dominates the field because it possesses real merchandising value — actually sells its contents — builds bigger sales volume. It is the better made — more attractive than any other Sundae package. Represents the highest attainment in paper packages. That's the reason it is selected and used by those who are winning additional profits by making and marketing packaged sundaes. Mono-made packages are so superior in workmanship, so superior in appearance, so practical for use that you cannot help but increase your sales volume and profits by their use. We'll gladly send you samples and "Packaged Sundae" information. Simply ask for "Sundae Kup" samples.

* * *

Michigan Dairy Boosters have you your floor space for Michigan Dairy convention in week of February 2. 1925? If not, get busy if you expect to exhibit there.

* * *

All Michigan Dairy Boosters get busy from now on and talk your coming convention at Lansing the week of February 2, 1925. Do not stop boosting it to your trade. Keep it up!

* * *

January's issue of The Ice Cream Review will have the list of all firms who will exhibit at Michigan convention in February, at Lansing, Mich. You will find some of the most reliable firms there, whom we are proud of.

* * *

Notice to those who are going to the Michigan dairy show at Lansing, February 2, 3, 4, 5, 6, 1925. You will find the following hotels at which you can make reservations. So better look after it at once:

144 rooms at Downey Hotel. Rates, $2, $2.50, $3.

300 rooms at Kerns Hotel. Rates, $2, $2.50, with shower; $3, with tub.

100 rooms at Detroit Hotel. Rates, $1.50, $2, with shower; $2.50, with tub.

200 rooms at Roosevelt Hotel. Rates, $1.50 and up.

Fleming Hotel. Rates, $1.50 and up.

* * *

Michigan Dairy Boosters, do not miss your annual banquet and election of officers, at Kerns Hotel, Lansing, Mich., Tuesday evening, 6:30 p. m., Feb. 3, 1925.

* * *

Michigan Dairy Boosters, your headquarters for convention week at Lansing, Mich., Feb. 2 to 6, 1925, will be Kerns Hotel, so kindly make your reservations at once. Quite a number of them have done so.

* * *

The local committee at Lansing, Mich., was appointed by the president of the Dairy Boosters. So far it is do-the good work for the coming convention:

H. C. Snyder of Freeman Ice Cream Co., chairman; Claude S. Winans of Winans & Sons, H. Chris. Hansen of Lansing Dairy Co., F. J. Free of West Side Dairy Co., H. A. Melins of Capital City Creamery Co., Fred J. Steinle of Lansing Creamery Co., Bernard Biergans of Biergans Brothers, C. J. Schneider of Artic & Connor Ice Cream Co., W. H. Hunter of Hunter Dairy.

* * *

Michigan Dairy Boosters, remember your election of officers will be held in connection with your annual boosters' banquet at Lansing on Tuesday night, February 3, 6:30 sharp, at Hotel Kerns. Do not fail to attend. On account of so many having missed it last year we will hold it this time on Tuesday instead of Monday so all can be there. We will have plenty of music and a good time. Remember the dairy boosters' dance at Lansing during convention week; It will be held at Hotel Kerns. No doubt, it will be bigger than ever, for the local committee is doing its best to make it such.

* * *

C. J. Yuncker, president of the dairy boosters, says he has made final arrangements for the boosters' banquet and that it will be a good substantial meal, one to please all. He asks all boosters to attend it and help elect their officers for the coming year.

* * *

C. J. W. Smith, secretary and treasurer of the dairy

Sanitary Ice Cream Truck

The Sanitary Ice Cream Truck facilitates handling cream from freezing to hardening room.

Will handle any size can in common usage. Avoids accidents in handling, as the operator does not touch the cans until he reaches the hardening room.

The truck can also be used in taking cans from the hardening room.

One man with truck will handle the cream from the freezers as fast as it will flow, no helper being necessary.

Substantially built to stand usage, nothing to get out of order. Can container revolves on a thrust roller bearing and is easily turned.

Made in two sizes. Style A, capacity six 5-gallon cans. Over-all dimensions, diameter 28½ inches; height, loaded with 5-gallon cans, 26 inches.

Style B, capacity four 5-gallon cans. Over-all dimensions, diameter 23 inches, height loaded 26 inches.

PRICE, STYLE A $50.00 **PRICE, STYLE B $45.00**

WARNING TO MEMBERS OF MICHIGAN DAIRY BOOSTERS.

Last Call!

Secretary Frary of the Michigan Allied Dairy Association has sent to all of our members the contract for space and floor diagram.

Our space this year is very limited and if you do not secure your space it will be only because you have neglected to reply to Secretary Frary's letter. You have been given first chance on space.

Don't blame Secretary Frary or the Boosters if you find no space left for you.

There will be only a total of 56 spaces in exhibit hall at East Lansing, Mich., Michigan Agricultural College. This is about 20 per cent less than we have had heretofore.

This is the forty-first annual session of the Michigan Dairy Manufacturers and Producers and is held in conjunction with Michigan Farmers' Week.

This will be larger in matter of popular attendance by the dairy industry than any heretofore. Don't forget the dates, February 3, 4, 5, 6, 1925.

If you do not intend to exhibit please advise the secretary.

If you do intend to exhibit rush your contract and check before it is too late to R. F. Frary, secretary, Michigan Allied Dairy Association, Lapeer, Mich.

There will be the usual program, unit sessions, and general sessions.

The members of the Michigan Dairy Boosters are urged to attend the annual meeting and banquet Tuesday evening, February 3, at Hotel Kerns, Lansing.

The annual banquet of the Michigan Allied Dairy Association will be Wednesday evening, February 4, at Hotel Kerns.

On Thursday evening, February 5, the "Boosters" will give their annual dance. This is entirely free to members and the local Lansing committee promises to have plenty of local ladies connected with the Lansing industry as partners for all gentlemen members who will attend and dance.

Prof. O. E. Reed and his staff of the Michigan Agricultural College and T. H. Broughton and his staff of the Dairy Division, Michigan State Board of Agriculture, are working with us to make this meeting a "humdinger."

C. J. W. SMITH, Secretary.

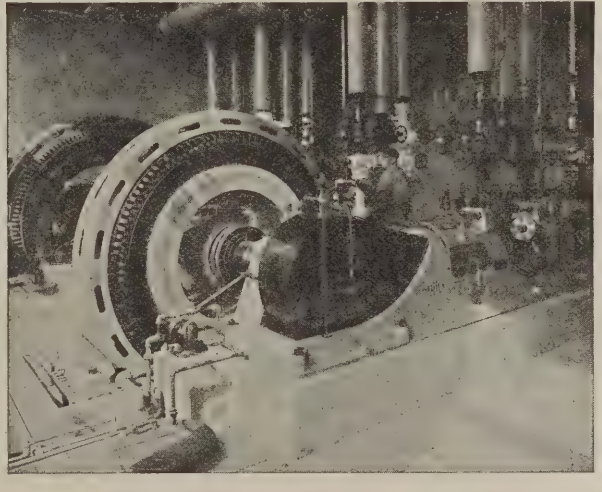
Dunn's Gelatine

Another Triumph for Frick Equipment



—the New Plant of Seattle Ice Cream Company

The refrigerating equipment installed in the Seattle Ice Cream Company's new plant is modern to the last bolt.

The main ammonia compressors are very heavily built and work on the long stroke principle. They are equipped with central and forced-feed oiling systems, metallic packing, plate valves, and triple suction connections.

A 5″x5″ enclosed ammonia compressor is installed for standby service. The condensers, ice tanks, brine coolers, and room coils are built on most recent designs.

Frick machinery was chosen by the owners after extended inspection trips, covering all types of machines. The plant is a living testimony to the worth of Frick Equipment.

Frick Horizontal Compressors at Seattle Ice Cream Company, Seattle, Wash.

Distributors in all Principal Cities.

his return from the National Dairy Exposition, just read this letter:

A certain dairyman from the central part of Ohio drove his auto through to the National Dairy Show held in Milwaukee and on his way home he drove through Zion City, a small village between Milwaukee and Chicago. It was about 7 o'clock in the morning and he saw signs saying, "15 Miles Limit in Residence and 10 Miles Limit in Business Districts." So he kept right on at 15 miles per hour and was watching for the business section so as to slow down. But after passing a few shacks of buildings he was stopped by an officer and asked why he was going 15 miles per hour through the business district. He told the officer he had seen the signs and was looking for business places. He was told he was now in such section and he had just passed that little frame building which was the police station and was told to go to that station; they fined him $20.00 which he paid and took a receipt for same.

When he arrived home he wrote a firm by the name of Zion Institutes Industries Co., whom he had bought office supplies of, thinking he would let them know how good treatment he received while in their city. He received a letter from a Mr. Bishop, who seems to be manager of said company, who also said he was the chief of police of Zion City, and was well acquainted with such an arrest and fine and he would be glad to do whatever this dairyman suggested to make things right. Now would that not get your goat? This Ohio man says after making further inquiry he finds this is a one man's town and whatever Mr. Bishop says goes. He says there were no business places there, that he could see. So whoever goes through Zion City, be on your watch.

Yours truly,
(Signed) C. J. YUNCKER, President,
Michigan Dairy Boosters.

Replies to Inquiries

Dear Sir:—I want to use a different brand of evaporated milk, which they claim contains 8.5 per cent butterfat and 28 per cent solids. With this I would like to use 4 per cent milk and 20 per cent sweet cream to make a 10 per cent butterfat ice cream.

Reply: I have your letter of recent date and request to assist you in formulating your ice cream mix. You will find my suggested formula for 100 pounds of mix given below in table one:

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
14.00 lbs. sugar	.....	.....	13.30
.50 lbs. gelatine	.....	.....	.47
20.00 lbs. evap. milk	1.70	3.90	5.60
36.00 lbs. 20% cream	7.20	.....	.....
29.50 lbs. 4% milk	1.18	5.18	13.56
100.00 lbs. mix	10.08	9.08	32.93

You will notice that this mix figures 10 per cent fat, 9 per cent serum solids, and 33 per cent total solids. Should you desire to increase the serum solids 1 per cent or to 10 per cent, I would suggest that you use 1 pound of skim milk powder replacing 1 pound of 4 per cent milk. I do not think it is advisable to use a larger quantity of the evaporated milk.

* * *

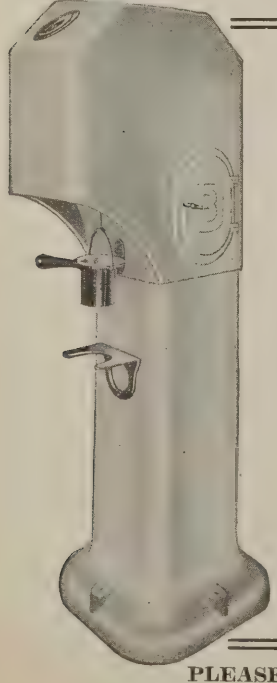
Dear Sir:—Will you please give us a proper proportion to use in making a 12 per cent ice cream? We are using cream 28 per cent butterfat, plain condensed skim milk and fresh milk 3¾ per cent butterfat. If we use sweetened condensed milk, how much less sugar do you recommend please?

Reply: I am indicating a formula in table one and table two using both the condensed skim milk and the sweetened condensed milk:

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
14.00 lbs. sugar	.....	.....	13.30
.50 lbs. gelatine	.....	.....	.47
12.00 lbs. cond. skim	.....	3.24	3.24
38.00 lbs. 28% cream	10.64	.....	.....
35.50 lbs. 3¾% milk	1.32	5.47	17.43
100.00 lbs. mix	11.96	8.71	34.44

Table 2.



Ingredients	Fat	Serum Sol.	Total Sol.
9.20 lbs. sugar	.....	.....	8.74
.50 lbs. gelatine	.....	.....	.47
12.00 lbs. sweet cond.	.....	3.24	8.04
37.50 lbs. 28% cream	10.50	.....	.....
40.80 lbs. 3¾% milk	1.53	5.90	17.93
100.00 lbs. mix	12.03	9.14	35.18

Either of these mixes should give you a very good product. You will notice that when the sweetened condensed milk is used the amount of sugar is reduced from 14 pounds to 9.2 pounds, and also that the total solids will be a little higher when the sweetened condensed is used.

* * *

Dear Sir:—We are enclosing you our 2,400-pound mix formula. Please comment on it and make any suggestions whereby we can better our ice cream.

2,400-pound mix: 1,275 pounds sweet milk, 425 pounds sweet cream, 391 pounds sweetened condensed,

Sommers Ice Cream Over-run Tester

Simple in Construction—Quick Acting and Accurate

SMOOTH, SIMPLE CUP IS USED.

Uniformity and Quality

THROUGHOUT the series of advertisements we have told ice cream manufacturers many of the outstanding features in the production of Merrell-Soule Powdered Milk. Those who have followed the advertising closely will naturally be led to a conclusion that explains the greatest of all features of this wonderfully convenient product—its uniformity. This is our great claim to success: Merrell-Soule Powdered Milk is always the same—one standard product of high quality.

Whether you order a barrel today or a year from today, you receive exactly the same thing. It is a quality that ice cream manufacturers can *count on.*

Why? Because Powdered Milk is the Merrell-Soule Company's chief product. There are no "side lines" such as ice cream, or bottled milk, to detract from the importance, the care, or quality of the production of the one Powdered Milk that has proved such a boon to ice cream manufacturers.

Buffalo
Kansas City

122 pounds butter, 180 pounds sugar, 10 pounds gelatine, 24 ounces gum, 12 ounces vanilla, 6 ounces color and 24 ounces meloine.

Reply: You will find the calculations given below in table one and you will note that your mix analyses about 10 per cent fat and 10 per cent serum solids, according to advice which I gave you some time ago:

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
1275.00 lbs. milk	51.00	108.94	159.94
425.00 lbs. 20% cream	85.00	30.26	115.26
391.00 lbs. sweet cond.	.....	105.57	261.97
122.00 lbs. butter	102.50	.....	102.50
180.00 lbs. sugar	.....	.....	171.00
10.00 lbs. gelatine	.....	.....	9.50
3.00 lbs. gum and meloine.	.....	.....	2.85
2406.00 lbs. mix	238.50	244.77	823.02
Per cent	9.93	10.20	34.30
Per cent sugar	14.00		

This should make an excellent product and should also stand up well at the fountain. It is possible that your competitor is making a mix lower in solids, possibly using only 13 per cent sugar and 8 per cent fat. This mix would, of course, remain hard in the fountain a little easier than ice cream made from your mix. The lower the solids the less refrigeration it takes to keep the cream hard and undoubtedly your difficulty in keeping your cream along with your competitor's at the same fountain is due to the solids content. You can be assured, however, that if that is the case you have a much better product than your competitor.

* * *

Dear Sir:—Will you please figure for us two formulas, one for 8 per cent and one for 10 per cent butterfat, with the desired solids for a 100 per cent overrun.

Material available: 20 per cent cream, 4 per cent fresh milk, Armour's evaporated, 7.7/8 per cent gelatine and improver.

Present equipment: 100-gallon pasteurizer and one freezer.

We mix, pasteurize, cool and hold the mix in the same vat from 12 to 18 hours.

In making up your formulas please figure same in pounds and its equal in gallons as it is more convenient for us in making up the batch with gallons.

With this equipment can we use skim milk powder to an advantage as we have viscolizer?

Reply: I am suggesting below in table one and table two an 8 per cent and a 10 per cent mix:

Table 1.—8% Butterfat.

Ingredients	Fat	Serum Sol.	Total Sol.
14.00 lbs. sugar	.....	.....	13.30
.50 lbs. gelatine	.....	.....	.47
3.00 lbs. skim milk powder	.....	2.85	2.85
2 gal—17.60 lbs. evap. milk	1.40	3.16	4.56
25.00 lbs. 20% cream	5.00	.....	.....
39.90 lbs. 4% milk	15.96	5.19	11.52
100.00 lbs. mix	79.96	10.25	33.00

Table 2.—10% Ice Cream.

Ingredients	Fat	Serum Sol.	Total Sol.
14.00 lbs. sugar	.....	.....	13.30
.50 lbs. gelatine	.....	.....	.47
2.00 lbs. skim powder	.....	1.90	1.90
2 gal—17.60 lbs. evap. milk	1.40	3.16	4.56
37.50 lbs. 20% cream	7.50	.....	.....
28.40 lbs. 4% milk	1.13	5.10	13.73
100.00 lbs. mix	10.03	10.16	33.96

Motor Truck and Railway Freighting

Comparisons As to Cost, Range and Service of Moving Less Than Carload Shipments Via Freight to Short Haul Points and the Movement of the Same Class of Freight Via Motor Trucks

*By W. J. L. BANHAM**

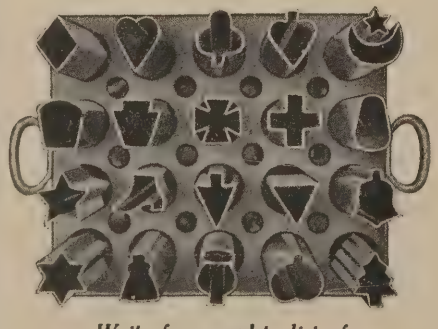
USERS of motor trucks should consider to what extent they can be operated in competition with short-haul freight movement. The principles involved are: First, service; second, cost. There seems to be no question at the present time that the carrying of less than carload shipments to short-haul points by the rail carriers is not only expensive to the shippers, but is also unprofitable to the carriers. Until recently it seemed to be almost necessary for the shippers to use the rail carriers for the movement of their less than carload shipments to nearby points, regardless of expense and delay, as there did not seem to be any organized effort made by the motor truck operators to take care of this class of freight.

It is extremely difficult for the carriers to figure cost of transportation of package freight hauled short distances and particularly to such points at which they do not have a through car movement. The expense of transferring the less than carload shipments one or more times when moving within fifty miles of the receiving station, and the additional expense caused by delay of equipment, has been recognized by the government, with the result that the United States railroad administration during the war ruled that freight destined within a certain radius would not be handled by the rail carriers. It was necessary, therefore, for the shippers to find other means of transporting this class of freight. Motor truck transportation, while still in its infancy at the present time, pointed a way to the shippers whereby their less than carload shipments could be handled not only more promptly, but at a considerable saving both to the shipper and to the receiver of freight alike.

WHILE it is true that it is almost impossible for the carriers to figure the exact cost of handling short-haul freight, it is equally as difficult for the shippers to ascertain the cost of transporting similar freight. The question of cost brings me to the first part of my subject, and in order to make it clear as to what I mean by costs and what these costs cover, I am going to refer to them as transportation costs. Transportation costs do not necessarily mean less than carload freight rates and motor truck rates, although both rates are a part of the transportation costs.

What I understand to be a true transportation cost is all expense involved in making a shipment, starting with the boxing or packing expense, together with handling expense in the shipping department, the loading of freight on teams for delivery to the freight house, teaming charges from the shipping department to the local freight house, and additional labor incidental thereto. To this must be added the less than carload freight rate and additional charge for cartage at the delivery point, with such other expenses that may be caused by requests for tracing, duplication of shipments lost or damaged in transit, entering of claims, checking of freight bills, delay to shipments in transit, and the expense of carrying additional stock to take care of freight in transit when moving via rail carriers.

All of these costs are properly transportation costs, and are part of the shipping expenses which are paid either by the shipper or receiver.



If you will make an analysis of the charges covering your shipments it will be of interest to you to know the amount it costs to make less than carload shipments, and if you will compare these costs against the same shipments moving via motor truck, you should be in position to eliminate a number of the cost items, by reason of the fact that it is not necessary to go to the same expense for packing or boxing freight shipments when moving via motor truck, inasmuch as there is usually no transfer in transit.

For the information of truck users I have compiled some figures showing the cost of freight movement, compared with the same movement via motor truck. These figures are worked out on an average basis.

In practically every instance, it is necessary to prepare material for freight shipment in an entirely different way than if it moved via motor truck direct from the shipper to the receiver. It is necessary to go to considerable additional expense for boxing or crating, or to protect by other means, in order to prevent loss or damage in transit. This additional packing expense is necessary on account of the number of handlings the

REPLIES TO INQUIRIES.

(Continued from page 120)

You will notice that in both of these mixes I have included some skim milk powder in order to bring up the solids rather than using a very large amount of the evaporated milk. It would be to your advantage, of course, to have at least an emulsifying machine or a viscolizer in order to get real satisfactory results, using the skim milk powder as well as improving the smoothness of your ice cream. You can, however, use the skim milk powder without a viscolizer. I would suggest that you mix the skim milk powder thoroughly with the sugar and introduce it at the time you do the sugar.

* * *

Dear Sir:—We want you to help us make up the following mixture: 12 per cent fat, 13 pounds sugar. We have concentrated skim, 36 per cent solids, 3.7 per cent milk, skim milk, and butter 84 per cent butterfat. In our 14 per cent mixture we will use 14 pounds of sugar, and in our 16 per cent mixture we will use 15 pounds of sugar. All the other ingredients are the same.

Reply: I am glad to indicate below four formulas, which I trust will meet your requirements for a very satisfactory and high grade ice cream:

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
13.00 lbs. sugar	.....	.....	12.40
.50 lbs. gelatine	.....	.....	.475
12.00 lbs. cond. skim 36%	.....	4.32	4.32
14.30 lbs. butter 84%	12.01	.....	12.01
60.20 lbs. skimmilk	.....	5.35	5.35
100.00 lbs. mix	12.01	9.67	34.555

Table 2.

Ingredients	Fat	Serum Sol.	Total Sol.
13.00 lbs. sugar	.....	.....	12.40
.50 lbs. gelatine	.....	.....	.47
12.00 lbs. cond. skim 36%	.....	4.32	4.32
11.60 lbs. 84% butter	9.74	.....	9.74
62.90 lbs. 3.7% milk	2.32	5.39	7.71
100.00 lbs. mix	12.06	9.71	34.64

Table 3.

Ingredients	Fat	Serum sol.	Total Sol.
14.00 lbs. sugar	.....	.....	13.30
.40 lbs. gelatine	.....	.....	.38
10.00 lbs. conc. cond. 36%	.....	3.60	3.60
15.00 lbs. 84% butter	12.60	.....	12.60
38.00 lbs. 3.7% milk	1.40	3.25	4.65

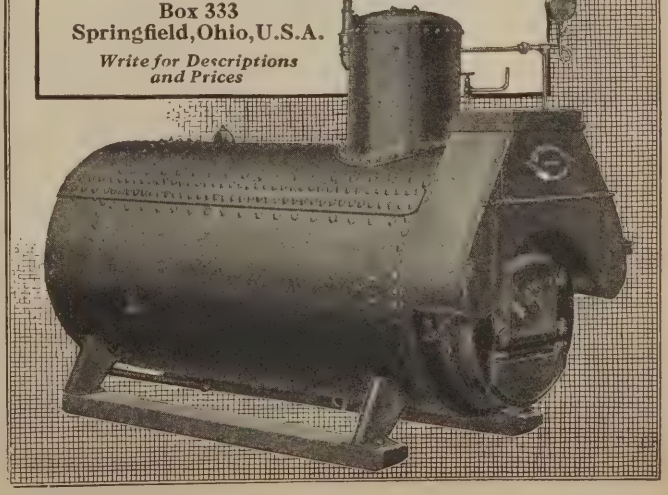
Leffel Scotch Marine Boilers



THESE Self-Contained, Internally Fired, Horizontal Return Tubular, Portable Boilers are quick, steady steamers designed especially to meet the demands for intermittent steam power in the Ice Cream, Creamery and Dairy industries.

They come complete with skids and all necessary fittings, occupy less space and are more powerful than other boilers of the same sizes. Minimum time and labor are required to operate them. Users report average fuel savings of 35 to 50 per cent. Made in 12 sizes 3 to 100 H. P. Meet requirements of all State boiler laws.

cent and your solids are also a little better than 10 per cent, but I find that the per cent of sugar you are using is 15 per cent. Your difficulty in keeping the ice cream hard at the fountain is undoubtedly due to conditions in your mix, one of them being the high sugar content which makes a lower temperature necessary for holding; the other being the large amount of sweet condensed milk which I found is very often the cause of cream not standing up well in the can because of the heavy solids going toward the bottom of the can if the cream is a little soft.

Of course, I am not sure whether that is exactly your trouble when your cream is in the hands of your dealers, but that appears to me to be the trouble. You are using sufficient gelatine and the meloine ought also assist you in getting a smoother cream and a satisfactory overrun. I am also wondering whether you mix is properly aged before freezing. Aging of the mix at a low temperature 24 hours or longer will improve the body of the cream and it will, of course, then stand up better at the fountain.

In table two below I have worked over your formula using 14 per cent sugar instead of 15 per cent, still continuing the 162 pounds of sweet condensed milk:

Table 2.

Ingredients	Fat	Serum Sol.	Total Sol.
560.00 lbs. 4% milk.....	22.40	47.84	70.24
48.00 lbs. 84% butter.....	40.32	.....	40.32
67.00 lbs. 42% cream.....	28.14	3.47	31.61
162.00 lbs. sweet cond.....	.....	43.74	108.54
58.00 lbs. sugar	.....	.....	53.10
4.50 lbs. gelatine	.....	.....	4.27
1.00 lbs. meloine	.....	.....	.95
900.50 lbs. mix	90.88	95.05	309.03
Per cent	10.07	9.55	34.30
Per cent sugar.....	14.00		

In table three I am suggesting how you might cut down on the sweet condensed milk substituting skim milk powder for a part of the serum solids and also reducing the total solids 1 per cent over the total solids as shown in table two.

Table 3.

Ingredients	Fat	Serum Sol.	Total Sol.
575.00 lbs. 4% milk.....	23.00	49.13	72.13
40.00 lbs. 84% butter.....	33.60	.....	33.60
81.00 lbs. 42% cream.....	34.02	4.19	38.21
100.00 lbs. sweet cond.....	.....	27.00	67.00
14.00 lbs. skim powder.....	.....	13.30	13.30
85.00 lbs. sugar	.....	.....	80.75
4.50 lbs. gelatine	.....	.....	4.27
1.00 lbs. meloine	.....	.....	.95
900.50 lbs. mix	90.62	83.62	300.21
Per cent	10.07	9.30	33.30

I would suggest that you try the formula in table two first and if that does not overcome your difficulty I would use the formula in table no three.

⚜

A LITTLE HISTORY.

Just 50 years since the soda fountain was invented. There are 110,000 of them in America now. They all date back to the pioneer in Philadelphia. The soda fountain dispenses 5,000,000,000 drinks and dishes a year. A gigantic industry.

If you have anything to say, say it, and with as few words as possible. That is what Abraham Lincoln did, and the world still remembers and repeats what he said.

This Year Give a Different Kind of CHRISTMAS REMEMBRANCE

Give your associates and employes a copy of "Sales and Advertising of Dairy Products" as many concerns have already arranged to do. This book will not only greatly outlast the ordinary gift but it will provide the recipient with much information and many ideas that he can use constantly in his daily work.

The book is handsomely bound in blue cloth with gold letters and is abundantly illustrated with numerous examples of profitable advertising of dairy concerns.

It is written from the laboratory of facts and gives the actual experience of scores of concerns in the sale and advertising of dairy products. It tells and illustrates the advertisements and ideas which have proven successful—plans which anyone can use to increase the sales of ice cream and dairy products.

There are hundreds of sales creating ideas that are carefully explained—any one of which are worth several times the cost of the book. In addition it has scores of charts and illustrations which explain the subject matter with crystal clearness.

The book is the "best-seller" in the dairy industry and if you want to give something that is highly appreciated, here it is. Price each, postpaid $2.00. Please write for prices on quantity orders.

POODLE DOG ASSOCIATION

President, C. W. HUTCHISON,
J. G. Cherry Co.,
Cedar Rapids, Ia.
Secretary, A. G. ROSE,
Rose Spec. Co., Des Moines, Ia.

LAST CALL FOR RECORD ATTENDANCE.

Des Moines, Ia., Nov. 13, 1924.

Dear Sir:

It is imperative that every member of the Poodle Dog Association make a special effort to attend the annual convention of the Association of Ice Cream Manufacturers of Iowa to be held at the Fort Des Moines Hotel, Des Moines, Ia., December 9, 10, and 11, as there are many vital questions confronting the ice cream manufacturers at the present time which indirectly affect us all.

The Poodle Dogs are making every effort to co-operate with the manufacturers' association toward the success of this occasion and nothing will be left undone to make it the best ice cream convention ever held in Iowa.

Make your plans now to be present—bring your wife or sweetheart. We need your co-operation and will be disappointed if you are not in attendance. May we count on your being among those present at the one big get-together event of the year? If possible, please advise the secretary who will, if desired, secure your hotel reservation.

Don't forget to bark for the convention—be there yourself and urge every ice cream manufacturer as well as supply man to be on hand when the bell rings.

Assuring you of a cordial welcome and a royal good time at "The City of Certainties," we are,

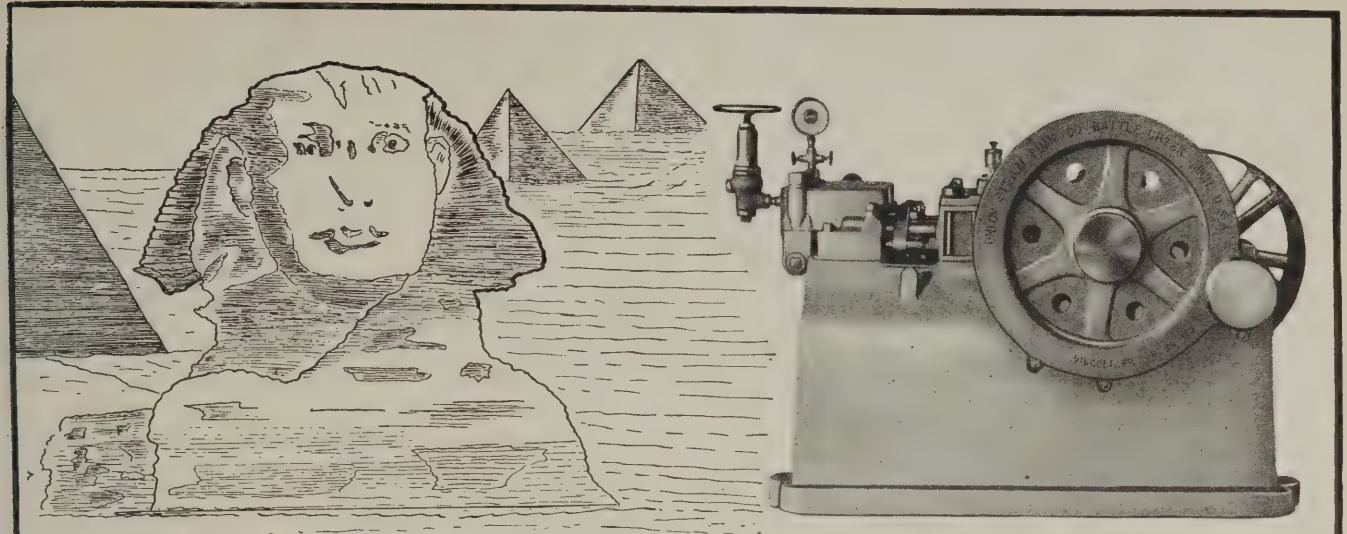
POODLE DOG ASSOCIATION,
C. W. Hutchison, President.
A. G. Rose, Secretary.

* * *

NON-MEMBERS OF THE POODLE DOGS ARE URGED TO ATTEND.

Des Moines, Ia., Nov. 13, 1924.

As a producer or distributor of any product which advances the manufacture and sale of ice cream you cannot fail to recognize the importance of being represented at the annual convention of the Association of Ice Cream Manufacturers of Iowa to be held at the Fort Des Moines Hotel, Des Moines, Ia., December 9, 10, 11. This one big event of the year offers you an opportunity to become better acquainted with every ice cream manufacturer in Iowa.



The ice cream manufacturers anticipate your being present, the Poodle Dogs expect you to co-operate in making the convention a success and you owe it to your house and yourself to be there.

The Poodle Dog Association, composed of men calling on the ice cream trade of Iowa, is held in high esteem by the manufacturers' association; and the personal contact afforded by this meeting is of inestimable value to all concerned.

Don't pass up the Iowa convention! The secretary will appreciate being advised by return mail, if you will be represented and by whom. He will make your hotel reservation, if desired.

Assuring you of a cordial welcome and a royal good time at "The City of Certainties," we are,

POODLE DOG ASSOCIATION,
C. W. Hutchison, President.
A. G. Rose, Secretary.

LONG WEAR

These Wonders

of Egypt are monuments to the engineering ability of the Egyptians. The Viscolizer is a monument to high pressure pump engineering ability. The secrets of the long wearing abilities of the Sphinx, the Pyramids, and the Viscolizer are in the materials and workmanship employed in their construction—

This eliminates upkeep expense—

This is ONE reason why

(COPY)

PURE FOOD ICE CREAM COMPANY
El Reno, Oklahoma.

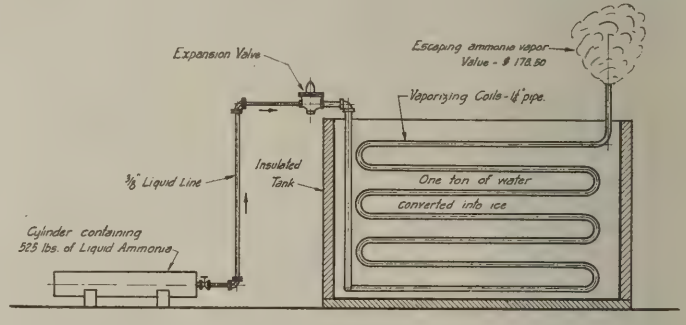
THE REFRIGERATION MEDIA.

(Continued from page 60)

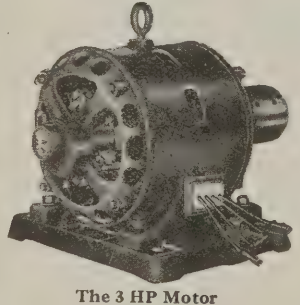
ical results the temperature of the evaporating fluid must be a few degrees below the temperature of the space or substance that is to be cooled. The usual practice when ammonia is used as a circulating media is to have a "spread" of about 10 degrees. To illustrate: Suppose it is desired to maintain a temperature of zero in an ice cream hardening room, it will be necessary to regulate the pressure of the evaporating ammonia in the "expansion" coils so that the vapor will have a temperature of about 10 degrees below zero.



The boiling points of the various medias are different so their application is governed by the conditions under which they are to be used, hence one refrigerant might give good results under a certain set of conditions, while another might not prove as satisfactory. The liquefying temperature of the vapor should be consistent with the usual temperatures of the water used for condensing and at reasonable pressures, otherwise there is a loss in economy of power operation, due to high condensing pressures that the compressor has to work against. Also the pressure on the lower pressure side should receive some consideration, for should this be below atmospheric pressure a partial vacuum is formed on the suction side and the tendency will be for air and moisture to be drawn into the system through the stuffing boxes and other loose joints, and these will cause many operating difficulties.

The pressure range is the difference between the pressure of a refrigerant, being used under ordinary operating conditions, as it vaporizes in the evaporating coils and the pressure at which it condenses. The following table shows the boiling temperature of the various medias at atmospheric pressure, and the average pressure range under usual operating conditions:

Media	Boiling temperature	Pressure range
Ammonia	27 degrees F. below zero	160 lbs.
Carbon Dioxide ..	110 degrees F. below zero	550 lbs.
Sulphur Dioxide..	14 degrees F. above zero	30 lbs.
Methyl Chloride..	10 degrees F. below zero	50 lbs.
Ethyl Chloride ..	45 degrees F. below zero	12 lbs.



There are losses of the refrigerant used, due to various causes and when much replacement is required it is apparent that the cost of the circulating media used has an important bearing. If the cost of the refrigerant used was only nominal, it could be allowed to escape into the atmosphere after it had absorbed its latent heat of vaporization in its passage through the evaporating coils, but all of the practical medias used represent considerable investment, hence they are used over and over again, by repeating the cycle of operation.

THE illustration, using ammonia as a refrigerant, shows the excessive loss by wasting the working media. With a set of good conditions the vaporization of 525 pounds of ammonia will produce enough cooling effect to freeze one ton of ice. If the cost of ammnia is taken at 34 cents per pound, the escaping vapor would represent (0.34 x 525 =) $178.50. In well regulated ice manufacturing plants the operating cost of producing a ton of ice is about $1.78, hence it is quite evident that the recovery of the ammonia to be used in repeated cycles is an economic factor in the ratio of approximately as one to one hundred!

Chemical Properties. There are two factors to consider when dealing with the chemical properties of the refrigerating media. The first factor relates to the corrosive action, if any, upon the various metals which are used in the construction of the system. In their pure state the refrigerants used may not produce a corrosive action on the metals used, but the introduction of air, moisture, oil or other foreign matter usually produces a corroding condition. As will be noted later,

For Installations where Quiet Operation is Required, Specify—

The 3 HP Motor

Century

Repulsion Start Induction

SINGLE PHASE MOTORS

Their ability to run quietly has been proven, too, and they have been adopted by leading manufacturers as regular equipment on such apparatus as household refrigerating machines, oil burners, house pumps, organ blowers, ventilating fans and other apparatus whose success largely depends upon the quiet operation and reliability of the driving motor.

⅛ to 40 HP

The brushes touch the commutator only a few seconds during the starting period.

But No Trouble Now To Have Safe Temperatures Always

A Climax Refrigerating Unit will soon pay for itself in the saving it makes. You can now have *refrigeration* anywhere and at any time in your place of business. You can have it with even more certainty and less trouble than you now have *heat.* All you have to do is to turn an electric switch and open a water valve. It is so simple to install and operate—so dependable—so economical—so clean and dry in its operation, and so surprising in its savings, you can no longer afford to be without this marvelous new refrigerating machine.

Outstanding Features of Climax Model C

1—Rotary Compressor a marvel of simplicity—positive and efficient in operation.

2—Model C operated by 2 H.P. motor. No power wasted in belts or other transmission.

3—No valves—no small frail parts.

4—Only 3 moving parts—all heavy, rugged and permanent.

5—Most compact—Model "C" size only 52" long and 21" wide, and 36" high. Weighs only 750 pounds.

6—Compressor direct connected to electric motor.

7—Continuous flow of gas through the compressor.

8—All lubricating oil confined to the high pressure side of compressor.

9—No oil can come in contact with liquid refrigerant.

10—No violent fluctuation of hands on pressure gauges.

11—Simplest starting. Just open water valve to start, close water valve to stop.

12—No throwing of electric switches—tightening of belts—or clattering of valves.

13—Nothing to forget. Shuts off automatically in case of failure of cooling water supply.

14—Particularly adapted to automatic control.

15—All parts made interchangeable.

16—Each unit factory tested before shipment to produce refrigeration in excess of its rated capacity.

CLIMAX Model C ROTARY

Driven by Gas Engine or Electric Motor

offers you all of these advantages:

—It is absolutely dependable.
—It keeps temperatures constantly within the seven degree safety range, below 40° and above 33°.
—It keeps foodstuffs safe from spoilage—safe from freezing.
—It requires almost no attention.
—It is always under your own control.
—It is always sanitary.
—It enables you to store foodstuffs in quantities at low prices, and profit by market advances.
—It is surprisingly economical.
—It operates at the turn of a switch.
—It provides dry cold—no water soaking of foods.
—It provides odorless refrigeration—no tainted food.
—It is not interrupted by holidays.
—It is never wasteful.
—It protects you and builds trade.

If interested, just fill out and mail coupon today for full information. ***We also make Reciprocating Type Units for larger requirements.***

certain metals are better adopted to some refrigerants than others.

The second factor relates to the chemical bond. This means that the nature of the substance used must be such that no decomposition occurs to allow the refrigerant to disassociate into its original elements. The repeated evaporations, absorptions, compressions, condensations and liquefactions of the refrigerating cycle have a tendency to disintregrate the substance used, due to the change of condition and the relatively high degree of heat during compression.

THE commercial application of any refrigerating media is very largely determined by its physical properties. The pressure that is required to liquefy the vapors in the condenser largely determines the design of the system. The specific volume per pound of the vapor at a given pressure controls the volume of cylinder capacity, and the larger this value is, the greater the weight of moving parts that is necessary, which not only represents greater first cost in construction, but also larger power consumption to compensate for increased friction losses.

The latent heat of vaporization and the density per cubic foot have a direct effect on the quantity of the refrigerant necessary to circulate through the system to produce a given amount of refrigeration. With compressors of a given size, this is the time factor.

The temperature of the compressed vapor in the condenser is several degrees above the temperature of the condensing water used, hence it is evident that the critical temperature of refrigerating media is an important factor, as it must be considered in relation to the temperature of the available cooling water.

FOR SALE

New and Used Equipment for Immediate Shipment

4—40 qt. Emery Thompson horizontal brine freezers, with or without motor drives.

1—40 qt. Cherry Perfection freezer—new.

1—6x6 Frick, latest type refrigerating outfit.

2—7½x7½ York vertical enclosed type ice machines.

50 and 100 gallon Cherry upright batch mixers.

5—200 gal. Cherry Perfection pasteurizers and coolers, steel bodies, motor drive—new.

1—No. 125 white enameled two compartment cabinet.

2—Champion No. 11-H hopper type ice crushers.

1—54-Y Creasey ice breaker—new.

1—300 gal. per hour viscolizer.

1—No. 30 De Laval cream separator.

1—No. 15 Chilly King cooler (1,500 lbs. per hour).

25,000 lineal feet of 2" hardening room piping.

2 H.P., 5 H.P., 7½ H.P., 20 H.P., and 25 H.P. motors.

ROBERT P. KEHOE

7 East 42nd Street New York, N. Y.

Telephones: Vanderbilt 9594-9595

CARBON dioxide gas was first liquefied in 1823 and at atmospheric pressure it has a specific gravity of 1.529. The lowest temperature at which it remains as a liquid is given at 109 degrees below zero and it is supposed to solidify at 110 below zero. It is manufactured from a number of materials such as limestone, coke, magnesite, marble dust, chalk, bi-carbonate of soda and certain classes of fermentations. If 150 pounds of bi-carbonate of soda and 100 pounds of hydrochloric acid were mixed in proper relation the result of the chemical decomposition would be approximately 600 cubic feet of carbon dioxide gas.

Carbon dioxide does not have a corrosive action on metals and it does not possess a great affinity for water, as it will dissolve only about an equal volume and is readily expelled by the application of heat. It is practically odorless and as much as 8 per cent of it in air can be inhaled with no serious effect, as it does not deteriorate the blood. As it is practically 50 per cent heavier than the atmosphere, it would settle in low places should any of it escape and 15 per cent of it in air would extinguish fire. Its value as a refrigerating media lies in the fact that it requires only a small volume of it to produce a given amount of cooling effect. Compared with the other refrigerants, with a given set of conditions, the cylinder capacity would stand as follows:

Carbon Dioxide	1.
Ammonia	5.77
Sulphur Dioxide	14.20
Methyl Chloride	11.50 (aprox.)
Ethyl Chloride	33.55

Impurities such as air and water in the system, if present in reasonable amounts, will have but very little influence and lubricating material is not absorbed, hence the system remains relatively clean. Carbon dioxide is economical for low temperature work and will produce a relatively high degree of efficiency for a temperature of 10 below zero. There is not much loss in economy when the system is operating with refrigeration of different temperatures, like having one room at freezing and the other at zero. The following comparison will demonstrate the point in question:

	Suction pressure for ammonia	Suction pressure for carbon dioxide
Zero temperature work	15 lbs.	279 lbs.
Freezing temperature work	47 lbs.	323 lbs.
Ratio of increase	1 as to 3.13	1 as to 1.16

The claim has been made that carbon dioxide will not decompose under any ordinary condition and its critical pressure is 1085 and the critical temperature is approximately 89 degrees F., hence it requires cooler condensing water than other refrigerants. Its use has been made more restricted to ocean-going vessels and in congested localities such as office buildings, hotels and other special cases. Due to the small cylinder capacity required the friction losses are small and the density of the vapor results in small piston slippage. The condensing pressure will average about 950 pounds which requires very heavy construction on the high side.

SULPHUR dioxide was first prepared as a pure gas in 1775 and has been used for many purposes in the arts and in manufacturing industries, such as refining sugar, preserving meat, fumigating cloth, bleaching wool, treating and preparing silk, feathers, sponges, etc., and in disinfecting the air of rooms and treating diseases. There are several methods used in preparing the gas, the principal one being the burning of sulphur in the presence of oxygen; the sulphur ignites at a tempera-

The FACTS *in the* CASE

1—Pen Pressure and Position Adjustments

2—Fountain Pen Point

3—Fixed Pivot

4—One Size Chart

5—One Turn Chart Holder

6—Improved Case

Inside the case you will find the reason for the extraordinary ruggedness and accuracy of TAG Recorders. By reason of a patented cam arrangement, the TAG is the ONLY Recorder with uniform chart graduations for ALL ranges. A special seasoning process prevents "setting" of the spiral spring. The development of a single-piece welded bulb and of a capillary tube of exceptionally fine bore are other TAG achievements. The following distinctive structural features also contribute to TAG superiority.

1—Pen pressure adjustment and pen position adjustment, the latter providing an exact and convenient means for correcting accidental bending of pen arm.

2—Fountain pen point writes a clean sharp record line and requires less frequent filling. The non-corrodible pen arm is inverted so that ink cannot run down into operating mechanism.

3—Accuracy of time indications is assured by mounting pen arm on a FIXED pivot so that pen point will always follow radial lines of chart (with clock stopped). Positive pen-arm stops, specially designed clock, convenient clock starter-lever are other features.

4—By standardizing on one best size of chart, manufacturing costs have been reduced making possible unusual refinement of construction at the usual price.

5—Improved chart holder, secured to case by light chain, is attached and removed with a single turn. Charts are printed in green ink on specially seasoned high quality ledger paper.

6—Improved case construction incorporating moisture-proof feature, if desired.

TAG DIAL-INDICATING Thermometers embody the same improved construction and operate according to the same reliable principles as TAG Recorders. The exceptionally easy reading dial is a feature.

ture of 250 to 260 degrees F. and sulphur dioxide is obtained in equal volume to that of the oxygen consumed.

Sulphur dioxide is very soluble in water, the solution being accompanied by a slight rise in temperature. At 32 water will dissolve about 80 times its volume of sulphur dioxide gas, but an increase in temperature results in a rapid decrease of the chemical affinity so that at a temperature of 70 the water will dissolve only 39 volumes and at 100 it is reduced to 18 volumes.

Sulphur dioxide has been used as a refrigerant for many years in Europe and gained a prominent position in dairy manufacturing. At first its true nature was not thoroughly understood and the early practice was to use lead lined pipes as a protective measure against corrosion. Later it was found that if it was placed into the system in a pure state and kept free from moisture that it would not have any corrosive effect on iron or other common metals, thus permitting the use of copper, which has a high thermal conductivity.

THE question of lubrication with the sulphur dioxide system is an easy one, as the liquid is to some extent self-lubricating, and as the specific gravity of the liquid is 1,4438 it is practically 50 per cent heavier than any oil that is used, hence the oil is floating on top of the liquid and is in constant circulation. The specific gravity of the gas at atmospheric pressure is 2.26, hence any escaping gas would tend to settle in low places. As it has a strong and pronounced odor, a small leak is readily detected, and as the working pressure is relatively low, no serious accidents have ever been recorded.

The critical temperature of sulphur dioxide is 311 degrees F. and the critical pressure is 1,160 pounds and at a temperature of 120 degrees F. it is decomposed into sulpher and oxygen. It is said to assume a solid form at 168 degrees below zero. Its evaporating temperature at atmospheric pressure is 14 degrees F. and the pressures of the condensing vapors are quite low, being from 30 to 50 pounds. This refrigerant is used in several of the small units manufactured for household refrigeration and iceless ice cream cabinets, and for this class of work it probably has more installations than all other medias combined, and as it has been in use in the small units for over ten years, it has firmly established itself as one of the prominent circulating medias for the future.

Sulphur dioxide has a strong chemical bond and it will, therefore, withstand the repeated evaporations and condensation easily. The compressed gas is easily heated and requires a medium flow of water through the condenser to maintain a normal working pressure. It is classed as a non-combustible. The detection of escaping gas is easily accomplished by using "test" paper, which is prepared by steeping paper (preferably filter paper) in a solution of potassium iodate and starch, the reaction being of a blue tinted color. The nature of this refrigerant is such that its use employs one of the simplest if not the most simple refrigerating system used.

METHYL chloride is classed as a non-poisonous and non-corrosive refrigerant. It was discovered in 1885 and has been used in industrial manufacturing to a limited extent. It is a colorless liquid with a pleasant odor resembling chloroform. Technically speaking, it is inflammable, but can be burnt with difficulty. If a valve of a cylinder of methyl chloride is slightly opened the escaping gas can be lighted, but if the valve is opened wider the flame is instantly extinguished. It is claimed that the explosibility of mixtures of methyl

We Specialize in Printing for the Dairy Products Industries

In our modern building we have housed an array of equipment of the first order to turn out in volume, with precision and dispatch, an endless variety of advertising material.

Specializing in printing to the dairy products industries, we are in a position to lend advertisers the benefit of a long experience and association with this trade, its requirements and peculiarities.

Our volume production should also make our prices worth your investigation. Submit your next printing job to us for suggestion and quotation.

Fifth and Cherry Streets

chloride and air are very narrow, for there must be not less than 10 per cent nor more than 15 per cent by volume present and then the explosion will not be caused by an ordinary flame.

The boiling point for methyl chloride is 11 degrees below zero and at this point it has a specific gravity of 1.00, at a temperature of 70 the specific gravity is 0.91 and at boiling temperature of water it is 0.73. It solidifies at 154 degrees below zero and has a strong chemical bond. It has been manufactured from natural gas, by the action of hydrochloric acid on methyl alcohol or by heating a substance obtained from beet sugar residues.

Methyl chloride appears to have been used as a refrigerant by the French army for upwards of twenty years and the British have used it in the Soudan so it seems adapted to warm climates. The condensing pressure under ordinary working conditions ranges from 75 pounds to 85 pounds but should the pressure range abnormally high the fluid has a tendency to decompose into its elements, carbon, hydrogen and chlorine and the latter will attack the metals of the system.

The critical temperature of methyl chloride is 287 degrees F. and the critical pressure is 1,088 pounds. There does not appear to be a visible test for detecting leaks, hence a small amount escaping would pass unnoticed while a larger amount would be discovered by its odor, and its action would be like a mild anasethetic. The use of methyl chloride in America seems to be confined to the smaller units for domestic purposes.

METHYL chloride was known as far back as 1500 and has been used for various purposes. It is a colorless mobile liquid, has an etheral odor and a sweetish taste. It is inflammable and burns with a green edged flame evolving hydrochloric acid. It is not readily dissolved in water but mixes easily with alcohol and ether. It dissolves phosphorus, sulphur, fats, oils and many resins, hence special lubrication must be provided when it is used as a refrigerant.

The specific gravity of ethyl chloride being quite low and with its solvent properties, glycerine is used for a lubricant. Some question has been raised as to the efficiency of this substance, but none better has been developed. The specific gravity of ethyl chloride is 0.900, the critical temperature 368 degrees F. and the critical pressure 785 pounds so warm condensing water can be used.

The suction pressure of ethyl chloride is usually below atmospheric pressure and the condensing pressure ranges from 8 to 14 pounds. Owing to these properties the compressor is usually of the rotary type, direct connected to an electric motor. The "herring bone" gear rotors are generally used and with a close-ground fitting, the slippage loss is not excessive as long as they are kept in good condition.

Due to the fact that the suction pressure is below atmosphere, extreme care should be observed to keep the joints of the system tight, otherwise air and moisture will get into the system and a little collection of moisture will freeze and stop the circulation of the media. This refrigerant is used only to a limited extent with small units, principally for domestic plants and a few other small applications.

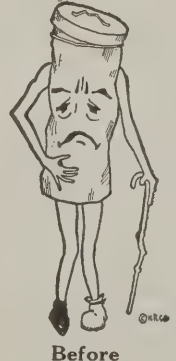
INDIANA ICE CREAM MANUFACTURERS MET LAST MONTH AT INDIANAPOLIS.

(Continued from page 16)

complete refrigerated unit, meaning storage cabinet and soda fountain, was only a question of time and manufacturers should be conservative in making installations.

It was the consensus of opinion that the manufacturers of Indiana should be conservative in furnishing cabinets owing to the fact that many new developments were being made in this field.

Hotel manager: "Boy, I believe I left my umbrella upstairs in my room on the fifteenth floor in the corner by my desk. Run up and see if it is there, and hurry, for I've got to catch a train."



The boy (a few minutes later stepping from the elevator): "Yes, sir, it's right there, sir, just where you said it was."—Tulsa Times.

LOWER UPKEEP

YOU will find a better way to deliver ice cream products when you put your first GMC to work—a more economical way.

GMC Trucks are designed against the wear that saps truck vitality and wastes your money.

Every GMC part is designed overstrength and built of overstrength materials, even though something less expensive and less sturdy might never cause trouble.

Every GMC of two tons and over has the now-famous GMC Two Range Transmission which provides a lower than low speed to take care of heavy pulling with heavy loads. This saves wear and tear on the engine, clutch, transmission and rear axle.

The Two Range Transmission also enables GMCs to use an engine of economical size which has *full pressure lubrication.*

Through and through a GMC is built like this, thoughtfully and carefully, to serve steadily and faithfully without repair interruption and expense. You need GMCs on the job so your trucks will be on the job in the busy season when you need them most. Ask for a catalog.

UNECONOMIC DELIVERY METHODS SCORED.

When recently asked concerning the efficiency of present-day delivery methods in the ice cream business, H. S. Meese, chairman of the transportation engineering Committee, commercial section of the National Electric Light Association, replied as follows:

"My observation has been that delivery methods in the ice cream business are gradually improving; executives are beginning to see the light. Just this past week in Washington, D. C., an auction sale was held by the Chapin-Sacks Corporation, one of the largest distributors of ice cream along the Atlantic Seaboard, for the purpose of disposing of 43 head of horses and wagon equipment. In place of horse equipment this company is using electric trucks.

"This decision of the Chapin-Sacks officials is typical of the re-alignment that is taking place, once the real facts are had on the best type of equipment for frequent-stop ice cream deliveries. In other words, the growing tendency among executives to select the electric truck for this type of city work indicates that the continuance of other types of vehicles means an economic waste.

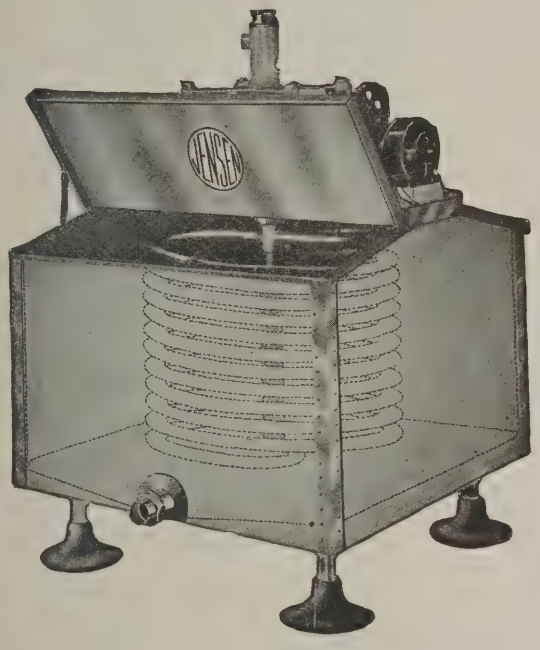
"As President Hovey of the National Association of Ice Cream Manufacturers has so characteristically pointed out, competition is very keen and those who survive will be the ones who abandon every policy that is uneconomic. With this mandate I feel that every ice cream executive should give very careful attention during the coming six months to the proper division of delivery equipment between frequent-stop deliveries and long hauls.

"Just recall that forty per cent of last year's business failures could have been turned into profitable successes if the executives in charge had not worked in the dark without facts. Facts cannot be ignored today in business, because business can rightfully be called a science in these days. I noticed in going over some mottoes the other day one that read: 'opinions are tolerated in science only when facts are lacking.'

"I am told that the cost of delivery in the ice cream business runs as high as one-fifth of the total gross income. Be that as it may; the very fact that delivery costs are major items in an ice cream company's business budget makes a paramount issue today.

"The Postmaster General's Office at Washington wanted information on mail deliveries sometime ago. They found that gasoline consumption is increased by frequent starting and stopping; tire wear and mechanical upkeep are greater with gasoline trucks on frequent-stop work. Electric trucks, on the other hand, start smoothly so that the wear is reduced to a minimum on frequent-stop work.

"This is a good prescription for delivery ills existing today in the average business concern. If more concerns in 1925 would follow it we would have a smaller number of failures."



NEW PLANT BEING ERECTED.

The Vengold Commission Co., 614 West Front St., Oil City, Pa., established for some years in the dairy products business, is erecting a new plant at Sandy Lake, Pa., which is expected to be completed in the spring of 1925. The building is 50 by 100 feet, and will be equipped with modern equipment to insure the sanitary handling of all dairy products.

Officials advise that they expect to handle a complete line of dairy products in their new plant, including ice cream, pasteurized milk and cream, buttermilk, cheese, etc.

JENSEN

The Mark of Merit

"20 to 50% GREATER OVER-RUN"

"A Mix Free From Air as It Comes to the Freezer Will Give a 20 to 50% Greater Over-run"

This statement was made before a meeting during a recent Convention of Ice Cream Manufacturers of two eastern states. The man was fully qualified to make such a statement and had charts and experimental data as proof thereof.

JENSEN VERTICAL COIL BATCH MIXER is the only Ice Cream Batch Mixer that expels air and gases.

The Vertical (entirely suspended) Coil always revolving from the bottom up constantly pulls the air and gases out. This is accomplished before pasteurizing temperature has been reached, and this same action absolutely prevents air incorporation through eddies during the ageing period.

Complete Elimination of Stuffing Boxes

Square construction requires one-half floor space necessary for old style machine.

Operating power reduced one-half.

MOTOR TRUCK AND RAILWAY FREIGHTING.

(Continued from page 122)

less than carload shipments receive at the hands of the teamsters and carriers after the material leaves the shipping department.

We have included in the freight cost the first-class rate plus 30 cents per hundred pounds teaming charges at shipping and receiving point. To these costs must be added 17 per cent for the cost of carrying the increased weight caused by heavy boxing, and 24 cents per hundred pounds for the increased cost of boxing. The rate via motor truck covers delivery from the shipper's warehouse to the receiver's warehouse. I have averaged this rate, and believe it to be a fair one to use in comparison with the freight cost movement.

THE rates that I worked out are based on Newark. I understand that in the freight cost item are included the various items that I have referred to, such as additional crating, additional labor, and so on. I find on shipments moving from Newark to Yonkers that if we combined all the costs, that is, additional costs, to make a less than carload shipment, that the rate averages a dollar per hundred. If you take the same movement by motor truck with decreased boxing, decreased weight, and decreased labor, you will find that the rate averages $.20. Between Newark and Yonkers there is a difference of $.80 per hundred pounds, in favor of the motor truck.

The following table gives cost differences for varying distances:

	Road Miles	Freight cost Per 100 lbs.	Motor Truck Cost per 100 lbs.
New York City	12	$.88	$.15
Passaic, N. J.	6	.88	.15
Paterson, N. J.	10	.88	.18
Trenton, N. J.	51	.88	.55
Philadelphia, Pa.	88	.98	.75
Bridgeport, Conn.	70	1.12	.75
New Haven, Conn.	87	1.12	.85
Providence, R. I.	214	1.21	1.15
Port Jefferson, L. I., N. Y.	71	.98	.75
Asbury Park, N. J.	46	.94	.45

I have quite a number of other figures, but those explain themselves, and they average about the same all the way through.

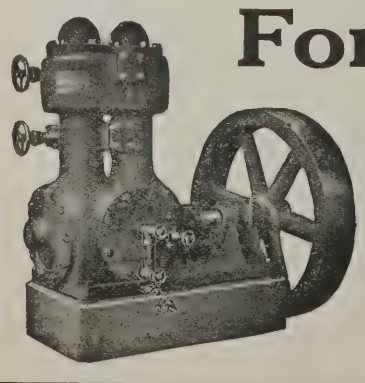
WHILE some will save more and others less, depending upon product to be shipped and conditions, the great possibilities of saving warrant careful study of the problem. Have you taken into consideration the amount of material you have in transit which is not producing any revenue, either to the shipper or receiver, while it is in the hands of the carrier? Have you considered the amount of space you use in your shipping department in order to prepare your shipments to move via freight?

Have you considered how much less space you need in your shipping department if you can materially reduce the amount of boxing and packing used on your shipments?

Have you considered the amount of lumber it is necessary for you to carry for boxing, the space necessary to store it, and the amount of freight charges you pay on wet lumber, if it is stocked in the open as is usually the case? Boxing lumber will frequently carry from 10 per cent to 25 per cent of its weight in moisture, unless it is passed through a dry kiln before being used for boxing purposes.

Could you not use any space which can be saved by changing your shipping methods for manufacturing purposes?

Have you considered the amount of material and money your company has tied up, by reason of the fact that you are unable to state definitely how long it will take to deliver by freight between your factories and your customers?



If a freight movement takes thirty days as against one day via motor truck would it not be to the advantage of your company to use the difference in time, twenty-nine days, for manufacturing?

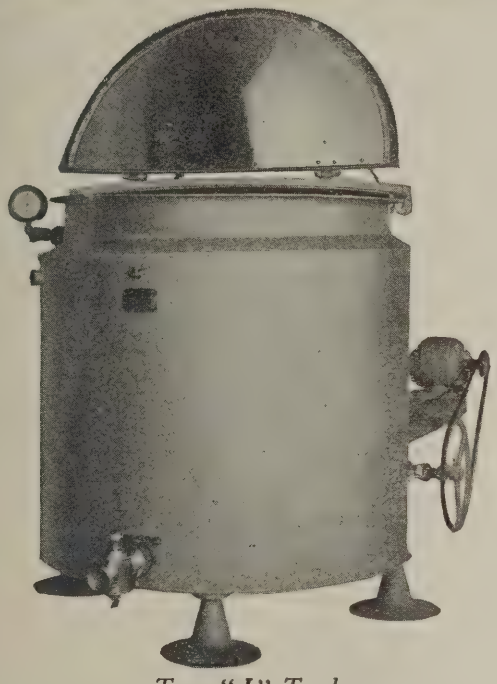
Have you considered the amount of expense to manufacturers and others for storing and handling their products on account of uncertainty of freight delivery?

ANY comparison between rail carrier movement and motor truck movement is entirely in favor of the motor truck, as it is necessary for the motor truck operators to make delivery in the shortest possible time, in order to operate their equipment financially successfully.

What is needed at the present time is organization on the part of the motor truck operators, in order to secure heavier loading and eliminate as far as possible motor trucks returning without a full load.

In general, I am of the opinion that motor truck transportation can, and should compete successfully with the carriers to short-haul points. The delivery time is all in favor of the motor truck, and I am satisfied if the manufacturers will take into account all the various costs and charges which are part of a true freight transportation cost, that motor trucks can be operated successfully in competition with the carriers for distances of between 10 and 125 miles.

For Lasting Satisfaction



York
Refrigerating
Equipment

One reason why there are so many installations of York Refrigerating Equipment is that its satisfactory working condition does not pass with the seasons. York Equipment does not mean satisfaction until the first signs of wear show up, but a year in year out dependable service that stands the strain of rush seasons without injury to its long life.

Let us show you just why York Equipment lasts longer.

MECHANICAL REFRIGERATION SAFETY HEARING.

The final public hearing on the mechanical refrigeration safety code, formulated under the direction of the American engineering standards committee and the sponsorship of The American Society of Refrigerating Engineers, will be held in room 1001 of the Engineering Societies Building, 29 West 39th Street, New York, N. Y., on the afternoon of December 1, 1924, at 2:00 o'clock.

Since the annual meetings of both The American Society of Mechanical Engineers and The American Society of Refrigerating Engineers will be in progress on that day, a goodly attendance is expected. It is particularly desired that the various branches of the refrigerating and allied industries be well represented, as this will probably be the last hearing on the code before its submission to the American engineering standards committee for approval.

Copies of the code in the form in which it will be represented at this hearing were available since November 15, 1924, and will be mailed upon request to anyone desiring to examine it.

F. E. MATTHEWS, Chairman,
Mech. Refrig. Safety Code Comm.

"THE CHARGE OF THE MAIL BRIGADE."

(With Apologies to a Famous Author.)

"Forward, the Mail Brigade!
Was there a man dismayed?
Not—tho' the workers knew
Some few had blundered.
Theirs not to reason why,
Theirs but to strain an eye,
Theirs but to work and sigh
With mail piled mountain high—
Minus street and number.

"Letters to the right of them;
Circs to the left of them,
Parcels in front of them
Tattered and sundered.
Stormed at with catalogs,
And post cards—unhappy dogs:—
Some folks just can't spell;
Some write just like 'L'
While postal clerks wondered.

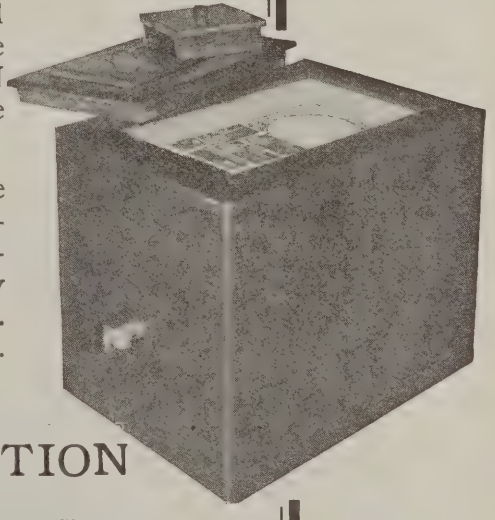
"Give us a plain address,
Then there'll be no guess
Making the Devil's mess
And dead letters plundered.
Why not co-operate?
Why not be up-to-date?
Why let your mail be late?
Why be a darned old skate?
One in six hundred!"

W. J. O'CALLAGHAN,
Postmaster at Nashville, Tenn.

SOUTH DAKOTA MANUFACTURERS TO MEET IN SIOUX FALLS.

The next annual convention of the Ice Cream Manufacturers' Association of South Dakota will be held in Sioux Falls on February 3, 4 and 5, 1925, according to an announcement by C. C. Totman, secretary-treasurer. Headquarters will be at the Cataract Hotel and the meeting will be held in conjunction with the annual meeting of the South Dakota Dairy Association.

Proven facts



D-Z CABINETS ARE THE BEST

In actual operation Dry-Zero Universal Ice Cream Cabinets live up to the letter of every statement made in their behalf for PROVEN FACTS form the basis of each statement.

Numerous skeptical ice cream manufacturers, finding it difficult to believe that any one cabinet could possess so many important advantages without a loophole being present somewhere, have materially aided in proving the facts by testing the Dry-Zero cabinet in their own plants under conditions triply as severe as will ever be found in actual use. Hundreds of unsolicited letters tell the same story of exceptional operation.

Statements about Dry-Zero cabinets are never expressions of hopes or expectations. Dry-Zero statements do not depend upon ideal conditions for fulfillment. They are unadulterated and unbiased PROVEN FACTS—collected from every reliable source available.

Looking at Dry-Zero cabinets from the point of view of ice and salt saving qualities, length of holding period, durability, sanitary features, in fact from any point of view whatsoever, it has no equal. PROVEN FACTS cannot be denied.

No obligation on your part to prove the facts to your entire satisfaction.--Have a D-Z cabinet shipped on thirty-day approval, for a thorough test in your own plant.

DRY-ZERO INSULATION COMPANY

Southern Representative: H. A. Benners, United Fruit Building, New Orleans, La.

Are Trade Magazines of Any Value to Your Business?

A Supply Concern, a Large Advertiser in this Publication, asks this Question and Several Leaders in the Industry Answer

IT IS a privilege to reproduce from Lactonews of the Cherry-Bassett-Winner Company, the answers that a few leaders of the industry have given to the question, "Are trade magazines of any value to your business?"

By A. E. Dixon, Carolina Ice Cream Company, Fayetteville, N. C.

"The question, 'Are trade publications of any value to your business?' is obviously one that apparently nothing could be said in the negative; especially so, as it applies to our individual business. Trade publications exercise such a vast influence over our business in general that chaotic conditions would exist were they removed; however, there is no denying the fact that a large percentage of literature sent to the trade is wasteful and superfluous.

A. E. DIXON.

"Competition has reached such a keen point that every business of any magnitude issues their own literature in some form, tons of which are invariably consigned to the waste basket. It is axiomatic that the judicial selection and reading of trade publications is essential for the welfare of any well regulated business whether large or small, and it is beyond imagination for anyone to attempt to do otherwise. It is useless to add that many publications sent broadcast could be eliminated with profit both to the publisher and subscriber."

By W. S. Obenshain, manager of Chapin-Sacks Corporation, Charlotte, N. C.

"It is not an easy matter to say off-hand just what value a trade magazine is to me and my business. I subscribe to all the magazines pertaining to the ice cream business, and that in itself should speak volumes. I keep the current copies on my desk, and after perusing them from 'kiver to kiver,' I pass them around among my employees, as every copy contains something valuable that one can ill-afford to miss.

W. S. OBENSHAIN.

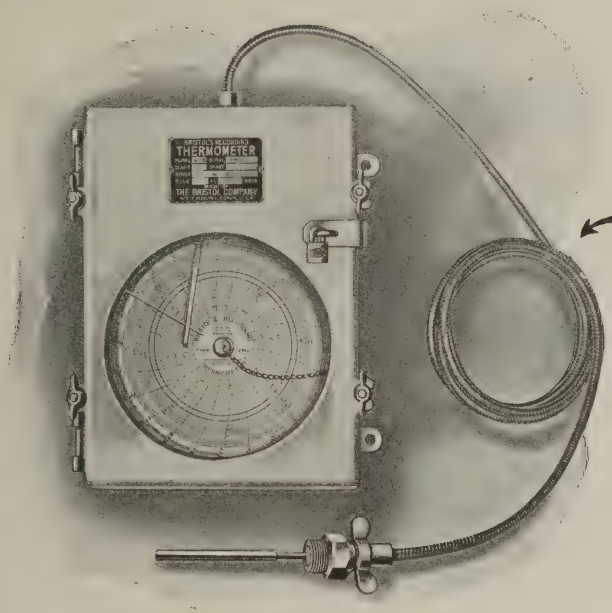
"In my opinion it is a very poor business man who does not subscribe to trade magazines pertaining to his particular line of business. One gets a flock of new ideas from each issue, particularly, appealing advertising ideas. While some of them would not be applicable to our particular territory, a great many of them can be utilized to a very good advantage.

"One also is able to keep posted on all the new machinery and to get an idea as to what other manufacturers are doing. The man who keeps up with all the latest machinery, installs all the labor-saving devices practicable, and puts out a 100 per cent sanitary product, is the man who keeps his competitors busy, and the best way to keep up with all this up-to-date equipment is to read your trade magazine—not subscribe to it and let it lie on your desk.

"If figures could speak, I am sure that the little figures in black at the end of the year could tell a much more interesting story than I can by the employment of mere words."

By C. D. Landreth, manager of Forsyth Dairy Company, Winston-Salem, N. C.

"The average ice cream manufacturer or milk dealer has a multitude of problems confronting him to a greater extent, we believe, than in many other lines of business that are not dealing with such perishable merchandise and whose production and sales go forward with more precision and efficiency. Just when the ice cream or milk plant manager feels that everything is moving along smoothly, trouble springs up from an unexpected source and a new situation must be met and remedied. As a consequence of this constant condition confronting him, he is more or less 'up in the air' at all times and does not feel that he should be absent from his business long enough to look around and observe what the fellows on the outside are doing as is the privilege of others in less exacting lines. It is a well-known fact that the fellow who is tied down in the manner described has his vision narrowed until he gradually becomes 'sufficient unto himself' and drifts into a rut which has been aptly described as a long grave.



C. D. LANDRETH.

"To overcome this inertia we know nothing more effective than the various trade magazines, and the house organs issued by the supply houses. In this manner the stay-at-home chap is able to keep abreast of new ideas and what others are accomplishing and renew his interest in the magnitude and importance of the industry in which he is engaged. It broadens his vision and raises his work from the commonplace and projects it into a plane that makes him feel he is really doing something for humanity and to make the world a better place in which to live.

"The plant manager who reads the trade magazines is usually familiar with the newer types of machinery and plant practices and if he is fortunate enough to attend the annual convention or dairy show he knows what to look for and is able to ask questions in an intelligent manner. As a consequence he saves time for

WHY Outside Temperatures Have no Effect on Bristol Tubes

Because, the pen arm on Bristol Thermometers is actuated by vapor pressure generated in the bulb directly inserted in the liquid you wish to record.

The varying temperatures of the room or outside drafts do not influence the vapor column in the tube. That is why Bristol Recording Instruments can be placed at so long a distance from the tank or vat and yet show reliable records.

There are many other reasons. You will find them explained in Bristol Bulletins. Write for them.

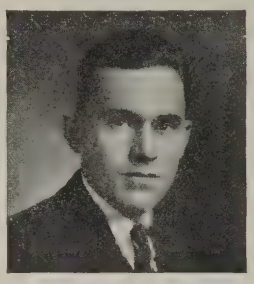
THE ICE CREAM REVIEW COVERS AMERICA LIKE THE DEW.

himself and those in charge of the exhibits. He returns home filled with real information, well repaid for the time and money expended and if he did not actually buy at the show, he is in a position to say yes or no in an intelligent manner when the salesman calls.

"We read them and pass them along to the foremen in the plant, calling their attention to special articles and discuss the subjects with them later. We know by the interest exhibited that they gain information and inspiration."

By E. W. Barker, manager of Horn Ice Cream Corp., Norfolk, Va.



E. W. BARKER.

"I am afraid that I will be obliged to begin my answer to your question, 'Are trade publications of any value to your business?' with a little criticism. Your question should have been, "How valuable are trade publications to your business?' I am sure that we all know that there has not been anything more valuable to the ice cream trade than the information obtained from the various trade magazines. I realize that the profit is naturally derived from the advertising in them, but I do not think that any of us object to this fact.

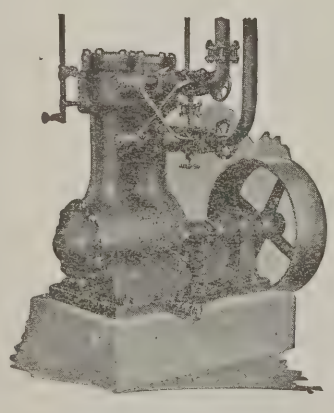
"Although there are various text books about ice cream to read, we all realize that our game is broadening so fast that it is really impossible to keep up with it by publication of same. In other words, we get a chance to read of all the new things every month, instead of gaining our information every year. I think that the publication of all convention addresses is of very great value. We are also able to get information regarding the latest equipment on the market from magazines, instead of having to wait for some 'silver tongued' salesman to come around and tell us about it.

"I always make it a point to have all of my plant men read the magazines. Being confined to the plant all of the time, it is practically impossible for them to get out and see what the other fellow is doing, and this is about the only method they have of broadening themselves at all."

By Claude Parcell, manager of Farmers' Creamery Company, Fredericksburg, Va.

CLAUDE PARCELL.

"The value of trade magazines to my business is incalculable. It would be impossible for any business man to keep pace with the great progress of the dairy industry if it were not for the trade magazine. These magazines are edited by practical men of many years' experience and are awake to the necessity of publishing articles of value. Through the advertisements alone many new ideas are gained for efficiency in plant operations.



"It is through the other fellow's experience that we are able to keep abreast with the times and compete with our neighbor. The trade magazine is the only means that we have to gain this experience except through visiting other plants, which is too costly to be practical, even if one had the time.

"Through the trade magazines the manufacturers of machinery and equipment are able to bring to us new developments that modern plants can not afford to be without. Through the advertisements the manufacturers are able to put their ideas before thousands of business concerns simultaneously, which it would be impossible to do were it not for the magazines.

"Any employee of a plant who had the initiative to develop and fit himself to grow at the same pace that the dairy industry is growing cannot afford to miss reading the articles of the leading publications pertaining to Nature's Most Perfect Food."

PARK NAMED FOR SOUTHERN ICE CREAM LEADER.

W. J. Barritt, for many years one of the South's leading ice cream manufacturers, in 1923 elected president of the Southern association, is well thought of in his home town. This is well illustrated by a recent decision to name the new city park recently created at Tampa, Fla., for Mr. Barritt.

The naming of the park was made known in a resolution adopted by the city council as follows:

"Whereas, The city has purchased 40 acres of land on which to locate the Tampa waterworks, and

"Whereas, The Tampa Northern Railroad is desirous of having a name designated for their station located on said waterworks property, and

"Whereas, The city is in need of additional parks; therefore, be it

"Resolved, That as an appreciation of the city of Tampa, and in acknowledgement of the fine service rendered by the Honorable W. J. Barritt, city commissioner, in securing said waterworks plant for the city, the said park and station shall be known as Barritt Park, and all of said property not necessary for the purposes of the waterworks shall be set aside and developed as a public park, to be known always as Barritt Park."

Important Announcement to DAIRY INDUSTRY

Through an arrangement with the Division of Industrial Co-operation and Research at the Massachusetts Institute of Technology, a Research Associateship has been established for the investigation of some of the problems of the butter and ice cream industries in America.

Although this work is supported by us, we desire, that it shall benefit the industry as a whole, and shall be pleased to have any problems pertinent to these industries brought to the attention of those in charge of the work. Investigation work along dairy lines is now being conducted at the Massachusetts Institute of Technology under the direction and supervision of Professor S. C. Prescott, Head of the Department of Biology and Public Health. Milton E. Parker has been appointed Research Associate. We invite the butter and ice cream manufacturers of America to counsel with us freely regarding problems that come within the scope of this work.

NOTES OF THE TRADE

News of Interest Concerning What Our Readers and Advertisers are Doing to Develop the Industry. We Invite Correspondence Relative to New Products and New Equipment.

RUSS MANUFACTURING CO. ACQUIRES WALKER SODA FOUNTAIN CORP.

Announcement of the acquisition of the Walker Soda Fountain Corporation of Detroit by The Russ Manufacturing Co. of Cleveland, brings another of the industry's leaders to the forefront in the field of mechanically refrigerated soda fountains. The Walker company, which was the first manufacturer to place on the market a soda fountain with a self-contained refrigerating unit, officials say, has for the past year been manufacturing and selling the Walker ice-making soda fountains.

As a result of this combination of interests, H. J. Walker, former president and general manager of the Detroit company, who for years has been known in the industry, takes office as vice-president of The Russ Manufacturing Co. and assumes the duties of general sales manager.

H. J. Walker.

For years Mr. Walker has been a close student of mechanical refrigeration of soda fountains and long ago realized that the development of fountains was far behind that of products in many other fields. Years ago he visioned a fountain containing a small, simple, automatically controlled refrigerating unit, combined with the system of brine circulation, that would completely eliminate the icing of any part of the fountain and at the same time maintain three distinct, correct temperatures for ice cream, fountain drinks and bottle storage.

Several years ago the Nizer ice cream cabinet was projected into the field and became the factor that crystalized Mr. Walker's ideas. Securing one of these units, he entered upon a period of experimental work, lasting well over a year. His early tests, he believes, proved that the unit had a surprising excess of cooling capacity beyond that required to keep ice cream at the proper temperature under most adverse conditions. His idea of 100 per cent mechanically refrigerated fountain, absolutely free from hand icing, was submitted to the Nizer Corporation engineers, and shortly thereafter he obtained a franchise granting the right to incorporate that company's refrigerating machine in soda fountain construction.

This fountain will be exhibited and demonstrated at the ice cream exposition in the Civic Auditorium, Oakland, Calif., December 10 to 16, The Russ Manufacturing Company exhibit being shown in booth 30.

* * *

THE NEW W-Z MILK PUMP.

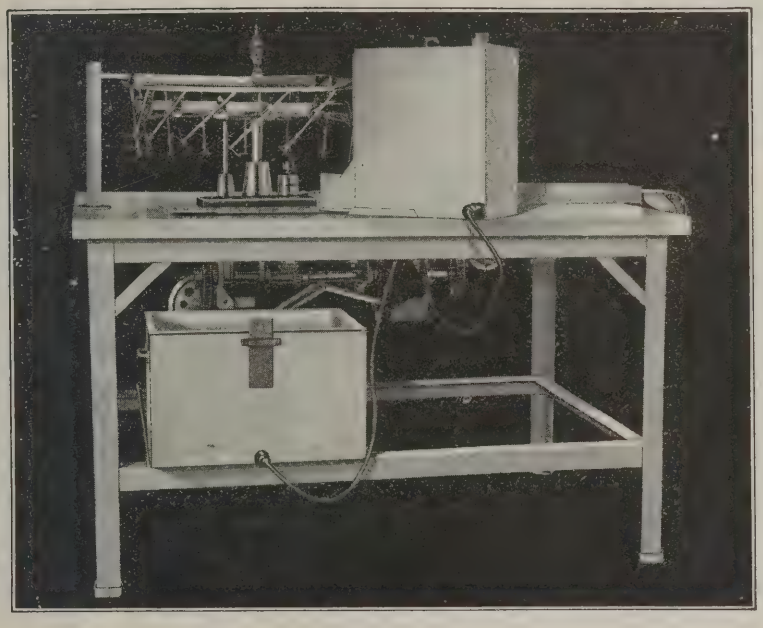
An attractive circular has been issued by the Wright-Ziegler Company of Boston, illustrating and describing the new W-Z centrifugal milk pump. Mr. Ziegler announces that in designing this pump a three-fold purpose was kept in mind. First, to so design the impeller as to handle the milk so gently as not to impair the cream line. Second, to make it so easy to clean that it would be kept clean. Third, to make all wearing parts easily replaced and material non-corrosive.

The pump is very heavily constructed, and a monel metal shaft is used instead of the usual steel, we are told. It is equipped with a self-lubricating idler pulley, and a swinging door makes it very easy to clean, the creamery company claims. It is also supplied with individual electric motor or belt drive. It is now supplied in two sizes; 22,000 and 58,000 pounds per hour respectively.

The above company has also designed a combination milk and brine pump. This has been so developed and designed that both the brine and the milk pumps are mounted on the same sub-base and are operated by the same motor. The capacities of the milk and brine pumps at the same speed are in proper proportion. The brine pump, in other words, circulates sufficient brine to cool the milk that is being pumped by the milk pump. It can be furnished in either belt or motor drive. Send for the W-Z pump circular.

* * *

FRESH FIGS FOR ICE CREAM.



Fresh fig ice cream has been made in the "home" freezer for many years in the fig growing sections of the South. However, it remained for a Galveston county fig grower to introduce fresh fig ice cream in a wholesale way and it has made so good that it opened a new department in the rapidly growing fig industry of Galveston county, Texas.

The Magnolia fig is said to be the best preserving fig grown and is used exclusively in its preserved form by ice cream manufacturers, in hotels and on dining cars throughout the United States. The Magnolia fig is preserved in it's near-ripe stage and the matter of handling the real ripe figs became a problem involving serious losses to the growers.

NORTHWESTERN CORPORATION

MORRIS - ILLINOIS

Fresh fig ice cream proved to be the happy solution. The advertisement telling all readers and manufacturers of this latest, and profitable fresh fruit ice cream appears in another part of this issue.

Ice Cream manufacturers may increase their profits in fruit ice creams by pushing the fresh fig which won its way in Galveston to the name of a regular stock ice cream and would not allow itself to be put on irregularly as specials usually are. At a recent county fair fresh fig ice cream outsold the grand total of all other flavors on account of the unusual excellence of its flavor and texture. South Texas has come into her own and adopted it.

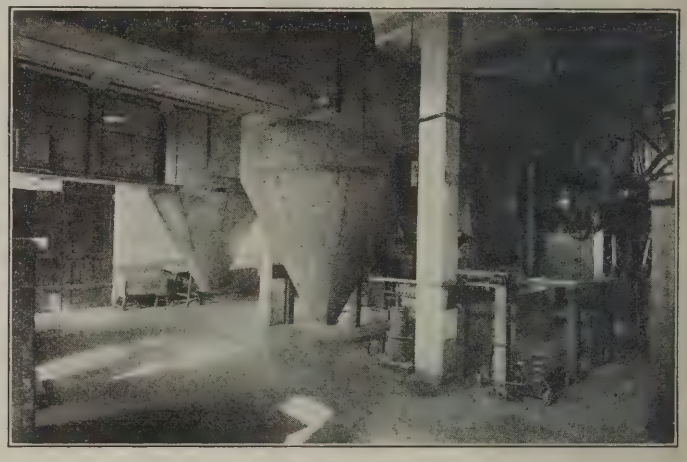
China Furnishes Egg Powder to American Ice Cream Industry

Egg Yolks Play Important Part in Making Good Ice Cream

FROM all corners of the world the ice cream industry draws its materials. If ice cream, as a commercial product, has in the last few years become a great national industry in this country, it has for several years been a great international industry in the geographical scope that it covers in getting its materials.

Egg yolk plays an important part in the high-grade commercialized ice cream manufactured in America today. This is a Chinese industry.

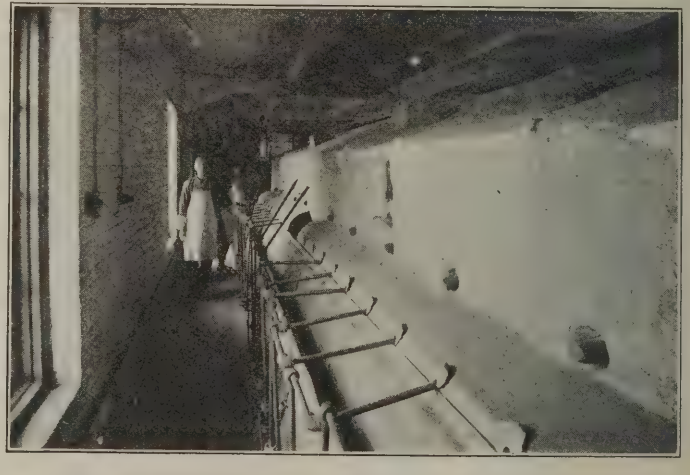
Breaking and separating room.



Eggs are brought into the factory by Chinese merchants and after being inspected and candled, are paid for on the basis of so many eggs for one Mexican dollar, according to fluctuations in the market. The Mexican dollar is the standard in these transactions.

The eggs, after being inspected, are broken by supervised coolie labor, and eggs found to be unsound on breaking are rejected. No practical use has yet been found for the shells —they are destroyed. After breaking, the contents of the eggs are passed through a sieve into large earthenware jars, either as whole egg or separate yolk and separate white.

THE jars of whole egg and yolk are taken to the drying room, where their contents are first stirred by a mechanical whipping machines and then, by means of regulated pumps, pushed at a certain pressure through pipes into the drying chambers. The drying chambers are heated up to a certain temperature by a pipe coming from the furnace. The spraying is done by steel discs called atomizers placed at the end of each of the pipes.



The liquid spurts out through these atomizers in a fine spray which dries immediately and falls to the bottom of the drying chamber or adheres to the walls. The drying chambers are left to cool over night and the powder is collected in the morning through an opening in the bottom. This is the "dick" process of dehydration.

The albumen drying plant consists of a large floor divided into small rooms fitted with wooden shelves. The liquid albumen is poured into shallow aluminum pans which are placed on these shelves to dry. This temperature is very carefully watched as it must not be allowed to get too high.

Ventilating shafts.

The drying period is irregular taking from 10 to 20 hours and even longer in some cases. Coolies, in very scanty attire, keep going from room to room and as soon as the contents of any pan are dried, this pan is removed from the drying chamber. The pans are emptied on large tables to cool and be broken into crystals for packing.

Back view of egg spraying chamber.

Previous to the drying operation, the liquid albumen is put into wooden casks open at the top standing upright in a room, the temperature of which must be regulated. A fermentation then takes place, lasting from three to six days. This fermentation causes the skinny matter enveloping the white of the egg to rise to the top and the clear liquid is then drawn through a tap at the bottom into other clean casks.

Specifications For Electric Truck Batteries

To justify its place in your electric trucks a battery should—

—have the longest useful life.

—have the highest sustained mileage.

—be built of steel and able to stand road service.

—have an alkaline—not acid—solution.

—be free from acid fumes and corrosion.

—be free from sulphation, shedding of active material, growing and buckling of plates, and other capacity-reducing battery "diseases".

—give freedom from internal rebuilding and cleaning, renewal of plates, separators, broken containers, etc.

—have the lowest cost for maintenance.

—be lightest in weight and allow the greatest payload on a given chassis without overloading.

—require the least attention and be able to stand accidental abuse.

—haul most for the least money.

Only one battery can fill these requirements. That is the Edison Battery. Be sure to see the Edison representative before you buy batteries and don't let anyone sell you something "just as good," for there is no such thing.

Leading Electric Street Truck Manufacturers gladly furnish Edison Batteries.

Built like a watch,
—Rugged as a battleship.

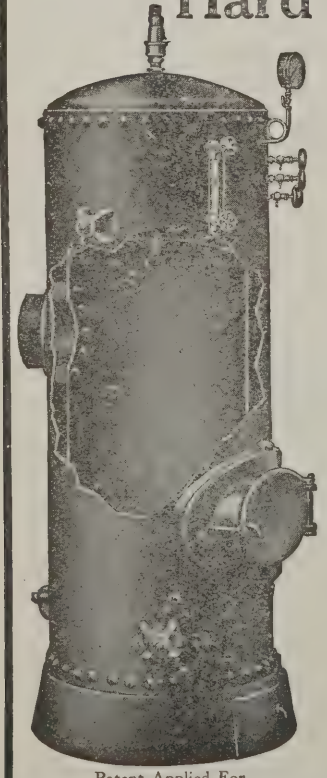
CAMP OPENS DISTRIBUTING OFFICE.

E. C. Camp, formerly connected with the Solar-Sturges Co., has established office, display rooms and warehouse at 319 North Crawford Ave., Chicago, Ill., according to recent annuoncement. He has organized the Blue Arrow Co. His telephone number is Van Buren 2922. Mr. Camp announces he is all ready for business. He said this location is one-half block from the Crawford Ave. station of the Lake St. elevated, and is adjacent to the yards of the Chicago Belt Railroad. He believes this gives him the opportunity to make one-day shipments on all railroads out of Chicago.



Mr. Camp will do business in dairy, creamery, ice cream and milk plant supplies, machinery and equipment. He has taken over distribution for Solar milk and ice cream cans for his territory. Mr. Camp for more than three years was general sales manager of the Solar-Sturges Manufacturing Co. Prior to that connection he was vice-president in charge of sales and advertising at the Solar Metal Products Co.

SUGAR PRODUCTS ADVERTISED.

Lamborn & Co., Inc., New York City, recently conducted in the Chicago Tribune a series of advertisements showing the importance of sugar in the diet and boosting food products containing sugar. Among other food products, these advertisements featured ice cream and condensed milk. The advertisements were intended to give the public a true appreciation of the value of sugar and sugar products as a food and the comparative cheapness of sugar and sugar products, according to G. V. Christian, representative of Lamborn & Co., Inc.

* * *

LEADING GELATINE COMPANY ADOPTS NEW POLICY.

"The mystery of gelatine and gelatine-making is a thing of the past," said Joseph H. Cohen, vice-president and general manager of the Atlantic Gelatine Company, Woburn, Mass., a few days ago in addressing a group of manufacturers, and this fact is equally as important to the manufacturers of ice cream.

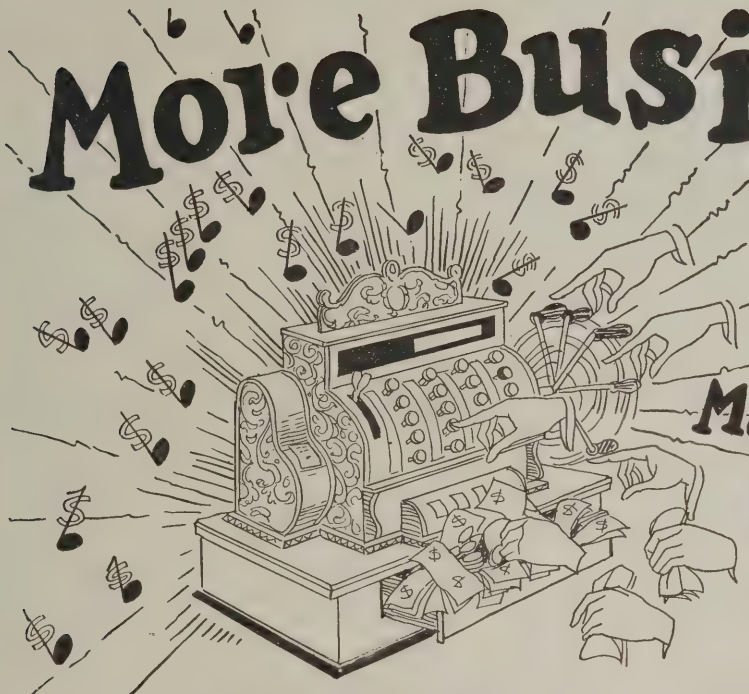
"Years ago we would have considered it suicidal to take a customer through the factory and show him gelatine in the making. Today we know better. We know that commercial users of gelatine are still in many cases ignorant of how gelatine is made and also how clean, pure and wholesome this product is. That is why," stated Mr. Cohen further, "we welcome our customers to come and visit us sand go through our beautiful daylight plant at Woburn, Mass.

"Gelatine is a food and the Atlantic gelatine plant with its various processes afford an education indeed to the gelatine user who has never seen this product manufactured.

"Sanitary and clean as a housewife's kitchen, Atlantic gelatine comes out of the mammoth driers pure and sweet."

* * *

SNOW INSURANCE.



"Snow Insurance" is the title of a pamphlet being issued by the Barber-Greene Co., manufacturers of standardized material handling machines. On page 3 of this pamphlet appear figures showing the yearly average for cities in many parts of the country with regard to snow insurance. Mechanical snow loaders are the best possible insurance against the tying up of business by snow, according to this pamphlet. The Barber-Greene snow loader is claimed to be able to replace from 50 to 200 men in handling snow. The company believes the machine will soon pay for itself in labor-saving alone. The machine is so constructed that it can be converted into a self-feeding bucket loader for use during the summer, officials point out. They say it has already proved its capacity and endurance despite the fact that it is a comparatively recent invention.

clients better than ever. In addition to rendering a mechanical and architectural engineering service they design ice cream and milk plants, creameries and special heating, ventilating, plumbing, refrigeration, filtering and power plant equipment.

* * *

Dave Steiner will attend the Kansas ice cream manufacturers' convention at Topeka in December, and will exhibit material for the Wolf Advertising Co. This announcement was made on November 5.

A COMBINED BOTTLE AND CAN WASHER.

The small and moderate sized creamery and milk plant have long felt the need of a washer which would enable them to wash both bottles and milk cans, with solution water under pressure, without the necessity of installing separate machines to accomplish these two purposes.

The Creamery Package Mfg. Company 61-67 W. Kinzie Street, Chicago, have recently perfected a machine known as W-116 combined bottle and can washer which fulfills this need.

This washer will wash, rinse and sterilize bottles inverted in the cases at the rate of 1,800 quarts or 3,000 pints, half pints or quarter pints per hour. With can racks supplied with outfit it will wash, rinse and sterilize cans up to ten gallon size at the rate of 135 per hour. No change of the machine is necessary when changing from bottle to can washing or vice versa. In fact, it is possible to wash cans and bottles at the same time.

The manufacturers will be glad to supply complete descriptive literature if you will address them as above.

* * *

ESTABLISH RESEARCH ASSOCIATESHIP.

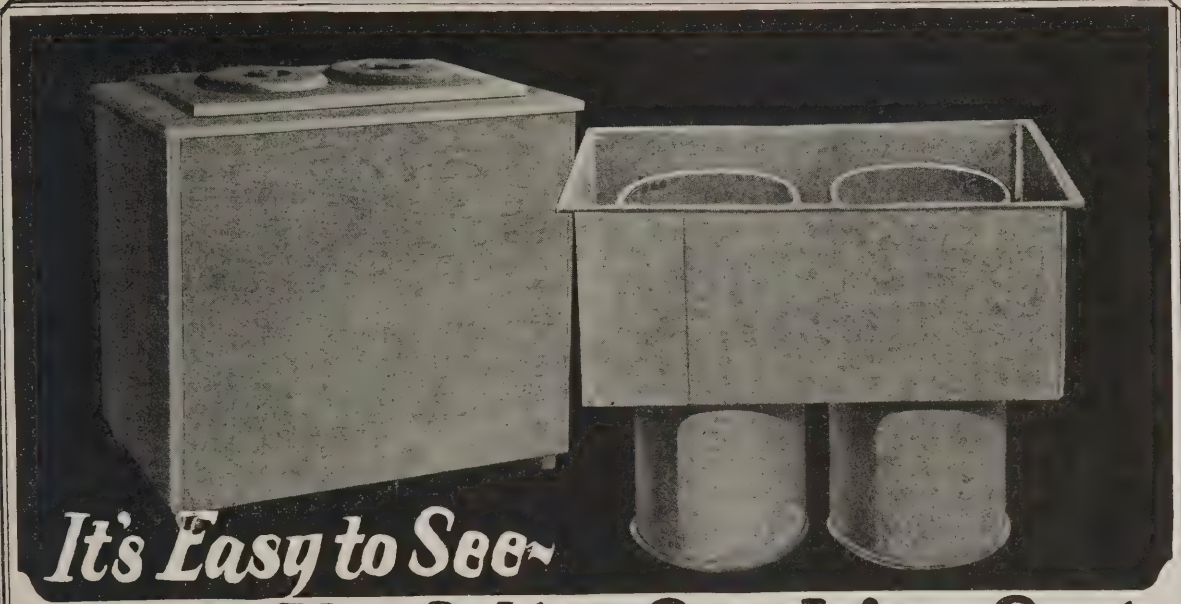
We are advised by C. A. Barry, president of the Heathized Products Company, 400 North Michigan Avenue, Chicago, that the Heathized Products Company of Chicago and the Heathized Butter Company of Baltimore have established a Research Associateship at the Massachusetts Institute of Technology for the investigation of some of the problems of the butter and ice cream industries of America. Although this work will be supported by the above companies, nevertheless they desire that it shall benefit the industries as a whole. They invite the butter and ice cream manufacturers of America to consult with them frequently regarding the problems that come within the scope of this work.

* * *

PAMPHLET ISSUED ON NEW RECORDER.

The American Schaeffer & Budenberg Corp. has issued a pamphlet illustrating and describing a newly designed recorder of the strip, or continuous chart, type. It is intended for applications where it is desirable to obtain a record of temperatures or pressures over an extended period of time and where the cycles of operation are of relatively short duration requiring a wide, open record enabling detection and study of the slightest variations.

The Columbia Strip Chart Recorder is furnished for the recording of all pressures (steam, air, water, ammonia, hydraulic, etc.,) vacuum and temperatures up to 1,000 deg. F.



The chart of this recorder is 6 inches wide with effective recording area of 4½ inches and is 90 ft. long. The clock movement is of special construction and moves chart 6 inches per hour. An automatic re-wind device takes up the recording chart.

Officials say they will be glad to send a copy of the pamphlet to anyone addressing request to the main office at Berry and South Fifth Sts., Brooklyn, N. Y.

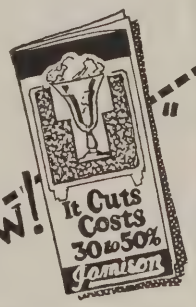
* * *

NEW BUFLOVAK BOOKLET.

The Buffalo Foundry & Machine Company of Buffalo, N. Y., have issued a very attractive booklet entitled "Buflovak Apparatus." This booklet describes the Buflovak processes for producing dry or evaporated milk products, powdered, evaporated and condensed milk and semi-solid and dry buttermilk. This booklet should be of considerable interest and value to those engaged in the manufacture of dry and evaporated milk products, or those who are contemplating adding condensing equipment.

It's Easy to See— Why this New Cabinet Cuts Icing Costs

HERE is revealed the inside construction of the new Jamison Ice Cream Cabinet. *Exactly Why* it is the most economical and practical cabinet on the market is also evident. In cabinets of the standard type, the ice and salt compartment extends the full depth of the cylinders. In the new Jamison Cabinet, it extends only half way down. Insulation replaces one-third to one-half the ice and salt used *in all other cabinets.*



But unequaled economy of operation is not its only advantage. Like all other products built by Jamison, it is made of only the finest materials, put together by the most careful and capable hands. It is built to give cheaper service than any other cabinet — ***but longer service too.*** For example, insulation is of finest grade pure cork board (not granulated cork or shavings or other inferior materials) tightly sealed with asphalt. And, instead of 2″ to 4″ insulation as found in other cabinets, 4″ to 6″ surround the compartment and cylinders of the Jamison Cabinet.

Let it Prove Our Claims in Your Own Plant

The new Jamison Cabinet is now ready to prove our claims in your own plant. In the city of Washington over 700 of these cabinets have been in service for more than a year. In every instance big reductions—30% to 50%—in icing costs have resulted. A test in comparison with any cabinet you are now using cannot fail to prove that the Jamison Cabinet will be worth its cost many times over. The coupon will bring you descriptive literature, details of construction, sizes and prices. Mail it today.

New Orleans is Host to Refrigerating Engineers

THE National Association of Practical Refrigerating Engineers held one of its most successful conventions in New Orleans, November 11, 12, 13 and 14, 1924. This was the fifteenth annual convention and exhibition of this association. In the matter of attendance, all previous records were broken, as a total of 908 were registered at this convention. Members were present from practically all states of the Union.

The educational program contained fifteen professional papers, which were of special interest, not only to operating engineers, but also plant managers and owners. Real Southern hospitality was shown in the entertainment features of the convention.

On Tuesday evening the members and guests were entertained by a boxing show at the Young Men's Gymnastic Club. On Wednesday afternoon, an excursion was taken on the river to various points of interest. This was followed by a smoker and motion picture entertainment in the evening. On Thursday evening the annual banquet was given at the Southern Yacht Club.

The reports of the secretary and treasurer showed that a large fund is being raised for carrying out the educational work of the association. The secretary's report showed that the membership at the time of the convention was 2,366. The convention voted to change the name "Subordinate" to "Chapter."

One of the interesting features of the convention was the exhibition of machinery, fittings, supplies, etc., in which approximately 70 manufacturing concerns took part. These firms were allotted exhibition space for their contribution to the educational funds of the association.

The following officers were elected for the N. A. P. R. E.:

President, Erle Ormsby, St. Louis, Mo.

First Vice-President, B. S. T. Dobres, New Orleans, La.

Second Vice-President, Fred I. McCandlish, Kansas City, Mo.

Secretary, Edw. H. Fox, Chicago, Ill.

Treasurer, Chas. W. Chapman, Detroit, Mich.

Sergeant-at-Arms, John Roth, Emporia, Kans.

Board of Directors.

F. B. Fulmer, chairman, Oakland, Calif.
T. V. Lawson, San Antonio, Tex.
James A. Ferguson, Pittsburgh, Pa.

Educational and Examining Board.

H. R. Halterman, Chicago, Ill.

Committee on Standards.

Van R. H. Greene, chairman, New York, N. Y.

Committee on Engine Room Records.

A. J. Authenreith, chairman, Chicago, Ill.

Publicity Committee.

Edw. H. Fox, chairman, Chicago, Ill.

Committee on Exhibits.

C. L. Whittemore, chairman, St. Louis, Mo.

Detroit was selected as the next convention city.

OUR FIRST ONE FOR 1925.

A very serviceable calendar from the Dearborn Chemical Company is the first to reach the editor's desk. It is one of those big ones that cover a big spot on the wall and the figures are so big that "all who run may read." The company calls attention to the fact that it has laboratories and factories in New York and Chicago, with sales branches in Milwaukee, St. Paul, Minneapolis, Peoria, Kansas City, Denver, Los Angeles, San Francisco, Detroit, Cleveland, Syracuse, Pittsburgh, Cincinnati, Indianapolis, Philadelphia, Boston, Honolulu, Manila, Habana, Barcelona, Santiago and Buenos Aires.

WHERE IS THIS?

Rastus: "Boy, it was so cold whar I cum fum we had to frow watah out de window an' slide daown de icicle to git out ob de house."

Mose: "Yo'll talk nuffins. Whar I lib it's so cold we gotta build fiahs unddah de cows to stop 'em fum givin' ice cream."—Jackson Gazette.

This Fall—

WHEN you are turning over in your mind the various improvements which this season's business has shown to be advisable, consider **this.** That the most important and beneficial change you can **possibly** make is an improvement in the quality of your **Vanilla Ice Cream.**

There is a particular **Vanilla** which fits **your** Ice Cream better than any other. **You** should buy **that** Vanilla. Sethness Company has, by means of a series of freezing tests, determined the particular type of Vanilla Flavoring best suited to each mixture of the various dairy products used in Ice Cream manufacture.

We believe there is room for improvement in the flavoring of every Ice Cream. We will be highly pleased to offer you the result of our labor along this line.

Get in touch with the Sethness salesman in your territory or write Sethness Specialty Department. Both are at your service for the increase of your Ice Cream Volume.

Cosco TRADE MARK *For Forty-four Years the Mark of Quality in Ice Cream Products*

C. NELSON MFG. CO. EXONERATED OF UNFAIRNESS.

At the New Orleans convention the financial differences between the Frick Ice Cream Company, Corsicana, Tex., and the C. Nelson Mfg. Co., St. Louis, were submitted to an arbitration committee, in accordance with the admirable policy adopted by The Association of Ice Cream Supply Men.

After hearing both sides of the controversy the committee completely exonerated the C. Nelson Mfg. Co., and according to agreement, the secretary of The Association of Ice Cream Supply Men, Roberts Everett, issued the following statement for publication:

In a letter to The Association of Ice Cream Supply Men, copies of which were sent to several ice cream companies and to the secretaries of the Texas, Southern and National Associations of Ice Cream Manufacturers, the Frick Ice Cream Company of Corsicana, Tex., shortly before the New Orleans convention, made accusations of commercial unfairness in certain dealings on the part of the C. Nelson Mfg. Co. of St. Louis.

Informing the Frick Ice Cream Co. of its adherence wherever possible in matters involving its members to a policy of friendly intermediation, The Association of Ice Cream Supply Men offered the services of one of its officers in an intermediary capacity in the matter that apparently was at issue between the Frick Ice Cream Co. and the C. Nelson Mfg. Co.

No settlement of the issue occurring as a result of this, however, the two companies agreed to submit their differences to trade arbitration. An agreement was signed by each to abide by the decision of a board of arbitrators. Each company designated two arbitrators. The four so chosen designated a fifth.

The Frick Ice Cream Co. designated W. W. Campbell, vice-president of the National Association of Ice Cream Manufacturers, and B. C. Brown, a New Orleans ice cream manufacturer, and a member of the National and Southern Associations of Ice Cream Manufacturers. The C. Nelson Mfg. Co. designated John H. Mulholland, John H. Mulholland Co., Philadelphia, and L. B. Esmond, Essex Gelatine Co., Boston. The four arbitrators so chosen agreed upon Wyn B. Morris, Barker, Duff & Morris, Pittsburgh, as the fifth member, and chairman of the board.

A five-hour hearing was held in the St. Charles Hotel, New Orleans, late in the evening and early in the morning of November 14 and 15.

The charge presented against the C. Nelson Mfg. Co., the agreement signed by both parties, and the decision of the board of arbitrators have been issued for publication.

The decision of the arbitrators completely exonerated the C. Nelson Mfg. Co. of unfairness. The Frick Ice Cream Co. subsequently repudiated its agreement to abide by the arbitrators' decision.

OUTLINE OF EVENTS OF FIRST JOINT CONVENTION.

(Continued from page 14)

The party will leave Seattle on the S. S. Ruth Alexander of the Admiral Line, sailing at midnight December 6 and arriving in San Francisco December 9. A sort of get-together rally will be held on board and the party will have an opportunity to rehearse the songs and stunts planned for the convention.

Convention headquarters will be at the Hotel Oakland and arrangements have been made for the accommodation of 500 ice cream manufacturers and supplymen and their wifes. No matter how many of the Western ice cream conventions you have attended, your past experience will furnish only a slight indication of what's in store for you at Oakland next month. Either the convention program or the show, alone, would make your trip to Oakland in December well worth while. Taken together, they form an unbeatable combination.

No ice cream man can afford to miss it.

You can't afford to miss a single copy of The Ice Cream Review. Did you send in your renewal?

Convincing Evidence!

HERE are excerpts from a few of many letters received from ice manufacturers throughout the country who have put G-W Welded-Seam Ice Cans to every test and are completely satisfied with results.

Users are enthusiastic not alone because these cans speed up ice making, but because the remarkable strength and durability of the *riveted-less* welded seams keep maintenance down to rock bottom.

Write NOW to the nearest office for information concerning these dependable aids to economy in ice making.

WASHINGTON—MAINE

News From Far and Near

CALIFORNIA—FLORIDA

Rochester, N. Y.—The thirty-fifth milestone of useful service in the ice cream industry has been passed by the Rochester Ice Cream Co., Rochester, N. Y., which began the manufacture of ice cream in 1889. The company entered the ice cream industry at the time when the product was distributed in tubs.

Someone with a passion for figures has estimated that if all the ice cream made by the company and eaten in Rochester were served in cones, there would be 32,500,000 cones of Rochester ice cream eaten during the year, or 130 cones per person. Again, if the ice cream sold by the company were divided into quart bricks, there would be 2,600,000 bricks sold, enough to put up a good sized office building.

S. T. NIVLING.

Officers of the company are S. T. Nivling, for many years prominent in national association activities, president and treasurer, and H. J. Coyle, secretary. These officers enumerate the following points in connection with the success of the company over a period of 35 years:

1—First to introduce the cold air blast.

2—First to introduce mechanical sterilization of utensils.

3—First to employ chemists and bacteriologists to make daily tests for purity.

4—First to install cabinets in stores.

5—First to introduce the modern carton for brick cream.

6—First to circulate brine around ice cream instead of ice and salt, thus freezing cream in a more sanitary manner.

Vancouver, Wash.—The new plant of the Maid O'Wauna Ice Cream Co., which was completed this summer, makes that company one of the leading concerns of the West. The company is operated by J. P. Breckel, who also manages the plant. Mr. Breckel purchased the ice cream business from the Columbia Dairy Products Co. in January, 1921. A quarter block on 20th and Main Sts. was purchased by Mr. Breckel and ground was broken on February 10, 1924, four months later having completed the new building without any burden in any way to the manufacture and delivery of ice cream. It has been said that the building more nearly resembles an up-to-date apartment house than a factory; the architecture being on the style of the Spanish mission type with an exterior of cream stucco finish, red Spanish tile roof, shrubbery and flowers planted between the sidewalk and the building. There is a flower box in every window. The principal decorative feature of the building is the Indian maiden's head in bas relief. Sound-proof walls prevent the hum of machinery from being heard on the street. The entire interior of the building is painted with gray and white vitrolite enamel of five coats, making it as sanitary and as easily cleaned as a surgeon's operating room. The company employs no salesmen.

Grove City, Pa.—The wholesale ice cream business of J. H. Curry has been purchased by Shillito and McCoy.

Los Gatos, Calif.—Announcement has been made of the appointment of J. Paulson as manager of the Los Gatos Ice Cream Co.

Little Rock, Ark.—The Clark Ice Cream Co. has filed articles of incorporation. It is capitalified at $12,500. The officers are W. H. Clark, president and treasurer; Mrs. Josette Clark, secretary; C. W. Smale, John D. Moore and H. H. McIntye, directors. The company will conduct a general ice and cold storage plant, and buy and sell dairy products and ice cream.

Stuttgart, Ark.—A. Palm and Fred O. Peterson have purchased the interest of G. A. Meyer in the Grand Prairie Ice Cream Company.

Mangum, Tex.—Announcement was made recently of the forming of the partnership of Cowan, Wicker & Jacobs, composed of Monroe Cowan, Chester Wicker and Earl Jacobs, who will establish a large ice cream and bottling plant and creamery at Mangum. An up-town location has been secured for the plant and a building will be erected early in 1925. It is estimated that the building will cost $40,000, including the machinery.

Wilmington, Del.—Arctic Products Company, manufacture ice cream, incorporated for $300,000. (Colonial Charter Company.

Leesburg, Fla.—The Lake County Ice Cream Co. has been sold by W. O. Johnson to J. G. Porter for consideration of approximately $18,000. The plant only recently was erected.

Hagerstown, Md.—D. Paul Shilling of Funkstown has resigned as plant manager for the Imperial Ice Cream Co. of Hagerstown.

Hamilton, O.—The Ohio Ice Cream and Cone Co. has been incorporated with a capital stock of $25,000 by Peter Janetos and Gus Pappas.

Irwin, Pa.—Announcement has been made that L. M. Hamilton, proprietor of Hamilton Ice Cream Co., will discontinue the manufacture of ice cream and in the future will buy Penn Cress Ice Cream. This is one of the oldest retail ice cream manufacturers in the state.

Jacksonville, Ill.—The College City Ice Cream Co. of Galesburg leased the plant formerly operated by the Jacksonville Ice Cream Co. and will operate the plant, according to recent announcement. The company consists of H. G. Hawkinson and his sons, N. H. and N. F. Hawkinson. This firm also owns a plant in Galesburg.

Nashville, Tenn.—Charles S. Rose, for 11 years sales manager of the Union Ice Cream Co., has resigned his position to become general manager of the Velvet Ice Cream Co. of Nashville. The Velvet Ice Cream Co. is a successor to the Sidebottom Ice Cream Co., recently sold in Nashville. The Velvet Ice Cream Co. will continue to operate at the old Sidebottom location, 143 Sixth Ave., North. New machinery and other equipment will be added as the Velvet Ice Cream Co. has need.

SPECIAL TRAINS TO CONVENTION.

A special train carried ice cream manufacturers of New England, New York, Ohio, Michigan, Illinois, Kentucky, Tennessee and other states to the national convention over the Illinois Central. Another special carried members from Maryland, Pennsylvania and New Jersey. A train of 15 Pullman coaches brought deledates from states west and north of Chicago, arriving the day before the convention.

SALESMEN'S CLUB RE-ELECTS THOMAS.

N. M. Thomas of Philadelphia was re-elected president of the Salesmen's Club of The Association of Ice Cream Supply Men. The salesmen's annual convention was held Tuesday of the convention at St. Charles Hotel. It was marked by spirited discussions. The following directors were elected:

N. M. Thomas, H. H. Miller Industries Co.; Howard Black, John H. Mulhollond Co.; Thomas J. Stewart, Milligan & Higgins Gelatine Co.; John J. Tracy, Essex Gelatine Co.; Robert Rosenbaum, David Michael & Co.; Lou Chamberlain, Nizer Co.; C. H. Achelpohl, Citrus Products Co.; J. W. Mulligan, Rex Extract Co.; A. E. Parks, Solar-Sturges Co.

These directors, in turn, elected N. M. Thomas as president, C. H. Achelpohl as treasurer, Lou Chamberlain as vice-president, and Chas. W. Caldwell, assistant secretary of The Association of Ice Cream Supply Men, as secretary.

President O. S. Jordan, president of The Association of Ice Cream Supply Men, heartily congratulated the club on its successful year.

You'll make better ice cream if you get "The Ice Cream Review."

Patented Jan. 21, 1923

Texas Barrel Company has installed one of the largest Barrel, keg and Ice Cream Tub plants in the South and will be ready to serve its tub customers at an early date. Texas Barrel Company had the misfortune to lose its Tub plant by fire in August but in its place has arisen a magnificent factory capable of serving a wider territory.

Service and good workmanship our motto.

TEXAS BARREL COMPANY

Box 665 HOUSTON, TEXAS

Jacksonville, Ill.—The College City Ice Cream Company of Galesburg has leased the plant formerly occupied by the Jacksonville Ice Cream Company here.

Litchfield, Minn.—The new plant of the Litchfield Ice Cream Company is nearing completion. It will be equipped with hardening rooms and cooler put in by the Insulation Sales Company, Minneapolis.

Minneapolis, Minn.—The new plant of the Woodlake Dairy Company, 63rd and Penn Ave. S., is about completed and ready for business. This plant is equipped with a modern built-in type cooler insulated with cork board installed by the Insulation Sales Company, Minneapolis.

Austin, Minn.—The Austin Dairy Products Company have recently added ice cream hardening rooms and large cooler to their equipment, these rooms being insulated with cork board insulation and equipped wth Jamison refrigerator doors, installed by the Insulation Sales Company, Minneapolis.

SOUTHERN EXPOSITION BREAKS PREVIOUS FOR DIXIE.

(Continued from page 82)

Article 5, Annual Meeting.

The time and place of annual meetings shall coincide with the time and place of the annual meeting of the Southern Association of Ice Cream Manufacturers.

The question of an exhibition or display at annual meeting shall be left to the board of directors who will canvass by mail all houses holding membership in the Dixie Flyers to get an expression as to whether or not an exhibition will be held, the majority of such replies to decide the question.

Section 1—The commission by any member, of an act which discredits or otherwise injures this body shall be cause for expulsion of such member by the board of directors.

Article 6.

Section 2—A member charged with the commission of an act or acts which is proved, would warrant his expulsion shall be duly notified in writing of the charge or charges against him, and he shall be given a fair opportunity to be heard at a meeting of the board of directors or to submit his defense in writing if he so elects.

Section 3—To expel a member a majority vote of the board of directors shall be necessary.

Article 7, Vacancies.

Vacancies in the board of directors occurring by reason of death or resignations, or other cause, the vacancy will be filled by the majority vote of the remaining members of the board of directors. The person elected to serve until the next annual meeting of the Dixie Flyers at which time a new director will be elected by the vote of the members of the Dixie Flyers.

Article 8, Amendments.

Amendments to the constitution or by-laws of this body may be made at any annual meeting and adopted by a two-thirds vote of the membership and such proposed amendments shall be published in the official journals thirty days prior to the annual meeting.

Election Procedure.

The candidates for officers shall be nominated from the floor and voted upon by secret ballot. The president to nominate three tellers to count the votes. The person receiving the highest number of votes to be declared elected. Voting on officers shall be in the following order: First, president; second, vice-president; third, secretary; fourth, treasurer, and then directors sufficient to fill any vacancies that may be in the board of directors.

BY-LAWS.

Article 1.

The report of officers, directors and of committees shall be written reports.

Article 2.

The board of directors will audit the books of the treasurer.

Article 3, Order of Business.

For all meetings shall be:
First—Roll Call.
Second—Reading of Minutes of previous meeting.
Third—Report of Officers.
Fourth—Report of Committees.
Fifth—Unfinished Business.
Sixth—New Business.
Election of officers shall come under NEW BUSINESS.

ICE CREAM MAN HONORED BY REFRIGERATING ENGINEERS.

The ice cream industry was honored by the National Association of Practical Refrigerating Engineers, when that body elected F. B. Fulmer of Oakland, California, chairman of its board of directors, this action being taken at the association's annual convention. The convention preceded by just a few days the sessions of the National Association of Ice Cream Manufacturers. Mr. Fulmer was quite an active man at this period. In addition to making a number of highly interesting addresses before the engineers, he presented the ice cream manufacturers with a splendid paper on iceless cabinets. Then, to top off his active convention work, he had to hurry from the New Orleans convention to get ready for the great joint convention to be held on the Pacific Coast in connection with the Pacific Slope Dairy Show.

F. B. FULMER.

LOUISIANA CONVENTION DATES CHANGED.

The annual convention of the Louisiana Association of Ice Cream Manufacturers was scheduled for Nov. 21, in New Orleans, immediately following the "National." The meeting was postponed, and will be held on January 13, 14, 1925. Full particulars in next issue.

MISSISSIPPI MAKERS TO MEET IN JANUARY.

The next annual convention of the Mississippi Ice Cream Manufacturers' Association will be held on January 15, 1925. Announcement of place and program in uary 15, 1925 at Vicksburg. National Park Hotel will be convention headquarters. Details in our next issue.

LADIES FEATURE NEW ORLEANS CONVENTION.

The Southern and national conventions were featured by the large number of ladies attending. The ladies outdid themselves in adding color and charm to the occasion. The Ladies' Auxiliary to the Southern Association of Ice Cream Manufacturers held its best convention on record, the attendance being nearly double that of the previous convention. Entertainment was on foot for the fair visitors at all times, including auto tours of the city, theater parties, luncheons, receptions, etc.

Mrs. R. J. Massey of Chicago was elected president of the auxiliary. She succeeds Miss Sally Mahoney of Chicago. Mrs. W. J. Barritt of Tampa, wife of the convention president of the Southern association, was elected vice-president. Miss Ruth O'Neal Dawson of Chattanooga was named secretary, succeeding Mrs. E. B. Geisel of New Orleans.

Mrs. Geisel played her usual part as central figure in the entertainment features of the convention. She added to her exceedingly splendid reputation as a charming hostess.

The auxiliary kept open its registration booth for the national convention, having someone on hand to extend courtesies to visiting ladies from out of the South.

QUALITY PROGRAM FEATURES GREAT SOUTHERN CONVENTION.

(Continued from page 76)

A round-table discussion at which officers were elected and the next place of meeting selected brought the convention to a close.

NEW ORLEANS had scored another triumph. The birthplace of the Southern association had received the members from every Southern state and accorded them hospitality such as will long be remembered. The climax to the occasion came at the association's annual banquet at the Hotel Roosevelt on the evening of November 16. The majority of the delegates enjoyed the Sabbath by taking the boat trip provided for the occasion, this trip proving a most delightful feature of a most delightful convention. So it was that the national association found a large number of Southern manufacturers on hand for the opening of its 1924 convention.

EXTRACT MEN MEET.

Representatives of extract companies belonging to The Association of Ice Cream Supply Men met in the Rose Room of the St. Charles Hotel, on Tuesday of the convention.

15 Miller St. SOMERVILLE, MASS.

NEW ORLEANS SERVES AS HOST TO "NATIONAL."

(Continued from page 74)

"The housewife, having tried a new and perhaps novel ice cream, would later want to serve the same ice cream at a week-end dinner, or at a party. The desire for this cream having been created by the advertising, additional sales would thus be created. The amount of this business would form no inconsiderable item in the course of a year."

And the very nature of the campaign, according to the presentation of the matter to the convention, "full of suggestions as it will be," would result—

"Not only in the sale of vast quantities of the weekly special ice cream advertised for a particular week or part thereof, but it would also make the people 'ice cream conscious,' with the result that ice cream would more often be consumed during the week, on the table, at the soda fountain and elsewhere."

Members of the national association, under one plan outlined, would be informed in advance of the program of different flavors for the different weeks. Newspaper advertisements, prepared in advance, would be sent to manufacturers in electro or matrix form so that manufacturers who would want to advertise these weekly specials in their local newspapers could do so with a minimum of effort and expense. This would call not only for linking up in local newspapers but also utilizing delivery wagons and trucks to call attention to the special for the coming week.

ONE of the really informing features of that part of the convention bearing upon national advertising was the presentation of a chart showing that if this industry had done one-third as well as the average of the industries whose activities have been studied and charted, this industry would have sold in over the period from 1919 to 1923 almost five hundred million gallons more ice cream than was actually sold, and the American public would not yet be consuming an additional dish per person per week.

Year	Gallons	Per Capita	Increased Gallons	Increase Per Capita	Additional Dishes
1918	231,053,000	72 dishes	231,053,000	72.00	
1919	248,381,975	76 dishes	264,600,000	80.64	5
1920	251,820,490	76 dishes	297,970,000	89.72	14
1921	216,569,212	64 dishes	338,595,000	100.49	36
1922	242,288,000	71 dishes	384,552,000	112.56	42

An additional dish of ice cream per person weekly would result in an increased consumption of 179,820,000 gallons per year.

Lack of time and space makes it necessary for The Ice Cream Review to defer until the January issue fuller details of the important matters threshed out at the convention concerning cost accounting, iceless cabinets, standardization and other important topics. These matters will be more fully treated in the following issue.

In the meantime The Ice Cream Review extends to the industry at large and to officials of the association heartiest congratulations upon the success of what doubtless will go down in annals as a new beginning for constructive work toward the industry's betterment.

Tell us what you want, or what you have that you don't want, and we'll fix up a little Ad for you and insert it in the next issue of "The Ice Cream Review." You just stay at home and wait for results. You'll soon have your hands full.

Good Tools for a *Good* Harvest

Now is the time to prepare for the coming winter's ice harvesting. The Gifford-Wood Co., as usual, is prepared to supply any ice tools you need—and to supply them promptly. These finely-made tools are available in all types for every purpose. Tools needing repairs should be sent in to us NOW, so we can return them promptly—in time for winter ice havesting.

Full information in our complete Ice Tool Catalog. Write for your copy.

The fact that these men are advertising here stamps them as unusually progressive. Write them and give them a chance to sell their services to you. "Ice Cream Review," Milwaukee, Wis. tf

REID ICE CREAM CO. EXPANDING.

The Reid Ice Cream Co., a well established ice cream corporation in Brooklyn, N. Y., announces the erection of an addition to its present plant at 524 Waverly Ave. A four-story extension, 134 by 80 feet, is being added, and new modern equipment will be installed. The alterations will increase the plant's capacity to 50,000 gallons daily.

The company's main office and factory is located at 524 Waverly Ave., Brooklyn, but a "family order department" is maintained at 858 Fulton St. Branch factories are operated in the following cities: New York, N. Y.; Jersey City, N. J.; Asbury Park, N. J.; Mineola, L. I., N. Y.; and at Coney Island, N. Y.

The Reid Ice Cream Co. also has established creameries at Thompson Ridge, N. Y.; Cincinnatus, N. Y.; Vernon, N. J.; Prices Crossing, N. J., and Allamuchy, N. J. This firm also deals in bottled milk.

W. J. Weller, treasurer of the National Association of Ice Cream Manufacturers, is secretary of The Reid Ice Cream Co.

Jakie Snitzenbaum stepped into the grocery store around the corner.

"I vant some pepper," he said to the little lady clerk.

"What kind do you prefer—black or red?" she replied.

"I don't vant eder kind. I vant tissue pepper."

SERVE IT - EAT IT - AND YOU
January 1925

The Newest Member of the CHERRY Line

1. Patented removable inner freezing cylinder. Eliminates sending to factory for cleaning brine sediment.
2. Enclosed "Safety-First" gear case. Cut gears run in oil.
3. All brine connections are brass. Durable plug type of valve used.
4. Symmetrical lines of the solid cast, white enameled base add greatly to beauty of this freezer.
5. Heavy tinned copper batch tank complete with strainer has abundant over-capacity.
6. Fruit hopper is separate from batch tank. Feed fruit independently. Fitted with ground valve. No leaking.
7. Belt shifter handle within easy reach of operator. Belt shifter operates quickly and positively.
8. Peep hole, covered, to enable operator to watch condition of mix during freezing stage.
9. Head is secured by four slotted clamps which are held in place with tinned brass wing nuts. Head easily removable.
10. Outlet gate designed to empty freezer straight downward into cans in minimum time.
11. Large square base assures rigidity and no vibration when freezer is running—means less wear and longer life.

"CHERRY"

40 Quart Freezer

"The World's Finest Low Priced Freezer"

Has every advantage of larger units — and its low selling price is the sensation of the trade.

IT is interesting to know that few, if any, of the essential ice cream equipment, supply and machinery groups, now surveying the 1925 certainties and prospects of the industry they sell to, can foresee anything but increased interests to be served among the ice cream manufacturers from coast to coast. It is their conviction that the ice cream industry will enter, and emerge from, 1925 not on a lessened, but a greater scale.

JANUARY 1925

THE Bells of 1925 have spoken. A New Year—and a New Opportunity! Both the same. People just look at the matter in different lights. Some people, bright and early quite recently, heard the bells chiming. Others just heard a noise. Some listened and felt that old electric thrill that makes for new efforts and new achievements. Others yawned and turned over for a few more naps before Big Ben would call them out.

The general business outlook at this time is most trustworthy. We have gone through the period of uncertainties incident to a presidential election. Business men seemed to want the man they got and men in business can have much to say about how business conditions will develop if they go at it right.

But no one can say much to encourage the man who wants to wait and see how things "open up." There is too much involved in running this world for any one man to be able to put his finger on a given scale of the commercial barometer and say, "Well, now in February, business will be at this point, and in March it will be at that notch, and in July, August and September it will be around such and such a point."

Things are not done that way. Money is not made that way. A big business is not built that way. We can only look back over the year that has just faded and check up on the troubles we had, the mistakes we made, the opportunities we overlooked, the new business we could have developed and didn't. Then we can look down into our own hearts and minds, make rigid scrutiny, and satisfy ourselves that we have the force, the confidence, the ability to step out and hustle for all the business in sight—and for just a lot of it that is not in sight.

Experts will tell you many reasons why business will grow stronger. Probably they know what they are talking about. But that doesn't mean the ice cream industry is going to get its share of the golden plums just by sitting down and waiting for prosperity. Prosperity doesn't "come along"; you go out and get it—grab it by the handle.

It's good business all the time when you put your trust in a good product and in a good determination to put it over to the public.

The bells have spoken. They signaled for the curtains to go up for a new beginning for the peoples of the world; for each man to take a new start and go ahead with a clean slate and a bright goal in sight.

It is to be hoped that you heard the Bells of 1925, my masters, for some people didn't—and never will. They heralded the coming of New Opportunity.

THE man who dreads competition needs something for his liver. Some folks may say he needs something for his backbone, but that is not necessarily true. Thoughtful reflection over a period of years in trade will impress any unbiased observer with how ridiculous it is for business men to fear the coming of a competitive concern into their community. There may be a way to keep out competition, but there is not one that can be recommended. Probably the best safeguard against it is to make a product that will defy competition.

But the records fail to disclose that any great harm ever has resulted in the coming into a given territory of a new concern, providing there was any reasonable kind of an opening for another firm and any reasonable kind of good spirit exhibited all the way around. Bad consequences have come of efforts to "kill-off" new competition. This has been found to be a double-edged knife that cuts both ways, and often enough the practice has hurt the man who strikes just as much as the object of attack.

You would be astonished to know how often it happens that new competition means better all-around business for all concerned. For one thing it makes everybody work harder. But probably the most important reason is it generally results in co-operation that uncovers new business for everybody.

Is anyone opening up in your territory some time soon? Well, don't let it trouble you. If your liver is

so badly out of order that you won't be able to welcome him with a smile, just stay away from him and let the situation take care of itself, a habit that situations have of doing, if you have noticed. Then when you have worried to the breaking point, just remember those lines over the New York doctor's door, previously mentioned in these columns: "I am an old man and have had many troubles, but most of them never happened."

WHAT of mechanical refrigeration? That's the big thing making ice cream manufacturers sit up nights these days. Various other important matters are before the industry, but mechanical refrigeration excites the arguments in which friendships totter and hang by shreds. Most of us agree it is here to stay. There is no doubt of it, and we are glad. Some manufacturers won't like that statement. But all of us realize that, whether we want it or not, we shall have to put up with it, and in time to come we shall look back and be reminded that the coming of mechanical refrigeration was a new era of progress for the industry.

Members of the trade will do well to avoid what has been termed the practice of using these cabinets as clubs. This sort of unfairness can work injury both ways. Men who have tried it have found this to be true. None of us can be sure about the situation now. Mechanical refrigeration is in its infancy. There will be changes. Leading ice cream men believed the refrigerated soda fountain is to be the big thing in iceless refrigeration in the near future. Maybe so. Watch your step. If you see a legitimate way to handle iceless cabinets and better your business, do so. If you think you are going to put over a smart-Aleck trick and use these cabinets as weapons against your neighbors, you stand a good chance to fall down under something. No business proposition is sound when you go into it solely on that basis.

IN a single day, recently, we received four letters from ice cream manufacturers in widely separated sections of the country asking permission to reproduce material published in The Ice Cream Review. Such requests are numerous, and we always gladly give permission.

While we are pleased to get this evidence of interest on the part of our readers, we want to assure others, in advance, that it is not even necessary to write us asking permission. You have it, regarding anything published in our columns. Courtesy suggests, of course, proper credit, that's all.

Now, friends, you have the reason why the material in the columns of The Ice Cream Review is not copyrighted. It never has been, and never will be while the paper is published by the present management. We feel that The Ice Cream Review belongs to the industry, and that its biggest mission is to serve. If anything appears in its columns that the reader can use in promoting his business he is promoting the industry by using it.

We have made special effort to help the ice cream manufacturer build up his business by giving him concrete suggestions as to how to go about it. We have cited the experience of other ice cream manufacturers and have outlined advertising campaigns. In doing so we have always hoped that many would follow these suggestions. We have never proposed these things and then labeled them "hands off" by copyrighting them.

With increased facilities and opportunities to serve the industry, which we now enjoy, we shall endeavor to make these columns still more helpful to the ice cream manufacturer. Please remember, friends, that you are welcome to make use of anything that appears in these columns. You may want to reproduce an article in full, or use extracts from it. Go ahead and use it and the wider use you make of it the better it will suit us. Remember, nothing in The Ice Cream Review is copyrighted. It's all for the industry.

THE effort made by the ice cream manufacturers of Wisconsin to emphasize the importance of their industry at the recent National Dairy Exposition is highly commendable. They went about the task in characteristic Badger style, and spent real money and effort in an attempt to get their brothers in other states to visit Wisconsin.

It is easy, of course, for these men to get enthusiastic over the possibilities offered by the dairy show to exploit their industry. They live in the greatest dairy state in the Union. They live and do business in a dairy atmosphere. They know what dairying has done and will do for general business conditions.

They realize, too, that the ice cream business is a branch of the dairy industry and an important branch, too. They wanted their brother manufacturers outside the state to get the same vision of this dairy business that they have.

They did more than invite their friends to come to the show. They worked with the officers of the various state associations in an effort to arrange for state delegations. They saw that these delegations were entertained after they reached the show. The manufacturers of Wisconsin were organized by counties and districts in this movement and nothing was left undone to give their visitors a good time while in the state. These enthusiastic men were entitled to the hearty response of ice cream manufacturers all over the country, and they got it.

IF YOU have not developed volume to the extent expected and are blaming competition for the business that has not come your way, you can not get much consolation from the future outlook. There are several hundred people studying, in American universities, the manufacture of ice cream, many of them ambitious young men now not connected with the industry in any way.

Today courses in making the frozen beverage are offered in 30 state universities. Since 1892, when the Pennsylvania State College led the way in teaching the manufacture of ice cream, the young men taking up the

subject have been increasing every year. There are hundreds of regular students enrolled now, in addition to the manufacturers who attend the short course every year.

There was a time when men entered the ice cream industry as a side line, operating other enterprises while employees of practical experience made their ice cream. An ice cream plant today requires the constant attention of a man who thoroughly knows his business. That is the kind coming to the industry every year.

Cussing competition will not solve the problem of greater gallonage for any manufacturer. Joining hands with a competitor and helping him increase the popularity of ice cream with the public is the one and only safe bet. You may boil over like a washpot every time you think of the business that you believe he has kept you from getting, but the sane and sensible thing is to get him on your side and make him help you develop more business for both of you.

To bring about greater volume you might **develop some more business for the fall and winter months, instead of catching it all in a lump during the summer and working away five years of your life trying to keep dealers supplied during twelve weeks.**

The ice cream business must be stretched more into the winter months. That will require real co-operation with your friend, the enemy.

SOME folks in business don't believe in advertising, but few of them are ice cream manufacturers. The good ice cream manufacturer knows that more ice cream is sold as a result of a suggestion than by any other motive which may prompt the buyer.

"Let's have a drink" in the olden days kept manufacturers of wet goods working overtime. "Let's have some ice cream" leads the shoppers and the sight-seers into the ice cream parlor. The printed suggestion "take home a brick of ice cream," prompts the busy business man to add The National Dish to the evening meal. Such suggestions are all advertising of one form or another. It sells ice cream.

NEWS of the resignation of R. F. Frary as secretary of the Michigan Allied Dairy Association, disappointing enough to the members of that association, is all the more disappointing when we reflect that, at least for the time being, he is lost to the industry. Affliction, never a respector of persons, some time ago settled itself upon this able and constructive man of Michigan. He will be sorely missed during the time he spends in an effort to regain his health. He will not be fighting alone, but through it all he will have the good wishes and hopes of his former fellow-tradesmen.

THE American Dairy Federation, in annual convention in Chicago early in December, went on record as favoring a minimum butterfat standard of 10 per cent for ice cream.

THE ice cream industry goes into the New Year with some ambitious ideas on foot. During the coming twelve months we may expect to see some interesting developments in connection with national advertising, cost accounting and iceless cabinets. These are matters vitally affecting the future of the industry. There are enthusiasts who believe the new cabinets, handled in the right spirit and not for vicious purposes, will do much toward getting the product to the consumer in better condition. A review of the work done on the advertising program indicates that this industry can achieve splendid results in this way. It is a matter that has very carefully been gone into by competent men. It has been presented to ice cream manufacturers in most of the states thus far, and virtually everywhere it has been hospitably received, many associations already having pledged financial support to the movement.

Thus it seems sure the ice cream industry in 1925 will take its place among those industries that have gone direct to the buyers with stories of their merchandise. Ice cream, under the co-operative advertising plan now being held out to the industry, will go into more homes this year—many thousands more—than ever before. For the most part it will go into the homes on printed paper, but in view of the splendid results achieved by other industries through co-operative advertising, there is every reason to expect greatly increased volume in all parts of the country.

BULLETIN OF EVENTS

Arkansas Ice Cream Manufacturers' Association—Annual Convention, Little Rock, January 6 and 7, 1925. Convention headquarters, Hotel Marion. Secretary, Charles Hooberry, Pine Bluff.

Association of Ice Cream Manufacturers of New York State—Annual convention, Buffalo, January 7 and 8. Convention headquarters, Hotel Statler. Secretary, A. M. LeMessurier, Box 676, Syracuse.

North Carolina Ice Cream Manufacturers' Association—Seventh Annual Convention, Charlotte, January 13-14, 1925. Secretary A. E. Dixon, Fayetteville.

Louisiana Association of Ice Cream Manufacturers—Annual convention, January 15, 1925, Alexandria. Convention headquarters, Hotel Bentley. Secretary, N. F. Manning, Monroe.

Nebraska Ice Cream Manufacturers' Credit Association—Annual convention and third annual ice cream makers' roundup, Lincoln, January 13 to 16. Convention headquarters, dairy building, College of Agriculture. Secretary, R. W. McGinnis, 204 North 11th St., Lincoln .

Mississippi Ice Cream Manufacturers' Association—Annual convention, January 15, 1925. Convention headquarters, National Park Hotel, Vicksburg, Miss. Secretary, N. D. Brookshire, Meridian.

Illinois State Dairymen's Association—Annual convention, Carbondale, Ill., January 20, 21, 22, 1925. Geo. Caven, 136 West Lake St., Chicago, Secretary.

New England Association of Ice Cream Manufacturers—Annual convention, January 21-22, Hartford, Conn. Convention headquarters, Hotel Bond. Secretary, W. P. B. Lockwood, 51 Cornhill, Room 401, Boston, Mass.

Ohio Association of Ice Cream Manufacturers—Annual convention, Cleveland, during last week of January, 1925. Convention headquarters, not announced yet. Secretary, W. A. Wentworth, 509 Outlook Building, Columbus, O.

Colorado Association of Ice Cream Manufacturers—Annual convention, Pueblo, January 27 and 28, 1925. Convention headquarters, Congress Hotel. Secretary, E. L. Carlson, C. G. Carlson Ice Cream Co., Denver.

Michigan Dairy Boosters—Exhibition in connection with convention of the Michigan Allied Dairy Association, Lansing, February 2, 3, 4, 5 and 6, 1925. Exhibition headquarters, Kerns Hotel. Secretary, C. J. W. Smith, 502 Lenox Ave., Detroit.

Michigan Allied Dairy Association—Annual convention, Lansing, February 2, 3, 4, 5 and 6, 1925. Convention headquarters, Michigan Agricultural College. Secretary, R. F. Frary, Lapeer.

Ice Cream Manufacturers' Association of South Dakota—Annual convention at Sioux Falls, February 3, 4, and 5, 1925, in conjunction with the State Dairy Association convention. Convention headquarters, Hotel Cataract. Secretary, C. C. Totman, Station A, Brookings.

Minnesota State Association of Ice Cream Manufacturers—Annual convention at Minneapolis, February 19 and 20, 1925. Convention headquarters, New Nicollet Hotel. Secretary, J. J. Farrell, 620 Hamm Bldg., St. Paul. President, W. W. Dunn, Jr., 506 Partridge St., St. Paul.

The Electrical Ice Cream Cabinet

Costs Are Cut and in Some Cases Entirely Eliminated, Speaker Claims

By W. D. McELHINNY

THE electric iceless cabinet is here and it is here to stay. It fills a long felt need from the standpoint of the dealer and the public because of the superior service it offers, and from the standpoint of the manufacturer to whom it offers a great saving. Possibly no other appliance has created as much comment and discussion as has the electric ice cream cabinet. The cabinet idea has swept the country like wildfire, and almost every manufacturer of any size in the United States today is either using cabinets or asking himself the question whether he can use them and, if so, what shall be his policy in connection with the cabinet problem.

The substitution of the iceless cabinet for the old style method of salt and ice should be accomplished without coercion of the slightest kind. The cabinet manufacturer should meet the ice cream manufacturer on a common sense ground and handle the cabinet situation as the ice cream manufacturer desires it to be handled in his particular territory. In other words, the cabinet manufacturer should be willing to play ball with the ice cream manufacturer. Any other method of handling this situation will be detrimental to both. Without the ice cream manufacturer's good will the cabinet manufacturer is bound to suffer. Without the willingness of the cabinet manufacturer to meet the ice cream manufacturer on a common sense ground and treat the subject of cabinets in a businesslike and conservative manner, a great deal of confusion, and sometimes hard feeling, may result.

From the manufacturer's viewpoint the electric ice cream cabinet cuts costs and, in some cases, entirely eliminates some of them: first, by the elimination of salting and icing cream where cabinets are in use; second, the installation of electric ice cream cabinets greatly decreases the labor at each stop because no time is taken for mixing ice and salt, carrying it into the store, packing the cream, and cleaning up the muss, to say nothing of the general inconvenience and confusion caused by such a process in a retailer's store.

The installation of electric cabinets means a great deal in the reduction of cost in connection with delivery and delivery equipment. Where the entire route is iceless, the truck equipment can be cut down to light economical trucks with a low first cost and small depreciation cost. Fewer deliveries need be made with the trucking equipment on account of the greater and longer storage capacity of the cabinets.

Delivery time is reduced due to the speed of delivery and the elimination of labor so that more stops can be made in the same time.

There is less depreciation on trucks, less investment per truck, and fewer trucks. If present trucks are used more cream can be carried. Consequently, longer routes can be established, quicker and better service given to the dealers, and a general saving effected on each route.

Experiences of many manufacturers show that the installation of iceless cabinets on country and suburban routes brings the country stop to the city and makes it practically a city stop. Installation of the cabinets on stops of this character often the cream does not have to be packed. It is kept in perfect condition and a large amount of it can be stored. Delivery is often accomplished by light high speed trucks whose operating over a radius of a great many miles is exceedingly low.

In cities the parking problem is becoming greater every day. The delivery time, due to the fact that salting and icing is done away with entirely, has so cut down the time at each stop that the driver can leave the truck at almost any place, drop the cream, and be off on his way to the next stop in a very short space of time.

MANUFACTURERS find that upon the installation of a cabinet in a store the public quickly appreciates the better quality of the cream—the fact that it is kept in an absolute clean sanitary condition—that here is no danger of salt or ice, water, or other foreign substance getting into the cream—that is is always kept at the proper temperature, it is never too hard, nor too soft—and that the cabinet itself attracts much attention. Soon the entire neighborhood learns of the cabinet.

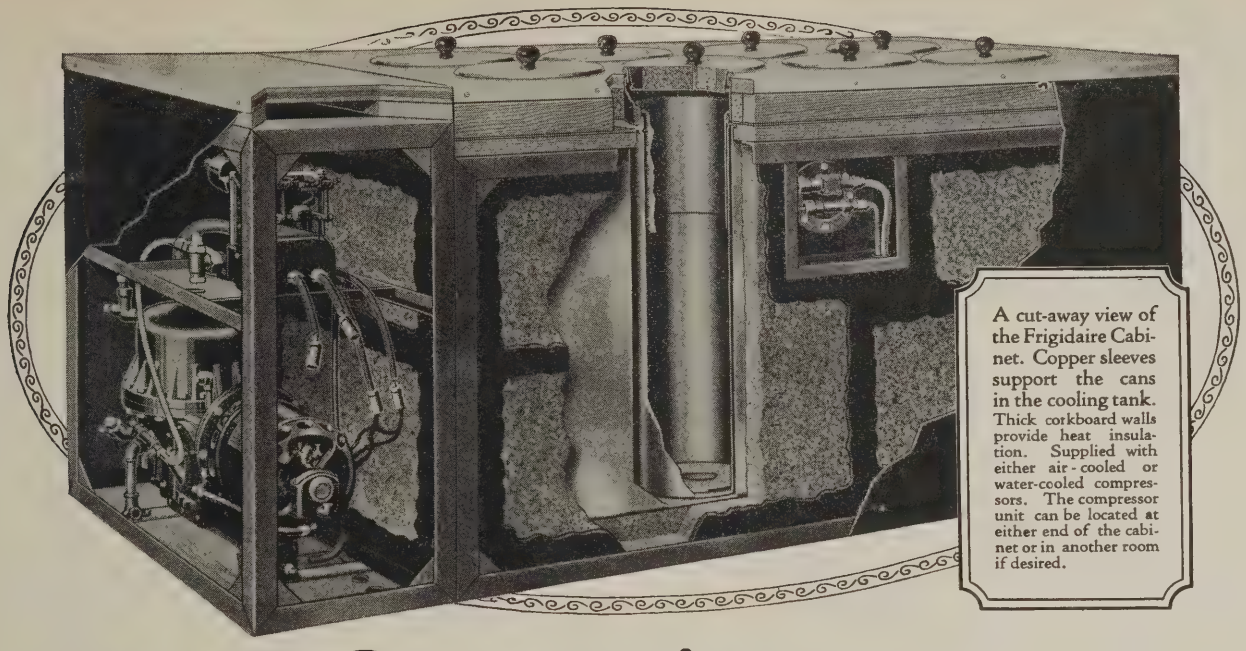
The cabinet improves or maintains the quality of the ice cream by keeping it at an even temperature; it is always at the proper consistency; the temperature of the machine can be regulated to suit your own needs or the needs of the particular dealer in whose establishment it is installed; the flavor is always maintained, and the customer is quick to recognize the superiority of the product and the service.

There is no re-icing, and the sometimes consequent attendant damage to the cream through crystallization; no returns of soft cream, a cost which someone always has to bear, and no petty annoyances such as delivery damages, etc., in the dealer's store.

The electric ice cream cabinet makes better customers for the manufacturer because the installation of a cabinet offers the dealer a convenience and fills a long felt need. It is something they have been wanting and hoping for for years. Ice cream dealers will be much pleased when they learn that they can be provided or can provide themselves with a cabinet that needs no ice or salt, makes no dirt, no muss, does away with sloppy floors and unsanitary conditions, eliminates the often unsanitary looking cabinet behind their counter.

Electric cabinets relieve the employees in the store of much work of a disagreeable nature, makes them more satisfied, and turns them into boosters for the cabinet and your ice cream.

These cabinets reduce shrinkage, allow the dealer to carry a greater variety and larger stock, and finally increases his sales and profits which is bound to be favorably reflected in your business.



Electric cabinets are being installed on many bases, and I will give you a brief summary of the principal plans now in use:

1. Cabinets are sold by local representatives of cabinet manufacturers direct to the ice cream dealer. Installation, service and repair in this case is usually taken care of by the cabinet manufacturer's local representative, and the ice cream manufacturer has no investment in cabinets.
2. The ice cream manufacturer sells the cabinet to the ice cream dealer. The service and repair is taken care of by the local representative of the manufacturer of the cabinet, or in some cases by the ice cream manufacturer. In the latter case, the ice cream manufacturer will have the responsibility of service and repair.
3. The ice cream manufacturer buys the cabinets outright and loans them to his customers. In some instances cabinets are rented. Service and installation are furnished

* Delco Light Co., Dayton, O., manufacturers of Frigidaire electric cabinets. Submitted to national convention at New Orleans in November.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

A cut-away view of the Frigidaire Cabinet. Copper sleeves support the cans in the cooling tank. Thick corkboard walls provide heat insulation. Supplied with either air-cooled or water-cooled compressors. The compressor unit can be located at either end of the cabinet or in another room if desired.

Quiet Operation — A Distinguishing Feature of FRIGIDAIRE

FRIGIDAIRE electric ice cream cabinets are *quiet.* Quiet when they're new—and quiet after long service.

What does that mean to you?

It means a lot. It means that your customers will not be annoyed by a noisy piece of machinery in your store.

But it means more. Quiet operation is an unfailing mark of perfection in engineering. A quiet machine is an efficient machine. A quiet machine is a long-lived machine. A quiet machine is an economical machine.

Yes, the quiet operation of Frigidaire means more years of better service, lower operating cost and greater profit.

Frigidaire is a product of the General Motors Corporation. It is backed by a nation-wide organization of over 2500 sales and service representatives.

ELECTRIC ICE CREAM CABINETS

Mechanical Refrigeration is Becoming Important Factor in Ice Cream Industry

*By ERNEST DENK**

THE mechanically refrigerated ice cream cabinet, which only about 18 months ago was not very seriously considered by us, is rapidly becoming a factor of vital importance in the ice cream industry. Only about 10 months ago we were convinced of their merits and that they were coming to stay. As it is useless to impede progress, our next move was to devise some practical, as well as economical, method of financing and placing these cabinets.

With some of our customers we have adopted a plan whereby we retain the controlling interest in the cabinet without an expenditure greater than perhaps 100 per cent in wooden cabinets. At present we furnish an eight-hole cabinet for $575.00, 49 per cent of that amount is assumed by the dealer, either by cash or ten deferred monthly payments with 6 per cent interest or at the rate of ten cents per gallon until his equity is paid for.

Our business consists of 90 per cent shipping and for that reason we were never confronted with any icing service. That has proven to be an obstacle in other cases in getting the dealer to bear part of the cost of the cabinet and pay the current bill. We consider it an advantage when the dealer has an equity in the cabinet in that he will take better care of same in order to prolong its usefullness and keep up general appearances.

A large number of our dealers are located in towns that have no ice plants and have to pay as high as 80 cents per 100 pounds for ice. In that case a material saving has been affected over and above the cost for ice during the season, not mentioning the labor saved and elimination of the slush and damp floors behind the soda fountain. Only recently one of our dealers told me that this was the first time in ten years that his floor was dry behind the fountain, and that his ice cream stayed in a much better condition than when he used ice and salt. In fact, the nearer to the bottom the ice cream the harder it is which is opposite the condition found in the soda fountain or wooden cabinet.

ALL of our cabinets are placed with our dealers on 30 days' trial and have not had one to go back to ice and salt. Without exception, they are all well pleased. We have one dealer in a town where the municipal light plant shuts down at four a. m. Sunday and does not start until five p. m., and he reports that the ice cream is in satisfactory condition.

We are using iceless shipping containers and thereby effecting a saving to our customers of from 5 cents to 8 cents a gallon on express charges, which will more than pay the power bill. We, in turn, save about 90 pounds of ice and the salt per five gallon ice cream.

We have never found any of our dealers keeping brick ice cream in good shape until the advent of the mechanical cabinet. Since then brick ice cream has been kept in satisfactory condition and helped to increase the sales.

The dealer can also carry a greater number of flavors and is glad to buy them in five-gallon units where before he demanded three and four-gallon units in five-gallon cans. In view of this fact we are carrying some flavors in five-gallon cans only.

All of our dealers that have the cabinets state that the chances to run entirely out of ice cream are reduced to a minimum, which before was a regular occurrence, especially in towns where there was no train service on Sunday. We also consider the possibilities of covering a greater territory with a speed wagon that under the salt and ice system would require a tree-ton truck.

WE HOPE to see the time when mechanical cabinets will be within reach of the dealer selling less than 1,000 gallons per year. At present we feel that it is not profitable to offer the cabinets to dealers selling less than 1,200 gallons per year on our plan as outlined previously. However, we figure that if we have to place as many as 100 mechanical cabinets in time to come under our plan our actual investment for that number will not exceed $15,000 and have control of the cabinets.

In conclusion I wish to state that our experience with the cabinets has been most gratifying and consider them in the light of a progressive step in the distribution of the ice cream industry.

* With Seymour Ice Cream Co., Seymour, Ind. Submitted to national convention at New Orleans in November.

CHICAGO MANUFACTURERS DEFEAT REFRIGERATION ORDINANCE.

ICE CREAM manufacturers of many cities will be interested in the achievement of the Chicago District Association of Ice Cream Manufacturers in defeating a city ordinance that would have made it compulsory to have a refrigeration engineer in charge of every refrigerating machine in Chicago.

This was announced in the report of Secretary Howard O. Shedd at the annual convention of the Chicago association, held the afternoon of December 16.

It can easily be seen how this ordinance, which was fostered by labor officials, would have affected the situation with regard to mechanically refrigerated ice cream cabinets. Every retail ice cream store in the city would have been compelled to go to the expense of hiring a man to do nothing during 90 per cent of his time.

That this measure may be introduced in other cities is not at all improbable, officials of the association believe.

The convention found delegates still talking about the highly successful Illinois state convention. At that time the Chicago manufacturers were thanked for the splendid entertainment features provided visitors. So successful was this entertainment that, according to Secretary Shedd, several different firms have communicated with the secretary to make arrangements for the same type of entertainment at other affairs.

The year just past was a constructive period for the Chicago manufacturers, who hold monthly meetings to exchange ideas on bettering trade conditions.

WANTED TO KNOW.

At a coroner's inquest in Ireland a chauffeur was giving evidence. "On seeing the deceased," he said, "I threw out the clutch and put on the brakes and swerved to the right."

"Tell me now," said a member of the jury, "when ye threw that thing out of the car, did yez hit anywan wid it?"

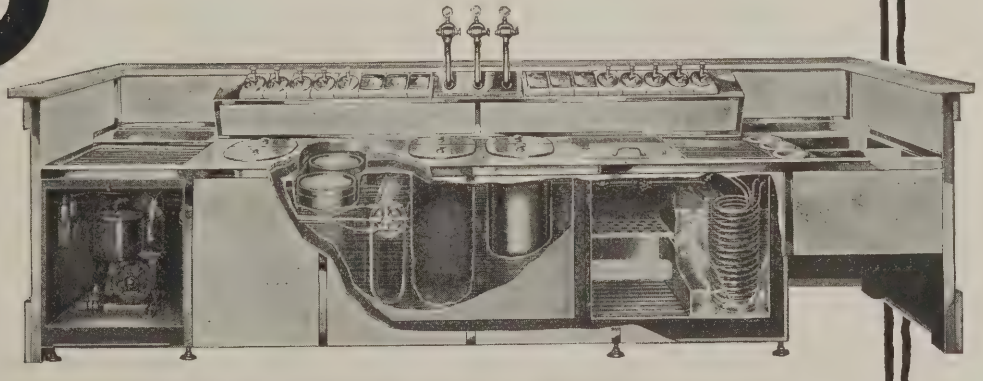
HERE is the fountain that will make money for you, and save it, too. COLD drinks and perfectly conditioned ice cream are assured with the BILT-RITE—Stops shrinkage loss of 1 to 4 quarts per 5 gallon can; eliminates spoilage; saves time of re-packing and cleaning. It pays for itself as you use it.

The well known Nizer Refrigerating Mechanism built in. Mechanically simple; extremely efficient; low operating expense.

Ice Cream kept in perfect condition—never salty, off-flavor, or soft. Storage capacity double that of old style fountain at same size.



Perfectly refrigerated bottle storage compartment maintained at 36 degrees to 40 degrees with atmosphere so dry that labels stay on bottles.

Soda and drinking water served so cold as to please the most critical taste. Patented Walker Thermo-Siphon System of brine circulation automatically ices coils without freezing them.

Every fountain is set up and operated in plant before shipment, and tested for maintainance of three correct fountain temperatures.

National Advertising Program Taking Shape

W. A. Schwindeler Goes Before Industry at State Convention to Outline National Association's Advertising Committee's Program

THE battle is on in connection with the national advertising program for the ice cream industry. When the National Association of Ice Cream Manufacturers adopted the advertising committee's report at New Orleans it took the initial step toward launching a half-million dollar program that promises to place the ice cream industry in high ranking among the great food industries of the country that have expanded along remarkable lines after co-operating to get their stories over to the public.

In the foreground of this movement, which is regarded by leaders in this industry as one of the greatest developments in ice cream history, is an earnest-hearted man who already has crowded much constructive work into his comparatively young life—that is, young in a business way. This man, Will A. Schwindeler, long has been regarded as one of the strong men of the industry before going out of the ice cream business in Illinois a year or so ago and resuming business in St. Louis just after he had been made head of the national association's advertising committee.

Mr. Schwindeler is pleading for his cause before state conventions this winter. When he faced the national convention at New Orleans in November it was to deliver a report that failed to bring out the hard fight he has been waging since the appointment of this committee. Few at the convention realized the work that faced him in the months to come.

WILL the ice cream industry carry out a worth-while program of co-operative advertising? The machinery is organized. The association has given the matter its stamp of approval. But the important thing is, can it be sold to the industry-at-large? In other words, can this industry to measure up to the situation? Are conditions different?

(Continued on page 94)

Resume of National Advertising Matter

ON WEDNESDAY, November 19, in convention at the Roosevelt Hotel, New Orleans, La., the National Association of Ice Cream Manufacturers, in 24th annual convention, passed a resolution approving national advertising.

The passing of this resolution for national advertising is the result of a year's work on the part of the advertising committee of the National Association of Ice Cream Manufacturers, of which W. A. Schwindeler of St. Louis, is chairman.

The committee, consisting of C. J. Alfred of Los Angeles, A. E. Dixon of Fayetteville, N. C., John T. Cunningham of Chicago, D. W. Kennison of Lawrence, Mass., and W. A. Schwindeler, have been working for a year on plans which would aid in the development of the ice cream industry.

The report of the committee was read by Mr. Schwindeler, and recommended for the approval of the National Association of Ice Cream Manufacturers.

The resolution recommended the adoption of a national advertising campaign, the endorsement of the Gardner Advertising Company of Chicago, New York and St. Louis, as the firm to handle the campaign; the appointment of F. W. Gentleman of the Gardner company to direct the campaign activities and the appropriation of a substantial sum of money to carry on the preliminary work of the advertising committee.

The resolution further recommended the joint participation in the advertising campaign by the National Association of Ice Cream Manufacturers, and the Association of Ice Cream Supply Men.

This type of campaign is unique, but thoroughly practical. Any increase in the consumption of ice cream is naturally beneficial to The Association of Supply Men, and as such, they deemed it a thoroughly sound and economic policy to assist the ice cream manufacturers in the campaign and in the development of the ice cream industry.

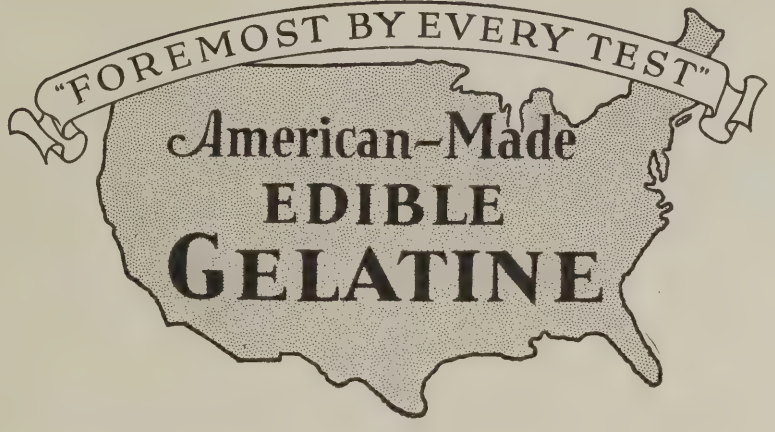
Mr. Schwindeler was followed on the program by F. W. Gentleman of the Gardner Advertising Co., and who for many years was actively connected with the dairy industry. Mr. Gentleman's subject was "Presentation of Plans in Development of Interest for National Advertising."

Mr. Gentleman presented a synopsis of the accomplishments of co-operative advertising and merchandising, and followed with a reading of the general plan proposed for adoption by the National Association of Ice Cream Manufacturers.

Mr. Gentleman was followed on the program by Charles Coolige Parlin, manager, division of commercial research, Curtis Publishing Company, Philadelphia, who took as his subject "Influencing Buying Habits of the Nation."

Mr. Parlin was followed by G. W. Kennison of the Jersey Ice Cream Co. of Lawrence, Mass., who addressed the association on the soundness of a national advertising policy, and the good that it would ultimately bring to each and every ice cream manufacturer throughout the country.

A discussion followed and the final action was taken, with the result that the resolutions and recommendations made by the advertising committee, were passed and approved.



Funds for defraying the expenses of the national advertising campaign will be raised according to a recommendation presented by the advertising committee. It is their plan to ask for one-half cent a gallon on 40 per cent of the national gallonage of the ice cream manufacturers.

The supply men have already taken steps for the raising of their funds, and are operating on the basis of one-half of one per cent of 40 per cent of the gross sales on supplies to the ice cream industry.

National magazines, newspapers, billboards and direct by mail are under discussion for inclusion in the plans finally adopted by the advertising committee.

V. F. Hovey of Schenectady, N. Y., who was re-elected president of the National Association of Ice Cream Manufacturers, re-appointed W. A. Schwindeler as chairman of the advertising committee for the coming year. The balance of the committee is not yet complete.

The plan now being worked out does not confine itself to advertising alone, but has for its purpose the development of the ice cream industry as a whole.

Something to Remember

THE pure food laws of the United States are more exacting than those of any other country in the world.

American-made edible gelatine surpasses in cleanliness, purity and quality, the highest standards of the U. S. Government and the U. S. Pharmacoepia.

Now that the stabilizing and health values of our edible gelatine in ice cream and confectionery have been fully established by scientific authorities, the above facts should be remembered by all gelatine users who are proud of their product.

Profits of Tomorrow in the Ice Cream Industry

Ice Cream Leaders Now Working for the Establishing of Cost Accounting for this Industry Believe that Tomorrow's Profits Will be Largely Realized from the Waste of Today

THE Ice cream industry's bill of waste has been presented. Industrial waste is given much attention in many lines of business today as it never was considered before. Members of the ice cream industry are being reminded that they must face this matter promptly and decisively. Cutting expenses in many enterprises is largely a matter of elimination—elimination of waste efforts, waste in materials, and general loose play about the plant. The first step is a survey to determine what should be eliminated.

The survey for the ice cream industry has been made. Members of the National Association of Ice Cream Manufacturers at the 1924 annual convention at New Orleans, in November, had the matter placed squarely up to them in the report submitted by S. T. Nivling, Rochester, N. Y., chairman of the cost accounting committee of the national association.

Among dairy groups the International Association of Milk Dealers has taken the lead in this matter. Through that association's general headquarters the preliminary steps have been worked out, and the cost accounting system now is operative.

This association is one of approximately 150 national associations of American industries that today are making uniform cost accounting among the major activities of their work.

THE ice cream industry will profit largely from the preliminary work that has been done by the International Association of Milk Dealers. The committee has decided upon plans, tentatively, whereby the National Association of Ice Cream Manufacturers and the International Association of Milk Dealers will act in harmony in the developing of their system to include ice cream accounts and preparing the uniform system of cost accounting for the ice cream industry. The tentative plan has received the approval of the executive committee of the ice cream association. The cost accounting committee has canvassed the industry in an effort to find the sentiment toward cost accounting. The response gave evidence of wide interest in this important work, according to Chairman Nivling, who in his report to the convention spoke as follows regarding the general plan:

"The cost accounting committee, before entering into this work, has given careful consideration to some of the natural questions which will arise, for instance: What is the final goal? What are the principal intermediate steps to reach this goal? How long a time will the work require? What form should the results of the work of the committee take? How shall we keep the membership of the association informed as the work progresses? What secretarial and clerical work will the committee need in addition to assistance given by the association office? To what extent will outside retained accountants be desirable? At what expense can this service be secured? What will be the entire cost of the committee's activity?

"The basic plan is really a budget. This budget has been prepared and has been submitted to your executive committee and approved.

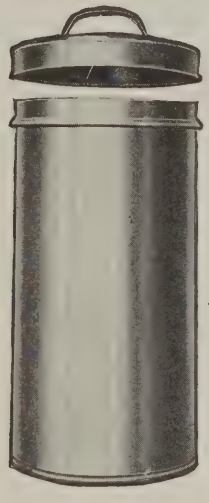
"A definite working program has been prepared. It is the intention to take each problem as it arises, and thoroughly thrash it out in order that the work, when completed, shall be 'the one best plan' as developed by the most able men in our association."

WISHING to make this work represent the very best thought of the association, "the cost accounting committee has appointed an advisory committee consisting of fifty-six members. This committee consists of executives, plant executives, plant engineers, and financial and cost accountants." Referring to them as the "key" men of the industry, Mr. Nivling says the committee has tried to secure from a number of plants of the industry, "the best men in their respective lines." He says the advisory committee will be subdivided into working committees as follows:

"1. Committee on Financial Statements.
"2. Committee on Uniform Classification of Accounts.
"3. Committee on the Basis of Pro-ration.
"4. Committee on Uniform Rates of Depreciation.
"5. Committee on the Preparation of the Manual."

The advisory committee will receive for approval

(Continued on page 98)



THE PROPOSED PLAN OF CO-OPERATION BETWEEN THE NATIONAL ASSOCIATION OF ICE CREAM MANUFACTURERS AND THE INTERNATIONAL ASSOCIATION OF MILK DEALERS.

In extending the uniform system of accounting of the milk association to include ice cream accounts, and in building a uniform system of accounting for the ice cream association.

1. **The milk association to extend its uniform system of accounting to include ice cream accounts through the board of directors of the controllers' council.**
2. **The ice cream association to build a uniform system of accounting for the ice cream industry through its cost accounting committee and other committees.**
3. **The two committees to sit in joint sessions in accomplishing both pieces of work.**
4. **The two systems to follow the same classification of accounts and correlate in all important essentials as far as possible.**
5. **Both pieces of work to be under the direct supervision of Mr. Bolitho.**
6. **The milk association to employ a high-class accountant with milk and ice cream experience to assist Mr. Bolitho in his work.**
7. **The ice cream association to pay the milk association for the salary and expense of the new man to be employed.**
8. **The ice cream association to pay for such other expenses as the travelling expenses of Mr. Bolitho, the salaries and expenses of junior accountants and stenographers, for working materials, office expenses, etc.**
9. **The cost accounting committee of the ice cream association to present the proposed plan of co-operation to its executive committee at the earliest possible date, and advise the milk association as to the result of their conference.**

This plan has the approval of the entire board of the International Association of Milk Dealers, as well as the National Association of Ice Cream Manufacturers.

K-W Type A ICE CREAM CANS

This new K-W Type A Can is as solderless as it is safe to make an Ice Cream Can; that is, it is soldered with a minimum amount of solder in just one essential place—the bottom.

This K-W Type A Can is tinned on all surfaces, in and outside—between hoop and cylinder—between bottom and cylinder.

This prevents rusting from the inside out.

Have the Cans you use these features?

We also make entirely solderless Cans if you wish them.

Standardization and the Ice Cream Angle

Other Industries Have Standardized As Guarantee of Quality Merchandise

THE matter of standards is in the air. Various movements now underway in the ice cream industry are shaping up, either in whole or in part, in the direction of standardization, particularly toward stabilizing quality. The quality program of the Southern Association of Ice Cream Manufacturers is an interesting study in this connection. After having this program enforced for a year, the association at its annual convention in New Orleans in November, formally endorsed the proposition and made the way open for it to go forward unhampered.

In connection with the ice cream men's angle of this matter, it is interesting to take note of what has been done in that of quality standards by other industries. More so than at any other time in the past, the buyer today finds himself in a position where it is absolutely impossible to inspect all his purchases. For this reason, business today is largely a matter of trust and distrust. The public is given largely to snap judgment. It may be due to the fact that the public has to buy so much merchandise without being much familiar with the back ground of that merchandise.

On the other hand, as most every business man knows, the public is overwilling to be distrustful of merchandise upon the slightest provocation, or even without provocation. It is for this reason that business men understand the wisdom of doing everything possible to gain the public's confidence, to assure the public that every safeguard possible is taken for its welfare in the production of merchandise.

THE guarantee of quality in merchandise is assurance of good will, probably the most valuable business asset any manufacturer can have. This same applies to any group of manufacturers. The quality standard program adopted by the southern association, provides for advertising the association's symbol of quality, design of which was printed in The Ice Cream Review some months ago. At the New Orleans convention, Secretary J. W. Clopton announced that the association has purchased 2,000 transfer signs and had distributed them to a number of the manufacturers during the past year. This was done to carry out the plans of the advertising committee of the association.

By purchasing these signs in quantity, there was a saving of from seven to eight cents each on them, which further shows the economy made possible by advertising through a quality guarantee program of this nature.

IN DISCUSSING this nation's opportunities for world trade, Secretary of Commerce, Herbert M. Hoover, has mentioned the establishing of standards of quality to insure foreign buyers getting just what is promised them in transaction, as an important vital factor. This movement toward national standardization serves to emphasize the importance of the same plan as applied within industries at home. The international slogan of quality proposed for this country is "Made in America—Quality Guaranteed."

It is interesting to study what has been done by other associations that have taken up this matter of standards:

American Association of Wool Blanket Manufacturers—Three standard grades of wool blankets established. Association has adopted quality seal and label, which is issued to members meeting quality standards.

American Bakers' Association—Association co-operating with department of agriculture promulgated definitions and standards for bread. Association registers baking materials and issues certification of quality.

American Gas Association—Association standardized nomenclature, material, specifications, abbreviations and performance specifications.

American Malleable Castings' Association — One of the most outstanding cases of quality standardization. Tensile strength of castings increased from 38,000 pounds to 50,000 pounds. Elongation raised from 5 to 10 per cent. Association maintains inspection and certification service.

American Petroleum Institute—Association has standards of testing methods, standardization of gravity and thermal expansion tables, standards of sampling and gauging methods, rules and regulations regarding shipping and storage containers.

Associated Cooperage Industries of America—Association has grade rules and inspection covering tight barrel and slack cooperage. Have other standards and rules for inspection and other trade practices as to shipments, etc.

Associated Metal Lath Manufacturers—Association has standards for weight, tolerance, quality and gauge.

Association of Electragists—Association has committee working on quality standardization and specifications for material and workmanship.

Concrete Products Association—Quality standards established and adopted. Association maintains test, inspection and certification service.

Cordage Institute—Association has standards for footage, nomenclature and tensile strength for ply and yarn goods.

Folding Box Manufacturers' Association—Association has quality standards for its basic material, box board.

Michigan Makes Ready for Great Convention

East Lansing to be Scene of 1925 Gathering, Which Will be Marked by Several Shows of Dairy Boosters

ICE cream manufacturers of Michigan have their eyes on East Lansing. The Michigan Agricultural College of that city will be the scene of the 1925 convention of the Michigan Association of Ice Cream Manufacturers, which will follow its usual custom in meeting with other branches of the Michigan Allied Dairy Association.

The ice cream sessions will be February 4 and 5. Secretary W. H. Bechtel of Caro, expects a large attendance.

Leroy S. Wilson, Port Huron, president of the ice cream men's association, returned to Michigan from the New Orleans convention full of pep and new hopes for a snappy Michigan convention this year. Arthur Francke of Saginaw, is vice-president of the association.

The Michigan Dairy Boosters, will, as usual, stage an exhibit in connection with the dairy classic.

* * *

Michigan's Capital City.

LANSING, the Capital City of the Wolverine State, is located only a fraction of a day's journey from three of the famous Great Lakes—Lake Michigan, Lake Huron and Lake Erie—and is the hub of an excellent road system leading to the many resorts which abound throughout Michigan and to the rich agricultural districts in which this state is a leader.

Box A JENKINTOWN, PENN.

An inland city itself, Lansing is happily free from the winter dullness of the resort city, having within its boundaries the industries and amusements that make for continuous activity, and in the summer is sufficiently near to any one of the Great Lakes and to the hundreds of smaller lakes scattered throughout central Michigan, enabling her people to take their choice for vacation and week end trips.

For the tourist, Lansing as the capital of Michigan and East Lansing with the Michigan Agricultural college have many distinctive attractions. Both are equally interesting as home cities.

The state capitol building stands in the middle of a beautiful four-block square located in the center of the city. The majestic structure was completed in 1878 at a cost of $1,510,130.59 and is now valued at $3,000,000. It houses the offices of the governor and other chief executives and in the rotunda of the building is the exceptionally interesting War Relic Museum.

The new state office and library building, Walnut and Washtenaw streets, valued at approximately $3,000,000, was completed and occupied in 1922. The library with entrance on Washtenaw street, in addition to the general building entrance, is considered one of the finest in the United States, due largely to the efforts and ability of the late Mrs. Mary C. Spencer, known nationally as the dean of librarians. The Michigan Pioneer and Historical Museum with Mrs. Marie B. Ferrey, curator, is one of the greatest attractions to tourists.

The Michigan Industrial School for Boys, located on North Pennsylvania avenue, taking care of 600 boys, is visited by thousands of tourists. The marvelous work the boys are doing, their excellent training in vocational lines and the industrial farm are particularly interesting.

Of unusual interest is the Michigan School for the Blind, Pine street and Franklin avenue, where hundreds of young people handicapped for life have been given vocational training which has enabled them to go into the commercial world on a fairly equal basis with others.

Lansing is noted for its wonderful shade trees, parks and drives, its general atmosphere of cleanliness and wholesomeness.

A city of prosperity, with a population of nearly 90,000, Lansing is proud of its lack of a slum district. True it has its poorer sections, but they are small and few. Every part of the city has its beautiful homes and parks.

Lansing has adopted the plan of locating a park in every neighborhood available to every child. Municipal playgrounds, swimming and wading pools and supervised recreation are included in that plan which is increasing in its scope each year.

To the outdoor enthusiast who enjoys golf and tennis the city offers many facilities. There is one of the finest country clubs in the mid-West, supporting an excellent golf course; two new courses, one at East Lansing, available to East Lansing and college folk and one under development to the north of the city for Lansing people generally. Every park has a tennis court.

Baird Bodies Give

THE HOSLER ICE CREAM COMPANY of Albany, N. Y., bought a Baird Refrigerator Body in 1922. Each season since they have bought more. In July, 1924, Mr. F. M. Hosler wrote:—

> "The refrigerator body which we bought of you this year is doing fine work. It will not only keep cream hard, but will harden soft cream. I wish I had Baird Refrigerator Bodies on all my trucks."

From all parts of the country we have received many similar testimonials. To operate Baird Bodies is to know that no more economical nor more completely satisfactory refrigerator body can be had at any price. You can depend on Baird Refrigerator Bodies for trouble-free deliveries.

There could be no stronger proof of satisfaction than that ice cream manufacturers everywhere find it profitable to replace other bodies with Baird Refrigerator Bodies and to continue to use Baird Bodies.

Puritan Ice Cream Company, Boston, Mass.

Lasting Satisfaction

BY BAIRD scientific construction maximum strength is secured without clumsy bulk or weight. This gives increased capacities; your truck carries ICE CREAM rather than superfluous body weight.

For example, on a 1½ ton truck you can use a Baird Refrigerator Body holding a full 150 gallons of ice cream and 2250 pounds of crushed ice, together with ample salt. In the empty can compartment, insulated and refrigerated as described in our catalogue, 90 gallons more may be carried.

150 gallons carried every day and 240 gallons on peak days — on a 1½ ton truck — without overload. Baird Refrigerator Bodies do it.

NEBRASKA ICE CREAM MAKERS MEET.

The third annual ice cream makers' round-up will be held at the dairy building, college of agriculture, Lincoln, Neb., January 13 to 16, 1925, inclusive.

In conjunction with the round-up the Nebraska Ice Cream Manufacturers' Credit Association will hold its annual meeting on Wednesday and Thursday, January 14 and 15. By holding these meetings at the same time it is hoped that a large attendance will be had and that many of the practical problems of the ice cream maker can be taken up.

PROGRAM OF THE ICE CREAM MAKERS' ROUND-UP.

Department of Dairy Husbandry,
University of Nebraska, January 13-16, Inclusive.

Tuesday, Jan. 13, 9:00 A. M.—Registration.

9:30 A. M. Welcome — Professor H. P. Davis, chairman, Dairy Husbandry Department, College of Agriculture.

9:45 A. M. What is in Ice Cream? Practical discussion on ice cream ingredients and formulas—Dr. P. A. Downs, Associate Professor, Dairy Husbandy Department, College of Agriculture.

10:15 A. M. Uniformity in the Mix: The why and how of standardization. Practical illustrations and practice—B. I. Masurovsky, Instructor, Dairy Husbandry Department, College of Agriculture.

1:30 P. M. Making the Ice Cream Mix. Demonstration and practice in making up mixes, showing effect of homogenization, aging, etc. — E. L. Reichart, Instructor, Dairy Husbandry Department, College of Agriculture.

3:30 P. M. How Does the Flow of Brine Affect the Freezing Process? Demonstration. — P. A. Downs, L. K. Crowe, Graduate Assistant, Dairy Husbandry Department, College of Agriculture.

Wednesday, January 14.

9-12 A. M. Meeting of the Nebraska Cream Makers' Ass'n.

1:30 P. M. What is Viscosity? Demonstrations of practical methods for determining viscosity, followed by discussion.—Prof. N. E. Olson, Associate Professor, Dairy Husbandry Department, Kansas State Agricultural College.

2:30 P. M. Uniformity in the Mix. The why and how of standardization. Practical illustrations and practice.—B. I. Masurovsky.

3:30 P. M. How does Freezing Affect the Overrun? Demonstration.—E. L. Reichart.

Thursday, January 15.

9-12 A. M. Meeting of the Nebraska Ice Cream Makers' Association.

1:30 P. M. Body, Texture and Flavor of Ice Cream. Followed by discussion and examination of ice cream samples.—N. E. Olson.

3:30 P. M. Efficient Operation of the Ice Cream Machine. Followed by discussion and inspection of refrigerating plant of creamery if time permits. —H. C. Venneman, Technical Expert of Baker Ice Machine Co., Omaha, Neb.

Friday, January 16.

9:00 A. M. Do You Take Care of Your Boiler?—C. C. Kershaw, representative of the James Leffel Co., Springfield, Ohio.

10:00 A. M. How to Test Your Ice Cream. Demonstration and practice in analyzing ice cream and ice cream ingredients.—P. A. Downs.

1:30 P. M. How to Increase Ice Cream Consumption.—E. O. Anderson, Instructor, Dairy Husbandry Department, College of Agriculture.

2:30 P. M. Examination of Experimental Mixes. Instructional Staff. Rount Table discussion.

"Everybody should learn to drive a car." This is especially true of those who now sit behind the steering wheels.—Martins Ferry Times.

Sanitary Ice Cream Truck

The Sanitary Ice Cream Truck facilitates handling cream from freezers to hardening room.

Will handle any size can in common usage. Avoids accidents in handling, as the operator does not touch the cans until he reaches the hardening rooms.

One man with truck will handle the cream from the freezers as fast as it will flow, no helper being necessary.

Substantially built to stand usage, nothing to get out of order. Can container revolves on a thrust roller bearing and is easily turned.

Style	Diameter	Capacity	Freezer Opening	F.O.B. Price
A	28½ in.	6 cans	30 in.	$50.00
B	23 in.	4 cans	24 in.	45.00
C	34 in.	8 cans	36 in.	62.50
D	40 in.	10 cans	42 in.	75.00

Two or three can containers, placed so that two or three freezers can discharge at one time, can be mounted on one truck, increasing capacity, making less trips to the hardening room necessary. Prices for these special trucks made on application, specifications required.

One regular size truck will be shipped, acceptance on approval.

YOUR CO-OPERATION WITH OUR ADVERTISERS BRINGS DESIRED RESULTS.

Loewenstein Resigns as National Secretary

Fred Rasmussen of Harrisburg, Pa., Widely Known in Dairy Manufacturing Circles, to Succeed Popular Secretary

Good Luck, Nate!

N. Loewenstein.

PRESIDENT LAUDS RETIRING SECRETARY.

Mr. Loewenstein, who has served as secretary of this association for the past six and one-half years, has resigned, asking that his resignation be made effective February 28, 1925.

Mr. Loewenstein has served the association well, and the industry should feel indebted to him for all that he has done. The present standing and strength of the association is due largely to his efforts. He states that he is planning to give all of his time to his other interests, but will continue to be helpful to this association in every way possible.

I have appointed as secretary, effective March 1, 1925, Fred Rasmussen of Harrisburg, Pa., whose training and experience are set forth in the statement which I enclose. (This statement is included in the article below.)

Yours very truly,
NATIONAL ASSOCIATION OF ICE CREAM MFRS.,
V. F. Hovey, President.

Welcome, Fred!

Fred Rasmussen.

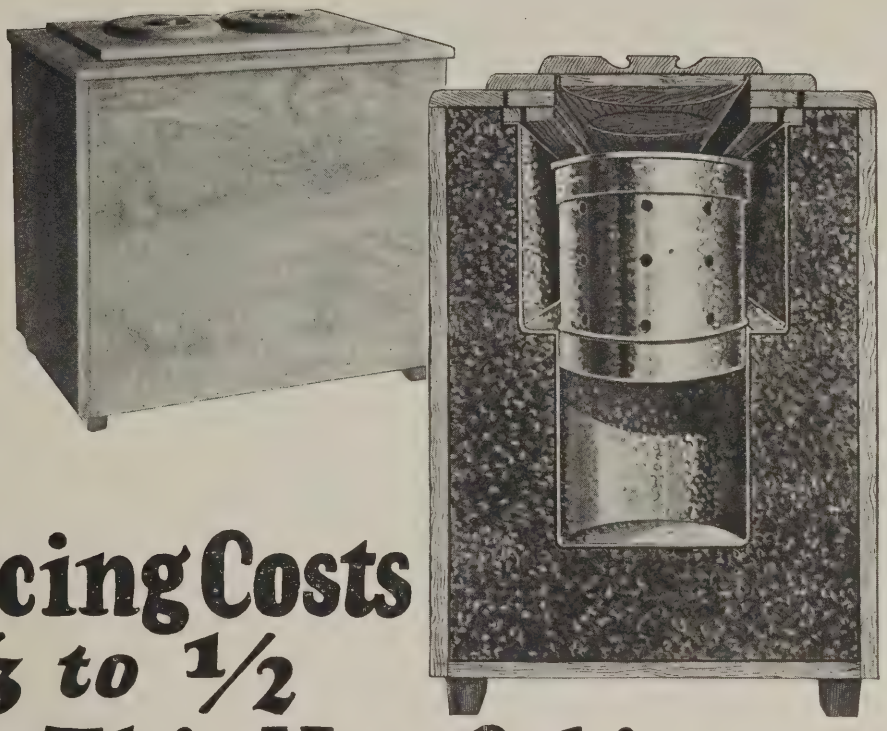
N. LOEWENSTEIN, for the past seven years secretary of the National Association of Ice Cream Manufacturers, has tendered his resignation, effective March 1. This announcement in December was followed by announcement by President Hovey that Frederick Rasmussen, president of the Pennsylvania-Maryland Joint Stock Land Bank of Harrisburg, Pa., has been appointed to succeed Mr. Loewenstein.

Location of the national association's offices had not been definitely decided upon when this issue of The Ice Cream Review went to press. It is thought likely, however, that the secretary's headquarters, effective March 1, will be Harrisburg, Pa., after which time, according to officials, "more central quarters may be suggested."

N. Loewenstein gives up his duties with the best wishes of hosts of friends. His term of office has been marked by constructive service for the national association and the industry as a whole. It was in 1917 that he succeeded L. O. Thayer as secretary. At that time the association's membership consisted of barely more than 100 members in good standing. The membership has grown to more than 500 in good standing. The association's financial assets have doubled many times.

Mr. Loewenstein has been actively identified with the ice cream industry since 1906. In the fore part of that year he worked in co-operation with officers of the then Three-I Association of Ice Cream Manufacturers. He appeared with officials of the national organization before a commission consisting of the department of agriculture, the department of commerce and the department of labor, at which time, rules and regulations were being considered for the ice cream industry. He later appeared before the committee on definitions and standards, which committee was considering the so-called Wiley standard.

After the Three-I association lost its identity by the formation of the national association, Mr. Loewenstein co-operated in organizing—or rather re-organizing—the Illinois state association, which had been the nucleus of the Three-I body. He was named the first secretary, and with the exception of the years 1909-10-11, has been secretary ever since. And he will continue to hold this post, by the way, after relinquishing his office in the national body.



Mr. Loewenstein was in charge of sugar distribution for Illinois ice cream manufacturers during the war. Conventions of the national and Illinois state associations in the past several years have been marked by excellent programs prepared by the retiring secretary.

The new secretary is not unknown in ice cream and dairying circles. He has long been identified with various important activities connected with dairying.

BORN in 1876, on a dairy farm near Hals, Denmark, Mr. Rasmussen came to the United States in 1899. He first worked for the Chicago Northwestern Railroad as a bridge carpenter. After a year of railroad experiences, he worked for a year on a dairy farm in Iowa.

In the winter of 1902, Mr. Rasmussen entered the four-year course of Iowa State College, specializing in dairying. After graduation, he accepted a position at Purdue University, Ind., as buttermaker in charge of the Purdue University Creamery, giving instructions in buttermaking. In the fall of 1906 Mr. Rasmussen joined the teaching staff of the Iowa State College and was for one year assistant professor of dairying of that institution. In the fall of 1907, he accepted the position of professor of dairying at the New Hampshire State College. He worked for nine years at the New Hampshire State College, during which time, in addition to the teaching of dairy subjects, he made a study of the cost of producing milk which attracted wide attention in New England. In the fall of 1916, he accepted the

(Continued on page 109)

Cut Icing Costs 1/3 to 1/2 With This New Cabinet

BIG savings on ice and salt, on labor, on haulage costs, on truck expense and maintenance—will follow the adoption of the new Jamison Ice Cream Cabinet. THAT IS NO IDLE BOAST. Several hundred of these cabinets have already been in actual use for over two years. And in every instance, icing costs took a drop of ONE-THIRD OR MORE.

These enormous savings are the direct result of an entirely new principle of cabinet construction. Pure cork board insulation, SIX INCHES THICK, replaces one-half to one-third the ice and salt required by all other cabinets. The ice and salt chamber extends only one-half the depth of the ice cream can compartment—refrigeration for the lower portion of the ice cream can, being secured entirely from the brine which circulates through the holes in the upper half of the cylinder.

Moreover, where one icing lasts from twenty-four to thirty hours in standard cabinets, it lasts FROM THIRTY-SIX TO FORTY-EIGHT HOURS IN THE NEW JAMISON CABINET.

The Coupon Will Bring Complete Information

This remarkable cabinet is now ready for a test in your own plant. We invite a comparison of its COST AND EFFICIENCY of operation with any other cabinet on the market. Let it prove our claims by its performance on one of your routes.

New York Manufacturers Meet This Month

Iceless Cabinets to Feature Annual Convention at Buffalo, January 7 and 8

NEW YORK ice cream manufacturers will gather at Buffalo on January 7 and 8 for their annual convention. This was announced recently by A. M. LeMessurier, secretary of the Association of Ice Cream Manufacturers of New York State, in a very facetious bulletin, in which Mr. LeMessurier styled himself the "Transmitter of Orders." Hotel Statler will be convention headquarters.

The subject of refrigerated cabinets and soda fountains will be the principal topic.

The official convention announcement issued last month follows:

HEAR YE! HEAR YE! HEAR YE!

You are hereby commanded to set apart the days of Wednesday, January 7, and Thursday, January 8, in the year of our Lord nineteen hundred twenty-five, and to appear at the Statler Hotel in Buffalo, N. Y., at 10 a. m., January 7, prepared to stay until the evening of January 8, to hear and speak to your fellow ice cream manufacturers of New York State on the important subjects which are disturbing your peace of mind and causing you to pay out sad dollars which are not bringing in good dollars plus their rightful gain.

And you are further commanded to prepare yourself on the subject of refrigerated cabinets and soda fountains, national advertising, electric trucks and dry pack containers so that you may speak and listen in the same language of your fellow beings.

And you are further commanded to prepare yourself so that you can resist the charms of Morpheus from 10 a. m. until at least midnight as our hosts—Lou, Ed, Alex, Paul and Bill, having decreed that there shall be no rest for you during those hours and that during at least five hours of the time ye shall labor at hard labor and the remaining time shall be spent in eating, drinking (soft stuff) and making merry.

Failing in attendance you will be handicapped by lack of knowledge and your power will be diminished.

Issued this 8th day of December by order of the High Moguls duly elected by your august body under the authority in them vested.

A. M. LeMessurier,
Transmitter of Orders

P. J. Smith,
Chief Orderer.

C. E. Kilburn is vice-president and Wilson C. Van Cleaf is treasurer.

Striking Program for Mississippi Convention

January 13 and 14 are Correct Dates of Annual Gathering at Vicksburg, to be Featured by Prominent Speakers

PREPARATIONS are going forward for one of the best conventions ever held by the Mississippi Ice Cream Manufacturers' Association. National advertising will be one of the program features. This subject will be handled by J. F. Finneran, representing the National Association of Ice Cream Manufacturers. Other high lights will be addresses by Ben C. Brown, silver-tongued orator of the Southern ice cream industry, and J. W. Clopton, secretary of the Southern association. Mr. Brown will discuss business ethics, a subject with which he is quite familiar. Mr. Clopton will talk on "Progressive Aims and Achievements."

Other program features consist of speeches by S. N. Sutton, president of the Southern association, and past president of the Mississippi body; W. W. Campbell, vice-president of the national association, and P. P. Garner, commissioner of the Mississippi State Department of Agriculture. Mr. Campbell will talk about "The Spirit of Our Industry," a subject which he has ably handled from many different approaches in the past.

WITH this impressive array of talent the success of the Mississippi program is assured. Officials are similarly optimistic over the outlook for a large attendance. The association was largely represented at the convention in New Orleans in November, and wherever Mississippians gathered in groups at that time they were discussing plans for their state convention.

There is something about the spirit of the Mississippi manufacturers that makes for congenial atmosphere, and for this reason alone one always is sure of an enjoyable convention in the Magnolia State.

W. D. Seale of Jackson, president of the association, is one of the industry's leading advocates of co-operative advertising. The project probably came in for more discussion at Mississippi conventions in the years before this plan was promoted than in any other circle of ice cream manufacturers.

THE association will meet this year at Vicksburg, the home city of its past-president, S. N. Sutton, recently elected president of the Southern association. Vicksburg has a population of about 30,000 and is one of the progressive cities of the state. The program shows that a banquet will be held on the first evening of the convention at the National Park Hotel January 13, which will be one of the attractions of the convention. Ladies will be entertained the same day at luncheon, to be followed by an auto trip in the afternoon through the National Military Park. On the afternoon of January 14 the ladies will have a theater party.

N. D. Brookshire of Meridian, secretary of the association, issued on December 13 a bulletin in which he stated that if delegates will arrive early at Vicksburg and be on hand when the convention opens January 13, they will help get started "the best convention, in the best

(Continued on page 149)

MISSISSIPPI CONVENTION DATES.

Under the Bulletin of Events, on page 6 of this issue, the Mississippi convention is scheduled for January 15. This is an error, being confused in telegraphic dispatches to The Ice Cream Review with the date of the Louisiana association. The correct Mississippi convention dates are JANUARY 13 AND 14. Headquarters, National Park Hotel, Vicksburg.

Carolina Manufacturers Face Lively Program

Officials Expect Large Attendance at Charlotte, January 13-14, 1925

ALL is in readiness for the annual convention of the North Carolina Ice Cream Manufacturers' Association, according to recent announcement. Charlotte will be the scene of the convention this year. Secretary A. E. Dixon announces that all signs point to a large attendance. Hotel Charlotte will be convention headquarters.

Charlotte is a centrally located city and is expected to draw manufacturers from all parts of the state.

North Carolina association in the last few years has taken its place among the leading ice cream organizations in the country. Its conventions always are of a constructive and interesting nature. Some of the best thoughts of every ice cream convention season come from the Tarheel association. This year's program will be well in keeping with the high standards of the past, it is indicated by an advance copy. The program has such interesting topics as "Iceless Cabinets," "National Advertising," "Group Insurance," and "Enforcement of State Food Laws Applying to Ice Cream." Among the well known men to address the convention are N. M. Thomas, F. W. Gentleman, Roberts Everett, T. C. Reed, W. M. Allen and G. L. Glendenin.

Mr. Everett is secretary-manager of The Association of Ice Cream Supplymen, and Mr. Thomas is president of the association's Salesmen's Club.

President W. S. Obershain, Charlotte, has promised the ice cream manufacturers a very delightful stay in his city.

TENTATIVE PROGRAM NORTH CAROLINA ICE CREAM MANUFACTURERS' ASSOCIATION

Address of Welcome.
Response—T. C. Reed.
Report of Secretary-Treasurer—A. E. Dixon.
President's Address—W. S. Obenshain.
"Survey and Resultant Conclusion of Six Continental Sales Tours"—W. P. Abel.
"Enforcement of State Food Law as it Applies to Ice Cream" W. M. Allen.
"New Things in the Ice Cream Business—N. M. Thomas.
"Iceless Cabinets"—T. C. Reed.
"National Advertising"—F. W. Gentleman.
"Engineering an Industry's Advance"—Roberts Everett.
"Group Insurance"—G. L. Glendenin.
"Do They Really Work for You?"—W. B. Savell.
"Do They Really Work for You?"—H. P. Olsen.
"Do They Really Work for You?"—R. C. Hibben.

CHARLOTTE, the city in which Carolina ice cream manufacturers will gather this year, is the home of W. S. Obenshain, president of the association. It is further distinguished by being the center of a great part of the industrial and agricultural activities that, in recent years, have made North Carolina not only one of the leading states of the South but also one of the leaders of the nation.

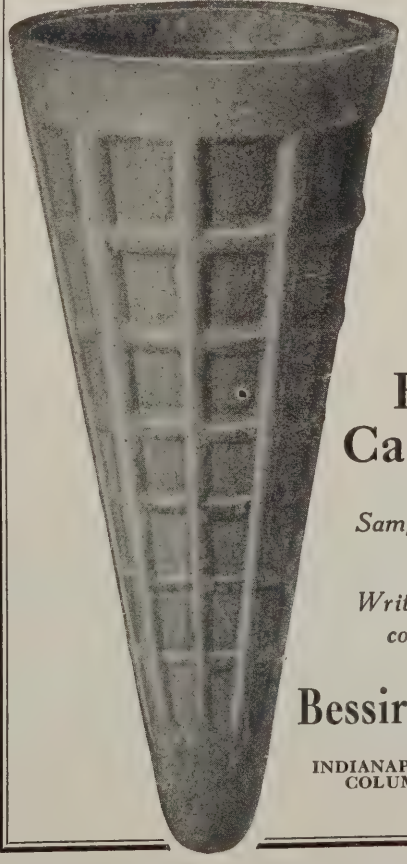
Charlotte has a population of approximately 50,000 people, an increase of about 20,000 in the last six years. It is one of the oldest cities of the South, being an historical center, but not until recent years has it succeeded in attracting the industries that promise to make it grow into one of the large cities of the South, although much furniture and cotton manufacturing has been going on for many years, North Carolina being one of the ranking states in output of furniture, particularly in dining room equipment, tables, tablecloths, etc.

A story illustrating North Carolina's industrial progress was told at the National Dairy Exposition in Milwaukee by a droll Tarheel delegate, as follows:

"If all the dining tables made in North Carolina were put end to end there would be enough room to stretch around the earth. If all the tablecloths made in North Carolina were pieced together the one piece would stretch to Europe and back. If all the cigarettes made in North Carolina were joined together this long cigarette would enable an imaginary man to stand with one foot on the North Pole, the other on the South Pole and light his cigarette out of the starry dipper."

Dining tables particularly appeal to the manufacturers and supplymen planning to attend the convention. And President Obenshain and his Charlotte friends promise that there will be plenty of entertainment for all.

The Yellow Dogs, as the Carolina association's affiliated organization is known, have not made known their plans in connection with the convention, but they are sure to help make things lively.



First Little Girl: "Do you believe there's a devil?"
Second Ditto: "No! It's like Santa Claus. It's your father."

Popular Topics on Tap for Ohio Convention

Mechanical Refrigeration and National Advertising Head List of Subjects to Come up at 1925 Convention at Cleveland This Month

PREPARATIONS were rapidly drawing to a close for one of Ohio's greatest ice cream conventions when this issue of The Ice Cream Review was ready to go to press. The Ohio Association of Ice Cream Manufacturers, according to officials, will have a record attendance when it convenes at Cleveland, January 27 and 28.

Secretary W. A. Wentworth of Columbus has outlined as follows the principal points of discussion to come up at the convention, this in the absence of a complete program at press time:

"The principal points of discussion will deal with mechanically refrigerated cabinets, mechanically refrigerated soda fountains, national advertising and uniform cost accounting. These subjects will be handled by men who have had experience in their development in order that this industry in Ohio may be in a position to profit from such.

"On the evening of the 27th some form of entertainment will be provided, arranged by the supply men, and on the evening of the 28th a joint banquet will be held in connection with the Ohio Association of Creamery Owners and Managers and the Ohio Milk Distributors' Association."

The Winton Hotel will be convention headquarters for the Ohio convention. In addition to the Ohio Association of Ice Cream Manufacturers, there will be conferences of the Ohio Milk Distributors' Association and the Ohio Association of Creamery Owners and Managers. The ice cream men will assemble January 27 and 28. The milk distributors will be in convention January 28 and 29, while the creamerymen will meet January 29 and 30.

MORE than one-half the population of the United States lives within 500 miles of Cleveland and much more than half of all the manufacturing of the United States is done within less than 500 miles of Cleveland. Cleveland, therefore, is situated not only at a point where raw materials in many important lines can be collected easily and at low cost, but it is also within easy reach of wonderful markets which have a remarkably steady buying power.

Cleveland now leads all other communities in the manufacture of nuts, bolts, wire goods, gray iron castings, paints, varnishes, electric batteries, twist drills, steel forgings, plumbers' fixtures, vacuum sweepers, hardware, job printers' presses, astronomical appliances, and stands second in the nation in the manufacture of women's ready-to-wear clothing.

Expansion of automobile manufacturing in Cleveland has been one of the city's most recent developments. Pleasure cars manufactured include the Chandler, Cleveland, Grant, Kurtz Automatic, Jordan, Marsh, Merritt, Peerless, Stearns, Sterling-Knight, Templar and Winton. The Grant, Peerless, White and Young trucks are made in Cleveland. The development of this industry has had no mushroom features but it is the result of the recognition by motor car experts of Cleveland's logical advantages.

Out of every dollar invested in automobiles in the United States 30 cents goes to Cleveland.

Cleveland is the home of the largest paint and varnish factories in the country, and a tremendous business results.

(Continued on page 151)

Coloradoans Meet This Month

Colorado ice cream manufacturers will gather at Pueblo on January 27 to 28 for the annual convention of the Colorado Association of Ice Cream Manufacturers, Congress Hotel will be convention headquarters. Officials were not ready to announce their program as this issue of The Ice Cream Review was going to press, but assurance is given by Secretary E. L. Carlson that the 1925 convention will be of great interest to every manufacturer in the state, as well as to visitors.

This comparatively new association has made considerable progress, the membership having virtually doubled in the last year.

Program appears on page 158.

Plant Men Wanted at New England Convention

Preparations Made for Large Attendance at Fifteenth Annual Convention at Hartford this Month

ESPECIAL stress is being made by the officials of the New England Association of Ice Cream Manufacturers on the importance of ice cream manufacturers getting their salesmen and plant men to attend convention at Hartford, Conn., January 22 and 23. It is promised that the program will be of particular value to the salesmen and plant men.

This will be the association's fifteenth annual meeting. Hotel Bond will be convention headquarters. The

Convention Headquarters, Hotel Bond.

secretary, W. P. B. Lockwood of Boston, has asked members to make hotel reservations early, and not to forget to bring along their wives.

Announcement issued by the association in December stated that rapid progress is being made by the entertainment, program and banquet committees.

Preparations for the New England convention were discussed at the regular monthly meeting of the association at the American House, Boston, on Dec. 10. It was attended by 92 persons, with President Platt presiding. The president announced that there will be a minimum registration fee of $5 for the annual meeting, and that this would include the whole program.

The New England convention usually is one of the best of the year. It is composed of some of the leading manufacturers of the country, including manufacturers who, in many ways, have served toward the industry's general advancement.

ARKANSAS MANUFACTURERS EXPECT LIVELY CONVENTION AT LITTLE ROCK THIS MONTH.

"Big ideas worth dollars and cents" are promised for the 1925 annual convention of the Arkansas Ice Cream Manufacturers' Association. The convention will be held at Little Rock, January 6 and 7, with Hotel Marion as convention headquarters.

Secretary Charles Hooberry of Pine Bluff, promises "a real program." In addition, he says, there will be ample time for mingling. In part the secretary's bulletin follows:

"This is the age of progress, the age of advancement in all lines of endeavor, the age of action. The Arkansas Ice Cream Manufacturers must establish leadership for their industry, and they can do it only through co-operation and public education. Plan to come to the state convention—make the trip an investment—take home ideas which you can incorporate into your business the coming year with profit to yourself and credit to the Arkansas Ice Cream Manufacturers' Association."

Little Rock is a favored convention spot for the Arkansas manufacturers. The 1923 convention was held there in connection with the Southern convention. At that time a number of important legislative matters were brought up for attention during 1924. These, no doubt, will be reported upon at the convention this year. R. L. Hargrove of Texarkana is president of the association.

President R. L. Hargrove of Texarkana has made the following announcement:

"We have had some very excellent meetings in the past, but we have reason to believe that the coming convention will be a wonderful success in every way. The program will not be a long and tiresome one; the thought we had in mind in arranging our program was to give the supplymen ample time to talk with the ice cream manufacturers.

"In addition to the regular program, a nice entertainment has been provided and we want to especially extend an invitation to the wives of the supplymen to accompany their "better-halves" to Little Rock. We assure them a pleasant visit.

IOWA MANUFACTURERS HOLD STIRRING CONVENTION.

An interesting program and a large attendance featured the 1924 annual convention of the Association of Ice Cream Manufacturers of Iowa. The convention was held at Fort Des Moines Hotel, Des Moines. Refrigerated cabinets, national advertising and cost accounting were discussed, among other topics pertaining to the industry today.

Entertainment features of a highly satisfying nature were provided by the Iowa Poodle Dogs, the association's auxiliary body.

The ice cream manufacturers' officers for 1925 are: A. B. Sales, Fort Dodge, president; R. A. Hadley, Ackley, vice-president; Joe Furnas, Des Moines, treasurer, and P. W. Crowley, Des Moines, secretary. The 1925 directors are: A. J. Murray, Cedar Rapids; Lee Blue, Red Oak; B. K. Peter, Fort Madison; Roger I. Crowell, Waterloo, and C. S. Hutchinson, Des Moines.

Ice Cream Voyageurs Back in Home Port

Great Southern Convention of National Association Topped Off by Flying Visit of 48 Delegates to Cuba and Panama

We drifted o'er the harbor bar
And I with sobs did pray,
"Oh, let me be awake, my God,
"Or let me sleep alway."
—From Ancient Mariner.

AND next comes Detroit. New Orleans is a pleasant memory. Cuba and Panama are sweet reveries of the past. The great national convention in the Southland has come and gone, leaving nothing but a delightfully lingering taste. Ice cream manufacturers of the country now are burrowing themselves in for the winter, so to speak, trying to put to the best purpose information picked up at the 1924 convention.

Thanksgiving found most of the national convention delegates back home. But not so for the 48 of their fellow-members who were on the deep blue of the Atlantic on the Carribean cruise of the National Association of Ice Cream Manufacturers, visiting the port of Havana, paying their respects at the palace of the Republic of Panama, dancing with maids who occasionally lifted shy Latin eyes from under rainbow shawls, and flashed trim ankles from under gaily hued petticoats. And—

BUT all that is a memory now. Christmas found our gay voyageurs back home again, back from the deep blue waters of romance to the stern business of running ice cream plants. Occasionally one of them—back home in December—paused over a list of special ice cream Christmas orders to let his mind wander back over the snatch of a Spanish phrase that he vowed he would never forget—though now he fears he already has.

They shook hands with "Black Jack" himself, these ice cream mariners. They found America's commander-in-chief, General Pershing, visiting the central republics.

They were extended the honors of the Panama republic's palace, sipped champagne of ancient vintage, ate their fill of tropical luxuries. They visited Culebra cut, went down under water in submarines and collected a lore of stories to tell back home. It was a real Southern trip. But they came back to the home port with a home song on every lip. For it is not a half bad place, you know—this place you call home—be it ever and ever so humble.

THERE were a lot of things that men this far from home would never voluntarily let come out, but press censors are impotent creatures when a determined reporter for The Ice Cream Review sets his mind to a task. So here is how it all happened—most of it, anyway:

They set sail—or turned the screw, whatever they do on these modern sea-going crafts—from New Orleans on Saturday, November 22. Then it was "Y' heave ho, m' lads, and let's ride this merry gale to Havana." The vessel was one of the Great White Fleet. The third day found the cruisers in port at Havana. The Sabbath had been spent at sea. The first day at Havana was taken up with suburban auto trips in which the travelers visited the Colon cemetery, the Casino, Marian beach, and —the race track. They saw the ponies run, and as one delegate sadly expressed it after getting back home to clear away the snow for Santa Claus—"Mine hasn't finished yet."

The next day all hands and the cook came up for air and to see the cruisers off on a launch trip across the bay to Morro Castle and Cabanas Fortress. The following day was the last on the island. The travelers were

turned footloose and told to shift about as best they could, each man for himself. No reporter would dare go into activities on this day at any length. Just imagine for yourself how you would like to be that far from home and all the places open and find a man with pencil and notebook at your heels.

That afternoon the steamer hoisted anchor and streaked for other waters. Then for the sixth, seventh and eighth days the travelers were at sea. There were card parties, and after a few poker sessions, many felt quite sure they were at sea. It is not likely that any ice cream factories will change hands as a result of those games with the fateful pasteboards, but everybody couldn't win.

The ninth day found the vessel at Cristobal, Canal Zone, after having passed through Culebra cut. The ninth, tenth and eleventh days were spent in Panama City and Ancon, cities that are divided by a street. The ice cream men stopped at Hotel Tivoli in Ancon, where the American population resides. The population of Cristobal is 40,000, of which 5,000 are white people. The whites, therefore, are outnumbered seven to one by negroes and breeds of the negroid species.

THE visitors danced at the Panama City Union Club. They met General John Pershing. They immediately made friends with "Black Jack," who likes his ice cream. They inspected battleships at Ancon. The outstanding social feature, however, came when they met the president of the Panama Republic, Senor Somebody, whose name could never be written twice the same way by a man used to the American language. This dignitary very graciously escorted his guests through the palace. He treated them to—er—ah—ahem —to wine. Several of the Americans cast furtive eyes around for the cops as they gulped down their portions. Feeling very guilty they thought they were getting away with something when they bade their host adieu and started out down the sidewalk.

It is officially denied that anybody among the visitors attempted to sing, as they were leaving the Panama president's home, that stirring ballad, "F'reeso a jolly good fello-o-o."

"Some of us started to," one of the visitors explained later on, "but we were afraid that Senor El Presidente would think we were singing our national anthem and would want to stand up out of courtesy to us. Anyhow, it might have brought on international complications, and who the heck wants to argue with a man he can't understand? Anyhow, Senor El Presidente is all to the mustard, and any time he wants to run up into our country we expect to show him how ice cream has his champagne backed clean off the boards when it comes to a steady diet."

The Americans visited the famous Balboa swimming pool. They saw the great Balboa swimming team that recently toured the United States. They visited the government coal storage plant at Mt. Royal. They entered submarines. At Colon, where they stopped at the Washington Hotel, they visited the American flying field.

Our travelers did not let Thanksgiving go by unobserved. They rendered a little musical program of their own and spent the evening at card games. After the card games some were more thankful than others.

ON WEDNESDAY, December 3, the journey home was begun. The ladies provided a little entertainment of their own; they staged a shawl parade, letting the men of the party rest their eyes upon the lovely shawls they had bought in Latin shops, showing them how well they looked on American senoritas—er—beg pardon,—American sonoras and senoritas.

Southern Ice Cream Men Look Forward to 1925 Visit in Kentucky

Officials Already Planning for Exposition—Will be First Southern Convention for Kentucky

THE smoke had no sooner cleared away from the highly successful convention-exposition, held at New Orleans by the Southern Association of Ice Cream Manufacturers and the Dixie Flyers, when preparations immediately began taking shape in the direction of another highly successful convention-exposition at Lexington in 1925.

Officers of the Dixie Flyers are fast workers. They are no faster workers, however, than officers of the Southern Association of Ice Cream Manufacturers.

No sooner was the convention closed when President Harry A. Benners, none other than Colonel Harry himself, notified The Ice Cream Review that he had his mind working toward a very elaborate show at Lexington. Officers of the Southern association immediately expressed themselves as looking forward to rounding up a large attendance for the Dixie Flyers' show.

The Flyers showed unusual confidence in Colonel Benners by re-electing him president at the convention. This is probably the first time in the history of the association that a president has been elected for two successive terms. P. N. Miller, Jr., also came in for a share of the honors, when he was re-elected secretary, a post he has filled off and on ever since the organization was established.

LEXINGTON will take the Southern association into entirely new territory. This will be the first visit to Kentucky; in fact, it will be the first time the association has traveled so far north. Little Rock is the farthest point north of any Southern convention thus far. Another feature of the Lexington venture is that this will be the first time the convention has been held east of the Mississippi River in three years, since the very successful convention held in Atlanta in 1921, in connection with the regional exposition of the Association of Ice Cream Supply Men. Immediately after the Atlanta convention it was decided to go to New Orleans in 1922, thence to Little Rock in 1923, and then back to New Orlenas in 1924.

THE FLYERS' PRAYER.

Lord of all power and might, Who rulest in heaven and in earth, and canst turn the hearts of men after the counsel of Thine Own will; we humbly pray Thee to awaken in all the members of our organization a deep desire to maintain and set forward the work of The Dixie Flyers throughout the Southland. Bless, we pray Thee, our efforts this morning to strengthen and extend our work. To all who shall take part in our plans give wisdom and zeal. Bind us boys to a closer fellowship. Teach us to pray, labor and give more faithfully that which we have not only for the extension of our own worldly affairs but for the furtherance of Thy kingdom among men. Direct us, O Lord, in all our doings with Thy most gracious favor and further us with Thy continual help, that in all our doings begun, continued and ended in Thee, we may glorify Thy holy name and finally by Thy mercy gain everlasting life. Amen.

Prayer by Chaplain Gordon Moumble at opening of 1924 session of Dixie Flyers.

The Kentuckians have been putting up a fight for the convention for the last two or three years, starting their drive at the 1922 convention at New Orleans. Harry A. Cuscaden of Louisville and his Kentucky friends are much elated over getting the 1925 convention for a Kentucky city.

"We will surely show them a mighty nice time in the Blue Grass State," Mr. Cuscaden said. "We know how to have fun in our state as well as anywhere else, and I think we can show some pointers to some folks who we know," he continued.

NEITHER the National or the Southern association has definitely decided upon convention dates yet. The national convention will be held in Detroit this year. It will not be until after a decision as to dates, before Southern officials make up their minds as to how largely attended the national convention at Detroit will be from the South in 1925. At the Cleveland convention in 1923, the manufacturers south of the Ohio River made a very nice showing, virtually every state being represented.

There is no doubt that the New Orleans conventions served to bring the Southern trade into much closer

Success Crowns Great Pacific Convention

Splendid Condition Shown for Pacific Ice Cream Industry at First Joint Convention of California and Pacific Associations, held at Pacific Slope Dairy Show in December

THE Pacific ice cream industry covered itself with glory at the Pacific Slope Dairy Show, held at Oakland December 10 to 16. The ice cream men's participation consisted of only three days, December 10, 11 and 12, when the first joint convention of the California and Southern States Ice Cream Manufacturers' Association and the Pacific Ice Cream Manufacturers' Association was held.

This memorable occasion will linger in the minds of every one of the 200-odd delegates and visitors. A healthy condition for the ice cream industry of the Pacific Coast was reflected in every convention session. The manufacturers showed themselves to have given thorough study to the various matters now before the industry, including mechanical refrigeration, national advertising, cost accounting, etc. Many manufacturers expressed the opinion that mechanical refrigeration may lead up to great development for their industry, if handled in the proper spirit.

CALIFORNIA, Washington and Oregon manufacturers seemed to be putting up a race as to which could send the largest representation. California, of course, took the lead, having the advantage of staging the show at home. The Golden State had 92 delegates and visitors to register, while Oregon and Washington divided second-place honors with 23 representatives for each.

Although the great coast joint convention did not draw as many people from the East as had been hoped for, there were representatives from 17 states, including, of course, the states of the coast, the Southwest and the Northwest—Arizona, California, Colorado, Nevada, Montana, Utah, Oregon and Washington.

Canada held up its end by sending down two delegates from British Columbia, though the convention was very far removed from the Canadians' stamping ground. Nine states of the Middle West were represented.

The ice cream men's convention was the largest of the numerous dairy conventions held in connection with the show.

OFFICERS AND DIRECTORS FOR CALIFORNIA AND SOUTHWESTERN STATES ICE CREAM MANUFACTURERS' ASSOCIATION.

OFFICERS.

Frank H. Ames, president, San Francisco.
Harry R. Peacock, vice-president, Bakersfield.
Jay H. Kugler, secretary-treasurer, San Francisco.
Harry F. Grosse, arbitrator, Los Angeles.

DIRECTORS.

C. J. Alfred, Los Angeles.
Harry R. Peacock, Bakersfield.
L. J. Christopher, Los Angeles.
F. H. Ames, San Francisco.
E. W. Chism, Reno.
K. L. Carver, Los Angeles.
W. A. Hosking, Sacramento.
Wayne Hood, San Diego.
Geo. H. Ball, Fresno.
Carl Plaut, Oakland.
Lawrence Hughes, Los Angeles.

An outstanding development was the association's stand in support of national advertising, which followed a speech by F. W. Gentleman of the Gardner Agency, engaged by the national association to handle the co-operative advertising project.

THE California association re-elected its officers. But members of the Pacific manufacturers could not persuade W. V. S. Robb to retain the leadership of that body for another year, and E. A. Burt of Portland, one

How to be *sure* when you invest in trucks

1 Buy trucks only from a maker who has demonstrated such financial strength as the Walker Vehicle Company has demonstrated from the beginning of the truck industry. *This will safeguard you from owning "orphan trucks."*

2 Select a truck builder whose factory is thoroughly experienced in building to the requirements of your line. *This will safeguard you from owning trucks not adapted to your service.*

3 Buy from a maker whose factory is always busy, always expanding, due to reorders from such leading business concerns as Anheuser-Busch, U. S. A.; Carroll Co., Chicago; Carry Ice Cream Co., Washington; Hoefler Ice Cream Co., Buffalo; National Ice Cream Co., San Francisco and H. P. Hood & Sons, Boston. *This will safeguard you from owning trucks that are short-lived or expensive to operate.*

Before you buy more trucks, consult us on how to organize your trucking service. List of Walker fleet users in your line sent free on request.

Plant Location is First Step -:- -:- Toward Getting Public's Interest

Value of Institutional Advertising Stressed at Pacific Convention by A. A. Comey, General Manager of Globe Ice Cream Co., Los Angeles

THE location of an ice cream manufacturers' plant is an important point in the matter of public attention. And public attention, of course, is really the first step toward the good will of the public. More and more we are coming to realize in this industry that the ice cream plant is, in every sense of the word, a public utility. This is particularly so in the sense that the wide popular field of ice cream and a general interest in the ice cream manufacturers' activities bring the manufacturer constantly in the public eye.

We are reminded of these facts in the address before the Pacific coast joint convention in December by A. A. Comey, vice-president and general manager of the Globe Ice Cream Co., Los Angeles. Probably no one in the industry is more qualified to speak on this important topic. Mr. Comey has given the industry a number of new ideas on methods of making the public think about ice cream. It is not often that the importance of the ice cream plant, its location, etc., is stressed at an ice cream convention. Mr. Comey pointed out that the plant not only should be located where the public can see it and visit it easily, but it also should be practical from the standpoint of shipping. The latter point, of course, is one of utmost importance that the ice cream manufacturer must consider in weighing all such thoughts. It means a great deal to be able to have railroad spurs available for the delivery of raw material and handy for the delivery of the finished product to all points of the territory served.

Institutional advertising can be begun just as soon as the location is determined, the speaker pointed out, declaring that—

"Public interest can be aroused in the structure, the type of equipment, the modern facilities and every other factor concerning which the public has a natural curiosity. It must be remembered that the public is naturally and vitally interested in how its food is produced—especially in the dainty foods which women take pride in serving at their tables."

He recommended white or attractive light colors for the painting of the ice cream plant, adding that if possible, there should be a planting of lawn and flowers to add the charm and grace which the public, especially the women, enjoy. He pointed out that the women are the largest buyers of ice cream.

In connection with this appeal to the women, who are recognized by ice cream manufacturers to consist of the great bulk of the ice cream market, it is interesting to note that other industries are capitalized upon appealing to the ladies in this way. A large baking company in one American city, not only went to the trouble to erect a plant of artistic design, but also took careful pains in the seeding of the lawn, planting of shrubbery, and the growing of clinging vines to walls and to windows of the plant. Candy manufacturers have followed out the same idea.

THE question of help brought from the speaker the importance of a careful medical examination of employees. Although he spoke of the lines of least resistance in securing help as dictating cheap help, he pointed out the advertising value of men carefully medically examined. He said it is a part of wisdom to pay wages commensurate with the type of labor produced, as he believes this would prove least expensive in the end that it would contribute to the standing of the manufacturer.

"In the factory of which I am an official," Mr. Comey said, "we not only employ better class of working men and women, but we make it part of our regulations that a change of clothing daily is obligatory, especially for those who work in the cream room.

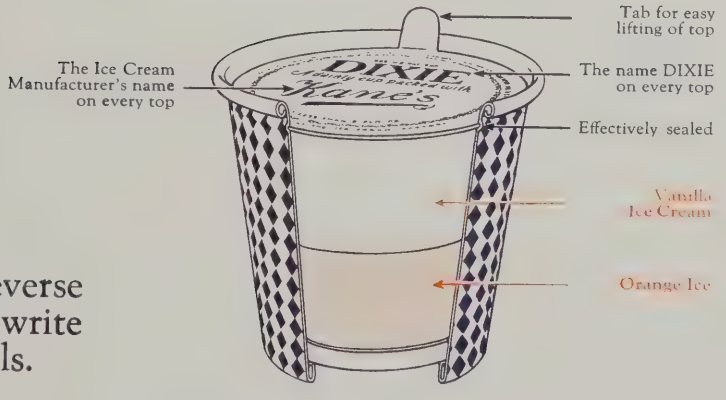
"Every employee comes at one time or another in contact with the public and this fact should be borne in mind. Clean uniform of a becoming color and with some attempt at style and fit gives a pleasing atmosphere and

(Continued on page 150)

Institutional Advertising

"The good will created through the right conduct of a business * * * can and shou'd be credited to institutional advertising. Every contact with the public through taste, speech or vision should be favorable. And every effort should be employed to keep the public so'd.

"In these days of dealer disp'ay, truck disp'ay, billboards, street cars, newspapers, radio and count'ess other logical forms of publicity, there is no lack of media through which the real message of your product can be broadcast. Nor should any opportunity be over'ooked where an executive can get his message before an assembly such as a food show, domestic science classes, schoo's and clubs. * * *



"And it should not be forgotten that ice cream has an almost universal appeal. It is so'd to the rich, the poor, the sick and the strong. It graces the finest homes and the poorest tab'es. It is the working man's treat to his girl just as it is the refreshment of the upper c'asses. It is the most aristocratic food on the market and yet it is the cheapest. It feeds princes, prize fighters and paupers. It is served in Florida, Texas, Maine, Missouri and even at Hollywood's quiet evening parties. It knows no 'imitations of age, sex or purse. It is worthy of the highest type of advertising, and frequently has the worst. It has more news stories to be told that are worth telling and worth hearing than any product on the market.

"It pays to advertise a product that is worth advertising. Wonderful is advertising and great its power. It can help even stars, planets, moons, nebulae and the Milky Way itself to attract attention. Sixteen hundred mil'ion peop'e on this earth haven't paid any attention to the planet Mars for years. Yet, only a few weeks ago several hundred million were looking around the sky for that planet simply because it had been advertised in the papers.

"It was only a few years ago that when you asked the man who served "sodys" at the corner drug store who made his ice cream you would hear him reply 'We make it ourselves.' Nowadays the same question brings an entirely different answer. He replies even more proud'y, 'We use only Blank ice cream made by the Plank Ice Cream Co.' And I am laying 100 to 1 right here that the Blank Company is the company in that town which has made the greatest effort and the greatest progress in gaining pub'ic interest—and in keeping it."

5¢ DIXIES

HERE'S one of the Special Reasons why DIXIES pay Ice Cream Manufacturers such solid big profits

Read the reverse page—then write us for details.

DIXIE

INDIVIDUAL DRINKING CUP COMPANY, EASTON, PA.
Incorporated

Original Makers of the Paper Cup

DIXIES

offer the advantage of a continuous, standard run

The suggestion we make on the preceding page is based upon what we learned from those ice cream manufacturers who had the vision and keen business judgment to take up the marketing of DIXIES for an *additional* profit.

Those manufacturers anticipated heavy popular demand. The *actual* demand proved more immediate, more spontaneous, and heavier than anyone (including ourselves) expected. It was sensational.

Still more important is this: that new demand comes, naturally, at a time when your normal gallonage is low! DIXIES stabilize your year's sales—largely eliminate the costly "peaks and valleys" in your production chart—*make the winter months profitable.*

And our suggestion for the most profitable filling of DIXIES is this: Vanilla Ice Cream and Orange Ice. For these reasons:

Each is the best seller of its kind. Both are universally the most popular flavors. The combination is ideal. Try it. Eating first the Vanilla Ice Cream (packed on top), the sweetish taste, the "sticky feel" of the cream is offset by the refreshing acid tang of the orange ice—the whole leaving you with a most delightful after-taste.

You get a Standard Run Product.
You need not worry as to what flavor you will use today or tomorrow—it's *Standard.*
You get a uniform demand from your dealers!
That demand for a *Standard* product comes without solicitation!

One manufacturer put out 7,000,000 DIXIES in one continuous run! : : You can do likewise.

Get in touch with us.

Ice Cream Profits the Year Round

Manufacturers Who Give Thought to Greater Development of Winter Business Express Themselves on the Sundae Package, Which Seems to be Meeting With Favor

BUILDING up winter consumption is the big problem before the ice cream industry today—year-round profits. That is generally agreed upon. We have made considerable progress in late years. You cannot imagine shutting down your plant in December to open up again in May, can you? That used to be done. As the industry has developed, with better ice cream and better merchandising methods coming in force, winter business has gradually increased. There never shall be a time when people will eat as much ice cream in winter as in summer, but manufacturers are gradually coaxing the public to eat more and more every winter than the one before.

Novelties galore have come on the market, and for the most part they have real merit, though occasionally one bobs up and falls through after a brief career.

In featuring in this issue the packaged sundae idea, we are putting before readers a matter that is not altogether new in the sense of being untried; yet it is fresh in the sense that it seems just on the verge of greater development. The sundae package, so it is reported, is being kindly looked upon by manufacturers in many parts of the country as a means of holding on more of the old trade and building up new trade in the winter months. One of the merits of the packaged sundae is it attracts, among others, new friends to the ice cream industry, so it would appear from reports.

We feel sure that a discussion of this matter, which we expect to go into at greater length in subsequent issues, will be of wide interest to our readers. We offer these discussions not with the wish to influence our readers toward any particular company's merchandise, but in line with our service policies of providing all information that may serve to keep ice cream men informed as this industry goes forward.

"OUR cost system doesn't tell us accurately just what portion of our profits last year must be credited to packaged sundaes, but here's one thing we can credit to them: they helped to increase our profits during the months of last winter."

This significant statement comes from a large manufacturer—the first to put out packaged sundaes on a big scale. He began in November, reached his peak in February, and during the year sold 7,000,000 of the little packages. This producer dished up 200,000 gallons of cream in these units, all at a gallonage profit, and most of it during the dead season, while Nature was performing all her well-known New England winter stunts.

Even manufacturers who have had a much briefer experience with the package are finding that it is a branch of business that holds up well during cooler months, and that "it is a wonderful thing for the ice cream business, it seems, for as J. F. Fadden of Scranton remarked, "It helps carry overhead."

PERFECT PACKAGE CO.
NEWARK, NEW JERSEY.

AN OLD kink in the buyer's habit is pointed out by Ernest Daniel, president of the Carry Co. of Washington. He has noticed that there is a supplementary season—winter consumption—in the ice cream business, which sets in after furnace fires are got going. During the chilly season between summer and artificial heat, people are too cold to think of eating frozen foods. And, although they resume the ice cream diet later, they do not consume as much as they would had they never dropped the habit. The packaged sundae, strangely enough, seems to hold up steadily during the chilly season. In Scranton, where it has made its greatest hit so far, it has been sold **only** during that season. So we have apparently a right to expect this new product to help carry the buying public along on a higher per capita consumption of ice cream. If so, it is going to help smooth out the winter depression, not only by turning in a profit on its own sale, but also indirectly, by keeping the public in the habit of eating **all** kinds of frozen products as a staple diet throughout the year.

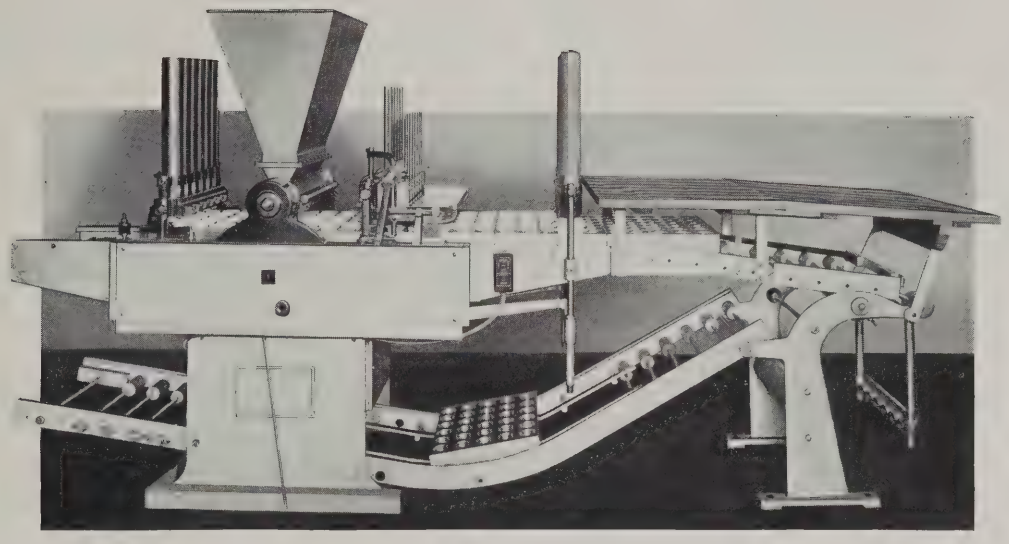
Mr. Daniel has noticed other indirectly profitable effects of the packaged sundae as a winter specialty. The dealer, apparently, is less of a winter problem, now, than he was before the introduction of the packaged sundae.

For this product seems to be a boon to the dealer. He makes more per gallon on them. He knows beforehand what his profits are.

The result of this is a happier feeling toward ice cream, and toward the drivers who come in to ice the cabinets and toward the company that sends him his bulk cream. In Washington this mood of greater satisfaction has relieved the Carry Company of the pressure of dealers to get it to go into the foolishly competitive game of "one-cent sales," which reduce the dealer's theoretical profits to something like 13c a gallon, and entail loss to the manufacturer.

Just why the packaged sundae should be less of a seasonal proposition than cream sold in bulk isn't immediately obvious. It largely begs the question to assume that it is all due to the fact that the dealer and the manufacturer have too much to do handling bulk during warm weather to push small package trade. For competition tends to boost every line to its fullest development during every season.

THERE is no reason, precisely, to neglect the small package even in the summer. But the fact is, nevertheless, that the little cup is less affected in a business sense by changes of temperature than bulk trade. Perhaps there is a simple reason—it sells mainly to children. They never get enough ice cream at any season. Their demand remains steady, as determined by the total number of nickels they can get—which is not a seasonal problem.



At any rate, the packaged sundae is proving a joy to manufacturers, it is reported, by reducing the losses due to the high unit cost of delivery in the winter time.

Therefore, by effecting a decided increase in can deliveries during those months, packaged sundaes have enabled manufacturers to reduce delivery costs. The amount may not be exactly stated until costs are watched for several years.

ICE CREAM FOR HICCOUGHS.

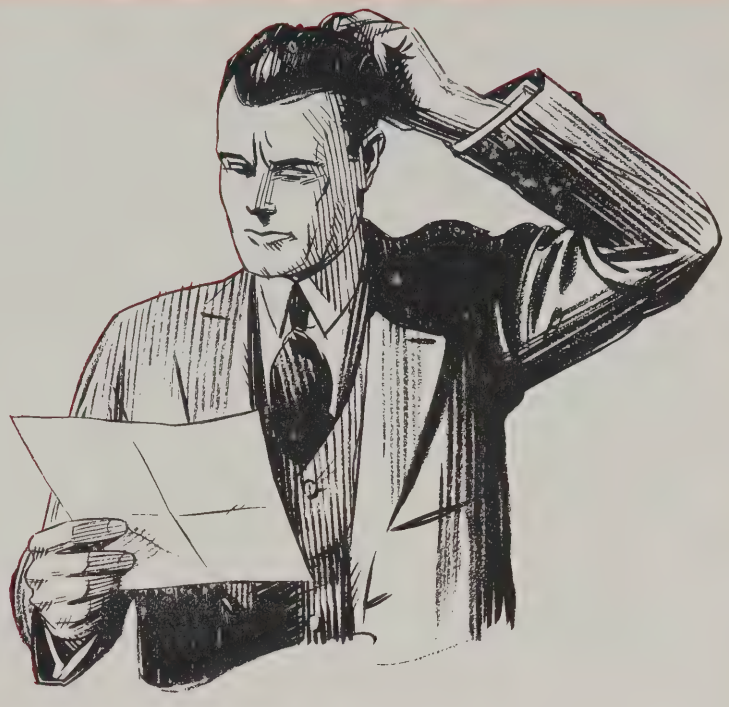
The Association of Ice Cream Supply Men, from one of its members, has received the following clipping from a New Bedford, Mass., newspaper of recent date, with the following statement: "The enclosed statement mentions ice cream as a sovereign remedy for hiccoughs. It seems to me that this unexpected therapeutic virtue of their product should be made known to ice cream manufacturers."

The clipping certainly opens a fertile imaginative field. Instead of the customary household remedy known to America for generations of nine sips of water to cure hiccoughs, it is evident that a new addition to medical science is at hand.

The number of children that have developed illnesses in order to obtain an administration of castor oil in the past is said to be practically unreckonable, minus symbols in arithmetic not having been carried far enough to express such negligibility in quantity. It is now conceivable, however, that the number of premeditated illnesses in order to obtain the new medicine, ice cream, may become incalculable at the other extreme.

The New Bedford clipping follows:

"The epidemic of hiccoughs, reported elsewhere in the country, has struck the city and the list of victims includes several physicians.



"The first case exploited was of a stage manager of a local theater and the old publicity ruse of the leading woman or chorus girl with the lost jewels never brought forth more comment than the case of the stage manager with the hiccoughs. There may be an idea in that for the professional publicity agent.

"From the day the announcement appeared in the newspapers the stage manager was swamped with more notes than the leading man. Lines of people awaited him at the stage door, notes were sent back stage, the manager was called on the telephone, men and women stopped at the box office.

"All these people and letters offered advice for curing hiccoughs. There was no limit to the number and variety of remedies. The stage manager, who regarded the matter as a joke at the beginning, became alarmed as the expressions of solicitude became impressive. On the ending of the second day he called up his physician. 'Eat a plate of ice cream,' said the physician. The afflicted man did so and the hiccoughs ceased.

"There was publicity for the cure. The demand for ice cream spread all around the town. Children commenced to be afflicted and anxious parents rushed their children to the places where ice cream was sold for relief. A convention of ice cream managers was to have been held at the local hotel early in the week. The attendance was small because ice cream makers could not get away, so busy were the plants."

Do Your Improvers Cost You too Much?

Some ice cream manufacturers have felt that, because Junket Ice Cream Rennet costs so little per 100 lbs. of mix, it could not be worth as much as improvers that cost more. These men have judged Junket Ice Cream Rennet on a *price basis.*

But laboratory tests by disinterested experts, and actual experience of numberless manufacturers have definitely proved that

Junket
REG U S PAT OFF
Ice Cream Rennet

"Very Successful," writes Carver of his 2 ABC Bodies

"Keeps the ice cream in fine condition," Wisconsin manufacturer says in letter

The body of an ice cream delivery truck must do more than merely haul ice cream. It must keep the cream firm and hard. It must keep it that way without wasting ice and salt. It must provide protection against brine drip, for brine drip leads to rust.

The management of the Carver Ice Cream Company, of Oshkosh, Wis., knows these things. It was this knowledge that led to Carver's choice of two 200-gallon ABC Bodies some time back. But it was the performance of these two ABC Bodies in actual service which inspired this letter by Mr. H. L. Carver:

"We are having very good success with the two 200-gallon refrigerated ice cream bodies purchased from you recently. They are well constructed, and the ice cream compartment keeps the ice cream in fine condition."

ABC Bodies keep ice cream, milk and other perishable products at the exact temperature required—*on less ice and less salt than any other!*

All brine is retained in the tank and circulated again and again thru coils of heavy iron pipe. The waste of good, cold brine is eliminated by a one-piece seamless brine tank — an exclusive ABC feature. This also prevents brine drip — the cause of rust on truck chassis — hence prolongs the life of the chassis.

ABC Refrigerator Truck Bodies are adaptable to any type or size of truck chassis from 1-ton to 7-ton capacity.

CONNECTICUT SHORT COURSE OPENS IN JANUARY.

A two week course for practical men to be given just previous to the opening of the 1925 season, and dealing primarily with the problems arising in plant operation, will open on the afternoon of January 19, 1925. This course, as in previous years, will be conducted by Professor R. C. Fisher, who is in charge of dairy manufacturing.

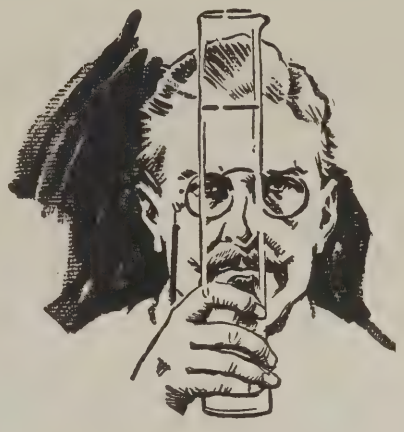
Among the topics to be taken up through lectures, round table discussions and practice in the plant, are the following: Testing the raw materials, figuring the mix, homogenizing temperatures and pressures, factors influencing quality, fundamentals in freezing and the making of special creams. One day may be devoted to attending the convention of the New England Association of Ice Cream Manufacturers in Hartford.

A fee of ten dollars to cover room rent and laboratory expense is the only regular charge. Board costs about a dollar a day. A white suit for use in the laboratory is also necessary.

A detailed outline of the course will be sent on request. For further information or to enroll in the course, address director of short courses, Connecticut Agricultural College, Storrs, Conn.

PURDUE OFFERS EIGHT WEEKS' COURSE IN DAIRY MANUFACTURING.

Well trained men in buttermaking, ice cream making and market milk are always in demand. The Purdue eight weeks' course in dairy manufacturing prepares men for such positions. The course is well adapted for young men who wish to become qualified to fill a position in a butter, ice cream or market milk plant, or for men who are now engaged in a dairy plant and wish to know more about the best methods used in creameries and dairy plants.



The course included the manufacture of butter, ice cream, and city milk plant operation; creamery machinery construction; operation and repair; refrigeration; factory management, and practical tests used in testing butter, cheese, ice cream, milk and cream. A few lectures will be given on farm dairying to show the relation of the producer's problems to the manufacture of dairy products.

This course begins January 19 and closes March 13. Anyone interested in this course may secure additional information by writing, H. W. Gregory, chief of dairy department, Purdue University, W. Lafayette, Ind.

A PILGRIM STOPS TO SAY "HELLO."

Dr. Wright, of Sealright, dropped in on us one day recently while in Milwaukee on business. Just to "check up" on us, as the genial doctor assured us. He was spending a few days in this vicinity calling on customers and renewing acquaintances. Dr. Wright was bubbling over with optimism and good cheer. The world looked brighter to all of us as a direct result of his call.

What the public knows about Gelatine—

Nine out of ten, perhaps, of those who buy your product at retail, never heard of gelatine as applied to the manufacture of candy or ice cream. But ignorance is not always undiscerning—they know what they like—they know the difference between a product made with an inferior gelatine and a good one—Atlantic Super-Clarified Gelatine for instance.

It is in your power to improve your product and lower your costs by the use of better gelatine. Use Atlantic Super-Clarified Gelatine whose high viscosity, purity, super-clarity and absolute uniformity are the basis of the success of some of the country's best candy and ice cream makers.

Atlantic Super-Clarified Gelatine passes every pure food law. It is safe, dependable and absolutely uniform. Standardize on Atlantic Super-Clarified Gelatine.

The Burning Question—

Refrigeration

"The truth, the whole truth and nothing but the truth, s'help me, Gawd." That's what ice cream manufacturers who have used iceless cabinets promised to tell at recent conventions. And they did!

TO INSTALL or not to install—'tis the question. Though it is not so much a question now as it was a year ago, the matter is causing more quarrels, quibbles and queries than anything else that has yet risen in the industry. Two years ago it was quite a big question, this strange dream of equipping dealers with cabinets that automatically kept ice cream hard and ready to serve. A year later found that some manufacturers, seemingly a rash bunch of men to those more conservative, had gone into this proposition. All were not satisfied, but the proposition had its champions; and then, after another year—

The industry is looking at the matter of mechanical refrigeration in a more amiable frame of mind now than at any time in the past. That has been brought out at least three conventions this year.

IN THIS issue we are passing along some of the thoughts dropped at recent conventions, particularly the national gathering at New Orleans, where the subject was the feature of the program. This was quite a most remarkable symposium, containing as it did addresses by men who have adopted mechanically refrigerated cabinets and have studied the matter as thoroughly as they have had the opportunity. On following pages appear a series of addresses and excerpts in which manufacturers actually relate their experiences.

It is generally understood that the introduction of mechanical refrigeration found considerable prejudice against this proposition. Undoubtedly this was due, for the most part, to the heavy investment for which this plan calls. Some still object to the cabinet on this ground.

A CHICAGO ice cream manufacturer figured it would be necessary for him to risk a half-million dollars to install iceless cabinets. On the other hand, a Milwaukee manufacturer has installed these cabinets, is much elated over their success and is sure he would not return to the old ice-and-salt method "under any circumstances."

"I have had one of my dealers who is not equipped with automatic refrigeration to visit another of my dealers who is, and buy a plate of ice cream because he wanted better goods," said this gentleman, an official of the Blommer Ice Cream Co. "The dealer even came to me later and asked if I were not making two grades of goods, declaring that the kind the other man sold, out of an iceless cabinet, was far superior to the product he sells for us. The answer, of course, is the iceless cabinet enables the other dealer to keep the ice cream in better condition, preventing it from deteriorating by melting down. There is no doubt we have found a way to get our ice cream to the public in better condition and are therefore better prepared to build up consumption through the iceless cabinet."

There is less objection to the idea of having the ice cream manufacturers own the cabinets outright. But the industry as a whole still stands firmly against the misuse of mechanical refrigeration by the manufacturer who would wield it as a club over competitors' heads. That policy has been roundly condemned at virtually every convention since the appearance of iceless cabinets

What is the outlook? A little statistical work at three large conventions this year showed up as follows:

Five convention speakers expressed themselves openly as believing in automatic refrigeration in an established institution for good.

Three speakers said they were sure the newcomer was here to stay, either for good or evil.

Sixteen speakers discussed the subject in a manner highly favorable to the new cabinets, but neglected to express themselves definitely as to the future.

Four speakers were sure they hoped the idea would "lose root" in the industry.

Of the latter, two were manufacturers who have built large plants for the manufacture of artificial ice, and of course feel that this original investment would count for little in the face of automatic refrigeration.

One of the others commented upon the matter as follows:

"My firm is capitalized at $25,000. (It is quite a much larger firm than this capitalization would indicate. Ed.) We figure it would cost us $150,000 at the very least to install cabinets. Can anyone show me how it is the part of wisdom for a manufacturer to assume an obligation six times greater than the capitalization of his firm?"

"What are you going to do about it?" he was asked.

"I don't want the dern things."

"What are you going to about them?"

Mechanical Refrigeration As Applied :-: :-: -:- To The Preservation of Ice Cream

New Method Enables Manufacturer to Get Product to Consumer in Best Possible Condition

*By FRENCH E. DENNISON**

WHEN refrigeration was produced by ice and salt, some very excellent results were obtained by the delivery-man who mixed the ice and salt in such a way as to really produce quite a variation in temperatures as required to preserve the different flavors of cream.

However, it was thought that this situation was largely forced on the driver through complaints by the dealers from time to time, saying that the cream was not hard enough or that it was too hard, with the result that they kept changing their salt and ice proportions, until many of these men really became expert in packing.

If you want to prove this to your entire satisfaction, try switching the drivers on two important routes without indicating to them the purpose of the change and you will immediately note the complaints from the two routes relative to the condition of the cream —too hard or too soft—which will indicate clearly that these men become accustomed to the mix needed for the particular cabinets which they serve, or the particular equipment which they supply.

In other words, these tests will demonstrate that with ice and salt, the proper temperatures for carrying various flavors of cream can be maintained with some measure of success by a "cut and try" method and that changing men or routes means learning all over again.

Now, when mechanical refrigeration was first brought to the front this feature seems to have been largely overlooked, since it seemed to be the general idea that all that would be necessary was simply to submerge a refrigerating coil in a bath of brine, or other medium, in the cabinet or fountain in which the ice cream containers were located, with the resultant single temperature.

INASMUCH as various flavors of bulk cream require temperatures ranging from five to fifteen degrees and brick or package cream must be held at approximately zero, if it is to be in a suitable condition for sale or home consumption, it is evident that manufacturers of refrigerating equipment, referring to fountains or cabinets, failed to provide for the actual requirements in attempting to meet the situation by units involving but one temperature. Even going to the extreme in connection with some types of cabinets of merely cutting a square hole for the brick while providing round holes for the cans, and in some instances believing that the bricks could be kept in much better condition in these square holes than in the round ones, while, as a matter of fact, the temperature was the same, although, the square hole lent themselves to better advantage for packing the bricks, which was probably the original intent of the manufacturer. Brick cream maintained under these conditions is entirely unsatisfactory for home consumption.

I believe that if you will thoroughly investigate the operation of any mechanically refrigerated fountain or cabinet, from which bulk and brick cream is served, which is not entirely satisfactory in performance, unless defective from a mechanical standpoint, you will find that the difficulty is largely due to dispensing brick and bulk cream from the same temperature. I remember explaining this to one ice cream manufacturer and in thinking back over the complaints that they had had with the use of cabinets, he stated that he was really shocked that they had never thought of the two temperature arrangement before and turning to a group of his men added, "Boys, this is the dope, there is no other way." Any cabinet or fountain to be successful must maintain the different temperatures for the cream being served.

I AM personally familiar with a number of installations of multi-temperature fountains and cabinets where the brick cream business increased tremendously with the introduction of the two temperature fountain and in one instance where the dealer maintained brick at from zero to three or four below, he actually drew the trade from other local ice cream dispensers for no other reason that that the brick was in splendid condition by the time purchasers were ready to consume it in the home. Customers would actually pass by the other stores in order to get the colder brick. The very large increase in the brick business was naturally a decided benefit from the standpoint of the dollar, as well as the manufacturer, and in the final analysis, that is what you gentlemen are after.

My observation, supported by recent conversation with a number of manufacturers, indicates splendid possibilities for the increased sales of sherbets, brick and fancy package creams.

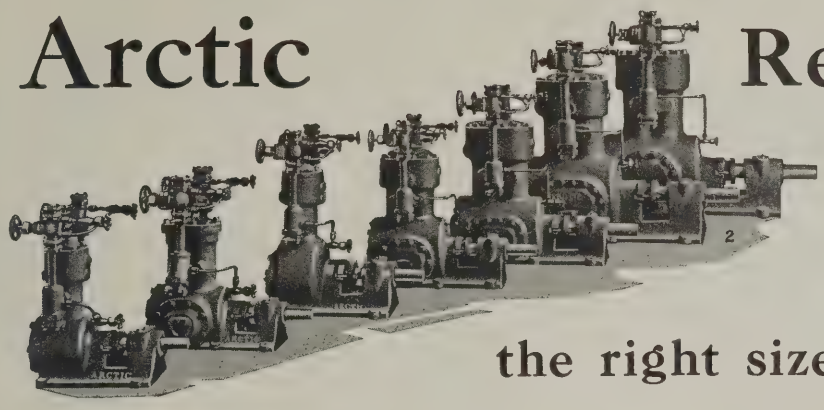
Looking ahead, we also have the possibility, and

The Important Questions

THE matter of mechanical refrigeration for the dispensing of cream was forcibly brought to the front about a year ago and at that time the usual questions were asked:

" 'What is the cost of operation vs. ice and salt?'

" 'What equipment can be eliminated and what will be the resultant savings?'



" 'How will the equipment be distributed to the dealer, etc.?'

"Now these points are very important and have been discussed in detail and I believe that the majority of you have decided that the mechanically refrigerated fountain or cabinet is superior to the ice and salt method, due principally to the fact that you are vitally interested in your product being delivered to the ultimate consumer in the best possible condition, whether it be bulk at the fountain or brick and package for the home."

—French E. Dennison.

even the probability, that the methods involved in connection with handling cream may be changed to provide for more sanitary conditions which involve the distribution of package goods, even for consumption at the counter. Take milk for instance—in certain localities the law requires that it be sealed and furnished in bottles, while breakfast foods and many confections are now being dispensed in individual cartons or packages. How long will it be before cream may be handled this way?

Will say in conclusion that the original and later ice cream cabinet is a stepping stone in the right direction, but I personally believe that the development of the multi-temperature system which maintains the various temperatures for the preservation of ice cream and ices as well as the cooling of city and soda water and the cooling of bottle goods and syrups, is the logical solution to the problem.

⚜

IOWA TEN-DAY SHORT COURSE.

This course will be given from February 11 to 21, 1925, and is outlined primarily to meet the needs of experienced operators and managers of dairy plants.

The following lines of study will be taken up in laboratory practice and lectures during this course:

Buttermaking.—This work will include starters, pasteurization of sweet and sour cream, cream ripening, churning, sweet cream buttermaking, butter judging, Milk and cream testing, butter analysis, etc.

Ice Cream Making. — Standardization, homogenization, testing of milk, cream, extracts, etc., preparation of special ice cream, freezing brick ice cream and fancy molds will be taken up in this course.

Market Milk.—In this work, standardization of milk and cream, homogenization of cream, clarification, pasteurization, separation of fermented milk will be presented.

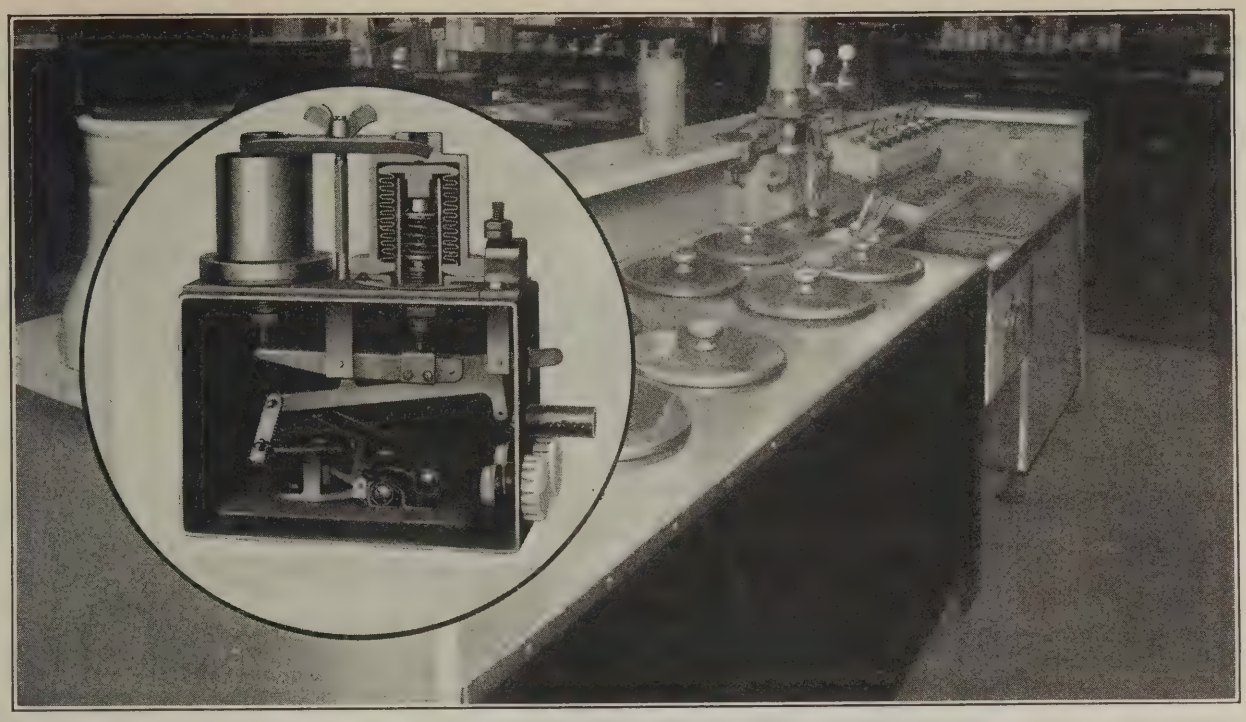
Bacteriology.—A ten-day laboratory course will be offered in the methods of determining the numbers of bacteria in milk, cream and ice cream and the numbers of yeasts and molds in butter.

Testing and Analysis of Dairy Products.—This work is given so as to permit those wishing to do so to spend as much time as desired on tests in which they may be particularly interested.

Factory operators of national reputation are secured by the dairy department to assist the faculty in making an adequate presentation of the work in the short time allotted.

For further information address Dairy Department, Iowa State College, Ames, Iowa.

⚜



PUBLIC TO NAME CREAMERY.

Messrs. Leo Hebert and John A. McGillivray, who have formed a creamery company in Chippewa Falls, Wis., are going to let the public name their creamery. A prize of $25.00 has been offered for the name selected by a committee of judges.

Workmen are now renovating and remodeling rooms in the Agnew Block at 421 Bridge St., and according to the proprietors, the creamery will be modern and will cater to the manufacture of fancy butter and quality ice cream. Mr. Hebert has had many years of experience in the manufacture of these dairy products, and he is confident that by following the quality route, success is sure to follow.

Study The Problem of Iceless Cabinet Obsolescence

THE subject of refrigeration seems to be as stimulating to the average business man's imagination as an oil gusher or a gold strike. Within the past few months alone, hundreds of "inventors" from inside and outside of this industry have offered mysterious and wonderful new gases, "brand new principles and methods."

With what result? The machine which was fundamentally right four years ago is right today. The hysteria of novel ideas has reached its climax—and has brought nothing save confusion.

It will take a lot of plain talking and straight thinking to clear away the fog.

Consider, for instance, the question of temperature control. What need is there for complex electrical contraptions — separate thermal-bulb arrangements, etc., no matter how "clever"—when a simple, positive switch thrown by the pressure of the gas in the main system does the work more satisfactorily. The Nizer control is the simplest and most positive known.

It indicates the desire and the ability of Nizer engineers to stick to fundamentals for the sake of better operation, reliability and economy.

Think of other parts of the Nizer—a ***single*** cylinder compressor, a ***universal*** motor, ***permanent*** compressor lubrication, etc.

Fundamentally right, all of them.

It is little wonder then that in four years of wide-spread use the Nizer has been changed only in one or two minor details.

Obsolescence? It is a small question as far as the Nizer is concerned.

"Our Experience With Refrigerated Cabinets"

Citations of Experiences Unfolded at 1924 National Convention

Cabinets in City Territory Have Meant Saving in Time and Effort Under Certain Conditions

*By WALTER BENDFELT**

OUR company, I believe, was one of the first to install electric cabinets and it was only after we made thorough investigation that we ordered our first shipment of refrigerated cabinets. This was in August, 1923. We installed some of these cabinets at that time and were entirely satisfied with their performance and, in fact, they are still running as well as ever. We delayed considerably making installations of additional refrigerated cabinets due to the fact that we were at a loss to know just what program to pursue in connection with the distribution of these cabinets.

About that time there was considerable interest in this point and after listening to the arguments advanced by different ice cream manufacturers, we decided it would be a mistake for us to place these cabinets in the hands of dealers at our own expense, and for quite some months we stood pat on this decision. At that time, we offered to sell the boxes to dealers and as an incentive we agreed to make them an allowance of 7 cents a gallon provided they furnished their own refrigeration. This particular subject in connection with the installation of electric cabinets is a very important one and, we believe, deserves a great deal of thought. However, I will pass over the matter hurriedly, without going into detail, by simply saying that from actual experiences we have now decided the best proposition for us to pursue is to install these cabinets in our city territory at our own expense and continue to own them in the same manner as we have always owned the old style salt and ice cabinets.

THE plan of selling these boxes proved impractical for many reasons. **First,** it delayed the installation of many boxes, particularly in stores where installations would have saved us the most money. **Second,** we quickly saw that if all dealers owned their own electric cabinets, it would tend to invite undesirable competition. While it has always been our practice to give the dealer all that we can afford to give him for the money, oftentimes a dealer erroneously gets the idea that the manufacturer is making too much money and it is this type of dealer who might stir up trouble in the event that all of the dealers owned their own cabinets. **Third,** if the dealer profits materially by owning his own cabinet on the basis of an allowance which the ice cream manufacturer makes, then the ice cream manufacturer should profit in a like measure in addition to protecting his business against mushroom plants springing up.

They very rarely run out of ice cream. They invariably carry a complete assortment and, of course, a larger stock, all of which tends to increase their sales. One of the principal reasons for having to make many special deliveries is the fact that the dealer has always hesitated about carrying enough cream on hand because it is so perishable. With refrigerated cabinets installed, however, we find that our dealers do not require special deliveries and, as stated above, they are willing and glad to carry a larger supply on hand at all times.

Ice cream, regardless of whose make it is, is subject to very much the same conditions all over the country and certainly we consider that if our product is maintained at a uniform temperature in a Nizer box without the use of ice and salt and without the variation of temperature it goes to the consumer in better condition than it did with the old salt and ice method. This matter of quality is one that should not be overlooked because, after all, there is nothing that appeals to us so much as something to maintain the quality of our product until it reaches the ultimate consumer.

Profitable If Saving Justifies Investment

"We have over 50 refrigerated cabinets installed, and anticipate installing a great many more. Our plan is working out profitably to us and satisfactorily to our customers.

W. H. BENDFELT.

We consider it profitable to install a refrigerated cabinet for a customer where the actual saving justifies the investment for us, and in this case we install the box and merely lend it to the customer gratis and do not change his price in any way. We have a number of customers, such as schools, industrial plant cafeterias, etc., whom we have always served daily, and it had always been necessary for us either to take back what ice cream they had on hand on Friday afternoon and re-deliver on Monday morning, or else make a special effort to get into these places while they were closed on the week-end. In either event this special service was expensive. With the installation of mechanical cabinets, it is only necessary for our truck to deliver the ice cream to these customers three times a week, and, needless to say, in addition to the saving to us, our customers are entirely satisfied and much happier than before. And in places where cabinets have been installed we find, without exception, that the customer uses more ice cream."

—Walter H. Bendfelt.

BARBER

Everything for the Dairy Industry

You Get a Smoother, Richer Feeling Cream with

The Viscolizer

The butter fat in the cream is finely divided by the action of the Viscolizer and united firmly with the filler, the sugar and the gelatine. These ingredients remain united in the freezer, resulting in smooth, rich-feeling cream.

A fine quality cream may be developed from sweet butter and skim-milk, or skim-milk powder. The Viscolizer unites the solid ingredients so that the butter fat will not separate while standing in the can or bottle.

The Viscolizer is furnished for either motor or belt drive – in five sizes, to meet the needs of any plant, large or small, capacities 100 gallons to 800 gallons per hour.

The Viscolizer is widely used also to improve table cream, for making ripened cream, for breaking up the fat in evaporated milk so it will not separate, for emulsifying oils, vegetable mixtures, salad dressings, fruit liquids, etc., and for various uses in the drug and food industries.

DURING the winter months, it is always a problem to keep from losing money, due to the expensive service which we are required to render. Where we have mechanical refrigeration, however, oftentimes it is only necessary for us to make one call a week, whereas with ice and salt it would be necessary to make seven.

There are a great many other things in connection with the installation of mechanical refrigeration which are helpful. For example, it enables the customer to keep a cleaner place, and it eliminates the loss of time required to pack ice and salt. In the case of permanent equipment, it eliminates the wear and tear on the dealers' equipment and certainly the manufacturer will welcome the time when it will not be necessary for him to call for and re-line and re-varnish cabinets by the hundreds every year.

We Install Cabinet for Dealers Who Sell 1,000 Gallons a Year

*By E. M. HERSHEY**

A YEAR ago a number of representatives of our company while attending the convention at Cleveland, decided to inspect a number of stores which sold ice cream from iceless cabinets. Unknown to the cabinet manufacturer and the ice cream manufacturer, we selected a number of addresses from a long list of installations which was on exhibition.

After visiting about a dozen of these and interrogating the dealers in detail as to the results obtained, mechanical trouble experienced, etc., (and, incidentally, we could not get definite information on operating cost) we decided to purchase one eight hole of three different makes and install them in our own plant under identical conditions to determine their operating cost and performance. Under a thirty day test, all three cabinets preserved the ice cream satisfactorily, but at a tremendous variation in cost of operation. Current consumption varied from 1¼ K. W. hours to 3 K. W. hours per day. Having satisfied ourselves that the iceless cabinet had a place in the ice cream business as we conducted it, we made our first installation early in April with one of our biggest out-of-town customers, to whom we shipped. We advanced the price to our "iced-up" price and made a three year contract, the dealer paying for current and water.

Since that time we have installed about 40 cabinets on the same terms and conditions. We have met no opposition to the plan from the dealer. Our competitors do likewise, or there would be a different story. We have not had a single instance whereby the cabinet had to be exchanged after the mechanic had adjusted temperature control after installation. The cabinet is usually adjusted the second or third day after it is installed.

THUS far only 4 or 10 per cent of the cabinets have required servicing after the installation has been completed. Two of these cases are interesting. In the first, the water continued to flow after the motor stopped running; investigation disclosed thread cuttings left in the line by a careless plumber had caused the trouble.

In the other instance, a customer reported the water was leaking all over his cellar from the floor above and he could not locate the cause. The discharge line from the cabinet was a rubber hose which passed through the floor—it happened to be a double floor — A rat imprisoned between the floors was famishing for lack of water and gnawed through the hose to get the water. I have been told that a rat will cut through a lead pipe under similar conditions. Neither of these two service calls could be blamed on the cabinet, but we had them nevertheless.

A questionnaire sent to our dealers using iceless cabinets shows current cost on an 8-hole cabinet to be from 8 to 15 cents per day.

Customer or Dealer Benefits.

1. Increased sales, ranging from 20 to 60 per cent increase over corresponding period last year. This increase may be explained by dispensing a more uniform ice cream; uniqueness of equipment acting as an advertisement in the community and greater interest and enthusiasm by the dealer himself in selling ice cream.

2. Less shrinkage suffered by the dealer because of uniform consistency.

3. Improvement in sanitary conditions around the store.

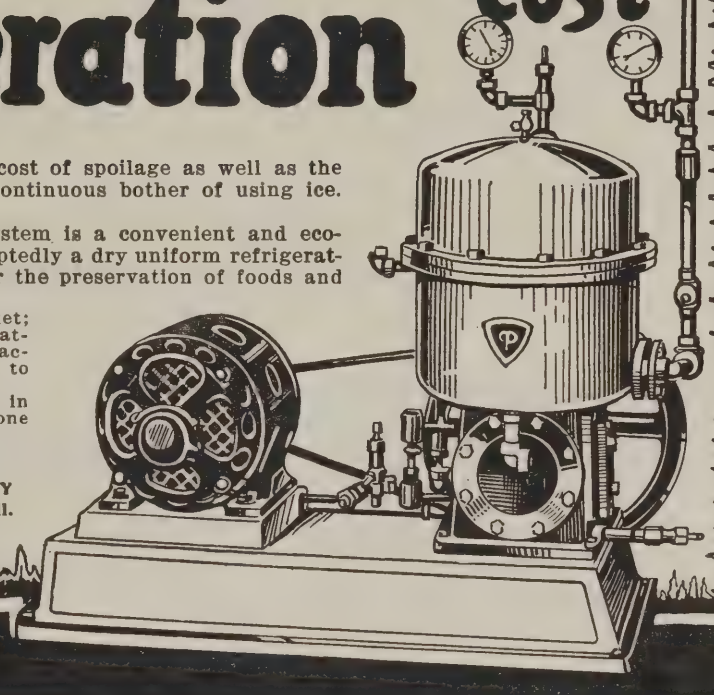
Pride and Profit

"IN OUR opinion the greatest curse of the ice cream industry today is the economic evil of continuing to serve the small dealer for the sake of gallonage or a puff to your pride by seeing a large number of signs. There are two things in business and both begin with the same letter—Pride and Profit. It is always better to sacrifice the former to obtain the latter. If after a trial in hot weather, the small dealer does not sell 15 to 20 gallons a week, we drop him. He not only is unprofitable from the dollars-and-cents standpoint but by usually serving the public with a product inferior to that which left the plant, he injures not only that particular manufacture but the industry as a whole. Serve that kind of stuff and you won't please all:

"Because of such conditions we have decided not to install an iceless cabinet unless the dealer has sold as much as 1,000 gallons a year, or in the case of a new dealer, we feel reasonably certain he will sell that much."—E. N. Hershey.

* With The Hershey Creamery Co., Harrisburg, Penn. Submitted to national convention at New Orleans in November.

Dependable Refrigeration at low cost



that pays for itself by eliminating the cost of spoilage as well as the ice-bills, to say nothing of the dirt and continuous bother of using ice. Has a capacity of one-quarter ton.

The *C P* Electrical Refrigerating System is a convenient and economical method of producing uninterruptedly a dry uniform refrigerating temperature, which is necessary for the preservation of foods and food flavors.

Connects with your electric light socket; regulates and controls temperature automatically; furnished complete with all the accessories and equipment, ready to connect to ice box or refrigerator.

We have 5,000 refrigeration systems in successful operation and guarantee this one in every respect.

THE CREAMERY PACKAGE MFG. COMPANY
61-67 W. Kinzie St. Chicago, Ill.

GLASCOTE

Type "J" Tank

You either visited the Milwaukee Dairy Show or have since been informed of the wonderful progress made in Dairy Equipment in the past year, more especially in the field of Glass Coated apparatus.

The Glascote Company has developed many new and economical features that have been previously considered impossible in this type of equipment but records made and customers satisfied beyond their expectations are the proofs of economical, sanitary operation with the resultant dairy product of quality to present to your consumer.

As the source of supply of Glass Lined apparatus is so limited you cannot afford to overlook The Glascote Company when in the market for your requirements of sanitary dairy equipment, as quality and simplicity of operation are points to be investigated.

THE GLASCOTE COMPANY

EUCLID, OHIO

[WRITE AT ONCE FOR PARTICULARS OF THIS LATEST IMPROVED GLASS LINED PASTEURIZER]

One dealer told me personally that for the first time in four years he had a dry floor.

4. Saving in labor in looking after the cream, for it has been our experience that a successful dealer using ice and salt always spent considerable time in caring for his cream.

Because of these different advantages to the dealer, we are positive in our view that if the manufacturer makes the investment, the dealer should pay for the operation as his share towards the benefits obtained.

By means of the iceless cabinet we have been able to save over ten cents per gallon on our shipping trade. We use the iceless shipping container, no ice, no salt, and a saving from 8 to 10 cents per gallon in express rates; also the time saved in packing the ice cream.

THE iceless cabinet may reduce some of the small dealers' troubles, but it will not eliminate them. It is here to stay and it is up to the manufacturers themselves to make it a menace or blessing, depending on how and where it is installed.

Intelligent Co-operation with Competitors is Necessary to Placing Cabinets Advantageously

*By L. S. WILSON**

THE company that I represent belongs to the class of smaller manufacturers, our yearly gallonage approximating one hundred thousand gallons of ice cream. We are located in Port Huron, Mich., situated just 60 miles above Detroit. The "hot-bed of mechanically refrigerated cabinets." Our population is twenty-five to thirty thousand and our city limits stretch along the river and lake front a distance of about 13 miles. Our city is made up of exactly eight sections with little or nothing in the way of ice cream stops between these respective sectoins, so it is only perfectly natural that we should have, with such a layout, more than our share of delivery problems.

In December, 1923, when we decided that we might solve some of our delivery problems with the use of these cabinets, we had a meeting with our only local competitor and threshed out the situation pro and con. We then started making installations only to our own established stops and only where we could see a semblance of a saving to us.

We have not yet, nor do I believe we ever will, take a customer away from our competitors on the basis of furnishing that customer with a mechanical cabinet.

OUR installations started in January, 1924, and continued up to about June 15, at which time we had in operation 35 cabinets, having our local busiess about one-third equipped. In making our installations we have not gone to any expense whatever in tearing our or rebuilding soda fountains, back bars, etc., but have put it entirely up to the customer to provide a space for the cabinet. In each and every case our dealers pay the cost of electric current and furnish the water for the cabinet.

Our shipping or country trade with whom we have a few cabinets installed pay us an advanced price of around ten cents per gallon for ice cream besides paying the electric and water bills. Our policy being to charge them the same rate as we do our city trade and we pay the transportation charges, giving us as I stated above an average of about ten cents per gallon for the use of the cabinet. Whether or not this will cover our expense remains to be seen from further experience.

When I was figuring depreciation on the basis of 33⅓ per cent, my eyes rested upon the figures for repairs. By that I mean the parts that we had purchased to keep these cabinets running for the period up to November 1, and the amount of that account was was exactly $9.35. In view of that figure I could not see how I could stand before an intelligent audience such as this and try to charge off 33⅓, or even 25 per cent, depreciation and hope to appear anything but ridiculous. I might add here that for bookkeeping purposes I am very pessimistic and 33⅓ will suit me perfectly, but for a little more optimistic practical purposes I am

We have been called by the customer for service just five times and in none of these cases was it necessary to break into the gas line of any machine, nor was it necessary to remove any ice cream from a cabinet. We have not had a gallon of ice cream, either brick or bulk, come back to our plant during the past season from any stop having a mechanical cabinet.

WE HAVE made it a practice in most cases to inspect the cabinets about every four months, checking the oil and motor brushes. We also make it a practice to remove the motor brushes and put in new ones whenever it appears that there is a possibility of their not lasting until the next regular inspection trip. It

(Continued on page 76)

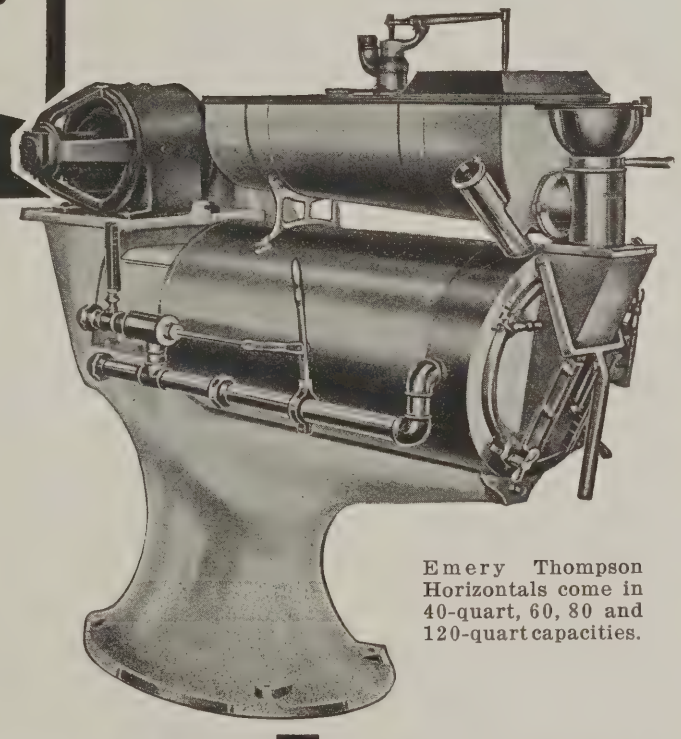
The Dealer's Attitude

"Some of you, I know, are wondering just what the dealer's attitude is on the subject (of the iceless cabinet) and whether he wants one when he has to pay the operating cost on it, and, in some cases, an increased rate for his ice cream. In order to get at this intelligently I put out a questionnaire to fifteen dealers, large and small, local and shipping and shopping, all of whom had cabinets during the past season. Fifteen replied that they preferred iceless cabinets. Fifteen answered that consumption of water is of no consequence. Fifteen reported having heard customers express a preference for ice cream coming from these cabinets. Fifteen said they get from 5 per cent to 25 per cent more servings from a given amount, due to the uniform conditions of the ice cream—most of them around 10 per cent more."—LeRoy S. Wilson.

* With Wilson Ice Cream Co., Port Huron, Mich. Submitted to national convention at New Orleans in November.

That is a fine slogan!

We firmly believe that, with some advertising "steam" behind it, a noticeable gain will be enjoyed by all worthy makers of ice cream. We shall do what we can to make it ever a reality by building freezers that produce a quality cream that will *"please all."*



Tell that story to your customers!

Throw it on the screen!

Put it in the newspapers!

Post it in the stores where your product is retailed!

And watch business hum!

Emery Thompson Horizontals come in 40-quart, 60, 80 and 120-quart capacities.

EMERY THOMPSON FREEZERS

"Have you had your iron?" sells tons of raisins.

"Drink an orange!" distributes carloads of this golden fruit from the South and West. "Serve it—and you please all" will market millions of gallons of cream if ice cream manufacturers and their allied dealers get behind the slogan, see that their cream comes up to it in quality, and tell the world about it in advertising.

Have you faith in the growing future of your own industry? Aren't you confident enough about better business in 1925 to send for the Emery Thompson freezer catalog now?

Manufacturers Should Own Cabinets Outright

Equipment Maker Must Co-Operate with Manufacturers to Keep Control of This Equipment, Declares Milwaukee Manufacturer

*By CONRAD BLOMMER**

THIS spring we are again confronted with the problem of increasing our facilities for handling ice in each of our three plants which led up to the question as to the advisability of building ice plants, and also because of the expansion in our business, we were further faced with the necessity of purchasing more trucks. At this juncture, the mechanically refrigerated cabinet furnished the solution. We determined to purchase numerous small ice plants in the form of mechanically refrigerated cabinets and place these with our dealers. At the same time the truck problem was also solved, for we found that we could add to each route eight to twelve iceless cabinet stops over and above the customary number of regular ice cabinet stops without in any way handicapping our service.

These are the two reasons that led us to the immediate adoption of the iceless cabinet. There is, however, another. Most everybody will admit that the method of icing up a cabinet with crushed ice and salt is at its best a very crude and clumsy one. It is not in harmony with all the modern mechanical improvements in every other phase of the ice cream industry. It is way behind all modern methods and inventions made use of in the home, on the farm and every kind of manufacturing plant. The method of preserving ice cream for the dealer, which has until the present been most exclusively used, differs in its essential feature very little from the methods of keeping cool foods, used over 1,000 years ago when rulers had their slaves bring in ice and snow from the mountains and pack this around the foods they desired to preserve.

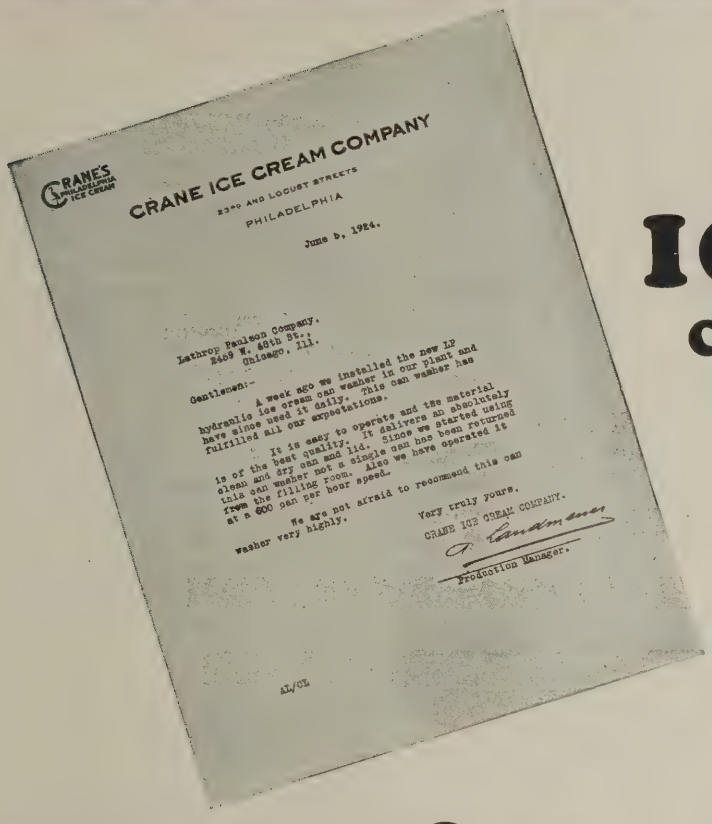
Aside from some improvements in insulation, it appears that very little progress has been made in this important phase of our industry. We have come to regard the mechanical unit a distinct advancement for the ice cream industry and a great marketing aid. The inherent nature of ice cream requires it to be kept in a condition of preservation different from any other food. It is essential that this important food be sold to the consuming public in a state of the greatest palatability. This has been the constant aim of the ice cream manufacturer. The achievements in the direction of flavor control, the improvements in manufacturing equipment, and the use of the best and proper ingredients have all been in that direction.

Every possible care is given the raw materials from the time they enter the factory through the various stages of manufacture to the finished product—ice cream, until it leaves the factory. But then, should our responsibility cease? The answer to that is that we must not in any way vitiate these efforts by improper and indifferent refrigeration at our dealers. We must see to it that the conditions under which the ice cream is kept at our dealers does not in any way detract from its palatability.

MECHANICALLY refrigerated cabinets offer a means of temperature control that assures the manufacturer that his product will reach the consumer in the same wholesome, delicious condition that it left his factory. Experience teaches that the more palatable a food, the greater will be its consumption. Our experience since last May has substantiated this. In spite of the exceptionally cold and unfavorable summer, at least 40% of our dealers having the mechanical unit have increased their sales, as compared to last year.

The fact that the iceless cabinet is more sanitary than the old wooden and cork box using ice and salt also helps to keep the ice cream in a more palatable state. Many of our dealers have remarked to us on the large number of favorable comments they have received from their customers on our ice cream since we equipped them with one of our units.

We started installing our cabinets about the middle of May, and had the majority set up by the end of June, but continued adding cabinets throughout the summer and are still adding more. Mechanical cabinets, of course, were furnished only to those dealers whose gallonage warranted the investment, who handled cream throughout the year and to city customers only. The minimum gallons per year which would entitle a dealer to one of these units, we placed at 700. We made some deviation, however, from these figures where we found that a delivery saving could be effected on a stop that was some distance out of the way and provision could be made to deliver but three times a week. The dealers at first were skeptical, but it was not long after we had the first few cabinets installed that we were taxed to our limits in trying to keep pace with the many demands for installation.



WE MAKE no rental charge to our dealers for the use of the mechanically refrigerated cabinet, yet where the dealer owns his cabinet, we at first made an allowance of seven cents per gallon, but subsequently in-

Iceless Cabinets Have Made Dealers Take More Interest

"In summing up our experience during the past summer months with the mechanically refrigerated cabinet, we have but this to say, that we think we have made a distinct step toward the elimination of ice and salt in the ice cream industry which eventually will lead to the practical elimination of Sunday work and place us on par with other industries. The elimination of complaints due to soft cream and the decrease of special deliveries have made and ice cream business a more pleasant and agreeable one than ever before, and even if the iceless cabinet has effected no saving, whatsoever, it has accomplished one thing which money cannot always do, it has made a friend out of each dealer to whom we have supplied one of our cabinets.

"The dealer feels that the interest we have taken in supplying him with the necessary equipment to make his sales more profitable by enabling him to supply his customers with a more uniform and palatable product and the increase in convenience by eliminating all dirt connected with the old method of icing up is worthy of consideration."

—Conrad Blommer.

CRANE'S PHILADELPHIA ICE CREAM

CRANE ICE CREAM COMPANY

22ND AND LOCUST STREETS

PHILADELPHIA

June 5, 1924.

Lathrop Paulson Company,
2459 W. 48th St.,
Chicago, Ill.

Gentlemen:-

A week ago we installed the new LP hydraulic ice cream can washer in our plant and have since used it daily. This can washer has fulfilled all our expectations.

It is easy to operate and the material is of the best quality. It delivers an absolutely clean and dry can and lid. Since we started using this can washer not a single can has been returned from the filling room. Also we have operated it at a 600 can per hour speed.

We are not afraid to recommend this can washer very highly.

Very truly yours,
CRANE ICE CREAM COMPANY.
Production Manager.

AL/CL

L.-P.

ICE CREAM

Can Washer and Drier

Fast, Efficient and Fool Proof.

Washes All Sizes of Cans and Covers from 20 qts. Down to 4 qts. Small Cans May Be Washed Together with Larger Ones Increasing Capacity to 1200 per Hour.

Cans Are Fed in and Delivered at the Same End of Machine.

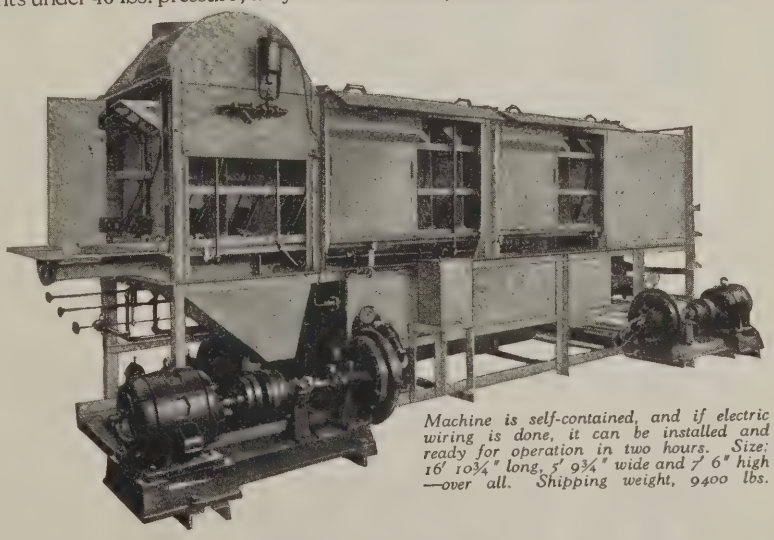
This machine embodies many of the L. P. features of efficiency, simplicity and durability which characterize L.-P. equipment.

600 Cans and Covers or Brick Pans Per Hour

Absolutely Clean, Sterile and Dry

THIS machine has two speeds—600 and 300 per hour. At the 600 speed it will efficiently wash, sterilize and dry all ordinary city and shipping cans, and at the 300 speed it cleans, sterilizes and dries the dirtiest of cans. Handled at 600 per hour, cans, brick pans and covers come from the machine **absolutely clean, sterile and dry.** Cans are washed on outside as well, freeing the cans, lids, pans and covers from brine. This machine eliminates the necessity of washing cans and covers separately. Cans which have been stored and coated with oil do not have to be brush washed. They come out ready for service, or may be piled in storage racks without danger of rust. The machine will also handle brick tanks up to 12-qt. size.

Each Can Receives 17 Distinct and Intensive Treatments



All cans are placed in machine upright. They are first thoroughly rinsed with preliminary tempered water, which thoroughly flushes out the cans, freeing them from refuse. This rinse water is caught in a separate tank and carried away. They are next washed inside and out with six separate intense soda solution treatments under 40 lbs. pressure; they are then entirely freed from soda and thoroughly drained before receiving six clear hot water washes, which are followed by scalding hot unused water rinse. Next comes the steam, inside and out, thoroughly sterilizing the cans, lids, pans and covers. They then pass over two hot air jets (the same as are used on all L.-P. Can Washers) and are delivered absolutely dry and ready for immediate service.

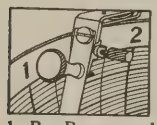
Only two men are required to operate the machine at maximum speed, and one man can handle the work efficiently at the 300 speed.

There are two powerful pumps operated by 10 h.p. and 7½ h.p. motors in separate units. No other power required.

The machine is sturdily constructed and heavily galvanized. Temperatures are thermostatically controlled. Soda solution is automatically controlled by L.-P. patent Soda Regulator.

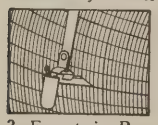
This machine has passed its experimental stage. It has stood the most rigid tests in actual operation, and is sold on a results-guaranteed basis. Write for full information and names of users.

Machine is self-contained, and if electric wiring is done, it can be installed and ready for operation in two hours. Size: 16′ 10¾″ long, 5′ 9¾″ wide and 7′ 6″ high —over all. Shipping weight, 9400 lbs.

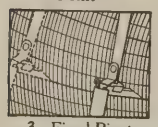


THE LATHROP-PAULSON COMPANY

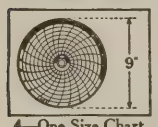
2459 West 48th Street *There Is an L.-P. Representative Near You* **CHICAGO, U. S. A.**



for TEMPERATURE



The FACTS *in the* CASE



1—Pen Pressure and Position Adjustments

2—Fountain Pen Point

3—Fixed Pivot

4—One Size Chart

5—One Turn Chart Holder

6—Improved Case

Inside the case you will find the reason for the extraordinary ruggedness and accuracy of TAG Recorders. By reason of a patented cam arrangement, the TAG is the ONLY Recorder with uniform chart graduations for ALL ranges. A special seasoning process prevents "setting" of the spiral spring. The development of a single-piece welded bulb and of a capillary tube of exceptionally fine bore are other TAG achievements. The following distinctive structural features also contribute to TAG superiority.

1—Pen pressure adjustment and pen position adjustment, the latter providing an exact and convenient means for correcting accidental bending of pen arm.

2—Fountain pen point writes a clean sharp record line and requires less frequent filling. The non-corrodible pen arm is inverted so that ink cannot run down into operating mechanism.

3—Accuracy of time indications is assured by mounting pen arm on a FIXED pivot so that pen point will always follow radial lines of chart (with clock stopped). Positive pen-arm stops, specially designed clock, convenient clock starter-lever are other features.

4—By standardizing on one best size of chart, manufacturing costs have been reduced making possible unusual refinement of construction at the usual price.

5—Improved chart holder, secured to case by light chain, is attached and removed with a single turn. Charts are printed in green ink on specially seasoned high quality ledger paper.

6—Improved case construction incorporating moisture-proof feature, if desired.

TAG DIAL-INDICATING Thermometers embody the same improved construction and operate according to the same reliable principles as TAG Recorders. The exceptionally easy reading dial is a feature.

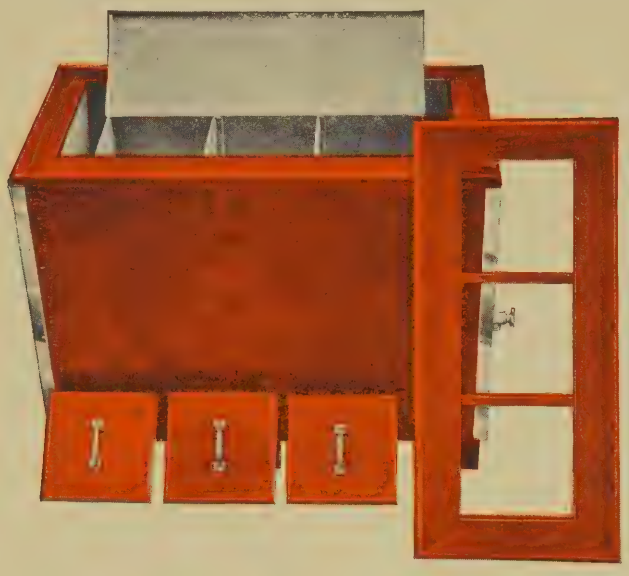
creased this to ten cents per gallon. The dealer in each case pays for current and water. The water consumption in a city like Milwaukee, where the water is very cheap, is of negligible consequence. The running time we have found to be about one hour per hole per day. The running time, according to this, will vary, therefore, from about four hours for a four-hole cabinet to about eight hours per day for an eight-hole cabinet. The current cost on this we have found to be about $1.50 to $3.50 per month per cabinet. Installation costs we found to vary from $25.00 to $50.00, including the cost of permanent electric and water connections. The three makes of cabinets which we are at present using we have found, without exception, to give dependable service and to keep the ice cream hard at all times.

Service calls, after adjustments have been made directly after installation, have been relatively few. In practically all cases service calls were for just minor adjustments. From most of our dealers we have had no service calls, whatsoever, and, aside from making periodical checkups, we have furnished no other service. We have one service man who devotes part of his time to this and who has charge of the repair of our trucks. We estimate the cost of servicing a mechanical unit to be about $30.00 per year which includes labor and parts, labor being approximately one-half.

The question of abuse to mechanical cabinets, especially when the ice cream manufacturer furnishes the unit, has come up from time to time. Abuse of this kind is from two sources: First, by our own drivers, and then by our dealers. The first, of course, can be easily corrected by properly instructing the driver. The abuse in this case usually consists of the drivers not properly cleaning the cans before placing them in the cabinet, which would cause an accummulation of salt in the bottom of the cabinet and cause corrosion of the metal. Whenever our service man, in making his checkup, detected this condition, the driver was reprimanded for it. Abuse by dealers will, of course, be hard to eliminate. Yet, we found in most cases that when the dealer was not properly using the cabinet or storing other foods in it, when we threatened to pull out the cabinet, he usually was willing to co-operate.



I have one example of this in mind, especially where the dealer used the cabinet for storing some meat. The meat froze to the sides and in order to get it out he used a sharp instrument and chopped a hole in the metal lining. We told him that he would have to stand the cost of repairs, to which he at first objected. When we threatened to take out the cabinet, he, however, was willing to assume this responsibility. This incident, at least proved to us that the dealer was well satisfied with the cabinet.

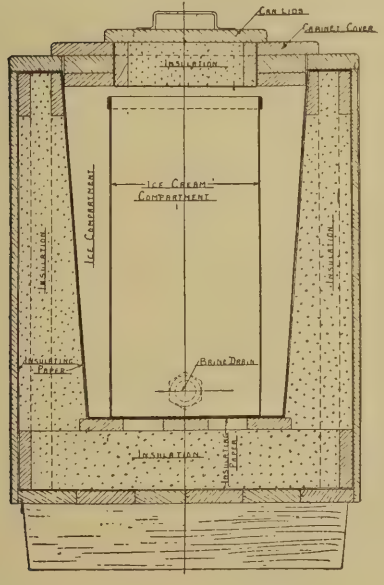
The all-important question with regard to mechanical cabinets is, of course, the question of cost. Will they show a delivery saving? Yet, before I enter this subject, Let me sound a word of warning to both manufacturers of this equipment as well as ice cream manufacturers.

The manufacturer of mechanical units must come to recognize that the ice cream manufacturer is the one most interested in mechanical cabinets and, therefore, must co-operate with him in everyway to keep control of this equipment, at least from the servicing end. We believe that a manufacturer is making a big mistake when he sells these cabinets direct to dealers without service and in this way invites outside service. The ice cream manufacturer being desirous to get his product to the consumer at the lowest possible cost, will be willing and is in a position to furnish this service at cost, whereas, if outside individuals or concerns take charge

Now!

Relief from Extravagant Ice and Salt Bills

No longer need you sacrifice a large share of your rightful profit to refrigerate your cream in dealers' stores. A new ice cream cabinet that gives perfect refrigeration on less ice and less salt than any other has been perfected. In actual service, 50 to 100 of these cabinets will save thousands of dollars' worth of ice and salt for the average ice cream manufacturer every year.



The A-B Ice Cream Cabinet! Designed and built so there is no chance for warm air to get in nor cold air out. An unusually efficient insulating material surrounds the ice and salt chamber on all four sides. Even the lid is fully insulated, and fits tight.

Cream compartments are square and perfectly dry. All sizes of bulk ice cream can be inserted with greatest ease—square pockets permit carrying all packaged cream in compact facility.

A-B Ice Cream Cabinets weigh 10% to 15% less than ordinary pack cabinets, hence you can carry an adequate supply for new dealers without placing any strain on your floors.

Full details and prices gladly furnished on request. Write

This diagram shows why the A-B Ice Cream Cabinet cuts your ice and salt bills to the lowest possible figure. Notice how cream compartments and ice and salt chamber are fully protected against warm outside air.

Anheuser-Busch, St. Louis

Also Manufacturers of ABC Refrigerator Motor Truck Bodies and Wagons

A-B Ice Cream Cabinets

of this end, it will greatly increase the maintenance cost of these cabinets, and if it does not make their use prohibitive, it will at least tend to greatly discourage the early adoption of this sort of equipment.

TO THE ice cream manufacturer it seems to us to be an appropriate time to at least broach the subject of whether it is advisable to furnish the cabinet to the dealers or to encourage the dealer to buy the cabinet. From our point of view, we cannot see any fundamental difference in furnishing the iceless units to dealers than to furnish them with the old type of wooden cabinets, pack these with ice and salt each day, and equip yourself with an ice plant running up in the hundreds of thousands of dollars to manufacture the ice used to keep cool the ice cream for the dealers. We believe that since the iceless cabinet is to be used for ice cream only, the manufacturer should own it and in the case of the mechanically refrigerated fountain should at least have control of the servicing. We do not believe that the ice cream manufacturer should render service on iceless equipment belonging to the dealer without compensation, but we do believe that he should furnish it as near to cost as possible, contracting for a period of a year or so with the dealer, with the provision that this service is rendered to him providing he handles that manufacturer's ice cream exclusively. An ice cream manufacturer servicing a large number of cabinets will be able to service the mechanical equipment for his dealers very reasonably in this way and by contracting with the dealer be assured that he is not servicing a mechanical unit which is being used to sell some of his competitor's goods.

It is this last point upon which I desire to focus your attention, the fact that a dealer owning his own equipment, independent entirely from any ice cream manufacturer through lack of some agreement, either for furnishing the cabinet or servicing the mechanical equipment is liable to cause chaos and confusion in the ice cream industry and which if not properly taken care of of now in its inceptive stage will require a painful operation in the near future. I am alluding to the practice that some ice cream manufacturers are resorting to in order to prevent or avoid the installation of iceless cabinets at their dealers, or in every way refusing to have anything to do with iceless equipment outside of praising and recommending it to their dealers as a great advancement for their business, and backing up their recommendation by allowing them a reduction on their ice cream providing they purchase this kind of equipment. And it is in this matter of allowing reductions for iceless cabinets owned by the dealer that the great mistake is being made.

Early in this paper I stated that the concern that I happen to be connected with allowed at first a seven cent reduction, per gallon, on ice cream to dealers owning the mechanical unit, and afterward increased this to ten cents. Our purpose in doing this was not to encourage our dealer to buy cabinets, for we have sold but two cabinets, and those in districts where it was impossible for us to furnish icing service, but was a temporary subterfuge, even if we must admit it ourselves, to place us on competitive basis with manufacturers who desired to stave off or discourage the adoption of mechanical equipment.

A DEALER who is completely refrigerated and owns the equipment is entitled to a reduction, and to a few dealers of this sort we have been giving a reduction for a period as long as five years,—a reduction which was equivalent to our cost of ice, salt, cabinet depreciation and packing labor which we figured to be seven cents. Yet, when you encourage a dealer to buy mechanical cabinets, say to supplement his fountain, you will come to the question of dual service. Just because a dealer has part of his cooling system mechanically refrigerated, you cannot offer him a flat reduction. Yet this is what some manufacturers appear to be doing, and if allowed to continue will cause almost unlimited havoc. This offering of reduction is but a makeshift proposition and should not be carried too far. If it is found within a few years when we hope ice and salt will be entirely eliminated that a great saving in delivery has been effected, then it should be our duty to give our dealers the benefit of this saving by a uniform reduction in the price of ice cream.

There are several bad features in having no agreement, whatsoever, with your dealers. What is to prevent a dealer owning his own mechanical refrigerated cabinet or fountain and paying for its maintenance from handling say the brick ice cream of one manufacturers, the vanilla of another and the fancy cream of a third? What assurance will a consumer have that the bulk ice cream he is buying is from the same manufacturer, whose signs are on the outside of the store? What are possibilities of inviting competitive companies forming and selling these independent dealers ice cream in paper containers, or, perhaps, inferior quality and at a much cheaper price than you, with a larger overhead, could afford to sell? I leave these questions for you to answer at your leisure while I pass on to a discussion of costs.

What the savings resulting from iceless cabinets actually are is perhaps a little early to determine, but we can point out in what direction the savings effected are. The greatest reduction in delivery cost will be when ice and salt are practically eliminated. Yet our experience has shown us that there is a saving even when only 8 or 12 dealers on each route have a mechanical unit. Another thing in figuring cost on a mechanically refrigerated cabinet, if you must make provision for writing off an expensive ice plant and add this as an item of cost on these units and further take into consideration the gradual decrease in efficiency of the ice plant while you are changing over to the iceless cabinets, and thus not operating this plant at its maximum efficiency, I might say that I am not very enthusiastic about the savings resulting in the first few years of mechanical cabinet installation. In this respect we are fortunate for we contracted for practically all our ice. Yet the fact that adopting the mechanical cabinet may necessitate the scraping of your ice plant, I believe is not an adequate argument against their adoption especially when viewed from the dealer's side of additional convenience and from that of the consuming public's of a better product.

There is, of course, a distinct saving in ice and salt. This, I think, I can best illustrate by giving a few examples. Take for instance one of our stops which I will call stop A. Last year this stop had one four-hole stock box and one triple cabinet; this year we supplied them with one six-hole mechanical cabinet which is taking care of their requirements, and they show an increase in their sales of 32.7 per cent for the months of June, July and August. Stop B last year had three triples; this year an eight-hole mechanical cabinet showed a slight increase of 5 per cent in sales. Stop

Competitors ... how are you fighting them?

THE expansion of your retail sales leads into the homes — where weekly "specials" become the preferred dessert. And there you meet competitors — Cakes, Pies, Puddings — accepted and satisfactory "home desserts" — tasty, nutritious, economical.

But so are your Ice Creams—and in addition they save the housewife all trouble of preparation and are a *greater* treat to all.

Are you telling that story—over and over again? Are you putting that greater sales power—*Advertising*—to work for you? It is the *one effective weapon* against these competitors.

"Kist" users buy Kist Flavors because they are better flavors. But though they are Kist Customers for the Flavors' sake, they value Kist Advertising because it fights these competitors for them. Kist Service gives you—*free*—advertising matter that it would cost you thousands of dollars annually to produce for yourself. It makes practicable for you a consistent campaign that promotes "home" consumption of your products.

Use that service—at least let us fully describe it to you. All you need to do is to fill in the coupon and mail it to Citrus Products Company. Do it today!

Citrus Products Company, Ice Cream Div.

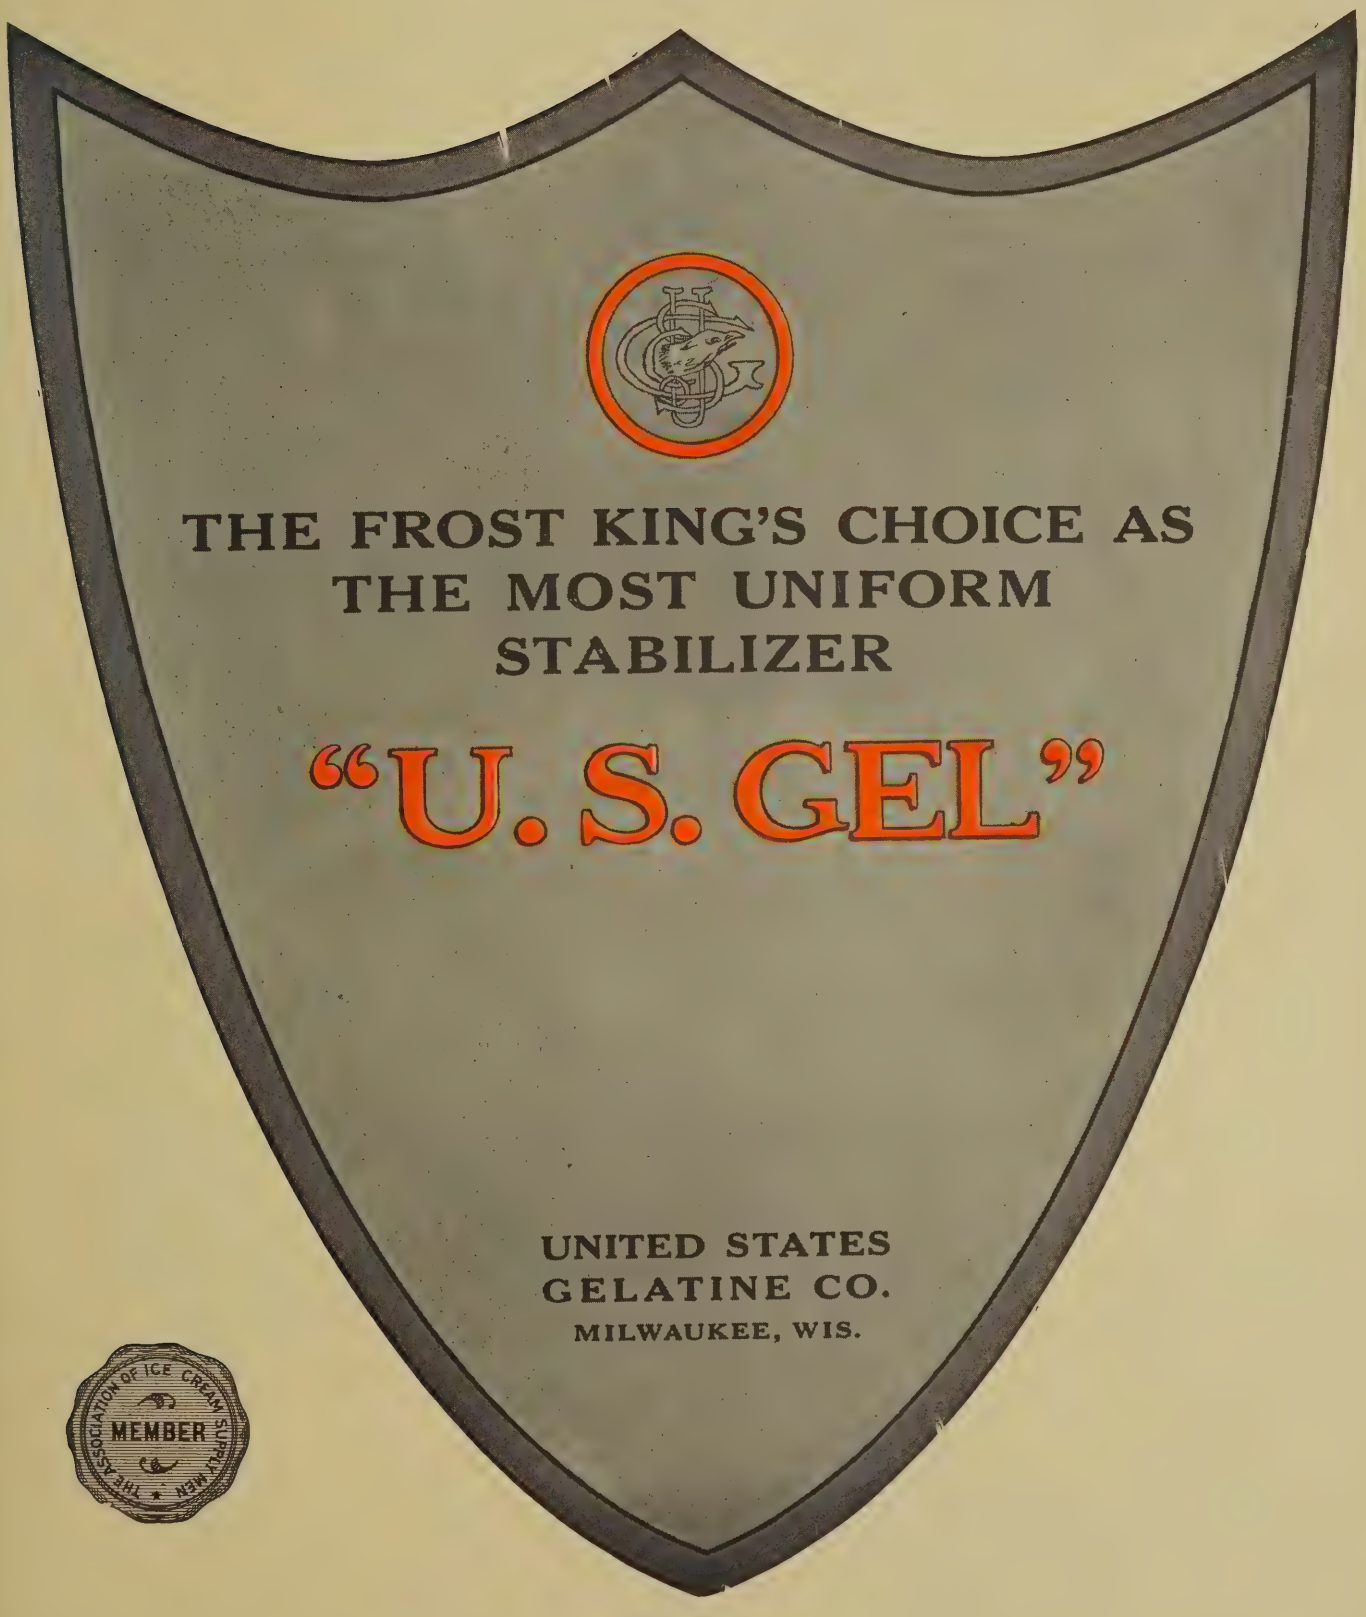
Ucopco Wheel Dried Gelatine

C, this year a six-hole iceless cabinet replaces a four-hole stock box and a double cabinet. Stop C shows an increase of 2.2 per cent in gallonage. Last year we made seven special deliveries to this stop against two this year. Stop D last year had a double cabinet and an old-type two-hole fountain which required about eight pails of ice to pack and then we had frequent complaints that the ice cream was soft. This summer we eliminated the ice compartments of the fountain and put in its place a four-hole unit which takes care of their requirements. This stop showed a decrease of 12 per cent in sales which with the extremely cool summer is better than the average stop. There was also a change in management. These examples are taken at random, and many more could be added, serve to illustrate some of the savings in ice and salt.

THE adding of more stops to a route, of course, decreases all delivery costs per gallon as cost of repairs, depreciation, insurance, gas, oil and driver's wages. Wear and tear on cans is also curtailed. To customers having an iceless cabinet, we have made practicaly no special deliveries. It appears that a customer having a mechanical unit feels himself more safe in taking a supply of ice cream which is a little more than he actually needs for his day's sales, because he knows that the ice cream will keep hard in his cabinet and that he will have no loss due to shrinkage. More customers have found that keeping the mechanical cabinet loaded with ice cream decreases the running time of their machine and, therefore, to effect a saving in current consumption have decreased our special delivery cost and also increased our sales. The sales have increased in this way—The customer being in a position to take in more ice cream is less liable to run short at a time when we cannot supply him with any more by special deliveries. In this way the dealer loses no sales and we also sell as much as possible. We also found that our iceless cabinet stops were willing to handle a greater variety of fancy creams which, of course, also helped to increase their sales. During the month of October, which was exceptionally warm, with approximately 75 more stops than last year and a substantial increase in every dealer's gallonage, we had two routes less than last year. We cannot exactly tell what the saving in this instance was, but there was a saving, our monthly statements indicate.



MINNESOTA CONVENTION IN FEBRUARY.

The Minnesota State Association of Ice Cream Manufacturers will hold its 1925 convention in Minneapolis, February 19 and 20. W. W. Dunn, Jr., president of the association advises that an interesting program is in the making. The president says assurance has been received from the Minnesota Gophers, the supplymen's organization, that they will "entertain the ice cream manufacturers royally."

The New Nicollet Hotel will be convention headquarters. Convention committees are at work in earnest in preparation of the convention, officials say. In addition to Mr. Dunn, other officials are C. E. Kester, Hutchinson, vice-president; Nels Baden, Wadena, treasurer, and J. J. Farrell, St. Paul, secretary. The directors are the officials and Riley Thompson, Albert Lea; Chas. E. Kiewel, Crookston; D. T. Carlson, Willman, and Ralph Nelson, Hibbing.

You can get somebody to sell you anything you want, if you use "The Ice Cream Review" Want Department.

THE BURNING QUESTION—REFRIGERATION.

(Continued from page 52)

"I think somebody ought to throw the cussed things into the river."

"But what are you going to do?"

After a moment's hesitation this manufacturer leaned over and, in a cautious whisper, replied, "We are going to have to take 'em an' make the best of it."

WHETHER or not all opponents of iceless cabinets view the matter in this way is open to debate, but it is felt sure that there is not so much prejudice now as formerly. Many manufacturers who are "holding off" are looking at the situation entirely in the light of what it offers to the advancement of their business. Some are frank to say they cannot see how iceless cabinets would be practicable for them. They are sincere about it; there is no doubt.

One manufacturer recently listened to a salesman go over the whole proposition, outlining and explaining the various angles. At the close of the conference the manufacturer still was at sea. And even after the salesman was gone to provide himself with further figures and records, the manufacturer said, "I don't, to save my life, see how the industry can stand it!"

Can the industry "stand it?" You will hear many different answers to this question at state conventions and at informal conferences this winter, but on the whole it is felt that you will find more manufacturers than you ever thought possible saying they firmly believe in the iceless cabinet and its possibilities. It has been pointed out that on certain routes the cabinet saves delivery costs, and that in other ways it reduces cost. Though, of course, it adds considerable cost of its own.

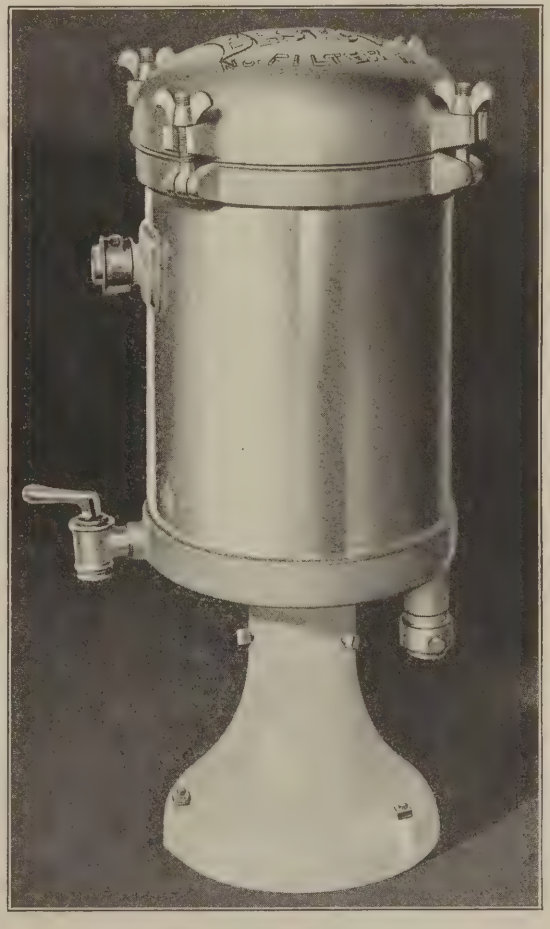
ONE thing is sure—the iceless cabinet certainly reminds members of the industry that the time is at hand when manufacturers should know more about the dollars and cents involved in their business. The cost-accounting proposition has come along in good season. It is apt to throw some very interesting sidelights upon our burning question—mechanical refrigeration.

VERMONT ICE CREAM MEN PLAN STATE ASSOCIATION.

The annual meeting of the Vermont Dairy Plant Operators' and Managers' Association was held at Burlington, Vt., in connection with the short course conference offered by the dairy department of the University of Vermont.

This is the first time that the ice cream manufacturers of the state have ever come together. Over 80 per cent of them were present and sent tubs of ice cream to the scoring which was participated in by a greatly interested group of ice cream men. After this regular meeting a number of the ice cream men got together and took steps toward forming a state association or securing an ice cream section of the Dairy Plant Operators' and Managers' Association.

Every Day in Every Way.—The Aunt: "Yes, Betty, with the new thought one can accomplish anything. For instance, I don't even have to rouge! I simply think a flow of color into my cheeks!"



The Niece: "Gracious! I'm glad I don't have such thoughts as that!"—London Mail.

The List is Growing!

The list of ice cream manufacturers who have recognized the necessity and advantages of filtering their mix is growing steadily longer. When will you be among them?

Start the promising year of 1925 by selling a **filtered** ice cream; make your ice cream as clean as it is possible for any competitor to do.

The investment in a Bestov Filter is small: compared with the advantages derived by its use, it is insignificant. And the BESTOV has some very important features of design that you ought to know about. To be sure of buying right, send for a copy of the Bestov Filter bulletin.

INTELLIGENT CO-OPERATION WITH COMPETITORS IS NECESSARY TO PLACING CABINETS ADVANTAGEOUSLY.

(Continued from page 62)

is just recently that we have found it necessary to replace some of our motor brushes and a little further analysis of our repair bill of $9.35 previously referred to shows that $8.70 of that amount was for motor brushes which have all been put in within the last 30 days.

As stated before I would like to give you all of my figures but in view of the fact that you are better qualified than I to figure your investment and depreciation, I am going to pass on to some of the actual figures on saving as shown in our records.

Our ice cream consumption figures for this year from June to October in comparison with last year are as follows:

Month	1923 lbs.	1924 lbs.	Saving in lbs.	Savings per gallon
June	33	26	7	.018
July	35	25	10	.026
August	36.8	25	11.8	.03
Sept.	44.6	33.5	11.1	.029
Oct.	54	33	21	.055

The amount of the savings per gallon is based on an ice rate of $5.25 per ton. This may appear high to some of you but we make our ice with a small ten-ton outfit and we sell every pound of ice that we do not use in our ice cream department at this figure, which I think is an ideal condition to sit in.

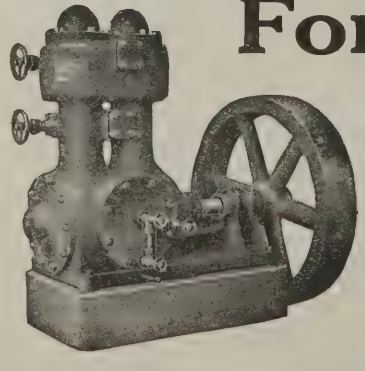
These savings are also spread over every gallon of ice cream sold from our plant whether for city delivery, where we maintain packing service, or for country service where we still ship in tubs. With about 50 per cent of our business as shipping business you can readily see how I could almost double that saving by making a little different analysis.

August figures in this case and the cases to follow are the most interesting to us due to the fact that our gallonage for that month was just about a hundred gallons more this season than it was in 1923.

The total payroll of our shipping delivery departments for the period of the five months above for 1923 was $3,827.64 and for same period 1924 was $2,627.70, a decrease this year of $1,199.94, almost $240.00 per month average. Here again August, which I stated was an ideal month for comparison due to almost identical gallonage, shows a saving of $290.99. An item which does not show in the figures and one which each of you can place your own value on is the cost of the operation of two 1-ton Ford trucks for the entire period as we have operated two trucks less than last year. These savings have not in the least reflected upon our service as we have had fewer complaints on service this season than any time previous during my six years in the ice cream business.

SOME of you, I know, are wondering just what the dealer's attitude is on the cabinet and whether he wants one when he has to pay the operating costs on them and in some cases an increased rate for his ice cream. In order to get at this intelligenty I put out a questionnaire to 15 dealers, large and small, local and shipping, all of which have had cabinets during the past season. To some of you and to me these questions may appear foolish, nevertheless they are the questions that have been put to me by different manufacturers and the replies from my questionnaires may answer some of them for you.

Questions and a brief tabulation of the replies were as follows:



1. Do you prefer the mechanically refrigerated cabinet to old ice and salt cabinet?
   Fifteen answer, yes.

2. Has your cabinet given you dependable service and do you find your ice cream in good firm saleable condition at all times?
   Fifteen answer, yes.

3. What do you estimate the cost of electric current per month and what is your rate per K. W. H.?
   One reports under actual meter test 4 cent rate $1.05 average per month, 6-hole cabinet. Others report various rates from 5 cents to 12 cents with monthly costs from $2.00 to $4.00 per month.

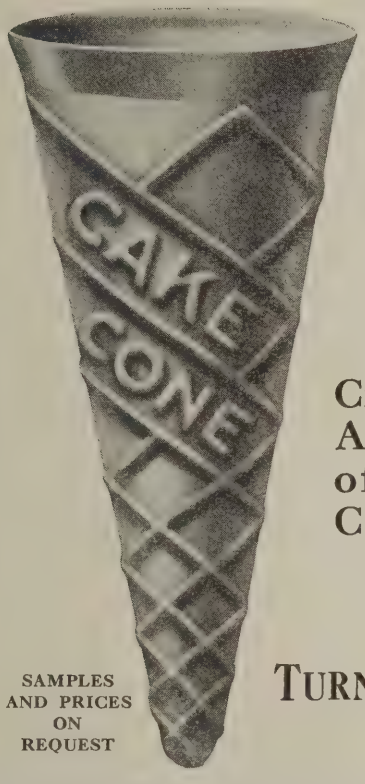
For Lasting Satisfaction



York Refrigerating Equipment

One reason why there are so many installations of York Refrigerating Equipment is that its satisfactory working condition does not pass with the seasons. York Equipment does not mean satisfaction until the first signs of wear show up, but a year in year out dependable service that stands the strain of rush seasons without injury to its long life.

Let us show you just why York Equipment lasts longer.

4. Is the consumption of water of any consequence?
Fifteen answer, no.

5. Have you heard any of your customers express a preference for ice cream coming from these cabinets?
Fifteen answer, yes, some adding several and some stating a great number of customers.

6. Do you estimate you are able to get more servings from a given amount, due to the uniform condition of the ice cream? If so, how much?
Fifteen answer, yes. Estimates varied from 5 per cent to 25 per cent, most of them around 10 per cent.

7. Had weather conditions and general business conditions been normal and with your ability to carry flavors, etc., due to the cabinet, do you estimate you would have been able to increase your business?
Fifteen answer, yes. Nine did show an increase in spite of adverse conditions.

8. Are you in favor of the ice cream manufacturer owning the cabinet and loaning it to you, assuming the responsibility for its operation and replacement, the same as we have done during the past season, or would you prefer to purchase your own cabinet, assume your own responsibility and obtain an allowance in the price of your ice cream to cover your investment?
Fifteen said they prefer our present arrangement of manufacturer owning the cabinet.

9. State frankly your impressions and experiences, favorable or unfavorable, with the cabinet and whether or not you would care to go back to salt and ice method.
Fifteen answer in various ways expressing favorable experience throughout and each stating they would go out of the ice cream business rather than return to salt and ice method.

In closing let me say this: I am thoroughly sold on the idea of mechanical refrigeration; I firmly believe intelligent co-operation with competitors is necessary to the placing of cabinets advantageously to the manufacturer; I firmly believe, and I have good reasons for my belief, that the manufacturer should own the cabinet. If the saving is not sufficient to enable his so-doing, charge some of the expense to that old chestnut called advertising, where it legitimately belongs and if you doubt it belongs there, send a questionnaire to all your dealers having your electric signs, awnings, store fronts, etc., and see if you can get 15 out of 15 to say those items increased their business or held it normal during the past season as our dealers do about the cabinets. I have no argument to offer, if you do not like the idea of mechanical refrigeration, I am for that for you, but for me, I am not going to try to hang on to the wheel of progress, hollering, "Whoa," and looking at a dollar sign.

⚜

EMIL D. FRANCKE PASSES.

A period of 37 years in the ice cream industry was brought to a close on November 9 by the passing of Emil D. Francke, head of the ice cream company bearing his name, located at Saginaw, Mich. Mr. Francke was 65 years old.

Mr. Francke's sons were associated with him in the business, which was operated under the firm name of E. D. Francke & Sons. His business developed from a small beginning to large proportions and was prominent in Michigan ice cream circles.

Mr. Francke was born in Saginaw, May 13, 1859. He is survived by one daughter and three sons, Helene N., Arthur N., Leonard N., and Emil D. Francke, all of Saginaw. He also leaves three sisters.

THE ELECTRICAL ICE CREAM CABINET.

(Continued from page 8)

by the ice cream manufacturer through a special service and repair department which he maintains, or in many cases it is obtained through the cabinet manufacturer's local service representative.

In our opinion the cabinet manufacturer's policy should be such that it can meet the wishes of each ice cream manufacturer as to how the dealers in each particular ice cream manufacturer's territory should be supplied with cabinets.

If the ice cream manufacturer desires the dealer to own his own cabinet, then the cabinet manufacturer should be willing to assist in getting the cabinets placed by direct solicitations, or by giving his co-operative assistance to the ice cream manufacturer, should either be desired by the ice cream manufacturer.

IF THE ice cream manufacturer desires to purchase cabinets and either loan or rent them to the dealers, the cabinet manufacturer should make available for the option of the ice cream manufacturer, in addition to the regular cash terms, a time payment plan which would enable the ice cream manufacturer if he so desired to make partial monthly payments over a reasonable period against a large portion of the total purchase price of the cabinets. This plan would be of considerable help in assisting the ice cream manufacturer to easily and conveniently make the cabinet payments, based partially on the amount of savings of the electrical method over the old method.

Ice cream cabinets come in many models and sizes, both single and double tier, which enables them to be placed either behind the fountain or in any convenient location in the store which should make the dispensing of cream rapid and efficient.

Some cabinets are constructed so that they may be installed as a complete unit or the compressor and motor may be placed at either end of the cabinet or in the basement, or some other place away from the cabinet. This arrangement often is a great convenience when space in the store is at a premium.

There are two distinct types of compressors—one known as the water-cooled, and the other as the air-cooled compressor. They differ little in principle, except the mediums used for cooling purposes. Both types are highly efficient and give satisfactory results. The installation of any particular type should, of course, depend upon the circumstances.

There are several general considerations which should be used as a basis in considering the purchase or endorsement of cabinets:

1. The life of the cabinet.
2. The freedom from trouble and breakdown.
3. The economy of operation.
4. Quietness of operation.
5. The ability to service readily and quickly.
6. The service organization behind the cabinet.
7. The manufacturing and financing organizations which manufacture the product.

In conclusion I want to reiterate that we believe the most good from electrical cabinets will come by electric cabinet manufacturers fitting their sales policies to meet the ice cream manufacturers' according to local conditions. In other words, the cabinet manufacturer should "play ball" with the ice cream manufacturer, both from a sales and financing standpoint.

TEXAS LONGHORNS CONTRIBUTE TO SUCCESS OF TEXAS CONVENTION.

The Texas Longhorns did themselves proud at the 1924 Texas convention. This organization greatly contributed to the success of one of Texas' greatest ice cream conventions.

Hal. B. Cox was elected president, Sherwood L. Quinker, vice-president, and P. F. Williams, secretary-treasurer, for the coming year. Enclosed you will find our menu. Then Bob Pool of the M. B. Ise Kream Co., Dallas, gave a solo, while Mr. Smith of the same company was his accompanist.

a. m. to Sanger Bros. for luncheon as guests of the Dallas ladies. At 8 p. m. all visitors were guests of the Dallas ice cream manufacturers at a Majestic theater party; all attended the five-round boxing bout and battle royal in the junior ball room at the Jefferson Hotel, after which a buffet lunch was served.

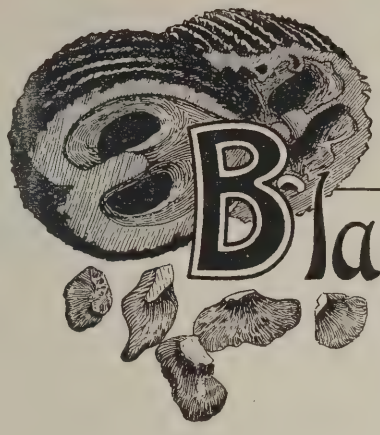
Thursday, at 2 p. m., a matinee party for the ladies at the Circle Theater was provided by the Dallas ice cream manufacturers. Then at 8 p. m. the Longhorn entertainment took place on the roof garden of the Jefferson Hotel. Friday morning, December 5, all visiting ladies were again guests of the Dallas ladies, wives of local ice cream manufacturers and supplymen, at a

Texas Convention Delegates.

The entertainment supplied by the Longhorns as well as the entertainment supplied by the ice cream manufacturers was most enjoyable. "I think Houston will have to hustle if they do as well next year," according to Sherwood Quinker. "We had a bountiful supply of toys, balloons, caps, etc., that were furnished all, cigarettes and cigars were likewise supplied during the evening most freely."

From all accounts the ladies considered they were entertained most royally. Wednesday afternoon, Dec. 3, at 2 p. m., they were given an automobile ride over the city, they having previously been taken at 11:30 breakfast at Stoneleigh Court, during which each lady was presented with a beautiful silver compact and pencil.

At the banquet H. T. Pangburn was toast-master. George Boedecker was called upon and responded in behalf of Dallas. Mr. Ridgeway responded in behalf of the ice cream manufacturers, and Sherwood L. Quinker responded in behalf of the Texas Longhorns, expressing the pleasure of having the ice cream manufacturers as guests and trusting they would enjoy the banquet and dance as much as the Longhorns enjoyed, and would ever enjoy, the entertainments.



MAGNITUDE OF EVAPORATED MILK INDUSTRY.

Appreciation of the immensity of the evaporated milk industry in the United States will be clearer when it is seen that last year's production of 1,400,000,000 cans would make a solid mound of tins twelve times larger than Chicago's Wrigley building with its area of 11,000 square feet and 398 foot tower, or an edifice of similar shape more than three-fourths of a mile high.

The entire production of evaporated milk in cans, if laid end to end, would extend four times around the globe at the equator. It would fill a train of 25,000 freight cars.

"The amazing growth of the evaporated milk industry in the past ten years can be traced to the purity, convenience and flavor of the commodity," declared Herbert C. Hooks, secretary of the Evaporated Milk Association, in an address in Chicago.

Replies to Inquiries

Reply to W. J. B.: I have your letter of recent date in which you have indicated your ice cream mix and also stated that your mix becomes sandy in eight or ten days. I have analyzed your ice cream mix and you will find it given below in table one.

Table 1.

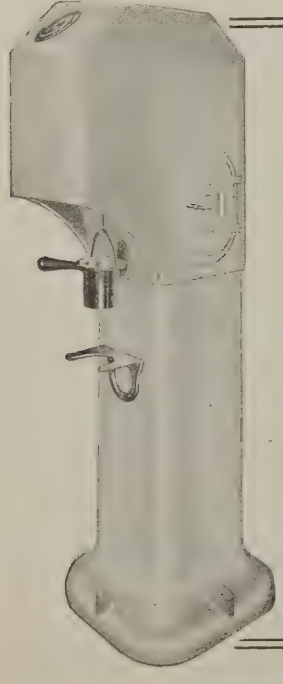
Ingredients	Fat	Serum Sol.	Total Sol.
3 gal. or 25.8 lbs. 4% milk....	1.03	2.20	3.23
1 gal. or 9.2 lbs. cond.....	.....	2.48	2.48
1 gal. or 8.3 lbs. 20% cream...	1.66	.59	2.25
½ gal. or 4.3 lbs. gelatine mix..	.....	.....	.59
7.0 lbs. sugar	.....	.....	6.65
54.6 lbs. mix	2.69	5.17	15.20
Per cent	4.92	9.46	28.00
Gelatine	1.1		

You did not state whether the sub-heated condensed milk you used contained any butterfat and I have assumed in the calculations that it was skim condensed. If that is the case you will note that the butterfat content of your ice cream is only about 5 per cent while the serum solids is about 9.5 per cent. The sugar content is about 13.5 per cent and the total solids only 28 per cent. You will also notice that in making up the gelatine stock, one-half gallon of gelatine would give you 1.1 per cent gelatine which is also very high.

It is rather difficult to say why your cream should get sandy with a serum solids content of less than 10 per cent, except it is possible your sub-heated condensed is very high in solids and also perhaps old before you use it in your mix. I doubt whether after you see the analysis of your formula you would want to continue to use it.

If you will give me the information, stating just what per cent of butterfat you want in the ice cream and the ingredients to use, giving me also the composition of your sub-heated condensed or any other condensed which you might have available, I shall be glad to assist you in working out a satisfactory formula.

* * *



Reply to C. E.: I have your letter of recent date in which you have requested an analysis of your ice cream mix. I am very glad to suggest this analysis to you below in table one. You should have no difficulty in getting a very satisfactory ice cream with this mix.

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
70.0 lbs. sugar	.....	.....	67.50
2.50 lbs. gelatine	.....	.....	2.37
10.00 lbs. skim powder	.....	9.50	9.50
180.00 lbs. 29% cream.....	52.20	11.37	63.57
238.00 lbs. 3.3% milk	7.85	20.50	28.35
500.50 lbs. mix	60.05	41.37	171.29
Per cent	12.00	8.27	34.26

* * *

Reply to A. J.: I have your letter in which you enclosed a statement of your ice cream mix for analysis. You will find the analysis of your mix given below in table one where you will notice that your ice cream will test 13.8 per cent butterfat, 10.3 per cent serum

Sommers Ice Cream Over-run Tester

Tuning In on a Tub

Why throw your old ice cream tubs on the discard? A tub that is leaking or has missing hoops can be re-conditioned and will give many months more of service.

The Gilmour Hoop Machine is in use by many leading manufacturers and is giving their tubs a new lease on life. It's a simple machine any boy can operate, and will last almost a lifetime. Keep your old tubs in good condition with a Gilmour. Buy fewer new tubs, and save money. The Gilmour will do it. Sent for 30 days free trial, upon request.

Gilmour Hoop Machine Company

Owensboro, Ky.

Third St. Masonic Bldg., Ground Floor

solids and 38.2 per cent total solids. This means a rather heavy mix, but should make a very satisfactory ice cream, especially if you require a rather firm product. You could possibly reduce the serum solids at least 2 per cent if you desire to maintain about 14 per cent butterfat without materially affecting the quality of your product.

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
200.00 lbs. skim powder	.....	190.0	190.00
280.00 lbs. sweet butter 84%	253.2	.....	253.20
240.00 lbs. sugar	.....	.....	228.00
9.50 lbs. gelatine	.....	.....	9.02
16.00 lbs. egg yolk powder	.....	.....	12.80
6.00 lbs. vanilla	.....	.....	.90
1088.00 lbs. water	.....	.....	.....
1839.50 lbs. mix	253.2	190.0	693.92
Per cent	13.8	10.3	38.2

Undoubtedly you are able to secure a very high quality of unsalted butter and you probably have difficulty in securing a supply of fresh milk and cream or you would not use butter and powder entirely for your solids.

If I were to make an objection to your method of processing I would state it was not necessary to pasteurize your mix to 170 degrees. This would undoubtedly give somewhat of a heated flavor to your product. Pasteurize to 145 degrees, holding for 20 to 30 minutes, is a more satisfactory pasteurizing temperature.

* * *

Dear Sir:—We want to make an ice cream 13 per cent butterfat. In regard to the condensed milk, we use Borden's unsweetened evaporated milk. I think it is supposed to be 8 per cent butterfat.

Reply: I am glad to give you the following suggestions relative to a good formula for an ice cream mix using the evaporated milk, cream and milk. You will find my suggestions given below in table one:

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
13.00 lbs. sugar	.....	.....	12.35
.50 lbs. gelatine	.....	.....	.47
17.60 lbs. evap. milk	1.4	3.17	4.57
35.00 lbs. 30% cream	10.20	2.21	12.41
33.90 lbs. 4% milk	1.40	2.89	4.29
100.00 lbs. mix	13.00	8.27	34.09

This will make a mix according to your suggestions testing 13 per cent butterfat and containing sufficient evaporated milk to properly balance the mix for serum solids. If you were to reduce the per cent of butterfat it would be necessary to bring up the milk serum solids in order to balance it properly.

* * *

Dear Sir:—We are having considerable trouble with our mix. We cannot control the overrun, getting too much—as high as 115 per cent. Finished cream tastes smooth, but looks course and has neither a good body nor a real good flavor.

The following is our complete mix. 120 gallons.

84 pounds sugar.
3 pounds gelatine.
63 pounds butter (84 per cent).
42 pounds skim milk powder.
108 pounds Armour's evaporated milk.
300 pounds water.

We pasteurize the entire mix, with the exception of the flavor, to 145 degrees, hold 30 minutes before emulsifying, then age 24 hours before freezing. We have

a horizontal C. and B. brine freezer, speed 175 r. p. m., brine 15 degrees.

At about what temperature is it advisable to hold in the hardening room? And also the brine to freezer?

Any help you can give us on this matter will be greatly appreciated. —A. M. H.

Reply: I have made an analysis of the mix which you state one of your customers was using, showing the calculations of this mix in which condensed milk was used. You will notice that this mix tests 15 per cent butterfat and 9.15 per cent serum solids. If the condensed milk was replaced by milk powder and water the ingredients are given below in table two:

Table 2.

Ingredients	Fat	Serum Sol.	Total Sol.
84.00 lbs. sugar	.....	.....	79.80
3.00 lbs. gelatine	.....	.....	2.85
63.00 lbs. butter	52.92	.....	52.92
108.00 lbs. evap. milk	8.64	19.44	28.08
300.00 lbs. water	.....	.....	.....
42.00 lbs. skim milk powder	.....	39.90	39.90
600.00 lbs. mix	61.56	59.34	203.55
Per cent sugar	14.00		
Per cent	10.26	9.89	33.90

The formula in table two will have exactly the same composition as the one your customer is now using.

* * *

Dear sir:—We are sending you the make-up of two different mixes and would like to have you tell us if they lack anything we are not using. The first one shows sandiness at a very early stage. We want to know why. The second does not show as soon as the first one. When you answer please give it in full as I have.

The first batch mix—this batch shows sandiness soon.

30 gallons of whole milk.
30 gallons of skimmed condensed.
85 pounds of sugar.
60 pounds of sweet butter.
3 pounds of gelatine.
3 ounces of Gomper's improver.

The second batch mix—this batch does not show as soon.

40 gallons of whole milk.
20 gallons of sweetened condensed.
85 pounds of sugar.
60 pounds of sweet butter.
3 pounds of gelatine.
3 ounces of Gomper's improver.

—K. A. B.

Reply: I have analyzed both of your mixes and you will find the calculatives given below in tables one and two.

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
30 gal. or 255.00 lbs. 4% milk	10.20	21.78	31.98
30 gal. or 270.00 lbs. cond. skim	.....	72.90	72.90
85.00 lbs. sugar	.....	.....	80.70
60.00 lbs. 84% butter	50.40	.....	50.40
3.00 lbs. gelatine	.....	.....	2.85
673.00 lbs. mix	60.60	94.68	238.83
Per cent	9.00	14.06	35.50
Per cent sugar	12.40		

Table 2.

Ingredients	Fat	Serum Sol.	Total Sol.
40 gal. or 340.00 lbs. 4% milk	13.60	29.05	42.65
20 gal. or 180.00 lbs. cond. skim	.....	48.60	48.60
85.00 lbs. sugar	.....	.....	80.70
60.00 lbs. 84% butter	50.40	.....	50.40
3.00 lbs. gelatine	.....	.....	2.85
668.00 lbs. mix	64.00	77.65	225.20
Per cent	9.50	11.60	33.70

You will notice from table one that your first mix has 14 per cent milk serum solids. This is brought

A Resolution that will pay

"RESOLVED, That during 1925 we are going to do away with leaky cabinet valves and save ourselves and our dealers a lot of trouble, because we will

And, further RESOLVED, That where we have had trouble with lost plugs we will supply only Smith & Mann one-piece valves with 'Security' Plugs."

Sending for a trial order will make this resolution a reality

SMITH & MANN CO.
914 West York St. PHILADELPHIA, PA.

about by the use of the very large quantity of condensed milk and is the cause of your sandy ice cream. The reason your second batch did not show sandiness either as soon as the first is because this mix does not contain so much serum solids. It is also possible that your condensed skim milk is perhaps a little old and you have kept it at a relatively low temperature. This might account for some sandiness in your second batch.

In order for you to eliminate this difficulty it will be necessary for you to use less condensed skim milk. I would suggest that in your second batch you do not use more than about 100 pounds of condensed milk and use a little skim milk powder to bring the serum solids up to about 10.5 per cent or 11 per cent. I believe if you get a product with 10 per cent butterfat and 10 per cent serum solids using part skim milk powder to replace some of the condensed milk you will have no more trouble with the sandy condition.

* * *

Dear Sir:—One of our very old customers has been reading with considerable interest The Ice Cream Review. In fact, copies are on his desk continually and he has asked me to do him a favor and ask Prof. Baer in the department which you are operating to make an analysis of his mix.

He gave me the following formula as being the one which he was using at that time:

350 lbs. 40 per cent cream.
350 lbs. 3 per cent milk.
160 lbs. condensed milk.
140 lbs. sugar.
6 lbs. gelatine.

Also advise to what extent he should add water and powdered milk to still maintain the very high butterfat content of his product, providing he uses milk powder in place of the condensed. He would also like the same analysis made of a mix in which the milk powder is used.

Reply: I have your letter discussing the considerable trouble you appear to have with your ice cream mix, especially in getting too high an overrun and getting a course product.

I have made an analysis of your mix and you will find the calculations given below in table one. The calculations on your mix show that there is nothing wrong with the balancing of the various ingredients.

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
350.00 lbs. 40% cream	140.00	18.69	158.69
350.00 lbs. 3% milk	10.50	30.21	40.71
160.00 lbs. cond. milk	.....	43.20	43.20
140.00 lbs. sugar	.....	.....	133.00
6.00 lbs. gelatine	.....	.....	5.70
1006.00 lbs. mix	151.15	92.10	381.30
Per cent	15.06	9.15	37.80

Table 2.

Ingredients	Fat	Serum Sol.	Total Sol.
350.00 lbs. 40% cream	140.00	18.69	158.69
350.00 lbs. 3% milk	10.50	30.21	40.71
140.00 lbs. sugar	.....	.....	133.00
6.00 lbs. gelatine	.....	.....	5.70
44.00 lbs. skim powder	.....	43.20	43.20
116.00 lbs. water	.....	.....	.....
1006.00 lbs. mix	151.50	92.10	381.30
Per cent	15.06	9.15	37.80

I believe that your trouble is rather in your method of freezing and handling. You stated that you were operating your freezer with a brine temperature of 15

degrees. That is a rather high temperature of brine. I would suggest that you try to run your freezer with an 8 degree brine and freezing your mix a little faster. Ten or twelve minutes should be sufficient time to freeze a batch. I believe you can in that way reduce the apparently high overrun and also get a little smoother product. The temperature of the hardening room should be somewhere near zero. It will not be objectionable to have the temperature 10 or 15 degrees below zero at night and it should not go higher than 5 and at least not higher than 10 above zero.

If you are not able to get a satisfactory smooth product without the use of some improver I would suggest you try using a little improver along with your gelatine.

You stated you also had trouble in getting a real good flavor in your ice cream. The flavor of your ice cream depends upon the flavor of your raw material. It is possible that the difficulty in the flavor comes from the butter you are using or comes from the evaporated milk which has a heated flavor.

* * *

Dear Sir:—First, we think our mix is costing us too much money and then we do not get the overrun that we should.

We are giving you below what we make up our mix with and wish to say that we are using an emulsifier and not a viscolizer or homogenizer.

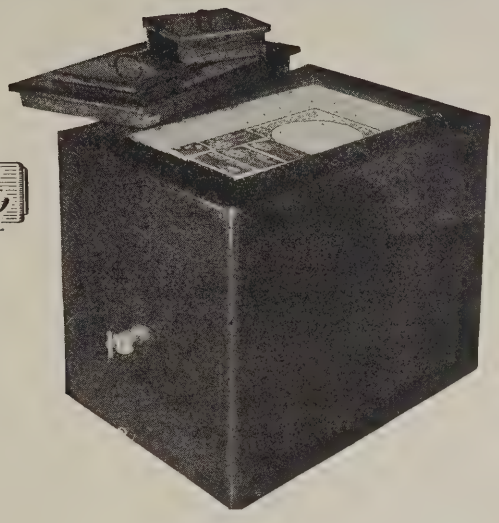
164 pounds 40 per cent cream.
180 pounds 4 to 1 skim. condensed.
93 pounds sugar.
3.5 pounds gelatine.
225 pounds water.

The cream has a good taste and nearly everyone likes it, but it is too grainy, and we just simply can't get the overrun. About 70 to 75 per cent overrun is all obtainable at our present arrangements.

Tell us what we can do with the material we are using to get the proper swell, as well as to eliminate the graininess.

Reply: You will find the analysis of your mix given below in table one.

Table 1.



Ingredients	Fat	Serum Sol.	Total Sol.
164.00 lbs. 40% cream	65.6	8.76	74.36
180.00 lbs. cond.	.....	63.00	63.00
93.00 lbs. sugar	.....	.....	88.35
3.50 lbs. gelatine	.....	.....	3.32
225.00 lbs. water	.....	.....	.....
665.50 lbs. mix	65.5	71.76	229.03
Per cent	9.86	10.80	34.40

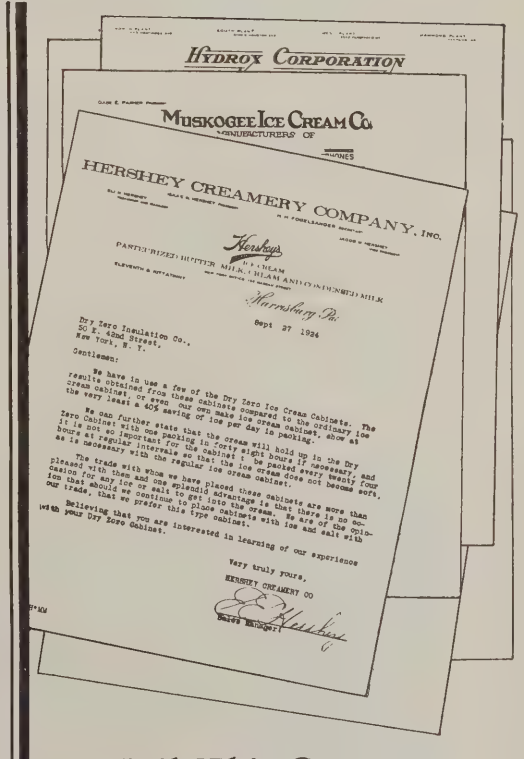
I would state that the ingredients of your mix are very well balanced for about a 10 per cent butterfat ice cream and if this mix is handled correctly you should have no difficulty in getting a satisfactory product.

You stated that you thought your mix was costing you too much, but unless you pay excessive prices for the ingredients as given or have bad competition with cheap, low grade ice cream, the cost of your mix does not appear to be excessive. You should, however, be able to get close to 100 per cent overrun.

You did not state the type of emulsor you are using, whether it is a steam emulsor and centrifugal emulsor. You also did not state the type of freezer you have. If you will give me additional information on the emulsor and freezer I can probably assist you further in overcoming some of your difficulties.

It is also possible that you could improve the smoothness of your product by using a little ice cream improver, as you are perhaps freezing your mix without aging it long enough and the improver would assist you in getting a smoother product and also in getting a little better overrun.

Proven facts



Icing costs *cut* 40 to 50% with D-Z cabinets

Read what reliable ice cream manufacturers say about saving 40 to 50% on icing. Better still, *personally ask any D-Z users* how much they have cut and still are cutting icing costs. Find out from them why installing D-Z cabinets in preference to all others is the best cabinet investment a manufacturer can make. Let them tell you how the money saved in the much smaller consumption of ice, salt and labor pays for the D-Z cabinet within a year from the date of its being put into service.

Get the facts from users of D-Z cabinets—the unbiased story of D-Z's superiority. They will give you PROVEN FACTS for what they will tell you has been shown to be true through the actual operations of D-Z cabinets under widely varying conditions.

Many D-Z users were skeptics of the first degree before putting their original cabinet through rigid tests. Now—just talk to any of them about D-Z cabinets and you'll find that they are enthusiastic over the results obtained.

Order your D-Z cabinet before the spring rush gets under way, that is—right now. Test it thoroughly under *any* conditions you wish to impose. You'll find it will save *at least* 40 to 50% on icing (without being favored in any way) as against the cabinets you are now using.

Gentlemen:

We have in use a few of the Dry Zero Ice Cream Cabinets. The results obtained from these cabinets compared to the ordinary ice cream cabinet, or even our own make ice cream cabinet, show at the very least a 40% saving of ice per day in packing.

We can further state that the cream will hold up in the Dry Zero Cabinet with one packing in every eight hours if necessary and it is not so important for the cabinet to be packed every twenty four hours at regular intervals so that the ice cream does not become soft, as is necessary with the regular ice cream cabinet.

The trade with whom we have placed these cabinets are more than pleased with them and only splendid advantage is that there is no occasion for any ice or any splendid advantage is that there is no occasion for any ice or any splendid advantage is that there is no occasion for any ice or any

The Evils of Overloading

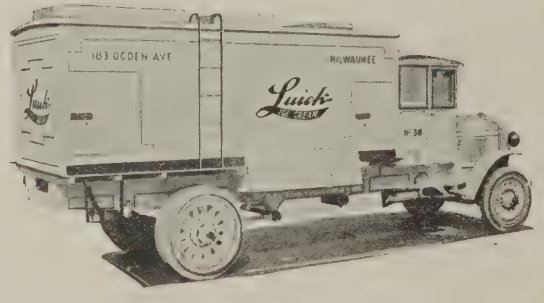
Life of Ice Cream Truck is Shortened by Overloading

*By ROBERT O. PATTEN**

FOR many years the appeal has been made by the makers of motor trucks to load the vehicle to its rated capacity. It is a discouraging fact that in many instances this advice has been disregarded, with the result that the motor truck industry has been injured. The cure for the evil of overloading does not appear to be immediately in sight, but experience, coupled with expense, is a great teacher, and there are hopeful signs for the future.

Just how has this condition of overloading become common practice and been permitted to grow? The burden in this respect should not be thrown entirely upon the truck owner. In many instances the enthusiastic and more or less ignorant salesman has made extravagant claims for durability and excess capacity, which have later on been carried out in practice by the owner. Then, again, competitive haulage—especially on a tonnage basis—has been an incentive for the owner to overload his truck with the idea that he was receiving an increased revenue for so doing. Whether the owner needed much urging to bring him into the class of overloaders is a question, but the fact remains that there are many cases of this kind, with very little being done to stop it.

*Truck sales manager, The Pierce-Arrow Motor Car Company, Buffalo, N. Y.



MOTOR truck owners' attention should be directed to the fact that a motor truck may be compared to a bridge, both structures being built with clear engineering thought of the capacity of load they will safely and economically carry. It is a common sight to see a bridge placard notifying the public that the capacity of the bridge is safe for a certain tonnage. It is a rare thing to see the same caution used with a motor truck, and still both are instruments for carrying weight.

It is generally a fact that those who are most prone to seriously overload, are also guilty of the other evils of truck operation, viz., overspeeding, lack of lubrication and general lack of proper upkeep. It is usually found that the overloader keeps his equipment in mighty poor shape, and is quite consistent in his bad business practice. In fact, the serious overloader is gradually being placed in the undesirable class by truck dealers, because this type of user is too expensive to service.

In conference with many of the largest truck operators in various lines of business all over the country, their views, based upon years of experience, lead them to state that overloading does not pay. It may be inviting in temporary instances, but continuous practice invites inevitable loss. To overload trucks is merely another way of materially shortening their useful life as well as decreasing their range of activity. An overload increases the stresses in the weight carrying members, and causes excessive breakage of parts. The depreciating point is so high that it is nearer the danger point. The successful operator of motor trucks rarely overloads, feeling that the slight advantage in tonnage which he might temporarily gain is more than offset by longer life of the truck, lower maintenance costs and reliability in times of need.

NATIONAL ADVERTISING PROGRAM TAKING SHAPE.

(Continued from page 12)

It remains to be seen whether the rank and file of this industry can match in breadth of vision the rank and file of other industries that have succeeded in national advertising. In other words, this is a program that requires money. And more money is needed.

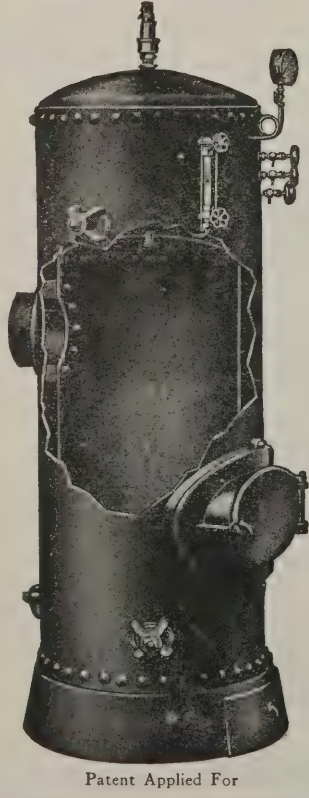
Delegates at different state conventions in December heard Mr. Schwindeler go into this matter thoroughly. From New Orleans he went to Dallas to put the matter before the members of the Texas association.

FROM Dallas, where Mr. Schwindeler addressed the Texas association, he went to Des Moines to address the Iowa convention. From there he went to the Kansas convention. As time and circumstances permit, he will visit every convention this winter on his mission.

It was explained in the December issue of The Ice Cream Review that the association is moving to put over a half-million dollar advertising program. The preliminary work is out of the way. Slogan has been selected. Virtually every member of the industry by this time is familiar with the design which shows a dish of ice cream and bears the words—"Serve it and you please all."

A small idea of the work that Mr. Schwindeler has done in the background of this movement was given the thoughtful delegates at the national convention in November when a certain member expressed his opinion with regard to the money to be subscribed for this campaign. Without an instant of hesitation, Mr. Schwindeler assured the convention in general and the gentleman in particular that "$10,000 would not pay for the work that the advertising committee had done on this matter." This work, of course, was done without pay.

N THIS connection it is worth-while to recall the statement in the president's annual address concerning this program. President Hovey speaking as follows with regard to national advertising:



"Possibly it has been the thought that but little work was required of our committees, and I cannot but smile when I think of the sort of job that was handed to Mr. Schwindeler, as chairman of our advertising committee. Most of you who buy advertising for your own needs, know the demands made upon your time in considering the advertising that is offered to you. If you will visualize the magnitude of plans that fit in well with national advertising for any industry, you will appreciate that our advertising committee has had to do an enormous amount of investigational work; has undoubtedly been required to give time to a vast number of advertising men who want to sell their own ideas; and has also had to take care of a volume of correspondence that has been mighty burdensome. Very naturally, I am particularly anxious that the workers for your association, this past year, may establish an unprecedented record for vision and constructive work. Your advertising committee is coming to you with a definite constructive plan, and with a prayer on their lips that we may have the vision to gamble a little, if necessary, in the endeavor to ascertain the real possibilities of our business.

"While national work runs into large figures, it is a fact that per capita cost is infinitely smaller than can be obtained in any worth while individual effort. Co-operative work gives greater value per dollar of expenditure than can be obtained in any other way. I feel that we are fortunate in that we are marketing a milk product. Milk is undoubtedly the greatest food that we have, and we must give credit to the milk men for capitalizing this fact. They are educating the people to the value of milk, and progress is being made as is evidenced by increased consumption everywhere. It is the greatest food in the world and people are beginning to know it. Consequently, I feel that we should, more or less, hitch our wagon to the Milk Star, and follow the lead of the milk men in telling the world that we have a wholesome, healthful, body-growing food. There is no question that people eat ice cream because it is delicious. Consequently, I feel that we are wasting our money, to some extent, in talking all the time about the deliciousness of our product, which is a fact generally accepted by the public, and feel that we would be doing more for ourselves if we could lay off a little in our talk on the deliciousness of the product and say more about its food value.

"People are just naturally going to buy a delicious product more readily if they also feel that they are getting a real healthful food. Many people realize that ice cream is satisfying food, not because we have done very much to tell them about it, but simply because they know it to be a fact. Let us make a stronger appeal along this line. I believe there are great possibilities from advertising, if we do the right sort of advertising. Let us give a full measure of appreciation to Mr. Schwindeler, and his associates on the advertising committee, and let us have enough vision to avoid being too conservative in considering the recommendations they are to give us."

The president also expressed confidence that the

A TRIP through the JAMISON PLANT

Conducted by Mr. J. V. JAMISON, Jr.

Mr. J. V. Jamison, Jr., President of the Jamison Cold Storage Door Company, has been very active in the Company's management from the day of its organization in 1906.

DURING the past 18 years, I suppose I have talked to something like 9,999 plant owners and engineers about cold storage doors. And I would guess that in 9,998 instances I have wished for some way to take these same plant owners and engineers through our plant, showing them step by step exactly what goes into a Jamison Door and **how it goes in.** But since such a personal excursion isn't possible, we've decided to do the next best and offer an inside look via our advertising. At least we can cover the high spots.

In the large room shown above, our automatic machines fashion and size the lumber. Every panel or brace must fit perfectly, which means that a cracked or knotty piece is rejected instantly. The exterior of every Jamison Door is made of No. 1 clear yellow pine. The back is of select spruce, cypress or pine at the manufacturer's option. The kind of lumber we use is just **one** reason why our list of some 15,000 customers includes the largest users of cold storage in the world. Next month, we'll give you others, **equally good.**

"A Franklin Cane Sugar for every use"

slogan adopted by the ice cream industry would become a household phrase in connection with ice cream, but—

"Just to the extent that you give it publicity. If used by ice cream men everywhere all the time," the president continues, "it will mean as much to our industry as other slogans have meant to other industries. Only those who had an opoprtunity to take a look at Ed Sutton's office during the solgan campaign can have any grasp of the amount of work involved in handling tens of thousands of letters. It required real organization to handle the job, and in return for the self-sacrifices of Mr. Sutton and his associates, you owe your loyal support in putting the slogan across."

IN THE report of Chairman Schwindeler, it is pointed out that the committee had come to the conclusion that no one was so well prepared to interpret ice cream to the public as someone who was, or had been, associated with the industry, and who understands the problems and the difficulties. Such an individual, Mr. Schwindeler said, had been forthcoming in the person of F. W. Gentleman of the Gardner Advertising Co. of New York, Chicago and St. Louis. This man is known to many ice cream men of the country. He is experienced in the manufacture and merchandising of ice cream.

As reported in the December issue of The Ice Cream Review, the association adopted the committee's recommendation that the advertising matter be placed in Mr. Gentleman's hands. In that issue we also gave an outline of Mr. Gentleman's speech in which he told the possibilties through national advertising. This man has made an analysis of the industry's failure to show a proper growth in the last few years. A detailed study of the methods employed by other important industries along the co-operative line, this work extending over a period of many months, a plan was worked out at a meeting in New York City last summer, attended by directors of the supplymen's association, the national association's advertising committee, and Mr. Gentleman himself.

This meeting resulted in a pledge from the directors of the supplymen's association of an effort to raise one-half of one per cent on forty per cent of the sales to the ice cream industry, if the ice cream men themselves could match it with a sum equal to one-half cent a gallon on forty per cent of the estimated gallonage. This will provide a fund for defraying the entire cost of the national advertising campaign.

UNEXPECTED objection came at the convention to the supplymen's part of the advertising program. A Chicago ice cream manufacturer, among some others, declared that the members of the ice cream industry, that is, ice cream manufacturers themselves, should feel fully capable of handling their own burden without asking the supplymen to "kick in."

At this junction, President Hovey explained that there was a misunderstanding on his part. He said that the supplymen were contributing only in proportion to the extent to which they would profit.

This is the way the situation stands at this time: The ice cream industry is being called upon to support a proposition that has required many, many months of hard, earnest labor in shaping up to be put in actual operation.

PROFITS OF TOMORROW IN THE ICE CREAM INDUSTRY.

(Continued from page 14)

the report of each sub-committee. This will work for complete co-ordination. It is believed the result will be "a complete work of inestimable value to the membership." Speaking of results, the speaker said:

"The result of this work 'will be finally presented in the form of an accounting manual. This manual will give the members of this industry the recommendations of the cost accounting and advisory committees with respect to the accounting procedure that is to be followed by the members in order to obtain uniformity of method in the figuring of costs.'

S. T. NIVLING.

"The manual will set forth the findings of this committee as the result of its investigation. It may also be considered a text book that will make clear the accounting principles and practices to be followed to bring about 'uniformity of method.' In other words, it might be considered a hand book for reference by the accountants of the industry for the determination of approved practices in various accounting matters.

"It may be well to give a definite definition of cost accounting. 'Uniform cost accounting comprises a set of principles, and in some cases of accounting methods, which, when incorporated in the accounting systems of the individual members in an industry, will result in the obtaining of cost figures by the individual members of the industry which will be on a comparable basis.'

"It is well to emphasize here that it is not the intention that the ice cream manufacturers should discard their present systems, and put in an entirely new system of accounting, but it will be the effort and the intention of your committee to avoid this by adopting a **classification of accounts under proper headings** so that each manufacturer, when discussing his costs with his competitors, will be able to 'speak the same language.' The result will be that manufacturers can intelligently compare their costs by departments, and by individual expense items."

This method will require much time and careful and continuous attention to carry this work to successful conclusion, the chairman of the committee declared. The committee was convinced that the increased knowledge and control of business to be derived will justify the time and expense required to get it in complete form.

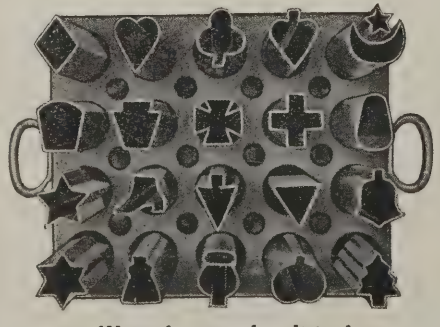
In connection with this work, readers will be interested in excerpts from a discussion of this subject by the Fabricated Production Department of the Chamber of Commerce of the United States. In a recent booklet entitled, "Uniform Cost Accounting in Trade Associations," this organization refers to cost accounting as being "Of the industry, by the industry, and for the industry."

THE mainspring of cost accounting activities, according to the United States Chamber of Commerce, is the cost accounting committee, which points out that cost accounting is carried on in the same manner as any other co-operative activity within a trade association—through the joint endeavor of those members of the industry whose interest is keenest and whose knowledge and experience are most valuable.

Three distinct steps are involved in the carrying on of cost accounting work in a trade association, the booklet points out. These steps are:

"First, it is necessary to arouse interest; second, comes the cost committee and its work, and third, there are the problems incident to securing the acceptance and use of the technique devised by the committee. These three steps taken together constitute the typical plan for cost accounting activities which is outlined in another pamphlet."

An earlier booklet, published by the Chamber, entitled, "Uniform Cost Accounting in Trade Associations—Organizations of Activities," defines the meaning of uniform cost accounting as follows:



"Uniform cost accounting comprises a set of principles and, in some cases of accounting methods which when incorporated in the accounting systems of the individual members in an industry, will result in the obtaining of cost figures by the individual members of the industry which will be on a comparable basis. Uniform cost accounting does not mean the preparation of average or standard cost figures for the industry, nor the inclusion in cost of predetermined or fixed elements of cost."

MUCH interest is being taken in this important work now being carried on, and the ice cream industry at large awaits with great anticipation future develops.

Thomas J. Bolitho, manager of the accounting bureau of The International Association of Milk Dealers, Chicago, Ill., gave an interesting outline of this matter at the national ice cream convention:

"The term accounting has been variously defined and is referred to as a science, but we are more interested in the aim of accounting, rather than in its definition, or the attempt to justify this branch of human endeavor as a science.

"The aim of accounting, as is well known, is to fur-

nish management with figures, facts and information, at the earliest date possible, reflecting financial position, operating condition, and the results of past action, in order that management may operate more efficiently, more economically and more wisely in future periods.

"It has been said that the accountant should not attempt to prophecy the future, yet the accountant is obliged to point out to management those policies which, in his opinion, are wise and those policies which are unwise as he finds such policies reflected in his figures."

The speaker said the aim of cost accounting, briefly, is to furnish figures, facts and information to management, showing the cost of producing and selling each unit of product. He believed such information leads to elimination of unprofitable products, "as far as competition permits," to reduce and stabilize the cost of production and selling, to stabilize, not to standardize, selling prices, and, consequently, to stabilize profits, which may be considered as the return to capital, after land has had its rent, (speaking economically) after labor has had its wage, and after management has had its salary.

Cost-Accounting Developments.

Proceedings of the Chicago Conference on Uniform Cost Accounting, constituting a compendium of the progress made in this field in widely varying lines of industry, were, as announced by the department of manufacture of the Chamber of Commerce of the United States, made ready for distribution about December 6.

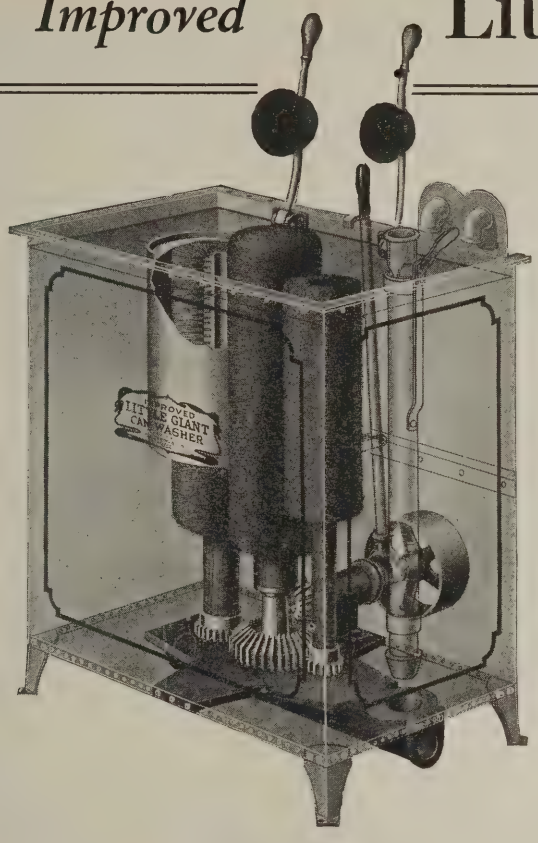
The proceedings include surveys of cost-accounting developments in the printing ink, fresh milk, corrugated and fiber box, printing, rubber, millwork, photo engraving, drop forging, prepared roofing and other industries. An address by J. W. O'Leary, vice-president of the Chicago Trust Company, on the relation of financing to cost-accounting, is also included in the report.

Practical methods by which various problems arising in the development and installation of uniform cost systems have been solved by different industries are explained in the proceedings. Copies may be obtained from the Department of Manufacture, Chamber of Commerce of the United States, Washington, D. C.

HE SPOKE of the much latitude for the accommodation of the standard system to peculiar accounting requirements, stating that there is wide scope for originality in office methods.

He told the convention that, contrary to general belief, uniform cost accounting does not consist in a rigid classification of accounts. While the back-bone of any standard system of uniform cost accounting is a uniform classification of accounts, yet it must make possible much elasticity and flexibility, he said, adding:

"A standard system of uniform cost accounting does not mean the inclusion in costs of predetermined or fixed elements of cost, nor does it mean the preparation of average or standard cost figures for the industry.



"The plan which the association proposes to follow has been referred to as the typical plan of the department of manufacture of the Chamber of Commerce of the United States, the trade association plan, or the committee plan.

"The slogan of the department of manufacture is 'Of the industry, by the industry, and for the industry.' The slogan used by The International Association of Milk Dealers in the preparation of its system was, 'A system prepared by, installed by, and operated by the accountants within the industry.' A slogan for The National Association of Ice Cream Manufacturers might be 'A system prepared by, installed by, and operated by the financial and cost accountants within the industry through the committee plan.'

"Since The National Association of Ice Cream Manufacturers have begun the preparation of a standard system of

uniform cost accounting for the ice cream industry, and since The International Association of Milk Dealers are about to extend its system to include ice cream accounts, a plan of co-operation as between these associations in carrying out both pieces of work has been proposed, submitted and approved."

In this connection, the speaker quoted a recent statement made by Manager McCullough, of the department of manufacture of the Chamber of Commerce of the United States, with reference to different branches of the same industry, like the ice cream manufacturers and the fresh milk dealers in the dairy industry, co-operating in developing standard systems of uniform cost findings:

"Recently, we have been pointing out to industries, through various trade associations, the duplication of effort and the unsatisfactory results that come from the various branches of the same industry, giving attention independently to the subject of uniform cost accounting.

"In the foundry industry, for example, there are a dozen or more industries where the manufacture of castings of some kind of iron or steel is a relatively important part of their work. Many of these industries, in developing standard systems of uniform cost accounting, have followed their own ideas in the development of such systems, with the result that there is much duplication of effort and many differences in method.

"How serious these differences may be in finding the cost of a casting, is very plainly brought out in an address made by W. J. Corbett, industrial engineer of the Electric Steel Founders' Research Group, before the American Foundrymen's Association as their convention held in Milwaukee last month.

"Mr. Corbett brings out the differences in costs that come about from the use of eight different methods used in uniform cost finding.

"In the case of Casting 'A,' for example, he reports a minimum cost by 'method number two' of approximately 19c per pound as against a maximum cost per pound of approximately 40c, arrived at by a different method."

IN THE preparation of the basic of pro-ration and the uniform rates of depreciation, the international Association of Milk Dealers found it advisable to ask several professional engineers "well thought of in the milk industry," to serve upon the engineering committee. Also to ask representatives of the federal reserve banking system, the American Association of Bankers', the American Institute of Bankers and the National Association of Credit Men, to serve upon the preparation committee who had charge of the preparation of the financial statements. In comparing the cases of his and the ice cream associations, the speaker said:

"While the subject chosen for this convention is confined to the proposed plan for developing the standard system, yet the question of its adoption by the membership of the association, if not by the ice cream industry at large, depends largely upon the kind of system that is developed, and especially the manner in which it is prepared. The term 'adoption' means installation.

"Installation implies eventually the universal application of the standard system to ice cream plants in the ice cream industry, operated in a uniform manner. Wide installation, therefore, is very much dependent upon wise preparation.

"Too much importance cannot be laid upon the preparation of the standard system through large committees. Preparation by large committees should mean wide installation; wide installation should mean early uniformity; and early uniformity should mean early cost comparisons.

"The International Association of Milk Dealers, in building its system, had four working committees, the largest of which, the advisory committee, had over forty members. These committees spent fifteen months in completing their first labors, the system costing the association about $25,000.00.

The income from subscriptions to the system at the close of the first year of operation was $22,000.00. The National Association of Ice Cream Manufacturers have made an appropriation of nearly $15,000.00 for the preparation of its standard system. A large part of the cost of the system was for the expenses of the committeemen attending the meetings of the various committees. It has been the policy of the fresh milk dealers to pay all the expenses of each committeeman. The committeemen, however, have contributed their time, their labor and their experience without compensation.

"Wide installation in the final analysis is secured through an accounting bureau, the functions of which are the installation of the system, the preservation of uniformity in the operation of the system, the comparisan of conversion costs, the extension of the system to include other products, the revision of the system as necessary changes occur, the mak-

ing of statistical studies for the ice cream industry, and the conduct of educational work in accounting within the industry.

"The International Association of Milk Dealers, with a membership of about 300, have received 113 subscriptions to the system. After one year of operation, we find that in nearly all cases, the dealers within this association prefer to make their own installations without the assistance, but with the advice of the bureau, both by plant visitation and by correspondence.

"In the preparation of a standard system, many associations have followed the plan of making their manual consist merely in a group of accounting forms. In the building of the system for the fresh milk dealers, the practice of eliminating forms from the manual, and adhering strictly to principles and fundamentals was followed.

"It seems wise in preparing a manual containing the standard system of uniform cost accounting for a given industry to adhere to fundamental principles and lay little emphasis upon the question of accounting forms. The preservation of uniformity in the operation of the standard system is of the utmost importance. A system may be well prepared, widely installed and yet fail in uniformity of operation. The accounting bureau has as one of its important duties, year in and year out, the preservation of uniformity."

* * *

ALABAMA MAN'S COST ACCOUNTING SYSTEM.

John Claitor of the Glen Iris Dairy, Birmingham, Ala., has given The Ice Cream Review an outline of a system he has worked out. It follows:

Cost Accounting for the Ice Cream Plant.

- Production cost
  - Material
    - Milk
    - Cream
    - Butter
    - Dry milk condensed
    - Sugar
    - Gelatine
    - Fruits
    - Flavors
    - Colors
  - Labor
  - Refrigeration
  - Power-heat-light
  - etc.
- Delivery expense
  - Labor
  - Truck expense
    - Oil
    - Gasoline
    - Repairs
  - Salt
  - Ice
  - Lost packages
  - Service-re-icing
- Selling expense
  - Advertising
  - Donations
  - Salesmen's salaries and expenses
- General expense
  - Administration expense
  - Office expense
  - Rent
  - Bad debts
  - Reserve for depreciation
  - Taxes
  - Etc.

"Production cost, delivery expense, selling expense, and general expense are controlling accounts in general ledger. The other accounts are carried in expense ledger, posting totals monthly to general ledger. A sub-expense ledger would be kept for material and for truck expense, posting totals to material and truck expense. If the plant owns a refrigeration plant a sub-ledger would be kept for refrigeration. This classification will apply to a business producing ice cream only or to a combination plant. A butter department and milk department would be outlined just like the ice cream department shown here. The rent and refrigeration would be prorated between the departments. This is not offered as a perfect model, but as suggestive material, from which a system can be designed for any plant.

CREASEY ICE BREAKERS
Save Ice Handling Labor

A CREASY MOTOR DRIVEN Ice Breaker can be located where most convenient for receiving the ice cakes and delivering the broken ice. In this way you can sometimes save the labor of one or more men. Our medium capacity breakers, covering the range from three to 25 tons per hour, are, when desired, equipped with a slow speed motor mounted on top of the machine, and driving the ice breaker shaft through a generous size pliable belt. An idler provides for adjusting the belt tension, and cork insert pulleys give the necessary adhesion. This arrangement is simple, rugged, foolproof, and much superior to gear transmissions, which are noisy and wear out of alignment so that they jam or break. The belt is protected from wet and the operator from injury by a steel cover.

In other respects the machine is a standard Creasey Ice Breaker, with movable front plate, interchangeable combs, socket held picks, heavy fly wheel and drum, deeply ribbed cast iron frame and all the various features that have made the Creasey the leader in the ice breaker field.

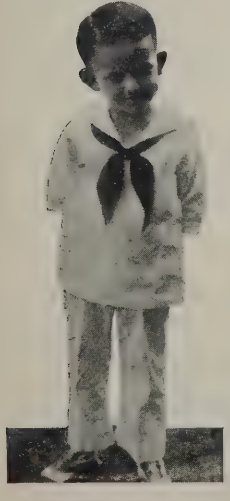
LOEWENSTEIN RESIGNS AS NATIONAL SECRETARY.

(Continued from page 26)

position of dairy husbandry at the Pennsylvania State College. This institution operates for instructional purposes a large commercial creamery and manufactures butter, ice cream and cheese and also distributes milk locally.

During the war, Mr. Rasmussen worked with the United States Food Administration of Pennsylvania, having charge of the work relating to dairy husbandry. He was asked by the American Red Cross to serve on a committee to establish dairies at the base hospitals of the American Expeditionary Forces and by the National War Council of the Young Men's Christian Association to outline and supervise courses in dairying to be taught our soldiers in France. He gave up the war work in Europe to accept the appointment of secretary of agriculture of Pennsylvania offered him by Governor William C. Sproul. During the four years as secretary of agriculture, the department of agriculture was re-organized and much legislation passed as well as a number of new lines of work started which have proved themselves helpful to agriculture. At the end of the Sproul administration, Governor Gifford Pinchot offered a reappointment to Mr. Rasmussen as secretary of agriculture which he declined to become president of the Pennsylvania-Maryland Joint Stock Land Bank of Harrisburg.

IN ADDITION to the experience in administrative and educational work in dairying and agriculture, Mr. Rasmussen during the period described above, spent four summers in Europe studying dairy and agricultural conditions in Switzerland, Holland, Germany, and Denmark. He is author of a number of publications, one published by the United States department of agriculture on Cattle Breeders' Association in Denmark.



While in New Hampshire, Mr. Rasmussen served for a number of years as secretary of the New Hampshire State Dairymen's Association and one year as president of the American Dairy Science Association.

At the present time, by appointment of the present governor, he is a member of the council of education of the state of Pennsylvania and a trustee of the Pennsylvania State College. Mr. Rasmussen was vice-president and a member of the executive committee of the World's Dairy Congress Association.

ONE OF THE LITTLE CARRS.

He's a little Carr, but he's no flivver. He's Mary Kate's nephew—the Dixie Flyers' Mary Kate, Miss Carr of Carr's Creamery, Montgomery, Ala. The future manager of Carr's Creamery doesn't "get out with the boys" often, but he gets reports from the conventions just the same. His aunt tells him all about what takes place at each convention—that is, most everything. But then, you know, there are some things that could not possibly be of interest to a little Carr, even if he isn't a flivver. Young R. E. Carr is about a 1940 model, for it is about that time that he will step in and take a hand at running the business.

Texans to Support National Advertising

Iceless Cabinets and Advertising Feature 1924 Convention at Dallas. Compulsory Pasteurization Recommended

MEMBERS of the Texas Ice Cream Manufacturers' Association cussed and discussed the iceless cabinets, voted to join hands with the national association and do their share toward putting over a national advertising campaign, and felt pretty well satisfied with results of their seventeenth annual convention at Dallas, December 3, 4 and 5.

Compulsory pasteurization was recommended in a resolution adopted. At the close of the sessions Secretary A. J. White stated that 100 per cent of Texas ice cream manufacturers would sign the agreement to contribute one-half cent a gallon to the proposed national advertising campaign. Seventy-five per cent of the state gallonage was represented at the convention. The appropriation is to be based upon 1923 production. This action followed report of an association committee which conferred with F. W. Gentleman, representing the national advertising committee. Adoption of a code of ethics was recommended in an address by Hugo Swan, business manager of the Dallas Better Business Bureau.

THE convention attracted more than 200 people representing all phases of the industry, ice cream manufacturers, their wives, and members of the Texas Longhorns. The large number of ladies present was noticeable and all details for their entertainment was looked to by thoughtful Dallas ladies—Mrs. E. R. Donnell, Mrs. Sherwood Quinker, Mrs. Geo. L. Boedeker, Mrs. C. W. Smith and Mrs. I. W. Boedeker, who made up the entertainment committee.

Of the original thirteen men who, seventeen years ago, were present at the organization meeting were C. W. Smith of Dallas, W. W. Wren of Ft. Worth. The others of the original thirteen were: F. W. Boedeker, Dallas; S. M. Lawson, Ft. Worth; H. R. Rigler of San Antonio; F. K. Klein of San Antonio; E. J. Kendall of Ennis; Mr. House of Houston, and J. F. Wells of Galveston.

Anyone who knows Lindley Waters, president of Tennessee Dairies, Dallas, knows that the address of welcome was one of sparkling wit and a "pace-maker" of good spirit. It was a reminder that "Dallas is second to no city when it comes to possibilities, ambitions and hospitality."

President Wortman delivered his annual address, in part, as follows:

"I recall, only a few years back, when this association was in it's infancy, and the small number in attendance. It was during the fall of 1908, that a meeting was held in this city, with only a handful present. Today there must be in the neighborhood of two hundred members and associate members present.

"Referring to the associate members, we want you men to know that we more than appreciate your membership, when I speak of this association and its members. I consider you valuable to this organization, not because of the small amount of dues you pay, but because you have been and will continue to be helpful to us in many ways.

"I feel the year 1924 has been a banner year for the manufacturers of Texas. While the weather in the early spring was somewhat unfavorable, yet with prosperous condition of the country, the extreme hot summer and the late fall, I feel sure the manufacturers of this association were blessed with a larger gallonage than ever before. The retailers likewise have enjoyed greater sales, so all in all we should feel highly pleased over the results of this year's efforts.

"I truly believe this to be the best association in the entire country. We have made great progress and must continue to go forward; while the gallonage of this state is not as large per capita as some other states, but with the congenial co-operative spirit that exists among the members of this association, and the progress that we are making, the time will soon come when our gallonage will equal any in per capita, and we will have the pleasure of doing a dandy, nice business in the best state that God's sun has ever shown on."

Speaking on "Co-operative Advertising," Will S. Henson, vice-president of the Johnston Printing & Advertising Company, Dallas, said:

"You might hire salesmen and send them out to all parts of your territory and have them call on all the prospective buyers of your products, explain the merits of your products, and then call back every few days and tell the same story over again, and keep this up year in and year out and eventually come to have the majority of the people as your customers. But, this method is out because no business in the world could stand the cost. A call or solicitation under this method would cost you dollars, whereas by advertising you can make such calls at a cost of cents, or even a fraction of a cent.

"Asa G. Candler of Atlanta, Ga., one of your chief competitors, took a nickel drink with a long name and made it a household word the world over selling annually 20,000,000 gallons of syrup, or enough to make about 2½ billion individual drinks.

"On the subject of co-operative advertising. Let's say for example, that Jones and Brown are in the ice cream business in Ennis, Tex. Jones tells Mrs. Housewife that Jones' Honey Dew Ice Cream is the best and that she should demand it from her dealer on all occasions. Brown tells Mrs. Housewife that Morning Glory Ice Cream is best and that she should accept no other.

"Here Jones and Brown go, hammer and tongs, fighting to get customers away from each other. Jones will get a few of Brown's customers and Brown will get a few of Jones' customers, and at the end of the year each will be about where he was last year. Ordinarily each will have lost 15 per cent of his old customers and gained another 15 per cent, part of his competitors and part from the ranks of aliens.

"But, if Jones and Brown pool their interest and go out and tell Mrs. Housewife that ice cream is the best possible

Election of Officers 1925

Pres.—W. M. Wortman, Waco, Tex., Purity Ice Cream.

Vice-pres.—D. J. Carithers, Wichita Falls, Tex.

Sec.-treas.—A. J. White, Mistletoe Creamery, San Antonio, Tex.

DIRECTORS, 1925.

J. J. Sullivan, Houston; W. W. Wren, Fort Worth; W. C. Ross, Beaumont; R. L. Hargrove, Texarkana; Adolph Brown, Waco; Geo. Maggard, Amarillo; M. R. Dillingham, Ranger; Theo. P. Meyer, Austin; L. M. Kelsey, Galveston, and E. F. Krause, Brenham.

Geo. L. Boedeker was elected delegate to the National Ice Cream Manufacturers' Association for 1925, with Secretary Al. White of San Antonio, alternate.

Houston was selected for 1925 convention.

You are talking to the Man Who Knows

When you call in the Armstrong representative you are talking to a man who knows insulation, technically and practically, from preliminary plans to the finished job. He is an Insulation Specialist. You can depend upon what he tells you about cold storage insulation with the same confidence you give your architect or engineer.

The Armstrong man can give you sound advice on insulation construction, the thickness to use and how to erect it to insure efficient insulation that is economically adapted to your requirements. His recommendations are distinctly to your advantage. They will save you money in the cost of your insulation. They will assure you insulation that will yield the maximum return in refrigeration saved. They will help you to avoid costly mistakes that are commonly made through inexperience or lack of technical information.

The Armstrong man is backed by the resources and integrity of the Armstrong Cork & Insulation Company, with all its accumulated experience to apply to your conditions. As an individual and as the Armstrong representative, he offers you the best that is known in insulation practice.

Have you a room or building to be insulated? The Armstrong Engineer is at your service, and there is an office in your city or near it. Write, wire or call up on the 'phone. Or address, Armstrong Cork & Insulation Company, 164 Twenty-fourth Street, Pittsburgh, Pa.

dessert, and that it's food of the finest quality, and that it is a dessert that always appeals to little, big, old and young; that here is a dessert that adds distinction to her meal, party or entertainment; that she can get ice cream in shapes and colors to suit every occasion and color scheme. If they keep on telling Mrs. Housewife this story, they will get new converts to the use of ice cream, and cause old converts to buy more ice cream and serve it oftener. You know about the prune. Once the despised swamp hound of the boarding house, now it is the pampered pet of silk stocking avenue, and advertising did it.

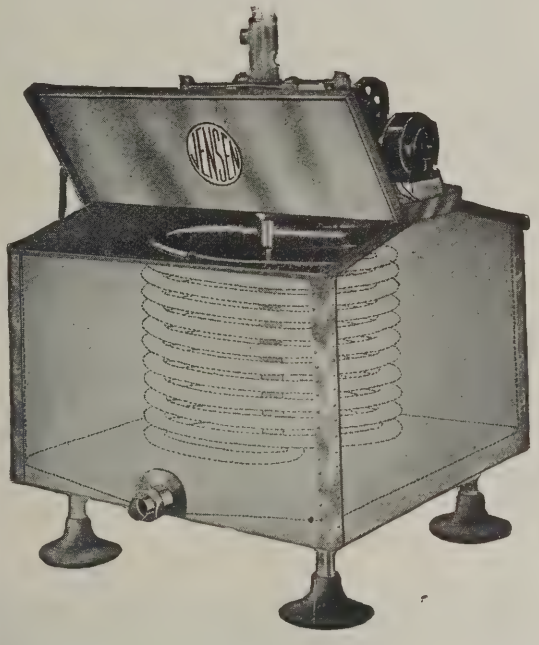
"The Jones vs. Brown brand of advertising is competitive, and the co-operative advertising is creative. The first results in a trade of customers and the other makes more customers for both Jones and Brown."

HUGO SWAN then gave his idea of what would constitute better business ethics for ice cream manufacturers. He did not think ice cream manufacturers should become "sign painters"—painting windows, drug store fronts, whole buildings, etc. believes it is fundamentally unsound business. The ice cream industry, he feels, is not free from ignorant competition. He thinks it fundamentally unsound to "buy up" ice cream stops. He feels it unsound in a general way to sell to a customer in a distant city delivered where delivery costs are higher at the same price as to the local trade without reducing to local trade. When freight rates are equalized as practiced in some places it is a specie of price cutting or discounts and special discounts make business more difficult as a whole. Somebody goes broke if he sells for less than cost long enough and the year he goes broke nobody else makes any money. You have no assurance that it will not happen in your community," he said.

He believes that quality and purity of product come before price and should always be maintained irrespective of price.

YANK TO HELP JAPS BUILD UP ICE CREAM INDUSTRY.

In its endeavor to promote the ice cream manufacturing and dairy industries in Japan, the imperial government of Tokyo, through its department of dairying, has completed plans to transfer W. A. Dryer of Visalia, Ca., to Japan to get ice cream manufacturing started in that country.



Mr. Dryer was formerly president of the Visalia Commercial Club, and recently manager of the Acme Ice Cream Co. of that city. It is reported that everything is in readiness for Mr. Dryer's sailing.

JENSEN

The Mark of Merit

"20 to 50% GREATER OVER-RUN"

"A Mix Free From Air as It Comes to the Freezer Will Give a 20 to 50% Greater Over-run"

This statement was made before a meeting during a recent Convention of Ice Cream Manufacturers of two eastern states. The man was fully qualified to make such a statement and had charts and experimental data as proof thereof.

JENSEN VERTICAL COIL BATCH MIXER is the only Ice Cream Batch Mixer that expels air and gases.

The Vertical (entirely suspended) Coil always revolving from the bottom up constantly pulls the air and gases out. This is accomplished before pasteurizing temperature has been reached, and this same action absolutely prevents air incorporation through eddies during the ageing period.

Complete Elimination of Stuffing Boxes

ICE CREAM VOYAGEURS BACK IN HOME PORT.

(Continued from page 34)

An account of the ice cream men's visit in Panama is given as follows in the Star & Herald, published at Panama, R. P.:

ICE CREAM MAKERS' PARTY FROM U. S. SAILS DEC. 3.

Will Cross Isthmus Today for Tour of Atlantic Side's Points of Interest Before Sailing Away to New Orleans Tomorrow.

En route on a tropical cruise after attending the convention of the National Association of Ice Cream Manufacturers of the United States at New Orleans November 16-21, a party of forty ice cream manufacturers are visitors on the Isthmus for three days.

The party is all staying at the Hotel Tivoli, Ancon, and goes to the Atlantic side today.

The visitors arrived on the United Fruit steamer Heredia. The cruise is under the personal supervision of Walter Pollock, cruise conductor for the Fruit company.

Arriving at Cristobal from New Orleans Sunday after a three-day stop at Havana, the visitors motored to the Gatun Locks and after inspecting the spillway and dam, came through the canal to Pedro Miguel in a special launch, motoring from Pedro Miguel to the Hotel Tivoli, where they had lunch Sunday.

Sunday night the visitors went to the Union Club, where each one of them was presented to General Pershing by Mr. Pollock.

Yesterday the visitors called at the Presidencia, where President Chiari received them most cordially and personally conducted them through the Palace.

Today they leave for Cristobal on the noon train and will inspect the Cold Storage Plant at Mount Hope and then motor to France Field, Coco Solo and other Atlantic side points of interest, staying at the Hotel Washington over night and sailing for New Orleans at 11 o'clock tomorrow morning.

Those in the party include Louis B. Olin, president of the Lawrence Ice Cream Company of Chicago; Mrs. E. A. Sacks, Mr. and Mrs. N. Loewenstein, C. H. Ozier, G. E. Thompson, E. Klinenberg, Miss B. Klinenberg, Mr. and Mrs. J. J. McDonald and son, Mr. and Mrs. J. D. Hodskin, Mr. and Mrs. J. M. Cherry, Mr. and Mrs. M. W. Hill, Mr. and Mrs. J. W. Neuman, Mr. and Mrs. J. E. Kircher, Mr. and Mrs. J. A. Jocoy, Mr. and Mrs. F. W. Babcock, Mrs. W. V. Dunn and children, Mr. and Mrs. C. Blommer, Miss M. Blommer, Mr. and Mrs. J. W. Kisner, Mrs. B. E. Moore, Mrs. J. T. Sterling, Mr. and Mrs. J. Coleman, Mr. and Mrs. R. E. Slonaker, Mr. and Mrs. E. Zollers, Miss E. Borneman, Miss R. M. Johnston and C. C. Burdan.

* * *

Ed. Klinenberg was the "life" of the party. He kept many a spirit from sinking beneath the deep blue waves during those trying first days at sea, when half the travelers thought they were going to pass out and the other half feared they wouldn't.

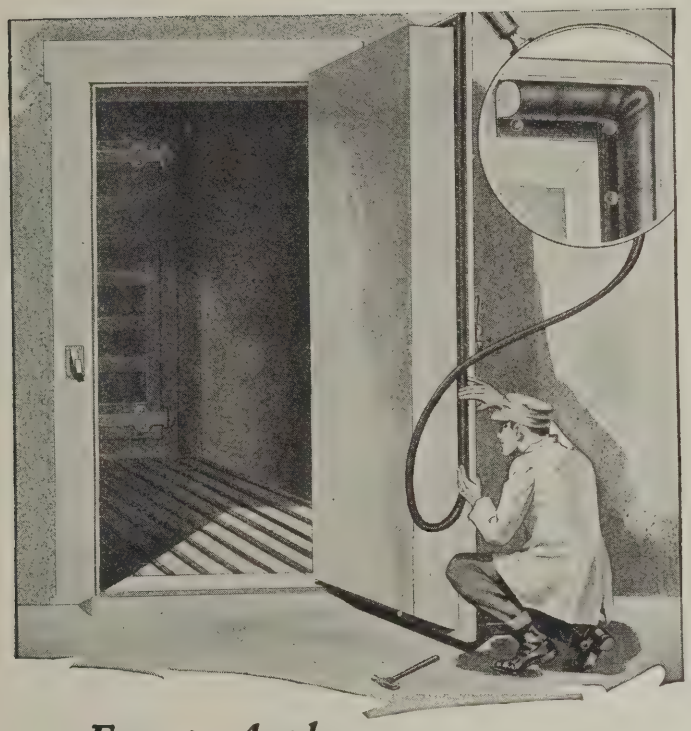
* * *

Among those who kept their sea legs—that is, sea limbs—all during the voyage were Conrad Blommer, John McDonald, Ed. Klinenberg and five ladies—Mrs. J. A. Jocoy, Mrs. Moore, Mrs. Sterling, Mrs. Babcock, and Mrs. Dunn. The ladies, therefore, proved better sailors than the men. These people were on deck every day.

* * *

Nate Loewenstein got away with most of the loot at the card tables. "He ought to be tried for piracy," one hard-crusted loser remarked of the genial Nate after paying off.

* * *



The voyageurs pay high tribute to Captain Burmeister and Cruise Conductor Walter Pollock for the courtesies these gentlemen extended on the cruise. All officers on the vessel went to every effort to make the trip pleasant for the passengers and to show them the meaning of sea courtesy.

WOUNDED FLYER WRITES FROM SIDELINES.

"P. N. Miller, Secretary
Dixie Flyers"
P. O. Box 1830,
Birmingham, Ala.

Dear Mr. Miller:

I am pleased to acknowledge yours of the 24th, with enclosed gift of The Dixie Flyers.

I need not tell you that your remembrance of me was accepted in the spirit it was offered, and the best expression of my appreciation, to me it was a gift adorned with friendship, expressing old time fellowship and good will, the memory of old associates, and the hope of new ones.

ADOLPH SKINNER.

I am making real progress now; my compensation for tedious days in pursuit of health. My friends, your altruistic deed has been a message of good cheer, giving me great exaltation of spirit and resolution to get back into harness again.

It makes me happy to hear of the wonderful convention that has just come to a close, and the wonderful attendance with the nice exhibits that displayed the wares of wonderful achievements of the "Dixie Flyers."

I have kept in touch with the outside world by "radio" which has been a source of real enjoyment through the long evenings.

The only way I can show my appreciation this day is to write you a note of thanks with personal greetings to each of you and every good wish, I am

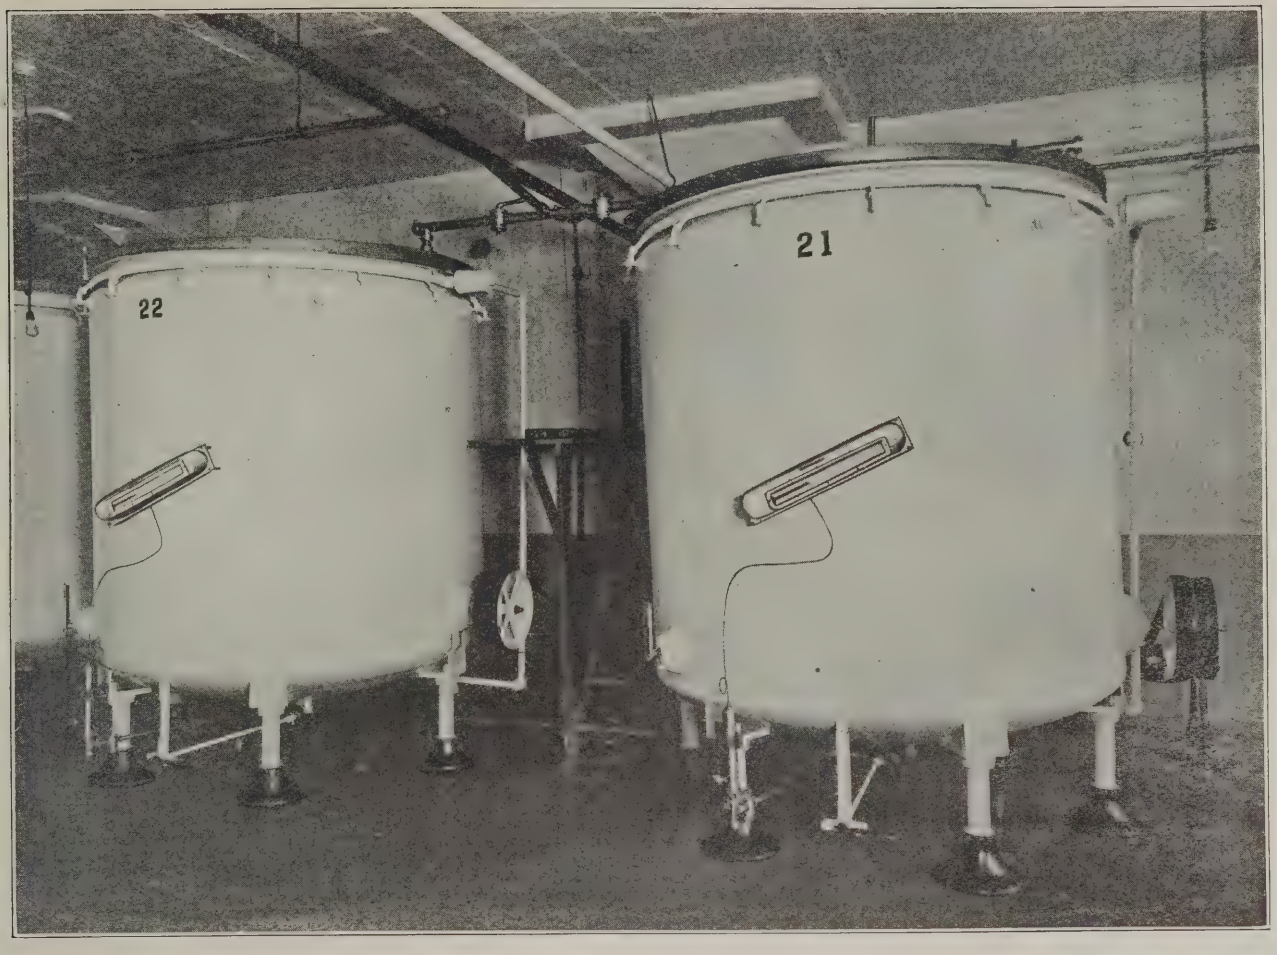
Sincerely,

ADOLPH SKINNER.

PAYNE WINS ICE CREAM SCHOLARSHIP.

The ice cream manufacturers' short ice cream course scholarship at Penn State College—donated by the 1924 class of salesmen of The Association of Ice Cream Supply Men's Salesmen's Club who attended from Penn State College—was won by E. E. Payne of the Payne Ice Cream Co., Buffalo, N. Y. The drawing took place at the reception of ice cream manufacturers given by The Association of Ice Cream Supply Men in the St. Charles Hotel, New Orleans, on Monday evening, November 17.

Among those ice cream makers who submitted their names for the drawing were:



Casper Wiedman, Connor Ice Cream Co., Ann Arbor, Mich.; J. Theo. Morris, 219 No. Lincoln Ave., Scranton, Pa.; D. B. Davisson, 707 C. Ave., Lawton, Okla.; E. N. Jones, Proctor & Co., Winchester, Ky.; E. L. Proctor, Proctor & Co., Winchester, Ky.; C. W. Rady, Proctor & Co., Winchester, Ky.; H. L. Bremer, A. & M. College, Miss.; Frank Zimmerman, Pearson Creamery, Spartanburg, S. C.; Chas. Hahlbolm, Abdella Ice Cream Co., Gloversville, N. Y.; E. E. Payne, Payne Ice Cream Co., Buffalo, N. Y.; De Vere Joslin, Rolla Creamery & Ice Co., Rolla, Mo.; Vern Joslin, Rolla Creamery & Ice Co., Rolla, Mo.; F. J. Sanker, Imperial Ice Cream Co., Cumberland, Md.; V. A. Casteel, Yerdon's Quality Ice Cream and Candies, Ft. Plain, N. Y.; L. E. Yerdon, Yerdon's Quality Ice Cream and Candies, Ft. Plain, N. Y.; C. Struble, Bartholomay Ice Cream Co., Rochester, N. Y.; Mr. Perry, Puritan Ice Cream Co., Newark, N. J.; Harry B. Hammill, Wheat's Ice Cream Co., Buffalo, N. Y; Robert G. Harris, Muskegon, Mich.; Joseph Costa, Jr., Joseph Costa Co., Athens, Ga.; B. P. Badger, Portsmouth Creamery Co., Portsmouth, N. H.; Roy J. Ogler, 1806 Graham Ave., Windber, Pa.; Albert Storz, Baker-Evans Ice Cream Co., Youngstown, O.; P. B. Thomsen, Goodland Creamery Co., Goodland, Kans.; Harry Repass, Leichtman Ice Cream Co., Inc., Hazelton, Pa.

THOUSAND DELEGATES ENTERTAINED AT NEW ORLEANS.

The association of Ice Cream Supply Men estimates that it entertained just under 1,000 ice cream manufacturers, supplymen and ladies in New Orleans during the period of the National Association of Ice Cream Manufacturers' 24th annual convention. The association's entertainment program commenced on Monday evening, November 17, with a reception to the ladies and gentlemen of the industry. This reception was held in the patio and ball room of the St. Charles Hotel. A buffet lunch was served and dancing, interspersed with entertainment by professional entertainers lasted until early in the morning.

On Tuesday evening entertainment was furnished during the National Association of Ice Cream Manufacturers' annual banquet and an orchestra for the dancing which followed the banquet. Original plans called for a banquet in both the St. Charles and the Roosevelt hotels, but at the last minute the national association found it more convenient to confine the banquet to the Roosevelt Hotel.

Wednesday noon the Salesmen's Club of The Association of Ice Cream Supply Men held its annual business meeting and luncheon. After the meeting, five ice cream manufacturers were given an initiation degree and made associate members of the club.

Wednesday evening the ladies were guests of The Association of Ice Cream Supply Men at the St. Charles theater at a performance of the mystery comedy "Whispering Wires" while the men were entertained at a stag party in the Young Men's Gymnastic Club. Thursday noon the ladies were given a luncheon at the Patio Royal, one of the most unique restaurants in America, in the heart of the French quarter. On Friday morning the first national golf tournament for ice cream manufacturers and supply men was held on the New Orleans Country Club golf course.

Choice of steamboat sightseeing trips on the Mississippi River, automobile sightseeing tours of the city or pedestrian tours of the French section, under supervision of competent guides, were provided for the ladies each day during the convention.

GOLF WINNERS.

Winners of the New Orleans golf tournament have been announced to The Ice Cream Review as follows:

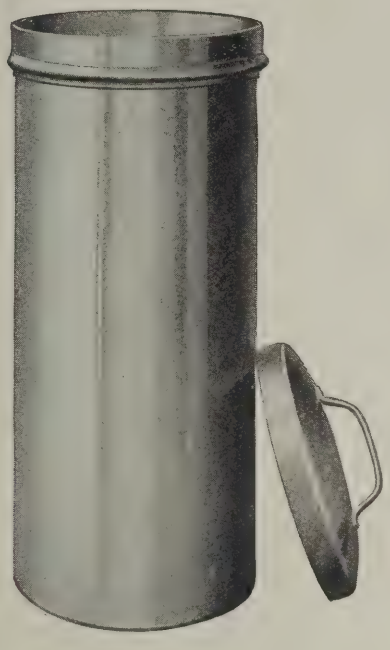
Ice Cream Manufacturers.

George Burt, Weatherly Ice Cream Co., Portland, Ore., Cup and Medal.

CLASS A.

E. B. Geisel, Anheuser-Busch, Inc., New Orleans, La.

Benj. C. Brown, New Orleans Ice Cream Co., New Orleans, La., Tie.

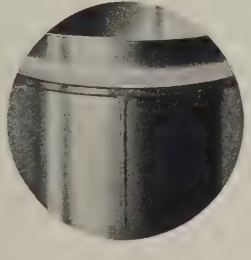


CLASS B.

1. A. H. Graeszel, Mansfield Ice Cream Co., Milwaukee, Wis.
2. N. J. Dessert, Detroit Creamery, Detroit, Mich.

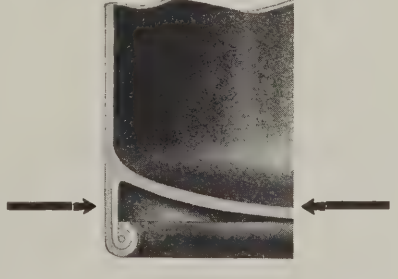
Supply Men.

1. Albert McDougal, Allman Gas Engine & Machine Co., New York City.
2. Louis C. Chamberlin, Nizer Corp., Detroit, Mich.
3. L. B. Esmond, Essex Gelatine Co., Boston, Mass.



Now Ready for Delivery--

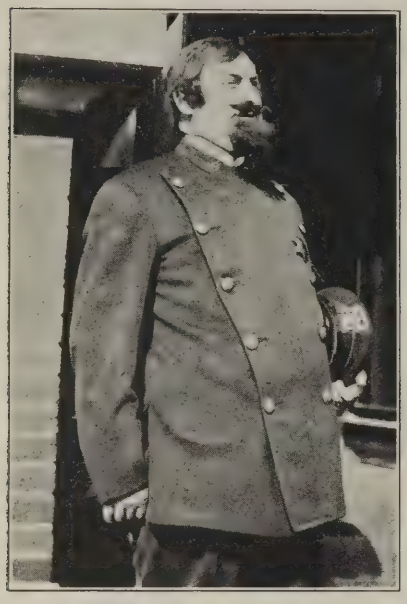
THE NEW



ULTRA-WELD

NO SOLDER-NO RIVETS-NO HOOPS

No solder—no rivets—no hoops—perfectly tinned. This newly developed ice cream can we are offering to those who prefer the solderless or welded type. The bottom is made an integral part of the cylinder by a continuous electric weld; it cannot leak, become loose, or drop out. The side seam joint is a genuine electric arc-weld and is built up with steel to securely bind the cylinder edge together; also notice the triple folded, rounded, "crackless" Ultra top band and bead. Our new Ultra-Weld is exactly the same as our regular Ultra except it is welded throughout instead of soldered. By all means see the excellent Ultra Cans before buying your requirements for next season.



SOLAR-STURGES MFG. CO.

FACTORY AND GENERAL OFFICES:

MELROSE PARK ILLINOIS

SOUTHERN ASSOCIATION APPOINTS ASSOCIATION COP.

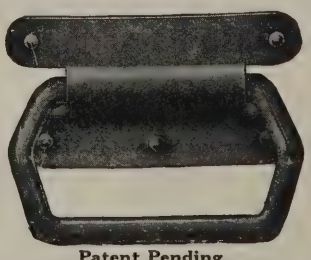
A new idea in holding the interest of convention delegates was brought out at the 1924 Southern convention. The association appointed a convention cop. Those duties went to Gordon ("Billy") Moumblo, the Dixie Flyers' chaplain. It may be a far cry from officiating as chaplain to performing the duties of cop, but Mr. Moumblo is a man of parts.

GORDON MOUMBLO, Convention Cop.

In the role of policeman he enabled the association to raise a good large sum for charity. Delegates found breaking some convention rule, such as hanging around the exhibits during sessions, sneaking out of sessions to talk with a friend near the door, etc., nearly always found the eagle eye of the convention cop upon them. Arrest was followed by trial before Convention President W. J. Barritt of Tampa, who, as mayor pro tem of his city, has had much experience in the matter of government. The president does not believe in being easy on law-breakers; he imposed fines in a businesslike way. What is more important, the fines were collected.

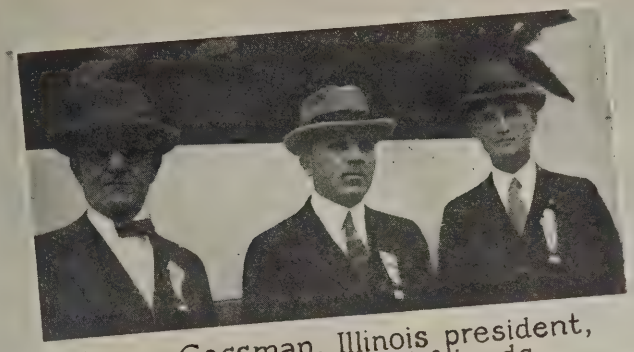
PEROT PURCHASES CONTROLLING INTEREST IN CHAPIN-SACKS CORP.

Frasier & Co., brokers of New York City, has completed a transaction whereby Edward S. Perot, Jr., of New York, acquires controlling interest in the Chapin-Sacks Corp., it was recently announced. It is reported that the deal involved approximately $1,500,000. According to reports, Mr. Perot represents a syndicate of capitalists, who, by obtaining controlling interest, will direct the organization and its policy. Headquarters for the Chapin-Sacks Corp. are located in Washington, D. C., but the company operates a number of large plants throughout the South.



FOUR MANUFACTURERS FACE MYSTERIES OF INNER KINGDOM."

During the recent ice cream classic at New Orleans the Salesmen's Club of The Association of Ice Cream Men, as is its usual custom, held the annual meeting and dinner. A new feature this year was the initiation into the Inner Kingdom of the club. Four ice cream manufacturers, chosen by lot from the convention registration were the victims. It is against the rules of the club to describe the secret initiations outside of the Inner Kingdom. The good-natured victims were: W. H. List, Puritan Ice Cream Company, Newark, N. J.; Joseph E. Wiedemeyer, Puritan Ice Cream Company, Newark, N. J.; H. C. Teall, Nizer Ice Cream Cabinet Company, Cincinnati, O.; Charles E. Landreth, Forsyth Dairy Company, Winston-Salem, N. C.



The victims got away before The Review cameraman could "shoot" their picture, but the Noble Initiators posed very sweetly. The King on the throne of ice cream and milk cans is none other than N. M. Thomas, N. M. Thomas Company, Philadelphia. The actors are from left to right: Robert Rosenbaum, David Micheal & Company, Philadelphia; Frank L. Carroll, Milligan & Higgons Gelatine Company, New York City; Herman Lapat, vice-president, Cone Company of America, Chicago; John J. Treacy, Essex Gelatine Company, Boston; Alexander Earl Parks, Solar-Sturges Mfg. Company, Chicago; L. W. Von Losberg, sales manager of Joe Lowe Company, Brooklyn.

Mojonnier

Ice Cream Packaging Machine

BUILT IN SEVEN MODELS

Model D, semi-automatic Mojonnier Ice Cream Packaging Machine ideal for plants having limited output of all sizes of packaged ice cream.

Standard Machines fill perfectly any type

50c Package
25c Package
10c Package
5c Package

EFFICIENCY PRODUCTS MOJONNIER

Five Principal Advantages

1. Fills exact measured quality into any size or type of package.
2. Saves Ice Cream — Saves labor — Saves time.
3. Good flavors sealed in — bad flavors kept out.
4. Insures "fine bulk texture" in packaged ice cream.
5. Offers new possibilities in merchandising of ice cream.

MICHIGAN MAKES READY FOR GREAT CONVENTION.

(Continued from page 20)

For exceptional scenic beauty, the visitor is invited to inspect the campus of the Michigan Agricultural college. The college is a land grant institution supported by both the state and national governments. It covers a 300-acre tract of beautiful ground, just bordering Lansing on the East.

MICHIGAN ALLIED DAIRY ASS'N

Dairy Booster Officers:

Pres., C. J. YUNCKER, 1112 Radcliffe Drive Toledo, Ohio

Secy., C. J. W. SMITH 502 Lenox Ave., Detroit

MICHIGAN DAIRY BOOSTERS NEWS.

Now are you all ready to attend the Michigan convention next month—week of February 2 to 6, 1925, at Lansing, Mich., at the agricultural college, in connection with Michigan farmers' week? If not, why not make some arrangements so you can attend the coming convention for it's going to be a dandy with plenty of exhibits in the Armory building. Such exhibits are being made with very reliable firms—firms with lines you can feel will please you. So be sure to go through the exhibits hall and get acquainted with all who attend.

C. J. YUNKER, President,
Michigan Dairy Boosters.

* * *

Only one month and the Michigan convention will be in full swing with finer exhibits than ever before and the attendance will be larger than ever and should be, for the coming convention is going to please you and you in turn should attend it and while doing so you should go to the exhibit hall and get better acquainted with each other. So let's all go to the double-header—the Michigan Dairy Manufacturers' and Producers and Michigan Farmers' Week. It's going to draw large attendance.

* * *

The Michigan convention is surely going to please you all. So you should attend it by all means and while doing so do not forget to see the exhibits of dairy machinery, extracts, cans, tubs, gelatines, paints, ice cream freezers, ice cream cabinets, refrigeration machines, egg yolks, retinning cans, signs, spoons, plates, salt, bottle crates, separators, washing powders, etc. It's up to you to see it, so let's go. Don't forget the week and date.

Remember this is the best state convention and show running; they all give us that credit. There will be no afternoon meetings to keep you away from the exhibit hall so spend your afternoons there and have a good time. Also remember the exhibits will not be open in the evening after 6 p. m. as banquets and dances will

(Use this as a guide in buying batteries)

More Than 55% of All Truck Batteries Have the Following Specifications:

1. Steel Container with cover welded on.
2. Alkaline Solution.
3. Steel plates.
4. Nickel and Iron elements.
5. Tubular perforated steel tubes for the positive elements.
6. Flat perforated steel pockets for the negative elements.
7. Hard rubber pin insulators.
8. Steel terminals.
9. Tapered steel connector lugs, bolted on.

If you want long life, steady operation, and very low maintenance you must be sure to buy the only battery that fills these specifications. That is the Edison battery. No other battery is built like it and no other battery will give you these results. That's why more than 55% of all Truck Batteries are Edison.

See an Edison representative before you buy and get all the facts. Don't let anyone sell you something just as good, for there is no such thing.

Leading Electric Street Truck Manufacturers gladly furnish Edison Batteries.

Built like a watch,
—Rugged as a battleship.

* * *

An arrangement has been made with the Michigan Agricultural College to serve noon luncheon from 11 a. m. to 1 p. m. each day during the Michigan Allied Dairy Association convention. Visitors need not leave the ground for their noon day luncheon.

* * *

Michigan Dairy Booster officials and directors held a meeting at the Ft. Shelby Hotel, Detroit, on November 28 to discuss matters regarding the Lansing convention. According to present indications, everything is sailing nicely for a great showing of exhibits.

* * *

If those interested in the dairy industry who live in adjoining states would come to the Michigan Allied Dairy Association convention at Lansing, Mich., February 2 to 6, 1924, they would be pleased to be there and also will see a fine show of exhibits. Be sure to attend the Boosters' dance on Thursday night at Kerns Hotel. It's going to be a "hummer."

* * *

The Michigan Dairy Boosters' banquet will be a good one. Let all members attend, the entertainment will please all. Remember, it's Tuesday night, February 3, at Kerns Hotel. Election of officers will be held after banquet.

* * *

The Boosters are going to put on dandy exhibits in the Armory Bldg., week of February 3rd, at Lansing. Everybody attend. Be sure and not miss it. Also see that Rube Band on Wednesday and Thursday at Exhibition Hall. They are wonders.

* * *

D. W. Shiel, C. J. W. Smith, Lloyd Hughes and C. J. Yuncker were in Lansing, Mich., December 11 and 12, making final arrangements for the coming convention of the Michigan Allied Dairy Association. They report everything is all settled for a big show and big attendance.

* * *

Alfred J. Myers, 719 Gratiot Ave., Detroit, Mich., has made arrangements to rent furniture, rugs, etc., to Michigan Dairy Boosters for Lansing convention. So let all Boosters get in touch with them at once for their furniture for their booths. The list and prices of rental of same will be mailed out at once by the secretary, Floyd Hughes, so do not delay it any.

* * *

Out of the 56 booths offered for exhibits at Lansing, Mich., show, 41 have been sold, thus leaving only 12 to sell. These are expected to be sold in the next ten days. Those who have not yet bought space had better get busy and buy if they wish to exhibit at Lansing. All those who have not received floor plans may have it for the asking. Just write to Lapeer, Mich., and floor plans will be forwarded to you.

C. J. YUNCKER, President,

Michigan Dairy Boosters.

Oklahoma Manufacturers Favor National Standard

Compulsory Pasteurization Recommended at 1924 Annual Convention at Tulsa

COMPULSORY pasteurization, the national advertising campaign, and iceless cabinets were high marks of discussions at the annual convention of the Oklahoma Association of Ice Cream Manufacturers. The convention was further marked by the re-election of the old officers, entire satisfaction being expressed with the administration of J. B. Porter of Tulsa, who more than made good his promises of an enjoyable stay in his home town. The convention was held December 8, 9 and 10.

Prof. A. C. Baer recommended compulsory pasteurization. The association pledged support to the national advertising campaign to the extent of 2,000,000 gallons. Sentiment was in favor of a national standard for ice cream. This was strongly recommended by Prof. Baer, who told delegates the ice cream industry must have its product nationally recognized as a real food and must produce a standard article throughout the nation if there is to be material increase in consumption.

PRESIDENT PORTER blamed unsatisfactory conditions in the oil industry for the fact the past season was "not an enthusiastic one." To increase volume consistently at all, the industry must get back to fundamentals, the president declared. The important fundamentals, he pointed out, are cost accounting, a uniform standard and national publicity based on food value. He said advertising is one of the industry's most vital subjects, and continued:

"It is a powerful agency when properly and successfully used. Its place is recognized in business, and a budget for expenses usually figures this at about 2 to 3 per cent. It adds nothing to the value of the product, and so must be considered an expense and to be replaced by greater volume. As an expense it is properly to be considered as any other expense and constant effort made for greater efficiency. Under the present method of individual manufacturing, each marketing his product on competitive lines, many wasteful practices might be avoided by more friendly relations, with corresponding benefit both to the public and the manufacturers.

"If ice cream manufacturers could appreciate the fact that their real competitors are not each other, but are soft drinks, confections and foods, and would direct their efforts to selling ice cream with this idea in mind, the market possibilities would be virtually unlimited.

"Co-operative advertising along this line would mean the greatest possible efficiency for the money to be expended."

W. M. Hawk reported that the ice cream week and flavor campaign staged in Oklahoma late last spring "worked out very nicely where it was followed closely." He said there are forty plants in the state, and six are members.

THE shrinkage problem was discussed by P. H. Tracy of the dairy department of the University of Illinois. His address will be touched upon in a subsequent issue. The entertainment of the manufacturer was provided for in the usually attractive manner by the Oklahoma Wolf Hounds. The Wolf Hounds, by the way, elected as its ninth president the man who enjoys the distinction of having been the first president—Hugh D. Harrington.

There were twelve members at the formation of this body, and now there are 44.

Prof. A. D. Burke, of the state A. & M. college, gave a highly interesting address dealing with the future possibilities of the industry, and G. L. Boedeker of Dallas, Tex., discussed the iceless cabinet. He predicted that it will come more generally into use among the dealers and presented figures showing the manufacturers how they could cut their general costs by having dealers install the iceless cabinets, which, he said, make unnecessary such frequent deliveries with the attendant delivery costs.

The convention closes with a luncheon given by the Tulsa ice cream manufacturers to the visiting manufacturers.

SCHLOSSER HEADS INDIANA ASSOCIATION.

The 1924 annual meeting of the Indiana Manufacturers of Dairy Products, held at Indianapolis, December 4, is characterized by officials as one of the best meetings the association has ever held. The meeting was featured by an address in which C. W. Larson, dairy chief, reviewed the dairy situation. Other speakers included Prof. K. L. Hatch of the University of Wisconsin, and Prof. W. P. Dearing, head of the Oakland City College, Oakland City, Ind. The meeting was attended by 166 men representing the milk, butter and ice cream industry.

Samuel Schlosser of Schlosser Bros., Plymouth, Ind., was elected president of the association for the ensuing

year. Other officers elected are: W. A. Klepper, Cloverleaf Creameries, Decatur, treasurer; Reed Shafer, Beatrice Creamery Co., Muncie, chairman of butter division; Frank Liggett, Sugar Creek Creamery Co., Indianapolis, secretary of butter division; Charles Reeves, Ballard Ice Cream Co., Indianapolis, chairman of ice cream division; H. W. Fleisher, LaFayette Ice Cream Co., LaFayette, secretary of ice cream division; Don Spugnardi, Mutual Milk Co., Indianapolis, chairman of milk division; R. Schuhardt, Jersey Creamery Co., Newcastle, secretary of milk division.

The ice cream division of the association will hold its annual meeting later in the year, although this division was well represented at the December 4 meeting.

The business session was followed by the annual banquet and dance, with the Hoosier Wildcats in charge. The banquet was attended by 205 persons.

NEW YORK ICE CREAM COMPANY PLACES STOCK ISSUE.

The Reid Ice Cream Corporation of New York City has placed with the Dillion, Read & Co. and Lage & Co., an issue of $1,500,000 seven per cent preferred stock and a block of the company's common stock. This action contradicts the rumor recently circulated that the Reid company would be taken over by the National Dairy Products Co. of New York. The capitalization of the new corporation will be $5,000,000, it is reported.

The Reid Ice Cream Corporation is formed to acquire the business and properties of the Reid Ice Cream Co. and the New Jersey Ice Cream Co., operating in New York City and suburbs, as also in Connecticut and New Jersey. These two companies are owned by the same interests, and this consolidation will form one of the largest ice cream manufactories in the country.

In 1884, with an initial investment of $20,000, the enterprise was started. The net sales for the year 1924 are said to amount to more than $8,000,000, and the net profits are estimated at $1,200,000. Modern plants are owned by the company in Brooklyn, the Boroughs of Manhattan, and in Newark. The company also operates and owns a bottled milk plant in Brooklyn, a condensed milk plant at Cincinnatus, N. Y., milk receiving plants and cold storage sales plants.

ALABAMA PLANT REPORTS GROWTH.

The Kratzer Ice Cream Co., Montgomery, Ala., reports a splendid volume of business during 1924 at the company's plant at 213-214 Madison Ave. A. W. Kratzer is president of the Alabama Ice Cream Manufacturers' Association.

A. W. and O. M. Kratzer began the manufacture of ice cream about 14 years ago. After being established in Montgomery for three years, the company found it necessary, in 1915, to erect its present large plant, which, by continual additions of new equipment, has retained its reputation as one of the most modern in the South. A homogenizer is an integral part of the Kratzer's plant, and officials say that their homogenizer is one of the few now in operation in that section of the country.

Quality is a byword, and to insure its patrons of the highest grade dairy products the company operates a creamery in conjunction with the ice cream factory. The Kratzer company also has its own ice manufacturing plant. The capacity of the plant is 4,000 gallons daily.

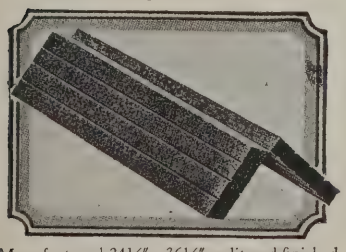
"HAPPY NEW YEAR"



— BRIGHT AND PROSPEROUS

Douglas World Cruisers

Every sheet crated. No breakage. Large stocks.

Manufactured 24½" x 36½", split and finished standard 12" x 36" for your protection against "green" centers.

No Air Ways in NOVOID!

EXPERIENCE of many years has taught that a requisite for efficient, **durable-in-service** corkboard is PROPER PROCESSING of raw cork waste. This means the correct granulation of the cork and the proper proportioning of the different sizes, so that when the raw material is put under pressure in the molds the granules will nest neatly and closely together—NO AIR-WAYS; NO VOIDS—and the baking process will bind the full area of the walls of the granules everlastingly into strong, durable sheets.

In a word, the "dead-air" in HIGH QUALITY CORKBOARD should be confined entirely to the hermetically sealed microscopic air cells in the cork bark itself, if the destructive forces encountered in cold storage temperatures are to be successfully overcome.

NOVOID CORKBOARD

manufactured in conformity with this principle of "no voids"—one of six basic principles followed by Manufacturas de Corcho, S. A., at their modern plants in Spain, the home of cork—is justly entitled to be known as a UNIFORM, HIGH QUALITY insulation, absolutely dependable in **actual** service. Manufactured 24½" x 36½", SPLIT and finished full standard 12" x 36" in 1", 1½", 2", 3" and 4" thicknesses. NO OTHER CORKBOARD is made in this way, with consequent complete protection to user against dangerous and costly "green-centers."

Then, too, every sheet is standard 12" x 36" — no odd widths or lengths — and all material is crated for user's protection against broken corners and edges. No waste; tight joints; minimum labor-of-erection cost. Benefit, as many others have done, by using NOVOID corkboard.

Refrigerating Media—Ammonia

Continuation of a Timely Topic by a Recognized Authority

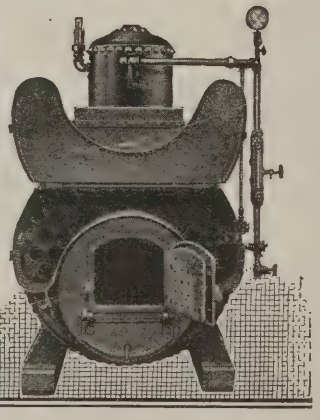
*By F. B. FULMER**

AMMONIA is the circulating media used in upwards of 90 per cent of the refrigeration work done by this country and its chemical and physical properties have been investigated to a larger extent than any of the other medias in use. The reason for the extensive use of ammonia appears to be the medium pressure required, the ease of condensing with ordinary water temperatures and the relatively large amount of refrigerating effect that can be produced by the evaporation of one pound of the substance used. These factors apply more particularly to the installation of large units and appear to meet the popular demands.

Ammonia has been known in various forms from early times and in England was called "the spirits of hartshorn" due to the fact that it was manufactured from the horns of the hart, several years ago. Its pungent odor can often be detected near decaying animal and vegetable matter. In fact, there are very few substances which are entirely free from it. It can be obtained from the air, from salammoniac, by the process of distillation from the nitrogenous constituents of animals and plants, from producer gas and blast furnaces and synthetically in limited quantities by the passage of an electric current through a mixture of nitrogen and hydrogen.

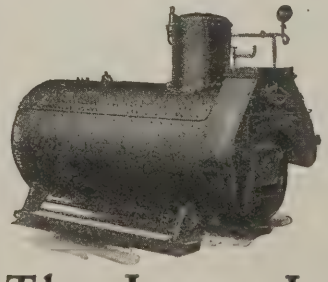
By far the larger part of ammonia in commercial use is manufactured from a by-product resulting from the carbonization of bituminous coal in retorts for the manufacture of illuminating gas for general distribution. This by-product of the gas plants is known as "ammonia liquor." Coal always contains nitrogen in greater proportion than is present in fresh vegetable matter, this being probably due to the remains of animals inhabiting the coal-forming forests and swamps.

The main product in gas plants is hydrogen gas, but when the coal is distilled in the retorts, all of the volatile constituents are driven off by the heat and the ammonia is separated in the compartment known as the "scrubber," where the escaping gases are forced upwards through a spray of cold water, which absorbs the ammonia present in the mixture. As the ammonia liquor is conveyed from the scrubber it may contain only two or three per cent of ammonia, and this in turn is concentrated to 12 or 15 per cent and then placed in tank cars and shipped to the ammonia manufacturing plant, where it is put through a process of refining to eliminate all of the impurities that are associated with it and the finished product is known as "anhydrous ammonia," which means water free ammonia and is supposed to be at least 99.9 per cent pure.



EXPERIMENTAL chemistry has shown that whenever a compound containing carbon, hydrogen and nitrogen is heated in a closed vessel, so the air does not have access to it, and it cannot burn up, the nitrogen passes out of the compound, not as nytrogen, but in combination with hydrogen, in the form of the compound called ammonia. This combination of these elements (one part of nitrogen and three parts of hydrogen) is the only known form in which they combine.

Unfortunately, in a popular conception ammonia is classed as being a very dangerous chemical. This is more of a matter of relative condition. Water is usually considered as harmless, but when it is confined in a steam boiler under a pressure of 100 pounds per square inch, each pound of the confined water has as much potential destructive energy as one-half of a pound of gun powder.



When handled under proper conditions there is really nothing dangerous about anhydrous ammonia. It is true that accidents have happened, but the great majority of these could have been avoided by exercising proper

Cut Production Costs in Half with Baker System Refrigeration

Production costs absolutely control profit in the manufacture of ice cream. Reduce production cost and your profits increase.

Baker System Refrigeration will do it! Baker System Refrigeration will reduce your production costs from one-quarter to one-half (even more in some instances) depending upon your present cost of ice and the cost of electric current in your town.

Your operators will have perfect control of the temperature at all times. Your ice cream will be uniform in quality every day. Your trade will be satisfied and stay satisfied. Your business will increase.

Baker System Refrigeration will put certainty into every refrigerating department. It will keep expenses down and put profit on a new level. Best of all, a Baker Plant will pay for itself in the first year or two of its installation.

Are you interested in knowing just how these claims are proven by Baker System Refrigeration.

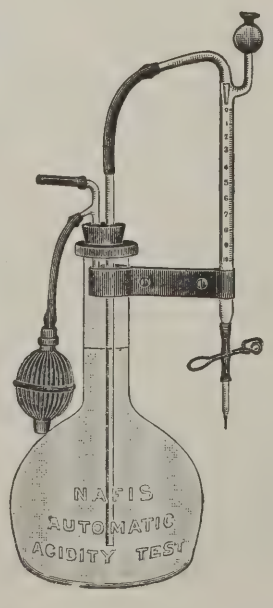
Read our special booklet "Dependable Refrigeration for Ice Cream Plants". The facts, illustrations and drawings will give you an introduction to greater profits. No obligation. Write for Bulletin 65 D.

Baker System Refrigeration

BAKER ICE MACHINE COMPANY, Omaha, Nebr.

care. Nothing should be assumed or taken for granted, but all conditions should be absolutely known. It is necessary that there be at least 6 per cent of ammonia mixed with air before it will form an explosive mixture, and this amount is beyond all reason where good engineering practice prevails. The liquid ammonia is shipped from the factories in steel cylinders which are tested to 1,000 pounds pressure and their bursting strain is calculated to be above 3,000 pounds pressure. The ordinary pressure in an ammonia cylinder is approximately 150 pounds and as they are filled only two-thirds full at the factory, there is an exceedingly large factor of safety present. If a filled cylinder is allowed to stand in the direct sunlight, heat will be absorbed and a high pressure will result. In a test case a pressure of 320 pounds was observed, but it is not good practice to allow filled ammonia cylinders to be exposed to a high degree of heat at any time. Ample strength of all parts, convenient and safety devices installed and intelligent operation will avoid all accidents.

AMMONIA has some resemblance to water in many of its physical properties and it is a solvent for a large number of substances. It burns in air with extreme difficulty when cold. Its coefficient of expansion is very high and increases rapidly with temperature. It will freeze to a white crystalline solid at a temperature of 77 degrees below zero. Under atmospheric pressure decomposition begins at about 500 degrees F. and increases rapidly with heat, until it is resolved into its elements at about 950 degrees. When this temperature is reached the hydrogen would be highly combustible and it is quite evident that this condition would obtain only in a burning building. The burning of the ammonia at this high temperature does not have the force of an explosion.



Of the metals that are suitable for refrigeration work, iron and steel are the only ones which can be used with ammonia, as it will attack copper and copper alloys. As it has such a strong and penetrating odor, a small leak is very readily determined and usually quite easy to locate. When the fumes of burning sulphur are brought in contact with escaping ammonia gas, a dense, white cloud forms, so when the odor of ammonia is present a little sulphur can be placed on some metal of suitable size and ignited with a match. A large iron spoon is a very convenient thing to use in connection with the sulphur testing. Should the leak be a small one, like a pinhole in a casting, it can be easily located by holding the burning sulphur under and close to the suspected place, and when a close contact is made, a part of the vaporized sulphur will be precipitated on the edge of the leak and a small, whitish deposit will result, which is easily noticed.

Leaks can also be located by using the "detecting" paper, which can be secured from the manufacturers of ammonia. A small strip of the paper is dampened with a little pure water and held near the suspected place and the presence of ammonia is indicated by the paper turning pink and when in close contact with the escaping ammonia gas, the color will deepen to a pronounced red. In some extreme cases where the air in a room is saturated with the ammonia, the leak may be harder to locate, as the moistened test paper may turn pink from the action of the ammonia in the air and not be anywhere near the place where the gas is escaping.

When the ammonia coils are submerged in water the presence of ammonia can be detected by taking a sample of the water in a glass and dipping the test paper in it, and if there is a leak in the coil, the water will produce a pink reaction on the paper. With a submerged coil the leak will be much harder to locate than with an exposed one.

A leaky submerged coil in a brine tank will allow the ammonia to escape into the brine and its presence can be determined by the "caustic soda test," which can be made as follows: An ordinary glass tumbler is filled about half full of the brine to be tested and a little granulated caustic soda is dissolved and mixed with it. A small piece of the detecting paper is placed on the under side of a piece of window glass, which is placed over the glass tumbler containing the solution of brine. The paper should be slightly moistened before it is placed on the piece of glass, and if the brine contains ammonia the paper will show a reddish reaction. Setting the tumbler in a dish of warm water will hasten the evaporation of the ammonia in the brine. Should there be only a trace of ammonia in the brine, it will require some time for the reaction to take place, but if the test

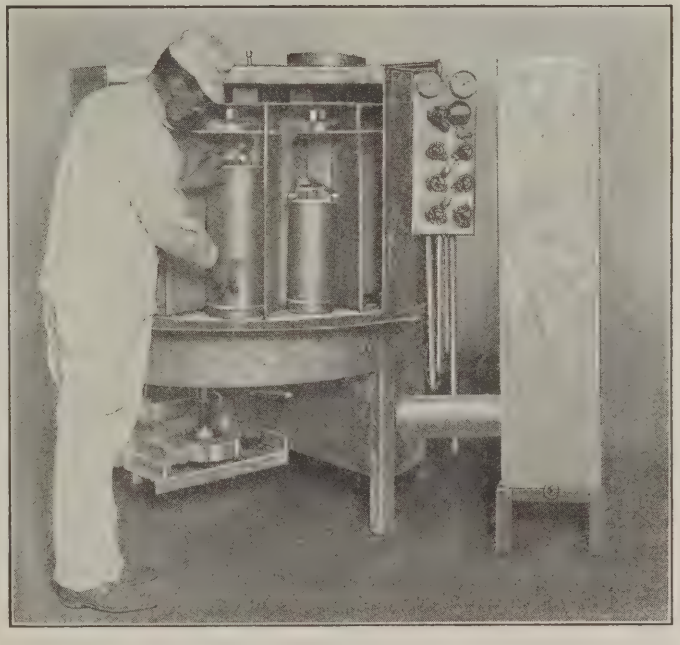
Six Cans Per Minute

washed, rinsed, sterilized and dried

by this new R&A Ice Cream Can Washer!

Highly Efficient

Speed: 6 cans per minute.



Jet nozzles, Slotted and Non-Clogging: Produce a fan shaped jet which strikes the dirtiest part of the can near the mouth ---with terrific force.

Angularity of Jets: All jets strike the can at a different angle making them most effective.

Cover Wash: Covers are thoroughly cleansed in a small compartment above the can as illustrated.

Five operations: Solution wash, Intermediate rinse, Rinse, Sterile Rinse and Hot Air Drier.

Three Tanks: One for Solution, one for Rinse, one for Sterile Rinse. Renewal water, supplied automatically, maintains both rinse tanks free from pollution.

Moderately Priced

The R & A Ice Cream Can Washer is moderately priced, not only because it is of moderate size but because it has been carefully and simply designed.

It is built of the very best materials thruout---completely galvanized and thoroughly rustproof.

Tanks are made of 1/8" boiler iron with heads welded in and afterward galvanized making tight, rustproof joints.

Tho the hot air drier is desirable in every respect ---the machine may be purchased without it. It may be equipped with belt drive or with motor drive as you prefer.

The *only practical* machine for medium size plants

At last the moderate size Ice Cream Plant is able to obtain a can washer fully equipped in every particular, efficient in operation, of the right capacity and at the right price.

The growing plant of medium size has heretofore been obliged either to wash cans by hand or install a high priced machine of more than needed capacity.

The New R & A Rotary Ice Cream Can Washer was designed especially to overcome these disadvantages. And it does the work thoroughly, quickly and economically. It met instant approval at the Milwaukee Dairy Show and has already earned a big mark of credit in a number of progressive plants thruout the country.

Will yours be the next?

paper has been exposed to the brine side of the piece of glass for five or six minutes and no change of color is noticed, it will be safe to assume that there is no ammonia present in the sample of brine.

The arrangement of the method of testing with the caustic soda can be noted from the following illustration:

The efficiency of ammonia depends upon its purity and reliable tests can be made in the plant to determine if it is pure. These tests are of a practical nature and can be performed by the operating engineer. The test for moisture is usually the first one which is made, and it is accomplished by means of evaporating a small sample of the ammonia and observing if there is any moisture remaining after the test has been completed.

A CONVENIENT method of testing for moisture is to have a glass flask with a capacity of at least 200 cubic centimeters and marked so as to show when it contains 100 c. c. A short piece of iron pipe of the right size to fit the valve on the ammonia cylinder is bent into a rainbow or "goose neck" shape so as to conveniently fit into the neck of the flask when it is held at an angle of about 45 degrees. A rubber cork which will fit the neck of the flask should be secured and the center cut out so as to allow the iron pipe to pass into it and the cork should be located on the pipe so it will close the opening of the flask when the ammonia is being drawn from the cylinder. This will prevent any impurities getting into the ammonia from the outside.

WHEN the test is to be made, the valve on the cylinder should be opened and a little ammonia blown through the pipe before it is inserted into the flask. After the flask has been placed in position to have ammonia drawn into it, it should be partially filled with ammonia, shaken around and allowed to drain out. These precautions will eliminate any impurities that may be in the pipe or the flask. Should the pipe frost, or any moisture collect on it, care should be taken to remove all of this before the flask is placed in position to draw out the test sample. A bent glass tube placed in the rubber cork will allow the air in the flask to escape when the ammonia is entering, and also prevent impurities gaining admission through the vent.

The flask is again placed in position and 100 c. c. of ammonia drawn into it, after which it is quickly removed and another rubber stopper with a bent glass tube is inserted. The flask is then placed in a vessel containing some cold brine to hasten the evaporation and the brine will prevent the forming of an ice coat on the outside of the flask. Should a coating be allowed

to collect, the evaporation will be slowed down as the coating will act as an insulator. See illustration for form of test flask and bent glass tube.

Testing for moisture

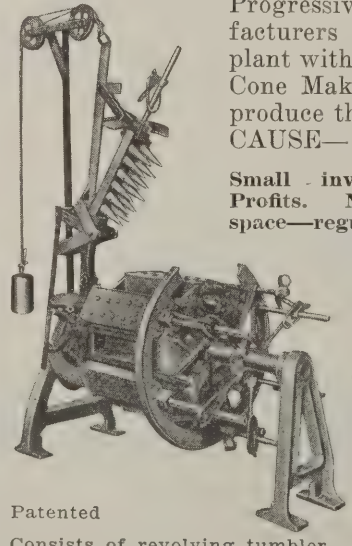
When the evaporation has been completed there will be no visible substance inside the flask if the sample of ammonia was absolutely pure. Should there be moisture present, it will appear in globules adhering to the flask and by a little shaking they can be collected and measured in a small and finely marked graduate. Should no measuring apparatus be convenient, the water can be allowed to escape from the flask in drops, and these are counted, allowing 16 for each cubic centimeter. The theoretical number being 16.3 drops for each cubic centimeter. Should there be 16 drops of moisture present, it will indicate about 1 per cent and 8 drops would indicate one-half of one per cent of moisture in sample. As noted before, great care should be taken to prevent any moisture gaining access to the flask from the pipe used to secure the sample, as such results would be misleading.

When evaporating the sample of ammonia in the test flask, its appearance should be noted from time to time. If a cloudy or milky condition is noted and this becomes more pronounced as the evaporation proceeds it is very probable that the sample contains traces of oil, and when the test has been completed the oil can be easily detected.

THE test for inflammable gases can be made by conducting a small amount of ammonia very slowly to the bottom of a pail of water. The water will at first absorb all of the pure ammonia present and any air or foreign gases will come to the top in the form of bubbles. A lighted candle or match held near the surface of the water will ignite any inflammable gases that may be escaping, which will indicate their presence.

Organic impurities which are sometimes found in ammonia are the result of the original ammonia material ingredients not being completely removed during the distilling process. The most prominent organic impurity encountered is pyridine, which is very detrimental to efficient operation. Its presence can be noted by its charactertistic odor. An analagous odor can be found when a small portion of commercial sulphate of ammonia crystals are rubbed between the palms of the hands and the odor noted.

Ammonia gas is readily absorbed by cold water. It has been determined that at a temperature of 32 degrees F. that one volume of water will dissolve 1,148 volumes of ammonia gas and at a temperature of 60 the water will absorb 800 volumes of gas. As water has such a strong affinity for ammonia, it should be used in case of a leak where either the liquid or ammonia gas escapes.



Pure ammonia at a temperature of 32 degrees F. has a specific gravity of 0.6364 which is practically five-eighths that of pure water. One cubic foot will weigh approximately 39¾ pounds and one gallon will weigh 5.3 pounds. The specific heat of ammonia gas is given as 0.50863 and the latent heat of evaporation at a temperature of 32 degrees F. is calculated to be about 560 B. T. U. per pound and if it is evaporated under a pressure of 15 pounds per square inch, it will occupy a volume of 21 cubic feet.

The critical pressure of ammonia is 1,690 pounds and the critical temperature is 273 degrees F. As the critical temperature is relatively high, warm condensing water may be used when necessity compels, but with ammonia as with all refrigerating medias, the colder the condensing water the more efficient will be the results obtained.

TO MISS FLAPPER.

Blessings on thee, little dame—
Bareback girl, with knees the same;
With thy rolled down silken hose,
And thy transparent clothes.
With thy red lips reddened more,
Smeared with lipsticks from the store,
With thy makeup on thy face
And thy bobbed hair's jaunty grace,
From my heart I give thee joy—
Glad that I was born a boy. —E. H. R.

NEW FIELD Opens for Ice Cream Manufacturers

Progressive ice cream manufacturers should equip their plant with the "Philadelphia Cone Making Machine" and produce their own cones BECAUSE—

Small investments net big Profits. No extra labor or space—regular salesmen solicit orders — helpers bake cones. Fresh, Crisp, Delicious Cones increase ice cream consumption.

Patented

Consists of revolving tumbler containing six sets of moulds of 12 cones each baking 72 cones each revolution.

This machine saves time, space and positively produces a better cone at less cost than any other machine on the market — Write for details today.

JNO. BLOMMER.

CONRAD BLOMMER.

GEORGE BLOMMER.

Blommer Ice Cream Company One of Wisconsin's Pioneers

Quality and Modern Methods Account for Success of this Milwaukee Company

A. C. BLOMMER.

WM. BLOMMER.

THE Blommer Ice Cream Co. of Milwaukee is one of the pioneers of the ice cream industry in Wisconsin. The company as it is at present is the outgrowth of a retail business started by Conrad Blommer over thirty years ago. The present company was incorporated in 1909. A factory was built at Fifteenth and North Avenue. Since its incorporation the company has shown a phenomenal growth. Besides the main plant at Milwaukee the company operates two branches, one at Wisconsin Rapids and another at Kenosha.

Associated with Conrad Blommer, who is the president, are his sons, George C. Blommer, secretary and treasurer; A. C. Blommer, vice-president and general manager of the Wisconsin Rapids Plant; John J. Blommer, general manager, and Wm. C. Blommer, one of the directors, who also is one of the officers of the Ambrosia Chocolate Co. of Milwaukee.

Believing that nothing should be left undone to give to the public the highest quality of ice cream the Blommer Ice Cream Co. has equipped its three plants with the most modern up-to-date scientific machinery.

Service is considered as being practically on a par with quality and it is for this reason that this company has devoted constant effort and energy to give to its dealers the best possible delivery service.

The Blommer Ice Cream Co. is a firm believer in the mechanically refrigerated cabinet, which it is installing with their dealers, believing that this is one of the best ways of giving to the public a better and a more uniform product, and is in line with their policy of service considering the mechanical equipment as a great merchandising aid for the dealer.

Conrad Blommer's speech on mechanically refrigerated cabinets at the recent national convention at New Orleans was one of the distinct features of the convention, following which Mr. Blommer accompanied the ice cream manufacturers who visited Cuba and Panama on the Caribbean cruise.

The company's success with iceless cabinets has led manufacturers of many states to visit Milwaukee and confer with Blommer officials on this subject, studying in the Milwaukee plant results the Blommer Co. has achieved through this newcomer to the industry.

This pioneer company has done much toward establishing the high reputation Milwaukee enjoys as one of the great ice cream manufacturing cities of the country. An early foundation of quality ice cream is attributed by officials to the growth of the company and the development of per capita consumption in Milwaukee.

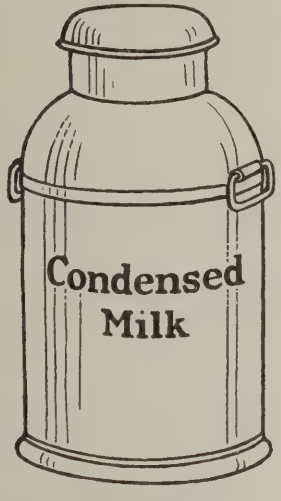
A Distinctive Industry

There is not another industry dealing with so delicate a product requiring so much care to handle, where lack of attention means so much loss as in the ice cream industry.

Nor is there an industry where such careful provision against loss of quality has been made as the safe, distinctive, sweet, wholesome, sanitary cleanliness so thoroughly and easily supplied by the use of

Wyandotte Sanitary Cleaner and Cleanser

Indian in Circle



in Every Package

Among other things the use of this cleaner entirely removes from ice cream equipment those greasy films which so often cause quality failure, and impart odors to ice cream. It is itself entirely free from grease, will not produce a greasy suds, and cleans so thoroughly and rinses so freely that all sour and stale odors are completely removed from the plant and equipment.

THE ASSOCIATION OF ICE CREAM SUPPLY MEN ★ MEMBER

MERRELL-SOULE CO. SYRACUSE, NEW YORK

KENTUCKY MANUFACTURERS MEET IN PADUCAH.

The general meeting of the Dairy Products' Association of Kentucky held at the Palmer House in Paducah, was a success both in the attendance and enthusiasm of its members.

It was directed that the committee in charge of preparing the articles of incorporation proceed with the plans as previously presented.

In order that some accurate information may be had in regard to the dairy development in Kentucky, a plan for collecting statistics from the manufacturers was discussed, this work to be in the hands of the college of agriculture.

It was then decided that the next general meeting of the association be held in Lexington the latter part of January or the early part of February in conjunction with the Farmer's Week Exercises of the college of agriculture, the exact date to be fixed by the board of directors.

Representatives of the Delco Light Products and the Nizer Corporation met with the ice cream manufacturers in regard to the iceless cabinet situation in Kentucky. The ice cream manufacturers have under consideration policies in regard to the differential to replace the expense of ice and salt and in addition the size of the customer's business that would justify the furnishing of the refrigerated cabinets practical. It was the opinion that iceless cabinets should be installed only as the trade demands and justifies them.

The creamerymen will continue their cream improvement work during the coming year more energetically than in the past, and the college of agriculture is to assist again in this worthy movement. The agricultural committee of the Kentucky Banker's Association is wielding an invaluable influence with its endorsement of cream improvement.

These combined efforts led to the recommendation that it would be unnecessary for the railroads, which are heartily in accord with cream improvement, to adopt their tentatively suggested policy of refusing to accept cream that is foaming out of the can during warm weather.

The general and divisional meetings were held during the forenoon. Following luncheon, Chas. G. Vahlkamp, ex-president of the association assumed the responsibilities as host. The Chamber of Commerce provided cars, which, under the direction of Mr. Vahlkamp, transported the visitors through the city and adjoining country. At 7:00 o'clock, Mr. Vahlkamp entertained with an elaborate course dinner, including a generous portion of quail on toast. This was immediately followed by a theater party, the host having previously reserved all of the lower boxes.

So pronounced was Mr. Vahlkamp's hospitality that the members have presented him with a sterling silver loving cup, to commemorate the date and his generosity.

CARLTON BALL, General Secretary,
The Dairy Products Association of Kentucky.

OKLAHOMA ICE CREAM COURSE BEGINS IN FEBRUARY.

The six weeks' dairy course of the Oklahoma A. & M. College, Stillwater, Okla., opens January 5 and will continue through February 14, according to recent announcement. There will be lectures, text book study, laboratory work and daily practice work in the creamery, in addition to instruction in ice cream making, butter making, pasteurization and handling of market milk, cottage cheese making, commercial buttermilk and in all other modern tests of dairy products.

There will be a one-week ice cream makers' course on February 16 to 21, 1925. This will be for ice cream makers and managers of ice cream plants. This will consist of standardization of mixes for butterfat and solids, factors in controlling overrun, overrun tests, pasteurization and processing of mixes by emulsors and viscolizers, acidity test, butterfat tests, test for solids, gelatine tests, improvers, tests for standard vanillas.

CERELOSE

CERELOSE is a pure white refined corn sugar which has been found to be of advantage to ice cream manufacturers for use in conjunction with cane sugar in the proportion of 25 to 50% Cerelose instead of 100% cane sugar, for the following reasons:

1.—Cerelose emphasizes the richness of the butter fat with the result that Cerelose develops the natural flavor of ice cream.

2.—Cerelose produces a smoother cream.

3.—Cerelose is the new solid builder for ice cream because it improves the body and texture. It will not crystallize nor form sandy cream.

4.—Ice cream made with Cerelose is more digestible than when made entirely with cane sugar because Cerelose is a dextrose sugar being directly assimilated by the blood, therefore, more ice cream may be consumed, particularly by infants and invalids.

5.—Cerelose is approximately 25% cheaper in price than cane sugar.

Cerelose should be used in the same manner as cane sugar, the amount depending upon the type of cream desired. 25 to 50% is recommended.

What I Found Out About a Gelatine Pot.
By Percy Werner, Jr.

A GELATINE pot is an ugly thing. When I started in the ice cream business a year ago I used to wrestle with mine every Saturday night, scraping off the week's accumulation of dark brown scum—and blessing the fellow who invented it. Then an accident occurred and I ran on to a method of preparing my gelatine for an ice cream mix without the use of a melting pot.

Of course, ice cream manufacturers who pasteurize the mix will not be interested in this method as they have learned to melt their gelatine in the mix during the pasteurizing process. But there are many small manufacturers who, like myself, do not always pasteurize, even though they should.

Percy Werner, Jr.

My pot sprang a leak one day. I was in a hurry to prepare my mix so I stirred my gelatine into a ten-gallon can of milk, put in a little soda and turned live steam into the can. This was then stirred until the gelatine was in solution. The result was a perfect solution of gelatine at a temperature lower than I usually used in the steam jacketed pot and in considerably less time. But my chief satisfaction came when I discovered that I had eliminated the problem of washing the gelatine pot. There was no gelatine burned to the side of the can. The milky film of gelatine that adhered to the side after the solution had been removed, washed out as easily as milk itself. My gelatine pot has since been junked and my disposition saved from utter ruin.

A FEW precautions are necessary for those who would try this method of preparing gelatine. The milk should be cold when gelatine is added. It should be poured into the milk slowly to prevent lumping, the milk being stirred vigorously while being added. Before steam is admitted three teaspoonsful of baking soda should be added as the milk will curdle if the least bit acid.

Some water will get into the milk from the steam so that the can should not be full before the steam is admitted. I usually start with seven or eight gallons of milk or less depending upon the size batch being prepared. There should be at least one gallon of milk to every pound of gelatine. The steam is admitted through a hose to the end of which a piece of sanitary pipe is attached.

Theoretically the water added to the mix through the steam should be taken into account. When a large

(Continued on page 148)

Creating Ice Cream Nutrition Classes in Public Schools of America

Explaining an Instructive Campaign Conducted by the Anheuser-Busch Ice Cream and Beverage Co., Inc., New Orleans, La.

*By E. B. GEISEL**

IN CREATING ice cream nutrition classes, the ice cream manufacturer should endeavor to interest the nutrition workers in their respective communities, and also the chamber of commerce.

After having the endorsement of the state or city nutrition workers, or the chamber of commerce, it is well to then interview the superintendent of the public schools or the heads of the private schools and present the idea of having an ice cream nutrition class in the schools. We have found that this is the best way to get the co-operation of establishing the ice cream nutrition classes.

In securing the endorsement of the superintendent or heads of the private schools, it is then necessary to get the co-operation of the principal or teacher of the individual school that you desire to create a nutrition class in.

E. B. GEISEL.

We have found that the principal in the schools very readily agree to the idea of the nutrition class, as we have been informed that whenever an ice cream nutrition class is formed the attendance of the pupil is very much improved.

THE quantity of ice cream that we decided to give a child was one-fifth of a quart of vanilla ice cream. This was given the child for five school days over a period of seven weeks. The portion of ice cream contained about 320 calories.

The children that were selected in the Alexandria Dimitry School were from the first "A" and first "B" grades, and only a few from the second, third and fourth grades. The children's ages ranged from 6 to 8 years.

In the Alexandria Dimitry class fifty-one children gained in weight, four remained the same, and four lost weight through illness. The least weight gained was one-quarter of a pound, and the geatest weight gained was five and one-half pounds. The total number of pounds gained by fifty-nine children was sixty-nine and one-half pounds over the period of seven weeks. The average gain per child was one and one-fifth pounds.

*Secretary-treasurer and manager of the plant.

We might mention that the Alexandria Dimitry School is located in what is considered a fairly poor neighborhood. This school was selected because it is a known fact that the children attending the school were of moderate means, and although they were given ten or fifteen cents for their school day lunch, it was noticeable that with this money they would purchase food or cheap candies of very small nutritive value.

WE ARE at the present time operating another nutrition class in a school located in one of the poorest neighborhoods in New Orleans. In this particular class the improvement in the children is much greater than was noted in the Alexandria Dimitry class. We have been informed by the principal that the children all seem to be more alert in their studies, and in better physical condition since feeding them ice cream in the class.

The ice cream manufacturer that creates ice cream nutrition classes is in a position to receive valuable advertising from the local newspapers, and although publishers are frankly antagonistic to giving free advertising in their news' columns, they are always on the lookout for news what is known in the newspaper fraternity as "Human Interest Stuff." There is less objection to giving free publicity to a whole industry than to an individual firm and such a campaign undertaken along with a regular space buying advertising campaign, and in conjunction with it should be productive of gratifying results.

Score card used in ice cream nutritional tests appear on page 158.

How It Is Done

E. B. Geisel, manager of the Anheuser-Busch ice cream plant at New Orleans, is known in that city as the school kiddies' "fairy godfather." This affection is due to the fact that he conducted for six weeks an ice cream test in New Orleans schools that conclusively showed that ice cream lives up to all claims as a wholesome food product. Undernourished children gained waight so rapidly from eating Mr. Geisel's ice cream that officials stated they were satisfied the product is more beneficial than milk.

In this article Mr. Geisel tells readers how these tests may be conducted—in other words, how the ice cream manufacturer can put over educational work through the schools. Since it is a matter of just as much importance to the school authorities as to the ice cream manufacturers themselves, there is every reason why the plan should be followed out quite generally in the industry.

NEW ADDITION FOR GLOBE PLANT.

Official announcement has been made by A. A. Comey, vice-president and general manager of the Globe Ice Cream Co., Los Angeles, that construction has now started on the new $200,000 addition of the Globe Ice Cream Co., located at the corner of Jefferson and Hill Sts., Los Angeles. It will consist of a new unit building, 40x150 feet. It will contain a two-story ice tank room, with an additional daily capacity of 200 tons of ice.

(Continued from page 148)

mix is being prepared, a half gallon of water from this source will not materially influence the percentage of solids or fat in the mix. My method of caring for this water is in the preparation of my ripener. This calls for two gallons of water per pound of powder. I use only one and one-half gallons of water in the ripener.

Without a doubt the best method of preparing gelatine for an ice cream mix is to put it into the pasteurizing vat with the other ingredients and melt it as the mix is pasteurized. This I hope to do soon. But, meanwhile, I find the preparation of gelatine in a milk can which has to be washed anyway, whether gelatine is put into it or not, is a most convenient, efficient and labor-saving method.

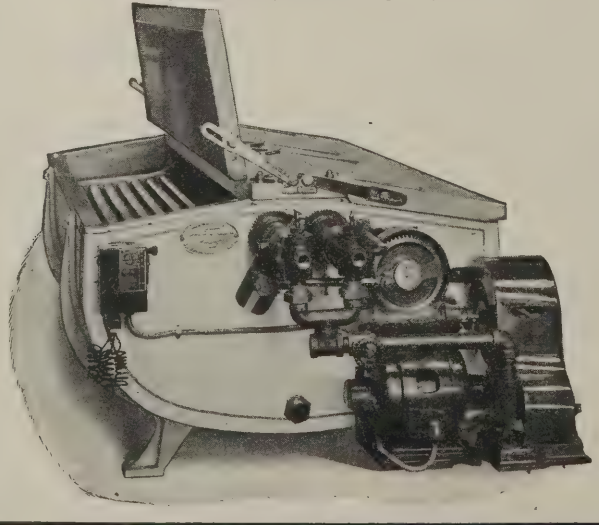
GEORGIA ASSOCIATION AFFILIATES WITH NATIONAL BODY.

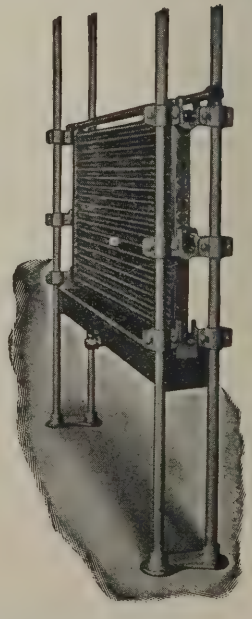
The prevailing topics of the day were discussed at the 1924 convention of the Georgia Ice Cream Manufacturers' Association—cabinets and co-operative advertising. The convention was held at Augusta, December 2. The scene of the meeting was Carmichael's Fishing Pond, but the weather was entirely different from what the manufacturers meeting in Des Moines recently encountered.

George Sancken of the Georgia-Carolina Dairy Products Co., Augusta, was elected president, succeeding J. D. Kinnett of Macon. Mr. Kinnett, who last year held down the post of president and treasurer, was re-elected treasurer. Joe Flowers of Thomasville, was elected vice-president.



The association held a very enthusiastic and harmonious meeting. National co-operative advertising was formally approved, and officials expressed the belief that members will cheerfully co-operate. The association formally voted to affiliate with the national association. M. J. Costa, former president of both the Georgia and the Southern association, was elected delegate to the national convention. Sam Marshall of Albany was re-elected secretary. The financial condition of the association is very good, the treasurer's report showed.

NEW PLANT ON COAST.



The Cutlip Ice Cream Co., North Bend, Ore., recently began the manufacture of ice cream in its new plant. All the machinery has been installed for the manufacture of the frozen product, but officials advise that later on the company will also make and retail butter and cottage cheese.

One of the most modern types of ice manufacturing systems has been installed. The city water is entirely clarified before the ice manufacturing process is begun. It is said that this is the only system of its kind on the Pacific Coast.

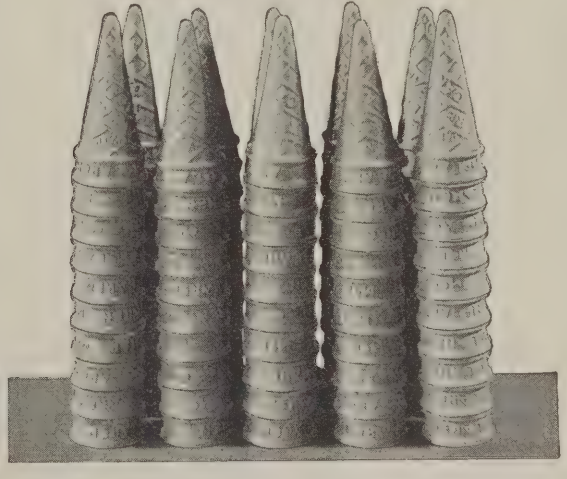
McLAREN'S CONES



Every Cone in Every Row is Uniformly Baked

INSIDE and outside, from tip to top, McLaren's Cones are baked to an even brown color. This result can be obtained only through the scientific use of fully-automatic cone machines. Heat adjustments must be exactly right, and the finished cones must be ejected from the moulds at precisely the correct time.

McLaren's Cones have no soft spots to dry out and shrivel up. No turned points. No intermixture of light and dark colors. No steam cracks to weaken wall of cone.

You would find it a pleasure to sell these good cones,—profitable too.

Every Cone is Guaranteed

(Continued from page 40)

help carry out the idea of spotlessness so essential to the reputation of the maker of ice cream. This care also applies to the delivery trucks, wagons and drivers which in presenting an immaculate appearance are traveling advertisements for the manufacturer, carrying wherever they go his message not only of the brand, but of its purity."

But the principal key to public interest lies in quality production, the speaker carefully stressed. In this connection, he said—

A. A. COMEY.

"All the institutional and good will advertising in the world could not hold trade if the product did not possess quality. Although ice cream is a low-priced unit of sale, quality is the first consideration.

"No matter how little discernment the public may have in distinguishing the difference between the good and poor in other lines, it knows the difference between poor and good ice cream and recognizes it quickly. And it's a caustic public when aroused. It can talk just as lustily against a product as it can for it, and it goes out of its way to wag a mean tongue when it gets started.

"We could, to be sure, use cheap ingredients, substitutes for pure flavors, make a product which has the general appearance of merit and which looked and tasted enough like the real thing to get by. We could take a few thousand dollars a year and through advertising ours as a wonderfully sweet, pure, clean product sell thousands of quarts of ice cream—that is, until we had exhausted our first market—those who believed our advertising and tried the cream once."

The effect of misapplied effort was compared with the effect of constructive forces which build good will. He stated that just as it is easy to multiply the effect of misapplied efforts 50,000 or 5,000,000 times to the destruction of business, it is just as possible to multiply in the same measure the effect of constructive forces. And the difference between the type of business just mentoined and the kind of business which members of the ice cream industry, for the most part, are trying to conduct, is tremendous, for—

"Imagine for instance the powerful advertising force which gathers behind an institution in which every factor of cleanliness and health is guarded and which is keen to let the public know through outward appearances as well as through personally conducted tours through its plant of its watchfulness on the side of purity and wholesomeness of its product.

"Here is a factory on a busy boulevard. It is spotless in appearance. At night it is brilliantly lighted to keep itself constantly before the public. By day, its white walls, its green lawn, its flowers, its well groomed appearance attracts constant and favorable attention. It is modern in every detail. It is scrubbed clean, inside and out, at frequent intervals. Its help looks clean and efficient. Everything is quiet and businesslike. Sunlight streams through the wide windows.

"There is no dust-gathering, unnecessary tools or equipment in sight. It is as trim as the deck of a battleship ready for action. Corners of walls and floors are rounded. Walls and ceilings are enameled for frequent washing.

"A spur track runs right to its receiving room where car loads of fresh milk and cream are delivered with unnecessary handling. Its cooling room is spotless. Its chemical laboratory where all the ingredients pass is an example of efficiency. Its tank room, its pasteurizing vats, its aging tanks—every element in the manufacture of ice cream is up-to-date and so scrupulously clean that every housewife that inspects the plant goes away a booster for the product.

"All the workers are in smart, clean uniform. The delivery trucks have the appearance of being just newly painted and the drivers are trim and immaculate. The product goes to dealers who have been educated through advertising to give the public real service—the very best dealers in the territory.

"Does such a manufacturer succeed? Why shouldn't he succeed. He has planned to succeed. Every factory which could contribute to his success has been summoned like the genii when the magic lamp had been rubbed to crown his efforts with glory."

Such good will should be earned and credited through institutional advertising, the convention was told. The speaker declared that every contact with the public in taste, speech or vision, should be favorable and every effort should be employed to keep the public sold.

LOUISIANA CONVENTION SET FOR JANUARY 15.

It was the plan of the Louisiana Association of Ice Cream Manufacturers to hold its annual session at New Orleans at the time of the conventions of the Southern and national associations. But they evidently could not find time, since there was so much going on during festivities in the Crescent City. For this reason the convention was postponed until January 15, when the association will hold a meeting at Hotel Bentley, Alexandria. This decision was reached at a meeting of the board of directors in New Orleans in November, with President A. A. Lay presiding.

touch with the national association in 1924, and in view of this fact, if the arrangement of dates and everything else works out all right, Detroit should find a large number of visitors from Dixie on hand.

Because of the incompleteness of the situation at this time, Southern officials could not advise The Ice Cream Review whether their association will hold a Southern booth at the national convention this year, as they did in Cleveland in 1923. But assurance has been given, however, that they will do everything they can to encourage a very large attendance from all sections of the South.

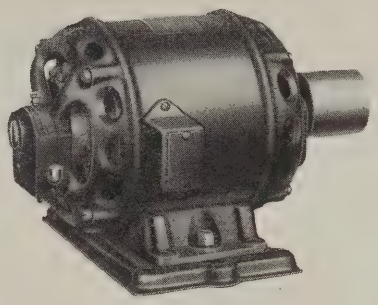
(Continued from page 30)



Cleveland owns or controls two-thirds of all the shipping upon the Great Lakes, with 45 steamship lines connecting with all ports upon these inland seas. The city has eight passenger boat lines, nine interurban lines and is served by seven trunk lines which are connected by a "Belt Line," giving Cleveland one of the best transportation systems in the country.

THE Cleveland Chamber of Commerce, with a membership of 4000 business and professional men, coordinates in a remarkable way the activities of various groups. There are several internal organizations, such as Manufacturers' and Wholesale Merchants' Board, Bankers' Trade and Acceptance Council, Cleveland Safety Council, Convention Board, Flour Club, Retail Merchants' Board, Grain and Hay Exchange, Military Committee, Retail Coal Dealers' Board, and Retail Merchants Board.

Other leading business organizations are Chamber of Industry, Builders' Exchange, Cleveland Real Estate Board, Industrial Association of Cleveland, Cleveland Advertising Club, Cleveland Association of Credit Men, Rotary Club, Electrical League, Kiwanis Club and Exchange Club.

During the war Cleveland had the opportunity of testing its industrial value, and as in everything else, went into it wholeheartedly to the end that not a war necessity was manufactured of which Cleveland could not make a part, from the tiniest screw to the ships which were built and loaded here and steamed via the Welland Canal across the Atlantic to their European destination.

"They Keep a-Running"

For Mechanical Refrigeration

Century Fractional h. p. Motors occupy an enviable position in the field of electro-mechanical refrigeration because "They Keep a-Running." They meet all the service requirements of refrigeration machines for ice cream cabinets, soft drink coolers, soda fountains, etc., which must operate satisfactorily under strenuous conditions from 6 to 18 hours a day. They function properly, without attention, for long periods—have high efficiency—stand up under heavy strain.

Iceless Cabinets Feature Record Kansas Convention

Discussions on Automatic Refrigeration Take up Most of Time at 1924 Convention at Topeka, Marked by Record-Breaking Attendance

MARKED by the largest attendance in history and by the most enthusiastic sessions of any of its past conventions, the Kansas Association of Ice Cream Manufacturers held its annual convention at Topeka, December 16, 17 and 18. An optimistic outlook for the future of the industry in that state was easily formed from the undercurrent of convention proceedings. Speakers discussed virtually all the problems now facing the industry. Iceless cabinets were brought up and soundly cussed, heartily praised, occasionally blessed and by some loyal supporters were staunchly supported and recommended.

The upshot of the convention was the iceless cabinet has its place in the industry, grudgingly won, but manufacturers must "watch their step" to see that no injurious principles be brought about through this new cabinet. On the whole, probably most of the discussions on the iceless cabinet came from the manufacturers of the cabinets themselves, through their representatives, but there were ice cream men present who had stories of their own to tell.

Both sides of the question were so fully brought out that many delegates left the convention feeling better satisfied about the matter than at any time since the introduction of mechanical refrigeration.

The association did not take definite action on the matter of supporting the national advertising campaign, but the way is left open for this to be taken up again in the near future.

Officers of the Kansas Association of Ice Cream Manufacturers for 1925

President, J. F. Crum, Junction City.
Vice-president, C. A. Radley, Winfield.
Secretary-treasurer, B. T. Perkins, Pittsburg.

The executive committee consists of the following: W. H. Hammond, Great Bend; Paul Edquist, Concordia; Paul Chism, Wichita; J. H. Bennet, Ottawa; J. R. Fenner, St. Joseph, Mo.; F. H. Meyer, Kansas City; C. A. Radley, Winfield; R. E. Ambrose, Norton, and W. H. Chappell, Manhattan.

* * *

KANSAS JACK RABBITS OFFICERS FOR 1925.

President, Ed. Weil, Western Rock Salt Co.
Vice-president, Hugh D. Harrington, Commercial Gelatine Co.
Secretary, C. M. Cory, Creamery Package Mfg. Co.
Treasurer, B. Heller & Co.
Sargeant at Arms, Chris Hollinger, Hudson Mfg. Co.

DISCUSSIONS on mechanical refrigeration occupied most of the attention of the delegates during the three days of the convention. The iceless cabinet cuts costs and in some instances eliminates some of the costs, declared E. F. Melke, representing the Delco-Light Co., Dayton, O., advancing arguments as follows:

"There is less depreciation on trucks, less investment per truck, and fewer trucks. If present trucks are used more cream can be carried. Consequently, longer routes can be established, quicker and better service given to the dealers, and a gneral saving effected on each route.

"Experiences of many manufacturers show that the installation of iceless cabinets on country and suburban routes brings the country stop to the city and makes it practically a city stop. Installation of the cabinets on stops of this character often enables the manufacturer to eliminate the dairy delivery because the cream does not have to be packed. It is kept in perfect condition and a large amount of it can be stored. Delivery is often accomplished by light high speed trucks whose operating over a radius of a great many miles is exceedingly low.

"In cities the parking problem is becoming greater every day. The delivery time, due to the fact that salting and icing is done away with entirely, has so cut down the time at each stop that the driver can leave the truck at almost any place, drop the cream, and be off on his way to the next stop in a very short space of time.

"Manufacturers find that upon the installation of a cabinet in a store that the public quickly appreciates the better quality of the cream—the fact that it is kept in an absolute clean sanitary condition—that there is no danger of salt or ice, water, or other foreign substance getting into the cream—that it is always kept at the proper temperature, it is never too hard, nor too soft—and that the cabinet itself attracts a great deal of attention in the store. Soon the entire neighborhood learns of the cabinet.

"The cabinet improves or maintains the quality of the ice cream by keeping it at an even temperature; it is always at the proper consistency; the temperature of the machine can be regulated to suit your own needs or the needs of the particular dealer in whose establishment it is installed; the flavor is always maintained, and the customer is quick to recognize the superiority of the product and the service.

"There is no re-icing, and the sometimes consequent attendant damage to the cream through crystallization; no returns of soft cream, a cost which someone always has to bear, and no petty annoyances such as delivery damages, etc., in the dealer's store.

"The electric ice cream cabinet makes better customers for the manufacturer because the installation of a cabinet offers the dealer a convenience and fills a long felt need. It is something they have been wanting and hoping for, for years. Ice cream dealers will be much pleased when they learn that they can be provided or can provide themselves with a cabinet that needs no ice or salt, makes no dirt, no muss, does away with sloppy floors and unsanitary conditions, eliminates the often unsanitary looking cabinet behind their counter.

"Electric cabinets enable the merchant to serve a more superior, a more sanitary, and a more palatable product.

"Electric cabinets relieve the employees in the store of much work of a disagreeable nature, makes them more satisfied, and turns them into boosters for the cabinet and your ice cream. These cabinets reduce shrinkage, allow the dealer to carry a greater variety and larger stock, and finally increases his sales and profits which is bound to be favorably reflected in your business."

LOUIS CHAMBERLAIN added his voice to this cheering chorus on the benefits of automatic refrigeration, declaring that he spoke as much in the interest of the manufacturers as for the company he represents, the Nizer Corp., when he said that "absolute co-operation is necessary among ice cream manufacturers in order to derive the greatest good from these cabinets."

He gave some interesting facts about the extent of the use of iceless cabinets, speaking in part as follows:

"It is conservatively estimated that some 18,000 iceless cabinets are now in operation in the United States and outside of the average trouble that one finds with machinery as a whole, are giving complete satisfaction. Never once have I found an ice cream manufacturer who has started installing iceless cabinets express a regret that he is sorry he went ahead with it and this bears out the fact that he immediately sees where the cabinet is able to pay for itself in a short period.

"The big question in their minds is how to install them with their dealers so as to show a profit to themselves and complete satisfaction to the dealer. I have found a great many methods being used in traveling from one end of the country to the other and believe it bases down to the fact that each territory and each city must work out a plan that suits them best and absolutely co-operates with each other.

"We believe the logical method is for the manufacturer to own his own cabinets for three or four reasons:

"1. There is not so much chance for the dealer to switch from one manufacturer to another.

"2. It eliminates the possibility of the dealer buying his mix nearby, putting in a small freezer and using the cabinet as a hardening room. These cabinets will freeze cream.

"3. Not all of your dealers will buy cabinets and until all of them do, you will not show your biggest profit, something you desire to attain as soon as possible and do away with dual delivery, etc.

"It is an almost universal procedure in the city for the manufacturer to loan the cabinet to the dealer. Mr. Dealer then pays the current and water costs each month. These vary in accordance to the charge levied for electric current, but a 4-hole cabinet should not consume over 1 K. W. per 24 hours—a 6-hole—1.6 K. W. and an 8-hole 1.9 K. W. In the city it is general that no reduction of the price of cream be given and I have found some cases where a 10 cents advance has been made.

"In the country, however, there are a great many ways to put the cabinet out, and I hesitate to say which is the better, because they all must have their good points or the manufacturer would not go to the expense of installing cabinets unless he had considered things from all angles.

"1. Put your cabinets out on a rental basis, either at a flat rate of so much per month or a larger rental for the months of April, May, June, July, August, September and October and a smaller rental for the months of November, December, January, February and March. According to this method some manufacturers are keeping up their country prices and giving a rebate and others are making a reduction.

"2. Charge no rental but loan the cabinets to the country dealers, keep up your city price, and pay for telephone calls, express rebates, etc.

"3. Re-sell your cabinets to the dealer, taking his down payment and so much per week, which acts to retire the balance against the purchase price of the cabinet but have their payments extend over a period of 18 or 24 months so that you are guaranteed his business for at least that time before the cabinet passes out of your hands.

"Profits from iceless cabinets have been found to run anywhere from 3 cents per gallon up to 15 cents per gallon, depending on the number of cabinets and the condition of the territory in which the cabinets are installed. As a rule a depreciation of 20-33 per cent is figured in arriving at the profits obtained. As to the life of the cabinet, might say that they have been in operation continuously for nearly 4 years and outside of yearly oiling and the usual wearing of motor parts are giving complete satisfaction. A recent test has been made which subjected an 8-hole cabinet to 22,500 hours of continuous running and figured on the average of 6 hours running per day it would bring the life of the cabinet to something more than 10½ years."

* * *

Pioneers On Hand.

Mrs. Henry Scott, probably one of the first ice cream manufacturers in the West, if not commercially in the United States, was present at the Kansas convention. She started the first plant in Topeka in 1879, 44 years ago, and has operated it continuously ever since.

Another pioneer ice cream manufacturer was Joel Baughmon, who started to make ice cream in 1884.

NOTES OF THE TRADE

News of Interest Concerning What Our Readers and Advertisers are Doing to Develop the Industry. We Invite Correspondence Relative to New Products and New Equipment.

DOUBLE-ROW ICELESS CABINETS.

A recent announcement from the Nizer Corporation of Detroit carries the news that this company is building 10 and 12-hole double row iceless cabinets. It is anticipated that these giant sizes will satisfy the requirements of many of the largest retailers completely and avoid the necessity for two cabinets of smaller capacities and of nearly twice the cost, officials say in the announcement. It is stated by the Nizer Corporation that even the new 12-hole size will be easily taken care of by the company's standard compressor. Experience with 4, 6 and 8-hole cabinets indicates that the

Double-Row Cabinet.

new 10 and 12-hole cabinets will necessitate the operation of the compressor for only 10 and 12 hours per day, respectively, in the hottest months of the year, the announcement says.

The construction of the new cabinets is the same as all other standard Nizer cabinets—a very large ice cream capacity being made possible in small space. The 10 and 12-hole sizes will measure about 28 inches wide by 70½ and 28 inches by 29 by 91, respectively.

These measurements provide room for the inclusion of the compressor unit within the cabinet. In cases where 10 and 12-hole capacity is required, but where space is too limited to take the self-contained type, the compressor unit is separately installed in some convenient spare space and the length of the cabinet is thus reduced 11 inches, we are told.

SLOGAN DESIGNS OFFERED.

Announcement has been made that John H. Mulholland Co., 1033 Chestnut St., Philadelphia, Pa., has made arrangements with W. A. Schwindeler, chairman of the national association's advertising committee, to make enameled steel disks of the new national ice cream slogan for delivery trucks. Readers of The Ice Cream Review know of the campaign conducted in which the winning slogan was selected. This slogan is, "Serve it—And You Please All." The slogan goes with an attractive design adopted at the same time. This design, of course, will appear in the steel disk manufactured by the Mulholland Company. The disks are made in five colors and in pairs, dish and brick, for the center, according to the announcement reaching The Ice Cream Review.

HOLLWEG VISITS COAST.

Not many of the Dixie Flyers took the opportunity to get away to the Pacific coast convention to break the bread of friendship with the ice cream men of that section, but Fred Hollweg, vice-president of the Thos. W. Dunn Co., was among those present. He arrived early and saw the show through. Mr. Hollweg misses few of the big conventions.

SERVICE MEN'S ASSOCIATION PROPOSED.

Editor The Ice Cream Review:

I have just completed a course on the servicing of automatically refrigerated ice cream cabinets and soda fountains in the school conducted by the Nizer Corporation of Detroit, Mich.

While attending this class, I had the pleasure of meetng a number of fine fellows from the four corners of the U. S. A.—some only came a few hundred miles, while others came thousands.

When I look into the future and see the probability that the time is not so very far off when every ice cream manufacturer in the country will have one or more men in their employ doing this servicing work. I can easily see the probabilities of an association of these men that will not only grow into a large membership of fine young men whom we may expect to produce a big percentage of our coming ice cream manufacturers, but it will go a long way toward the advancement of this new and recognized very important branch of the ice cream game.

While thinking along these lines, I wrote a brief sketch of some of the things that should be considered by such an association, which I will submit to you, and should you see fit to pass it on to your readers, it is very probable that you will be sowing the seed from which a new and valuable association might spring.

I will appreciate it if you will tell me whether or not my thought is a good one.

Yours very truly,
A. D. MORRIS,
Minneapolis, Minn.
2500 Emerson Avenue South, Apt. S,

1. The name of this organization is the "S. O. 2 Service Men's Association."

This name is chosen because S. O. 2 (the chemical abbreviation for sulphur dioxide gas) is more universally used in connection with automatically refrigerated ice cream cabinets and soda fountains than any other refrigerant.

2. The emblem of this organization will be the sign "S. O. 2" withing a triange, with the word "Service" marking the three sides of the triangle—thus—

Color scheme and kind of metal or material to be determined.

3. The purpose of this association is to enable the growing numbers of such service men to have a time and place where they can meet in common and become acquainted, exchange views, benefit by each others' experience, and in various ways become more valuable to themselves and their employees, and to the cause.

4. The meetings should be annually—the date should be at the same date of the National Association of Ice Cream Manufacturers—the place should be the same city selected by the National Association of Ice Cream Manufacturers.

This association should have as many open meetings as the convention time will permit, but it should have at least one closed meeting where they would go into executive session for the purpose of electing officers for the following year—hearing reports from retiring officers and committees, and conducting any other business which might come before this meeting.

5. The advantages of this association will be invaluable, as it gives its members an opportunity to learn new or better ways of meeting their field conditions, by a transfer of ideas and experiences, etc.—it gives them an opportunity to see all new equipment and all improvements and advancements made by the various manufacturers of this style of machinery that might be on exhibition at the convention.

The employers should encourage their service men to join this association and attend all conventions, as the knowledge gained will more than repay him for the expense of the trip.

6. The entertainment feature will be worked out before each convention by the entertainment committee.

7. By-laws should be enacted, committees created and its members appointed, and other organization activities should all be pre-arranged so that the first annual meeting will go into motion without loss of time, then new committees, community members and new by-laws can be attended to at each executive session.

8. Eligible members should be any one whose duties call him to service automatically refrigerated ice cream cabinets, either in a service station or in the field—charging board operatives should be eligible.

(Continued on next page)

A salesman of this equipment whose duties also include servicing is not eligible as a member, but may be elected to an honorary membership from year to year, and such membership shall be passed upon by the members at the executive meeting for the following year—the term of such honorary membership is to extend from the beginning of one executive meeting to the beginning of the next, or until such time as the honorary elected member is read out of membership. The first order of business after meeting is called to order should be these elections.

Any member who later becomes a salesman will automatically cease to be a member in good standing, but he will become an honorary member, and will be governed by such rules and by-laws as apply to such class of membership.

Papers will be read, talks made and discussions entered into at the various meetings of the association, but there will be no sales talk permitted by any one in favor of any particular manufacturer or machine.

The chairman of the convention will be the judge as to whether or not any paper, talk or discussion appears too strongly as a sales talk, and he will be expected to immediately stop such talk, even though it be necessary to make the offending speaker stop before he is through.

This association must be kept free from any outside influence.

As the membership grows, there can be an auxiliary association organized in the various states to meet with the state ice cream manufacturers.

Dues or assessments can be handled along the customary lines, such as the system now in use by most of the supply men's associations.

Any one who is eligible to membership in this organization, either as member or honorary member, can make application either drect to its officers, through the mails, care of the trade paper which is selected as the association organ, or through the columns of the association organ.

* * *

MORRIS JOINS NIZER.

Ice cream men of Texas, Oklahoma, Arkansas, Missouri, Kansas and Minnesota, and the supply friends of A. D. Morris, will be interested to know that he has joined the Nizer Corporation, and will represent that company in North and South Dakota, Minnesota, and Western Wisconsin.

Mr. Morris has just finished a two year connection with the Northwestern Ice Cream Company of Minneapolis, Minn., by which he has added another successful new plant venture to the chains which he has extended from Minnesota to Texas.

Mr. Morris has cautioned us not to miss sending any of his Ice Cream Reviews, as he knows that the Ice Cream Review is as valuable to the ice cream equipment salesman as it is to the manufacturer.

* * *

A NEW PRODUCT OF ROGERS, DETROIT.

C. E. Rogers, 8731 Witt Street, Detroit, Mich., announces new condensing and drying equipment known as the "Dribatch." This machine is built in four sizes and is recommended for the production of dry milk and sugar for chocolate manufacturers, dry buttermilk powder, dry cultured skim milk powder, condensed buttermilk and skim milk, concentrated skim or whole milk, sugared condensed milk and for chemical and food drying purposes. The "Dribatch" is primarily a super vacuum pan doing the work that a vacuum pan accomplishes with the added advantage of concentrating to any required degree, officials claim. Complete information on the Dribatch can be secured by writing to C. E. Rogers.

THANK YOU, MR. DREW.

Many readers will recall the interesting article in the December issue of The Ice Cream Review on China's egg powder industry, from which the American ice cream industry gets one of its important ingredients—that is, one that seems to be of growing importance. We neglected to state that this article was made possible through the efforts of James F. Drew, head of James F. Drew & Co., importers of gelatine and egg yolks, 320 Broadway, New York City. Mr. Drew went to great trouble to prepare this information and to procure the photographs with which the article was illustrated, and this acknowledgment is cheerfully made.

STILL WITH JOE LOWE CO., RIEF SAYS.

In the November issue of The Ice Cream Review it was announced that Anton Rief had severed his connection with one ice cream supply house to accept a place with a firm supplying egg yolk to the industry. This announcement was made in good faith, at the National Dairy Exposition, by the head of the firm that had offered Mr. Rief a connection, which Mr. Rief was believed to have accepted. In fact, so strong was this belief that in commenting upon his "new representative," two months later, this gentleman declared Mr. Rief "was making good."

But it seems there was a misunderstanding. At any rate, The Ice Cream Review has received a cable and a postal communication from Mr. Rief, who is now abroad, stating that The Ice Cream Review's announcement was incorrect; that he still is employed by the Joe Lowe Co. of New York City. Mr. Rief communicated from Milano, Italy, and there was not sufficient time to take up the matter further with him before press time for this issue. This correction is cheerfully made in the interest of all concerned.

* * *

FLOWERS APPOINTED.

The American Engineering Co. of Philadelphia, builders of Juruick refrigerating machines, announces the appointment of Ed. Flowers, Huntington, W. Va., as sales agent for the Huntington territory. Mr. Flowers has a wide business acquaintance and is a well-known engineer. The new company will be known as the Huntington-Juruick Refrigerating Co. and will engage in general refrigerating, contracting and service work.

* * *

MALTED MILK ICE CREAM.

Malted milk ice cream is something new. For several years this matter has engaged the minds of men in the industry. It is reported to be making a way for itself among Chicago ice cream manufacturers.

The Eureka Food Products Corp., 444 W. Grand Ave., Chicago, is supplying the dried milk and malt flour for this product. Many ice cream manufacturers sampled malted milk ice cream for the first time at the Illinois convention in Chicago in October. Zack S. Frank and Jos. E. Fagan represent the company.

* * *

POSTLEWAIT IN NEW CONNECTION.

It will be of interest to the ice cream trade in the central West to learn that Edw. A. Postlewait, for several years trade representative of the Consumers' Glue Co., has joined the forces of Horine & Bowey Co. of Chicago, manufacturers of ice cream fruits, flavors and colors. Mr. Postlewait will serve the trade in Iowa and Omaha territory.

* * *

AN ICE CREAM PLANT NEAR THE ARCTIC CIRCLE.

A refrigerating plant has been installed within 70 miles of the Arctic circle, according to recent announcement. The Loman Reindeer Co., Teller, Alaska, has bought from the Baker Ice Machine Co., Omaha, Nebr., through the latter company's jobber, the Northwest Ice Machine Co., Seattle, Wash., a six-ton Baker plant for the Loman company, which is in the ice cream manufacturing business. The plant is located very near the Bering Strait, recently crossed by the world fliers.

Naturally the first thought that probably enters the reader's mind is, "Why should anyone need a refrigerating plant when located so far north?" During the winter the temperature frequently registers from 50 to 60 degrees below zero, but the warm Japanese current gives Teller a mild summer.

The Loman Reindeer Co. has a Sharp freezer 38 feet wide, 10 feet long and 9 feet high, and a storage room 38 feet wide, 40 feet long and 9 feet high. A 5½x5½ Baker Uni-flow compressor has been installed, the power being furnished by crude oil engine.

In order to get condensing water a hole about 12 feet deep was dug in the ground. At this depth ice and ice water was encountered. Teller virtually being located on an iceberg. The Baker compressor is run at 90 pounds condensing and 15 pounds suction pressure.

The Sharp freezer is carried during the summer months at 10 degrees below zero, and the storage room at 15 to 18 degrees above zero. Deer are frozen and corded up like wood in the storage room. The average deer when slaughtered are from 18 months to 2½ years old and weigh about 150 pounds when dressed.

* * *

HARGRAVE IS SALES MANAGER.

The Postum Cereal Company, Inc., of Battle Creek, Mich., announce the appointment of Newell H. Hargrave in charge

of the sales of Postum Cereal Company's new product, malted grape-nuts.

Mr. Hargrave formerly was president of the Dolly Varden Chocolate Co. of Cincinnati, and is well known in confectionery and drug circles. He is an enthusiastic worker in various trade associations and at one time was president of the Central Candy Club, the membership of which comprises manufacturers of Ohio, Indiana and Michigan. He also was president of the Cincinnati Candy Association, made up of manufacturers, jobbers, wholesalers and retailers.

PHILLIPS RESIGNS.

Announcement has been made by the Gifford-Wood Co., Hudson, N. Y., that B. B. Phillips, general manager of that company, severed his connections December 15.

Trade Literature

Review of "The Sale and Advertising of Dairy Products," By N. Clyde Tompkins, Advertising Manager, The Creamery Package Manufacturing Company, and Published by The Olesn Publishing Company, Milwaukee.

By L. M. Dorsey.*

This little book is one of the signal achievements of the year in the dairy industry. This because of the fact that individuals connected with the processing and sale of milk and milk products have come more and more to realize the benefits to be derived from the application of modern merchandising methods to the sale of dairy products. Merchandising practices which have proven successful in selling other commodities have been just as successfully utilized in the dairy products selling field; and because of the excellent results obtained in the application of these methods, Mr. Tompkins has pioneered in furnishing to the dairy industry a volume exclusively devoted to the setting forth of such of those methods as have been practically applied to dairy products merchandising.

The author takes up in the following order each of the major dairy products: Ice cream, market milk, butter and cheese. He demonstrates the selling organization to be employed for each product and indicates the kind of advertising material to be used to reach the dealer and the various classes of consumers. All this is done in a concise manner, straight to the point without any unnecessary elaboration of minor detail. This alone commends the volume to the perusal of the busy executive, manager or owner.

While the large scale of business has been given the larger share of attention, Mr. Tompkins has not neglected to devote a section of his book to the producer of milk and milk products who sell direct to consumer. The merchandising methods of the not unnumerous members of this class are woefully poor, notwithstanding shining exceptions, and it is pleasing to see someone give consideration to their problems. It is doubtful if this particular book finds its way into the hands of the producer or retailer of dairy products but it points to a field in which dairy farm papers might expend some effort which would be of considerable value to their readers.

Many books have been written dealing in a technical manner with production of milk, processing of milk, and manufacture of milk products, and occasionally one has found a very brief space allotted to merchandising but not until the advent of Mr. Tompkin's book, which should become a milestone in the development of dairy literature, has the dairy industry had a book solely devoted to merchandising. In this respect the literature of this industry has but reflected the general attitude of everyone connected with it. The greatest attention has been paid to dairy cattle production and technical problems which have had to be solved in connection with the processing of milk and the manufacture of high quality milk products; but now that many of these items have been placed upon a satisfactory footing, a greater amount of consideration is being given to the marketing of the of the products which have been brought to a high standard of perfection. Evidences of this stage of progress have become more apparent in recent years, as witness the mission of this magazine, and "The Sale and Advertising of Dairy Products" is the first concrete attempt to record in book form for the use of the many, those methods which have been successfully applied by the few. Let it be hoped that Mr. Tompkins may at some not far distant time, enlarge upon his first effort in behalf of the dairy industry by giving to it a book even more replete with dairy products merchandising information than in his first volume.

* With the dairy department, Maine Agricultural College.

A NEW CABINET CATALOG.

The Brooks Cabinet Company of Norfolk, Va., has just issued a beautifully illustrated catalog featuring their cabinet. A copy of this will be sent to any ice cream manufacturer on request. It is worth having.

The Brooks guarantee provides that if any defects develop in the Brooks cabinet within thirty days the cabinet may be returned to them at their own expense and they will ship the ice cream manufacturer another, freight prepaid. To get all details send for their catalog and price list.

* * *

The American Schaeffer & Budenberg Corp., Brooklyn, N. Y., has issued a new thermometer catalog No. 200, in which it tells the story of Crescent thermometers. The bulletin calls the trade's attention to the stock of thermometers the company now carries. In this catalog a list of stock ranges and standard straight and angle form is given.

Officials of the company say every Crescent thermometer is now furnished with bulb chamber of monel metal, assuring long life and elimination of corrosion troubles. It is further stated that the Crescent thermometer can be supplied with red capillary tubing, if desired. The catalog has 50 pages and is attractively illustrated.

With Reverse English.—Miss Green: "I know he's rich, but isn't he too old to be considered eligible?"

Mrs. Wyse: "My dear, he's too eligible to be considered old."—Boston Transcript.

COLORADO CONVENTION PROGRAM.

The following is an outline of the program for the second annual meeting to be held at the Congress Hotel, Pueblo, Colo., January 27 and 28, 1925:

Tuesday, January 27.

10:00 A. M. Meeting of Board of Directors.
Registration.
Noon. Luncheon. Courtesy C. B. Frink, Frink Creamery Company.
2:00 P. M. Address of Welcome—John M. Jackson, Mayor of Pueblo.
Response—C. T. Myers, Alamosa, Colo.
President's Address—E. B. Darrow.
Secretary's Report—E. L. Carlson.
Address—"The Importance of Sanitation to Quality Dairy Products," Prof. Geo. E. Morton, State Dairy Commissioner.
Address—"Co-operation," Dave Thomas, secretary, Colorado Creamery Butter Manufacturers' Association.
Address—"National Advertising of Ice Cream," W. A. Schwindeler, chairman Committee on National Advertising, National Association of Ice Cream Manufacturers.
7:00 P. M. Annual banquet and dance.

Wednesday, January 28.

9:30 A. M. "Mechanically Refrigerated Cabinets." Papers by representatives of the various cabinet manufacturers.
"Experience with the Mechanically Refrigerated Cabinets." Papers by the various ice cream manufacturers.
Discussion.
"The Refrigerated Soda Fountain." Papers by representatives of the various manufacturers of refrigerated soda fountains.
Discussion.
2:00 P. M. Round Table Discussions. (Sessions open only to ice cream manufacturers.)
Report of Committees.
New Business.
Election of Officers.
Adjournment.
2:00 P. M. Executive session of Rocky Mountain Canaries. Election of permanent officers, etc.
7:00 P. M. Buffet dinner, smoker, and entertainment by the Rocky Mountain Canaries.

We expect to have ninety per cent of the gallonage represented at this meeting. The interest is very keen in all sections, and we look for a highly successful and profitable two days.

The Rocky Mountain Canaries, which is the name chosen by the new sales organization, was founded a few days ago, and the following temporary officers were elected:

President—L. C. Hurley, The Hurley Company.

Vice-President—L. C. Chamberlain, Nizer Corp.

Secretary-Treasurer—John Bruce, Beatrice Creamery Supply Company.

The officers and directors of the Colorado Association of Ice Cream Manufacturers and the Rocky Mountain Canaries wish me to extend to you their thanks for whatever publicity you are able to give us on our coming meeting. Very truly yours,

THE COLORADO ASSOCIATION OF ICE CREAM MANUFACTURERS. E. L. Carlson, Sec'y.

FINCH JOINS WRIGHT-ZIEGLER CO.

W. G. Finch, well-known in the ice cream industry of the middle West and other sections, particularly as the inventor of the weigh-batch system, has been appointed head of the ice cream department of the Wright-Ziegler Co., Boston. This firm only recently established an ice cream department, although it has been in business since 1864. The company has added U. S. freezers to its equipment. Mr. Finch, who formerly operated from Grand Haven, Mich., now is established in Boston, and he says he has found the New England manufacturers to be "about the same sort of a crowd that we had in Michigan."

COMING!

Something absolutely NEW and vastly BETTER in ICE CREAM CABINETS

Within the next two weeks we will have ready for your inspection a new type of Ice Cream Cabinet that—

—eliminates absolutely ALL of the usual muss and inconvenience of icing; *yet* is refrigerated with ice—

—a cabinet in which the danger of leakage is completely done away with—

—a cabinet that assures uniform low temperatures and 48-hour service with one icing.

—a cabinet that makes possible for ice cream makers a new system that will cut service costs materially ***without requiring a single change in service equipment.***

If you'd like to receive an advance copy of the descriptive literature now on press simply drop us a line NOW. In any event WATCH for big announcement in next month's issue.

GRAND RAPIDS CABINET CO.

GRAND RAPIDS, MICHIGAN

World's Largest Manufacturers of Ice Cream Cabinets

SUCCESS CROWNS GREAT PACIFIC CONVENTION.

(Continued from page 38)

of the ablest manufacturers of the Northwest, was elected president. Mr. Burt replaces J. E. Dunne of Portland on the board of directors. Other changes on the board include the replacing of G. S. Helphrey of Sand Point, Idaho, with F. H. Maush of Seattle, and the replacing of E. M. Raymond of Wenatchee, Wash., with W. T. Graken of Anarutis, Wash.

LACK of space prevents the writer from going as extensively into convention speeches at this time as the importance of this convention would justify. But it is worth while to sketch a few of the important addresses, leaving others, some equally as important, for subsequent issues.

One of the outstanding addresses was that by K. L. Carver, general manager of the Crescent Creamery Co., Los Angeles, on the subject, "Constructive Merchandising."

The policy of building up a business on the foundation of better quality and better service cannot be questioned, it was the speaker's belief, for—

"In the case of ice cream, popular approval serves as a moderator to prevent the quality being elevated to the point where it becomes a luxury for the classes instead of a food for the masses.

"But in the matter of service," the speaker continued, "there seems to be so much outside limiting influence. Our consciences, our pocketbooks, are our only guides."

He warned against the tendency toward more salesmen, higher-priced salesmen, more deliveries, earlier deliveries, special deliveries, more cabinets, different kinds of cabinets, refrigerated cabinets, more extravagant advertising, more electric signs, more discounts—"without proper co-operation and organization." The speaker declared in this connection that—

"Often methods or practices among business houses and individuals have been used so long that they have come to be regarded as standards, while in reality they are but habits and customs, or even 'ruts.' With us this service rut is getting dangerously deep; too deep to climb out of if we don't watch our step very carefully."

Constructive merchandising, he declared, is nothing more than the practical application of the good old principle of "do unto others as you would have others do unto you."

Conditions today will not permit a line to be drawn between the manufacturer and the dealer, nor between the retail dealer and the consumer, he said, adding:

"No such manufacturer can long prosper or continue to increase his business, if, after making the sale to the dealer, the latter is unable to dispose of the manufacturer's product with reasonable success. Therefore, in modern merchandising, the manufacturer whose goods reach the consumer through dealer outlets should be as much interested in retailing as is the retail dealer himself, and as much interested in satisfying the consumer in the matter of quality and price, as is the retailer himself, and vice versa.

"Further indulgence in the uneconomic practices or tendencies that now seemingly pervade the industry, is in reality, but a slow means of reducing the industry to a point where each manufacturer will have the same desire or inclination to sit down at the same table and talk co-operation and constructive methods of merchandising with his competitor, and if we must take this course in getting down to the 'grass roots,' there will be a lot to talk about. The agitation brought on by the advent of refrigerated cabinets and fountains may well forewarn us of some of the possibilities or consequences that may result from lack of co-operation.

"Too often, in the merchandising of ice cream, the individual manufacturer practically limits his interest in the retail dealer to an occasional visit of a salesman to take an order; or the gratuitous filling up of ice boxes with cracked ice, or supplying a few highly colored display cards, or perhaps a sign painted on the side of the store building. This is not a sufficient degree of interest for the manufacturer to show in the retailing of his product. There should be frequent communications by mail direct from the manufacturer to the dealer, with which, from time to time, might well be enclosed practical suggestions on how to sell more ice cream; the importance of cleanliness at the fountain; the importance of adequate advertising display; the importance of courtesy and other suggestions of equal value. It may be said or thought that retail dealers will pay little or no attention to these suggestions. Whether they do or do not is not the point; the point is that he manufacurer will at least have impressed the dealer with his genuine interest in the latter's daily problems and his desire to be of helpful assistance.

"The next step, and of even more importance, would be to meet, as an association or by committee, with the various retail dealers' associations such as the druggists, confectioners and restaurateurs."

It is possible for the buyer to assist himself as well as his supply manufacturer if the former will only anticipate his early requirements whenever it is possible, J. C. Capron of Los Angeles told the delegates in speaking on the subject, "The Relation of the Buyer and Seller." This step helps the supplyman carry out his end of the bargain by making prompt deliveries, he added. With regard to the advantages of paying cash, the speaker said:

"I believe it is the general experience of the buyer that if his firm is rated well enough financially to pay cash, that he has one of the best levers obtainable in securing low prices. There is one thing sure, that the buyer should see that the bills and collection notices of the house from which he buys are met and replied to in the most business-like manner possible. If these are not given the attention that they demand the buyer will often find himself handicapped in his fight for low prices when the fault is that of the remittance end of the house for which he is buying. When the buyer is making every effort to get a satisfactory price from his supplyer he must be given proper attention the exact moment bills are due. When the seller knows the buyer's firm is rated prompt pay he is more liable to go the limit on low prices to the consequent benefit of the firm."

ONE of the splendid features of this history-making convention was the high-class exhibition of ice cream supplies, machinery and equipment staged by the supplymen of the Pacific Coast Ice Cream Manufacturers' Association, headed by H. P. Jacobson of San Francisco. This was one of the most up-to-date exhibits to be found at state and group-state conventions. The handsome Civic Auditorium at Oakland was the scene of this excellent display.

In fact so successful was the Pacific Slope Dairy Show, which attracted more than 20,000 persons, officials of the show organization, the California Dairy Council, believe the time has come for the dairy exposition to be a permanent institution on the coast.

This belief was expressed in an interesting bulletin summing up results this year, quoted in part as follows:

"With confidence gained from the great success this year of the Pacific Slope Dairy Show in Oakland when more than 20,000 persons passed through the doors, steps have been taken by the directors to organize on a larger and permanent basis.

"The show in the past has been carried on by the staff of the California Dairy Council, loaned for that purpose during a certain period of the year, it was explained by Sam. H. Greene, secretary-manager. Robert E. Jones, who has managed the show each year, is director of publicity for the California Dairy Council.

"The show now has reached such a size that it needs its own permanent organization and articles of incorporation for the Pacific Slope Dairy Show Association will be filed at once, Greene continued. Frank T. Murphy, former farm advisor for San Luis Obispo county, who served this year as assistant manager, has been appointed manager and will devote his time the year around to the show association.

"At the meeting of directors, Dr. C. L. Roadhouse, University of California College of Agriculture, was re-elected presi-

dent of the association. The vice-presidents are: M. H. Adamson, Los Angeles; George W. Prising, San Francisco; W. E. Haley, San Francisco; R. A. Condee, Chino, and J. N. Gilman. Sam H. Greene was re-elected secretary-treasurer of the association.

"In sketching plans for next year's show the plans for an extensive exhibition of livestock was emphasized. A livestock feature had not been possible this year on account of the foot and mouth visitation in California.

"Directors of the show association were elected as follows: Albert Meister, Sacramento; C. E. Gray, San Francisco; D. M. Dorman, Los Angeles; Sam H. Greene, San Francisco; George R. Frampton, Artesia; George W. Prising San Francisco; C. L. Roadhouse, Davis; Robert E. Jones, San Francisco; George E. Platt, Los Angeles; Merritt H. Adamson, Los Angeles; W. E. Haley, San Francisco; A. Jonson, Los Angeles; J. W. Coppini, Ferndale; P. H. Davis, San Anselmo; H. W. Low, Oakland; Robert A. Condee, Chino; Frank M. Helm, Fresno; W. T. Cole, San Francisco; J. J. O'Neil, Oakland; J. H. A. Jorgensen, Riverdale; Walter A. Haas, San Francisco; F. J. Bowden, Hanford; W. H. Scott, Hanford; George H. Ball, Fresno, and Wm. M. Regan, Davis."

IN THE ice cream competition at the Pacific Slope show, first place was given by the board of judges to the entry of the Crescent Creamery Co., Los Angeles, with a score of 97; Woodland Ice and Bottling Works, Woodland, Calif., second, 96½; Valley Dairy Co., El Monte, Calif., third, 95¾.

There were 22 entries in the ice cream class, and Prof. M. Mortensen, Iowa State College, presiding judge, said he had never before seen so much high quality ice cream assembled together in one place. In addition to Prof. Mortensen, the judges were: D. G. Turnbow, University of California, Davis, and S. L. Denning, Premier Machinery Co., San Francisco.

After the official judging, the delegates to the ice cream manufacturers' convention were given an opportunity to judge the entries and make comparisons for themselves.

The score card, which is as follows, is based on the recommendation of the American Dairy Science Association at its recent meeting in Milwaukee: Flavor, 45 per cent; texture, 25; bacteria, 20; color, 5, package, 5.

The conditions provided that entries containing less than 10 per cent or more than 14½ per cent of butterfat, or less than 34 per cent of solids, were disqualified and no score reported. For entry with a bacteria count of 50,000 or less per cubic centimeter, the judges allowed 20 points. They deducted one point for each 25,000 additional bacteria per cubic centimeter.

THE ice cream manufacturers were royally entertained at every opportunity, each evening of the convention being marked by some form of entertainment. The first evening found the manufacturers the guests of the supply men of the Pacific ice cream industry at a reception and dance.

The close of the convention was marked by a banquet and dance. This was held at Hotel Oakland.

The manufacturers were welcomed to Oakland at the reception by the supply men with a cabaret dinner dance. The occasion was officially known as "get-together night." The festivities were held at Toyon Inn, about 12 miles from Oakland. The people were transported in electric cars at the expense of the supplymen. About 300 people attended the banquet.

Supplymen were amply rewarded for their pains by the good attendance of ice cream manufacturers at their exhibits.

Send your personals and news items to "The Review" and see how well they look in print.

TEN NEW DIRECTORS OF NATIONAL ASSOCIATION.

Ten additional directors were appointed at the 1924 convention of the National Association of Ice Cream Manufacturers. This was done that the association's directorship might be more representative of the country. The new directors are:

C. G. Carlson, Denver, Colo.
W. J. Barritt, Tampa, Fla.
C. S. Hutchinson, Des Moines, Ia.
H. P. Hood, 2nd, Boston, Mass.
Madison Lewis, New York, N. Y.
J. M. Harding, Omaha, Nebr.
S. M. Ross, Columbus, O.
George M. Brink, Philadelphia, Pa.
H. T. Pangburn, Fort Worth, Tex.
J. B. Robbins, Salt Lake City, Utah.

The 1925 executive committee is composed of: N. J. Dessert, E. B. Lewis, Wm. F. Luick, F. N. Martin, C. G. Norris, J. H. Randolph, L. W. Roszell, E. C. Sutton.

NATIONAL ASSOCIATION OFFICIAL HONORED.

The ice cream industry was honored by Governor Fuqua of Louisiana in the selection of a new official family for the State Charity Hospital at Shreveport. W. W. Campbell, vice-president of the National Association of Ice Cream Manufacturers, was named chairman of the board. Mr. Campbell operates at Shreveport one of the largest ice cream manufacturing plants in the Southwest. The governor selected for the board "men who have been successful in their own affairs," and just how Mr. Campbell is regarded as a success in his part of the country is indicated by the fact that he was put at the very top of the list. Mr. Campbell is head of his business, which was established by him, and has steadily expanded under his direction.

W. W. CAMPBELL.

ARKANSAS ASSOCIATION TO FORM AUXILIARY BODY.

Supplymen of the South operating in Arkansas have been requested to gather at Little Rock January 6 and 7 and take part in the organization of a body to be affiliated with the Arkansas association. This step was proposed by R. L. Hargrove, president of the Arkansas Ice Cream Manufacturers' Association, which body will hold its annual convention at Little Rock on January 6 and 7.

P. N. Miller, Jr., secretary of the Dixie Flyers, has issued a bulletin calling upon the supplymen of that territory to organize to work toward the success of Arkansas conventions. Hotel Marion will be headquarters for the convention

NORTH, EAST, SOUTH AND WEST—"REVIEW" IS LIKED THE BEST.

Wisconsin Manufacturers to Hold Important Session

"Mystery Program" on Tap for 1925 Annual Convention at Milwaukee, January 13 and 14

THE men of Badgerland evidently have something weighty on their minds to talk over at the 1925 annual convention in Milwaukee, January 13 and 14. At least, it seems so in view of the fact ice cream manufacturers only will participate in the convention sessions. Although officials are too polite to say so, it is felt, no doubt, that much more ground can be covered by dispensing with the usual preliminaries that take up so much time when different members of the supply industry pass out their greetings.

The Badger Flyers had not made announcement regarding their usual part in the convention festivities, but so far as the convention proper is concerned, "strictly business" will be the order of procedure, according to Secretary Arthur Graeszel. The secretary added that the association will not even hold its annual banquet.

In view of the many important matters facing the industry at this time, it is easy to understand how the manufacturers could want all the time they possibly can get to discuss their problems and propositions. But it is difficult to see how they can leave out of consideration that earnest band of men who have so loyally stood by them during all the years of the upbuilding of the Wisconsin industry. Officials of that organization probably have something of their own to say in this connection, but Uncle Sam's hired help won't hold the Christmas mails long enough for them to say it in this issue of The Ice Cream Review.

The membership of the Badger Flyers will, indeed, get word from officials as to what will be done, and when officials say they will hold a meeting, they mean they want every member to come a-running, they mean they have business on foot. So look out for your circular and see what the officers of the Flyers have to say.

The Wisconsin convention usually draws a nice attendance from other states, particularly from Illinois. Just how largely the industry of Illinois will be represented this year is not known now, for the Wisconsin association has not even given out any set program.

Hotel Plankinton, the usual gathering place of the Wisconsin association, will be the scene of the 1925 convention.

MICHIGAN DAIRY INDUSTRIES.

I wish to call the attention of you all that to keep the Michigan Allied Dairy Association up-to-date, and make it a great state proposition, you should all attend the convention at Lansing, February 3 to 6, and when so doing you should all go to the exhibition hall and see the exhibits of machinery and supplies which are put on for your benefit, and to show your appreciation for this convention you should all attend the exhibits on Wednesday and Thursday afternoons. Go to your meeting in the mornings but be at the exhibit hall in the afternoons. You will be well entertained and welcomed by the firms and their representatives who will show you their line of goods. And just one word, why not remember those who attend at your convention with exhibits when you are needing machinery and supplies, by so doing you are strengthening your state association and building it stronger and larger than ever.

C. J. YUNCKER, President,
Michigan Dairy Boosters.

Flyers Are Willing.

The Badger Flyers have their hearts in the right place. Every man in the outfit was ready and willing to move on Milwaukee and help in every way possible to advance the interests of the Wisconsin ice cream industry, if the association had not made other arrangements. Under the circumstances the Badger Flyers will not meet with the manufacturers this year.

The foregoing is the gist of a letter received at the eleventh-hour, as press time drew near for this issue, from O. E. Harwood, secretary of the Flyers.

There is no criticism of the stand of the ice cream manufacturers. Officials of the Flyers once contemplated calling a special convention of their own, and, although these plans did not work out, it was the general purpose of officials to have their usual discussions on ways and means of better co-operating with the manufacturers for the continued development of the Wisconsin ice cream industry.

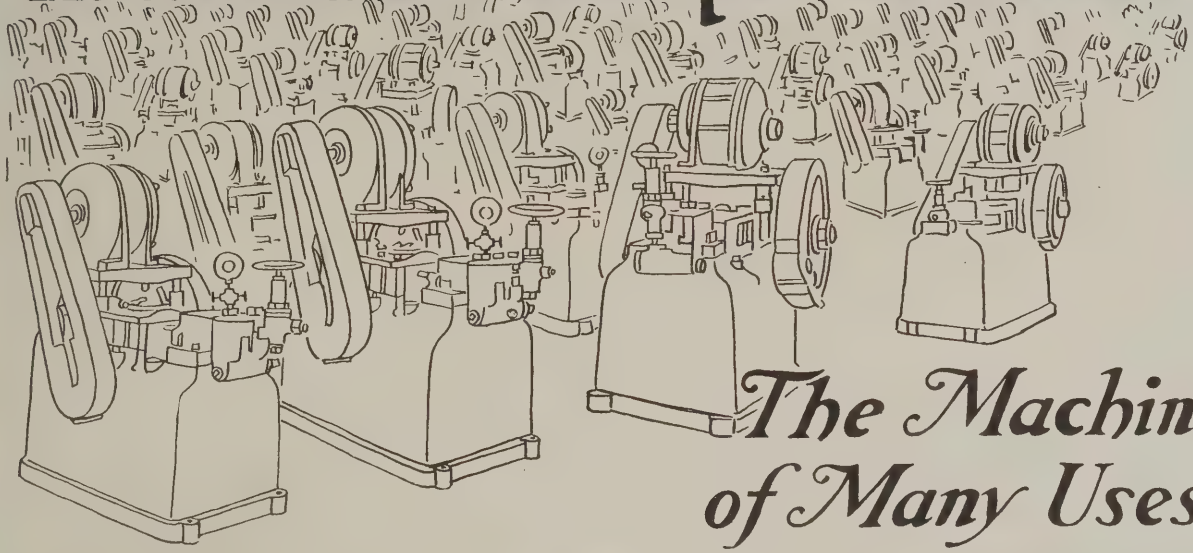
The ice cream manufacturers, according to a statement issued by the secretary, are not unmindful of the good work the Flyers have done for the advancement of their celebration, beginning with the very organizing of the body. The old cordial relations between the two groups will continue as in the past, there is no doubt.

ENGLAND LIKES OUR SLOGAN.

The English people like the American ice cream manufacturers' slogan pretty well, judging by comment appearing in the December issue of The Milk Messenger, the house organ of the dairy manufacturing firm of Storer, Rodgers and Hughes, Ltd., London.

The Milk Messenger's comment was made after reading the article in the November issue of The Ice Cream Review on the American manufacturers' extensive search for and finding of a national slogan in this country and Canada. The English firm believes the American slogan could well be used in Great Britain, "although the public, being slow to appreciate the food value in addition to the attractive taste which is universally well known, might be helped along the right road by such a slogan as 'A food and not a Luxury.'"

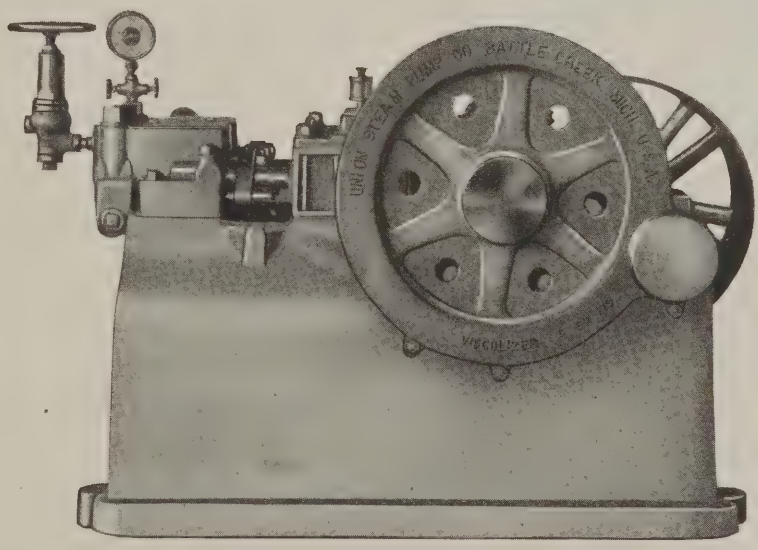
The Milk Messenger editor fully agrees "with the adaptability of the wording of the American ice cream slogan," and added his "humble but hearty congratulations to Miss Ashcroft for having won for Canada the distinction eagerly sought by thousands in the United States and even the whole world."



HUGHES SUCCEEDS FRARY.

Lloyd Hughes of Detroit has been named secretary of the Michigan Allied Dairy Association to succeed Secretary R. F. Frary, whose resignation in November came as a distinct disappointment. The resignation of Mr. Frary, who has done excellent work for the association in the years he has been in office, was due to ill health. He immediately left Michigan to spend the winter in Florida.

You'll make better ice cream if you get "The Ice Cream Review."



Viscolizers Surpass all others in numbers and performance

The Machine of Many Uses

There are more Viscolizers in use than all other machines combined because the Viscolizer is the standard machine of this type.

At all seasons of the year it means real profit for the ice cream manufacturer.

The No. 800 Belt Drive

The Viscolizer makes a better product and enables the manufacturer to be independent of the fresh cream supply during all seasons.

Canadians Announce Ice Cream Makers' Competition

Event to be Held in Connection With Saskatchewan Provincial Dairy Convention, Prince Albert, February 3, 4 and 5

OFFICERS of the Saskatchewan Dairy Association have announced that for the third successive year an ice cream makers' competition will be conducted in connection with the Saskatchewan Provincial dairy convention. An ice cream judging competition was also held in connection with the 1924 competition, and this will be repeated in 1925.

The prizes for the makers' competition have each year been donated by the Canadian Milk Products, Limited, and this firm has again donated very generous prizes.

The objects of the competition are to develop a greater interest in the scientific manufacture of ice cream, and also to establish a recognized standard for plain vanilla ice cream as a commercial product.

A handsome silver shield has been awarded as a first prize each year, with suitable pieces of silverware for second and third prizes. These were worthy prizes, but for the 1925 competition the Canadian Milk Products, Limited, has offered prizes about which we want to tell the world. Prizes are as follows:

To the company manufacturing first prize exhibit—a handsome Silver Shield.

To the actual maker of the first prize exhibit — $50.00 in gold.

To the maker of the second prize exhibit—$25.00 in gold.

To the maker of the third prize exhibit—$15.00 in gold.

In view of the importance of the ice cream trade, the desire of the makers of ice cream in the prairie provinces and also the burning anxiety of those prairie makers to learn everything they can from everywhere they can, the officials of the Saskatchewan Dairy Association and the Canadian Milk Products, Limited, also beg to announce that the 1925 competition is open to the world. The ice cream judging competition is likewise open to the world, and the "world and his wife" will be welcomed at all sessions of the dairy convention at Prince Albert, February 3, 4 and 5, 1925.

Canadian Competition Plans

IN 1923 the Saskatchewan Dairy Association, with the co-operation of the Canadian Milk Products, Limited, conducted an ice cream makers' competition in connection with the Saskatchewan provincial dairy convention held that year at Saskatoon. This competition, which was open to the three prairie provinces, proved a great success and found widespread interest, exhibits being received from virtually all sections of the three provinces. In 1924 the western Canada convention, which includes the three prairie provinces and British Columbia, was held under the auspices of the Saskatchewan Dairy Association. The provincial convention was merged with the western Canada which was held at Moose Jaw. The Canadian Milk Products, Limited, again lent their assistance and co-operation to the officials of the Saskatchewan Dairy Association in repeating the competition.

The Saskatchewan Dairy Association is this year holding its provincial convention in the city of Prince Albert, February 3, 4 and 5, when a third C. M. P. ice cream makers' competition will be held and also in connection therewith an ice cream judging competition. Both competitions are this year open to all comers. All that is required in the ice cream makers' competition is that the exhibit be delivered to Prince Albert in good condition, while all persons engaged or directly connected with the ice cream business are invited to take part and are eligible for prizes in the judging competition.

Regulations.

1. Contestants will submit three bricks—one to be scored by the judges, one for analysis, one for use in the ice cream scoring contest.

2. Exhibits will be scored and awards made on the basis of the following standards:

Items	Possible Points
Flavor and Palatability	45
Texture and Body	35
Color	10
Appearance and Finish	10
Total	100

Flavor—To be that of clear, sweet dairy products and true vanilla, special avoidance of sour or unclean flavors or coarseness of added flavors (for the purpose of this competition true vanilla not necessarily considered superior to a synthetic flavoring extract).

Texture—To be fine and uniform, body firm, showing little or no recoil when cut with a spoon. The whole of smooth velvety consistency—special avoidance of ice cystals, sand grains, butter lumps, large air bubbles or other evidence of poor workmanship.

Color—A rich cream color, such as is found in commercial ice cream manufactured from June cream. Evenness throughout, with special avoidance of any unnatural color in the finished products is of prime importance.

Appearance and Finish — Package neat, wrapper clean. Brick to show a clean, bright appearance, indicative of fresh dairy products, clean sugar and pure extracts.

3. Exhibits to be forwarded, charges prepaid, addressed to the Secretary, Saskatchewan Dairy Association, care of Prince Albert Creamery Company, Limited, Prince Albert, Saskatchewan.

4. Samples must be shipped to arrive at Prince Albert not later than Friday, January 30, 1925. On arrival all exhibits will be placed in a sharp freezer and held until the time of judging.

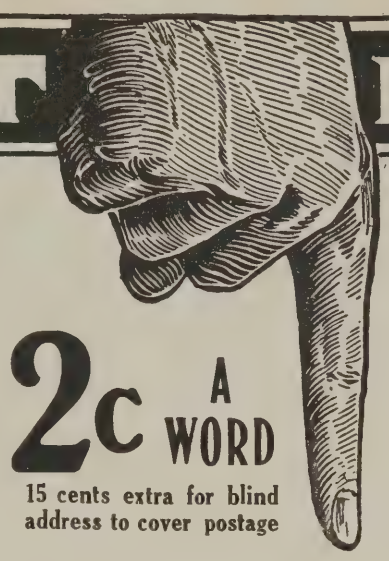
In addition to the shipping address the name and address of the shipper must be plainly marked on the outside of the package. As a further safeguard exhibitors are requested to place in the tin with the bricks a card bearing the exhibitor's name and address.

5. No special entry is required, but it will be an advantage if intending exhibitors will advise the secretary in advance. When shipment is made, notice of shipment, showing route, must be mailed to R. W. Heim, manager, Prince Albert Creamery Company, Limited, Prince Albert, Sask. This is necessary for recording and checking exhibits.

6. Plain wrappers must be used but, if for protection in transit, exhibitors desire to use cartons this may be done. Cartons and other distinguishing marks will be removed before the judges commence scoring.

7. Exhibits should be full Imperial pint or quart bricks. If any other size is used statement to this effect must accompany exhibit.

8. For the purpose of this competition the following standards shall govern:



Fat—Not less than 10 per cent (legal standard for Saskatchewan) not more than 18 per cent.

Total Solids—Not more than 36 per cent.

Overrun—Must not be less than 75 per cent.

9. All samples will be tested to make sure that they conform to the above standards. Samples which fail to comply will be given a complimentary score by the judges, but will not be eligible for prizes.

WANT DEPARTMENT

15 cents extra for blind address to cover postage

HELP WANTED

WANTED—Manager for ice cream manufacturing plant in New York State. Reply giving reference and experience to R-761, The Ice Cream Review. 1-25

WANTED — Young man as ice cream maker who can take charge of ice cream making, take care of two C. P. refrigerating machines and who is willing to help with such other work as his spare time would permit in a retail milk plant which has branched into ice cream recently and intends to expand this department the coming season. Give references and salary expected. Address: R-757, The Ice Cream Review. 1-25

WANTED EXPERIENCED SALESMEN

Calling on the **Supply and Equipment Trade,** etc., full time or side line, for a new article. No competition. A real opportunity for live wire salesmen full of pep and initiative. State what territory to travel at present. Reference required.

AMERICAN-STANDARD MFG. CO.

422 Augusta St., Cincinnati, Ohio

1-25

POSITION WANTED

POSITION WANTED—By May 1st as plant or production manager of ice cream plant. Understands manufacturing end thoroughly. References. Address: R-713, The Ice Cream Review. 1-25

POSITION WANTED—Before April 15 as head ice cream maker. Experienced in plain and fancy creams. Technical training. Address: R-714, The Ice Cream Review. 1-25

POSITION WANTED—As assistant manager in ice cream plant. Have both theoretical and practical knowledge. Understands standardizing, testing, pasteurizing, freezing and overrun control. College education with capacity to produce results. Address: R-765, The Ice Cream Review. 1-25

POSITION WANTED — As ice cream maker. Five years in charge manufacture. Six months' course Iowa State College. Understand standardizing, testing, pasteurizing, freezing and overrun control. Excellent references. Some milk plant experience. Middle Western states preferred. Address: R-762, The Ice Cream Review. 2-25

POSITION WANTED — As manager in modern ice cream plant. 15 years experience in ice cream manufacturing. Thoroughly competent to handle any size plant. Address: R-759, The Ice Cream Review. 1-25

POSITION WANTED — As manager or superintendent of dairy or ice cream plant. Graduate of 4-year dairy course. From position as chemist and superintendent I thoroughly understand the manufacture of condensed milk, market milk, butter, ice cream, installation and operation of all dairy equipment, including electric ice cream cabinets. Best references furnished. Address: R-756, The Ice Cream Review. 1-25

POSITION WANTED—By reliable progressive man with 20 years executive and practical experience in large retail milk concerns and creameries. Excellent references as to reliability and ability to successfully handle a responsible position. Address: R-686, The Ice Cream Review. 1-25

POSITION WANTED — As ice cream maker. Am fully experienced in all lines of milking, freezing, testing solids and overrun or proper swell. Attended Minnesota short course for ice cream makers. Best of references. Interested parties write R-752, The Ice Cream Review. 1-25

It Pays to Advertise

Orders for this Department must reach our Office not later than the 25th of the month. Orders received after that date will be carried over to the following month's issue.

NOTE: Names and addresses of advertisers using blind addresses cannot be furnished direct from this office. The advertiser can be reached only by using the key number and addressing your reply care of "The Ice Cream Review."

NOTICE.

The Ice Cream Review disclaims any responsibility for the reliability of parties advertising in the Want and For Sale Department, nor for the truthfulness of statements made in such advertisements. In answering such ads, ask for references if parties are unknown personally, before sending money. Our subscribers are requested to assist us in keeping unreliable parties from advertising by reporting any suspicious dealings.

We reserve the right to refuse to accept advertisements which we believe are detrimental to the ice cream industry.

POSITION WANTED — As manager of ice cream plant or production superintendent of chain of plants. 12 years experience in ice cream work; 9 years with one concern. Understands refrigeration and other branches of dairy work. Technical as well as practical training. Best of references. Address: R-721, The Ice Cream Review. 1-25

POSITION WANTED — By ice cream man, who through 25 years of experience knows this business in all its branches, knows how to make a retail product, how to put it on the market and how to get economies in plant operation. You may need a manager or superintendent now or in the near future. This is your opportunity to investigate a real man and a hard worker. Replies are only solicited from those really interested in this kind of a man. Address: R-723, The Ice Cream Review. 1-25

FOR SALE BARGAINS

BUSINESS

FOR SALE—Suits' ice cream factory at Medford, Wis., city of 2,000. Act quick, $800. Address Wm. Suits, Medford, Wis. 1-25

NEWS FROM FAR AND NEAR.

Searcy, Ala.—The Grisham Ice Cream Co. recently built a 30x50 addition, to be used as a shipping room.

North Little Rock, Ark.—Articles of incorporation were recently filed by The Clark Ice Cream Co., 311 N. Main St. The company is capitalized at $12,500, and its officers are W. H. Clark, president and treasurer; Mrs. Josette Clark, secretary; C. W. Smale, John D. Moore and H. H. McIntyre, directors.

Wilmington, Del.—The Arctic Products Co., Inc., made application for charter recently and is contemplating the manufacture of ice cream, candies, etc. The company reports a capital stock of $300,000.

Kelsey City, Fla.—This is a newly organized community and the erection of an ice and ice cream factory is being sponsored by the mayor's office.

Moline, Ill.—The Bluebird Dairies, Inc., 2300 Fifth Ave., recently had its name changed to Baker Ice Cream Co. E. C. Baker is president and A. E. Baker, secretary.

Jacksonville, Ill.—The College City Ice Cream Co. of Galesburg has leased the plant formerly occupied by the Jacksonville Ice Cream Co. here.

Indianapolis, Ind.—The Fertig Ice Cream Co., a newly organized concern, will open a factory at 507 North Noble St.

Lynn, Mass.—The Jersey Ice Cream Co., 306 Eastern Ave., has completed plans for the construction of factory, garage and ice house at an estimated cost of $100,000. Ashton, Huntress & Alter, 477 Essex St., are the architects.

Hillsdale, Mich.—Foots Bros., Inc., has disposed of its ice cream and dairy plant. The new firm will be known as the Hillsdale Bottling Works.

St. Louis, Mo.—The Kraemer Ice Cream Co. was recently incorporated by A. E. Kraemer, Henry J. Stadler, W. A. Ward and others with a capital of $20,000.

Jersey City, N. J.—The Clover Ice Cream Co., 76 Montgomery St., was incorporated naming Alexander B. Giesuch as statutory agent. The authorized capital stock is $50,000.

Bayonne, N. J.—Most of the ice cream dealers in this city will sell their ice cream by weight instead of liquid measure. This step is a result of the vigorous stand made by Walter L. Flynn, superintendent of weights and measures.

New York City.—Reports have it that the National Dairy Products Co., capitalized at $5,266,000, and the Reid Ice Cream Co. will consolidate. Goldman, Sachs & Co., bankers, are reported as negotiating the merger.

New York City.—The Kream Quality Corporation was recently incorporated with a capital of $4,000,000. The new concern will deal in ice cream, water ices, sherbets, ices, etc.

New York City.—Edward S. Perot, Jr., 261 Broadway, is reported as having obtained controlling interest in Chapin-Sacks Corp., 10 S. Jefferson St., Richmond, Va., through Frasier & Co., 5 E. 47th St., New York.

Hamilton, O.—The Ohio Ice Cream and Cone Co. was organized by Gus Pappas and Peter Janetos. The capital is reported as $25,000.

Marshfield, Ore.—The new plant of the Cutlip Ice Cream Co. is nearing completion. J. A. Tourtelotte of Portland is architect. The estimated cost of the building, with new equipment, will exceed $30.000.

Hazelton, Pa.—The Leichtman Ice Cream Co. just recently installed a new electrically driven Eskimo pie machine that cuts, dips and wraps the chocolate coated ice cream delicacies. It is reported that a night shift has been put on at the East Green Street plant to keep pace with the demand for Eskimo pies.

Gaffney, S. C.—The Colonial Ice Cream Co. recently applied for charter, reporting a capital of $100,000. Officers of the company are Claude B. Poole, president; R. A. McGraw, secretary and treasurer.

Fayetteville, Tenn.—Although the Foster Ice Cream Co. has been established in business in Fayetteville for only four months, W. B. Foster, general manager, reports that every dealer in Lincoln county, except one, sells Foster ice cream. Mr. Foster reports a splendid business, and he claims the success of his company is primarily due to the manufacturing of only high-grade ice cream. Mr. Foster is also manager of the Elk Valley Creamery Co., makers of American Maid Butter. The creamery operates a modern plant.

Nashville, Tenn.—The Velvet Ice Cream Co. was recently incorporated with a capital of $20,000. The incorporators are C. S. Rose, Alfred T. Levine, and others.

Eatonville, Wash.—The Central Creamery Co., although in business only two months, reports a splendid business and has found it necessary to add a new truck. The company expects to begin the manufacture of ice cream in the spring of 1925.

NEW PLANT IN ARKANSAS.

Construction of a new plant to house an ice cream manufacturing concern will be begun soon at Brinkley, Ark., which, when completed, will represent an investment of approximately $30,000. Ben Vanderford of Brinkley, and a Mr. Hughes of the Meddy Ice Cream Co. of Jonesboro, Ark., will form the partnership. The plant will be ready to begin the manufacture of ice cream early next spring, according to present plans. It will be erected just west of the Brinkley Ice Company's plant, and will be thoroughly modern in every respect. Brick and concrete will be used in constructing the plant, and only the latest ice cream making equipment on the market will be installed.

The new structure will also house the Brinkley Bottling Works, of which Mr. Vanderhoof is also head.

Ask Yourself These Questions

Check up on your freezer—ask yourself—

"Can the front dasher bearing be easily adjustable to take up wear?"

"Are the brine conduits large enough to assure quick brine flow and rapid freezing?"

"Is the inner freezing cylinder removable?"

"Are all brass connections brass?" These are but some of the many advantages that Cherry freezers offer.

Ask us for bulletin 2063—it is entirely free and does not obligate you.

FEBRUARY 1925

AN ICE cream manufacturer remarked in our hearing one day recently, "More money has been sunk in the ice cream business than has ever been taken out in profits." He was emphasizing what he termed "giving away good money trying to get the other fellow's business away from him."

We have no way of checking up on the gentleman's assertion that more money has been sunk in the business than has been taken out in profits. Whether he is right or not, he touched upon an important matter. It is a problem that the men in the industry should find a way to minimize.

There are too many greedy men in the ice cream manufacturing business—greedy for gallonage, and apparently obvious of all demands of decent competition. They seem ready to do anything, no matter how despicable it may be, to get business, and unfortunately their idea of getting business is to get it away from the other fellow.

They seem anxious to give away money. They court opportunities to give the other fellow's customers something for nothing, hoping thus to make him discontented and change his business connections. It is not necessary to enumerate the inducements that are offered. They are well known—too well known—to our readers.

The ice cream manufacturing business is unlike most other large industries. Millions upon millions of dollars are invested in it and nothing to show for it except piles of steel, brick and mortar and machinery equipment. No business that the manufacturer can call his own except the business that he goes out and drums up each day. He doesn't know where the next day's business is coming from.

What ice cream manufacturer can say, "This is my business, I have so many retail dealers or 'stops,' and they are mine; no one else can take them away over night?" He is furnishing a product that the consumer wants, but he is not in touch with that consumer, who, after all, is the real customer. He must depend on an agent—the retail dealer—to get his product to his customer.

The city milk dealer sends out his wagons in the morning and, just for example, let us assume that the average wagon carries 150 quarts of milk or their equivalent. The dealer knows that the goods are going to be sold. He knows his customers and has control of the service they get. He knows that even if competition is keen he is going to get the business at the great majority of the "stops" on that route. If he loses a customer he knows where the customer lives. He even knows the telephone number and knows he has a fair chance of getting the business back.

But how is it with the ice cream manufacturer? When he sends out his wagon or truck how much of the load is coming back? He is entirely separated from his customer—the consumer. If the dealer goes over to some one else he has lost a neighborhoodful of customers and doesn't even know who or where they are. His ice cream immediately ceases to be used in that neighborhood.

What can he do about it? Can he appeal to his customers and convince them that they should return to using his ice cream. No, he cannot. He doesn't even know to whom to appeal. His only chance to get back their patronage is to do something to get that dealer back. If the dealer left him because the other ice cream manufacturer gave him some "easy money" in the way of free equipment, rebates or what not, then he must talk the language that the dealer understands. He must go the competitor one better and the dealer soon learns that he is not getting all that he might if he doesn't play one manufacturer against the other.

As we heard a certain ice cream manufacturer say one day, "well, I've had a busy week. I got a dozen customers away from a competitor and he got a dozen of mine. We're both right where we started, but we had a lot of fun." He and his competitor spent a lot of money, too, that is forever lost to the industry.

Men, we've a lot of confidence in this industry. We would not paint a black picture of conditions in the in-

dustry just to attract attention to these pages. We want to see conditions changed and we have confidence in the good judgment of the men who are shaping the general trend of affairs in the industry. We believe they will be changed. We all want to see the ice cream manufacturing business established on a firm basis. It is not on that kind of a basis today. Something must be done to eliminate cut-throat competition or we will never get on a firm basis. Our money and our efforts should be expended in building up the ice cream industry instead of tearing it down.

There is a way open to every ice cream manufacturer in the country to do his part in establishing the business on a firm basis. That way is through organization. We believe there is no other way. The retail dealer in ice cream is spoiled. He is hopeless. He has been educated wrongly. Let him pass out of the picture so far as hoping to secure his co-operation is concerned.

From now on he must be told what to do, not asked what he wants to do. The ice cream manufacturers must, through their organization, agree upon certain trade practices which are fair to everybody and then do business on that basis. These practices must be approved business practices, such as are followed in other business lines.

There is no law in the land to prevent business men agreeing among themselves to be sensible men. In fact, the Federal Trade Commission encourages such action and will co-operate in pushing such a movement along.

The trend of the times leads in that direction, gentlemen. In fact there is just such a movement on foot right now in our industry. Leaders in our trade associations, national and state, are alive to the situation. They realize that something must be done to introduce safer and saner business methods. Uniform cost accounting methods are a step in the right direction. National advertising of ice cream will furnish a common effort by which men in the business may think more of the industry as a whole and less about their neighborhood quarrels.

We want to see these big things, and the other big things that will come up, put through. They will show the value of working together and eventually this spirit of co-operation will find its way back out into each community where ice cream manufacturers will run their own business instead of letting the retail dealer in ice cream tell them what to do.

Then the millions of dollars invested in this great industry will represent more than piles of brick and steel and mortar and machinery equipment. They will represent, in addition to these material things, the confidence and good will of the customer without which no industry can prosper.

We are going to have more to say along these lines in these columns. We want it to be constructive. We need your "reaction." What do you think about it? Are we suggesting the correct remedy when we offer closer and more intensive co-operative effort through organization? We want to hear from you.

AT BEST there are but a few "working hours" at a trade convention. In view of the fact that such a convention is held at a tremendous expenditure of time and money it is only fair to expect that each working hour shall be filled full with constructive effort. It is unfair to the delegates and to the industry to spend any time on unimportant matters.

Trade association officers do their best to give delegates interesting, constructive programs. Oftentimes the discussions, following the presentation of a subject by a convention speaker, are constructive and interesting. They help to make the program better.

Delegates, however, should enter into these discussions fully realizing the value of time. To spend precious minutes arguing about some unimportant phase of the question, merely that the speaker may get a grouch out of his system, is unfair to the other delegates who prefer to keep on the main subject.

We would not discourage discussions at our trade conventions. We recognize their value and interest, but we would discourage the habitual "argufier" who monopolizes precious minutes—sometimes hours—in order to make himself conspicuous. A convention is a better one when he stays at home.

IN the May, 1924, issue of The Ice Cream Review we featured Ice Cream Cone Week. We got a late start, but, in spite of this fact, many ice cream manufacturers reported greatly increased sales because of the special advertising done in connection with Ice Cream Cone Week. Many of them reported to us that the idea was sound, and that a good start was made toward featuring the ice cream cone during one special week each year.

Shall we have Ice Cream Cone Week in 1925? Shall this be made an annual event, not only to increase sales for that one week, but to further popularize the ice cream cone?

We believe the idea is a splendid one. The results achieved last year by those manufacturers who joined in the movement were far beyond expectations. But if it is to be really worth while; if it is to materially increase ice cream sales the country over, it must be a national movement so intensive that it will command general attention.

What is the best week for Ice Cream Cone Week? We want an expression from you ice cream manufacturers. Please give us your views. Write us a letter and tell us just what you think of the whole proposition.

WE ARE hopeful that eventually the refrigerated cabinet problem will prove to be the means by which ice cream manufacturers will work more closely together than they ever have before. It has not brought about that result so far, in fact in some communities it has been the cause for considerable ill feeling. Some ice cream manufacturers have used the cabinet to get business away from a competitor who was not disposed

or who was not financially able to meet cabinet competition.

We believe, however, that in time it will have the other effect. Ice cream manufacturers' conventions during the past few months have been well attended. There has been intense interest manifested, and the refrigerated cabinet question has been uppermost in the minds of convention delegates. They have wanted to learn what the other fellow proposes to do. The refrigerated cabinet is largely entitled to the credit for their increased interest in the conventions that have been held during the past year. Then, too, many district meetings have been held, usually to discuss the cabinet question.

This all means that ice cream manufacturers are getting better acquainted. They are learning that most of their troubles are in common, and that the way to solve them is to work them out together. The refrigerated cabinet problem is one of these. It will be gradually worked out satisfactorily to everybody, and when that time comes we believe many other competitive problems will be settled because of a better understanding, brought about by these many interesting sessions devoted to the cabinet question.

So what may now seem to be a very vexatious situation to some may eventually prove to be a real blessing to the industry, not only because of the introduction of a valuable method for holding ice cream, but because it will bring a better understanding all around between men who will profit most when they understand each other best.

WHAT is a good starting point for a man engaging in the ice cream business? That question arises in view of certain men who have been successful by taking different approaches. To look at some of the splendidly equipped plants of today, one would find it difficult to believe that the owners ever had anything but that sort of a plant. But as a matter of fact, is this supposition correct?

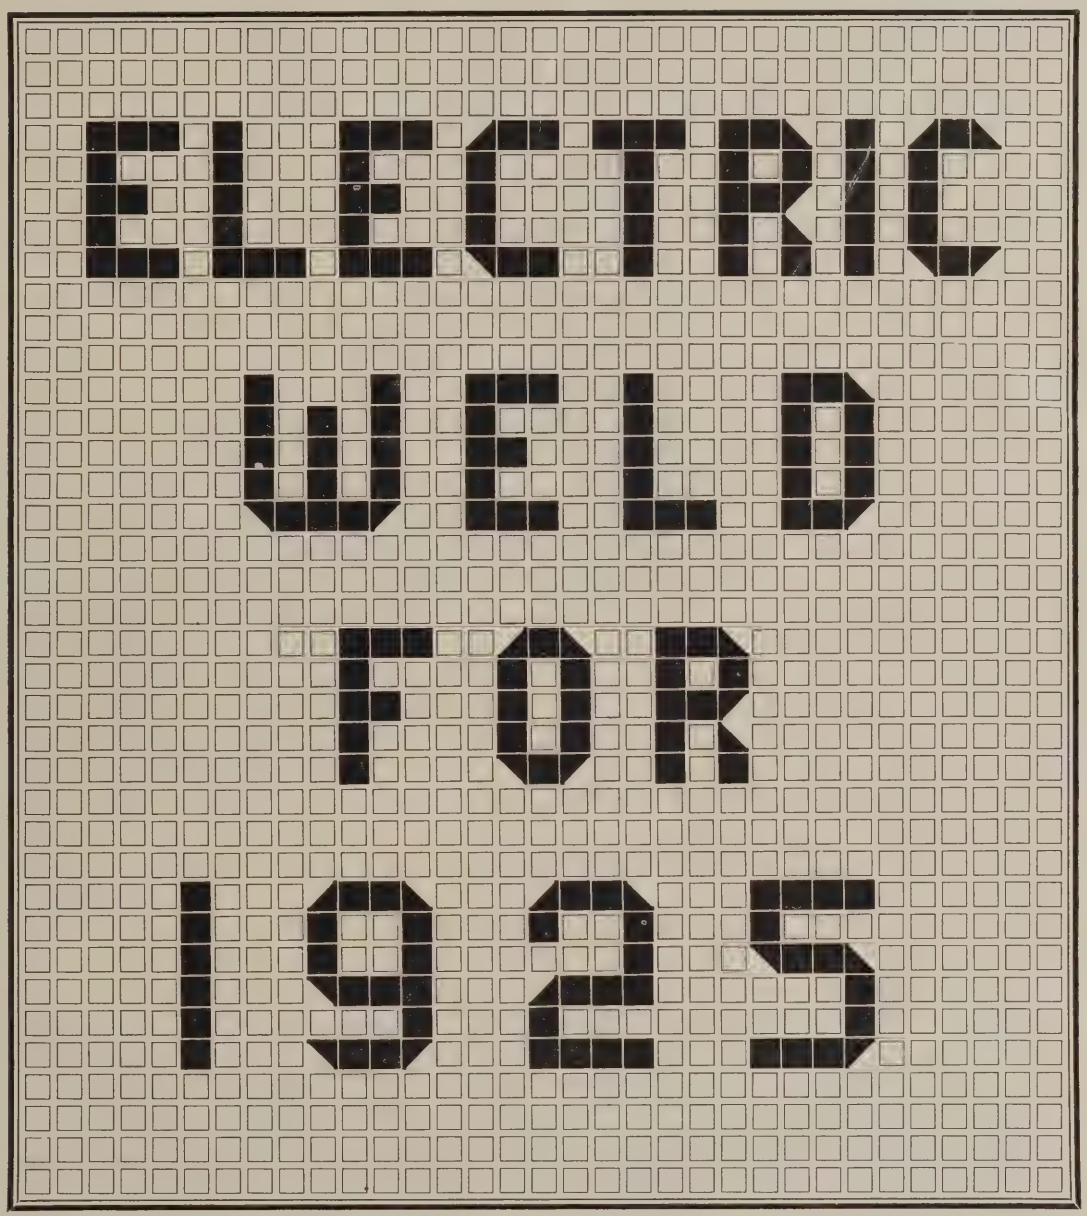
Some men now groping around the lower rungs of the industry's ladder sometimes feel that everything is against them; they are persuaded, in moments of trouble—and those moments have a habit of being frequent callers—they are persuaded at times that they have a harder row to hoe than anybody else. For just look at those fellows who have so much money to spend for equipment, modern, up-to-date freezers, the finest kind of tanks, the best of storage and freezing room facilities, etc. Some of those firms spend more money for advertising every year than some of our smaller brethren realize as profit at the end of a turbulent season.

A little investigation, however, brings up another side of the matter—a side that all of us will do well to consider. It is surprising how many "shoe-string" beginners in the ice cream industry there are among the so-called big men of today. A certain Chicago manufacturer could not very well be accused of having had someone slip a silver spoon into his mouth at birth and tell him that a batter of high-powered ice cream machinery was ready for him to step in and operate. This is not to say that this man was a "shoe-string" beginner by any means, for he earned his spurs by the right sort of apprenticeship in business; but the fact remains that he has had to fight his way up from a level no higher than that now occupied by some manufacturers who feel that everything is against them and all "little men."

By the way, someone would accomplish an interesting something by explaining to us just what is meant by "little men." A man who operates a small plant is not necessarily a "little man," for convention delegates have heard some unusually big and broad ideas expressed by these same men. In fact, some men with big minds and big hearts are operating small plants today. If their minds and their dreams and their hopes are only big enough they will in time be up among those so-called big men at the top now.

SOME years ago a certain "small man" in the auto industry wanted to advertise. He had little capital—to be exact he had one hundred dollars and sixty-five cents. He started advertising on that. Now he can afford to spend several hundred thousand for that purpose. This is not only an argument that advertising pays; it also is an argument that a man doesn't have to have a silver spoon in his mouth to have his business success assured. A certain chewing gum manufacturer who annually makes an appropriation of four million dollars for advertising alone, once had only thirty-five dollars to spend for this purpose.

A man who slips into the industry on a shoe-string, so to speak, buying up a lot of second-hand machinery. Is he necessarily a parasite? Is he somebody that must be hooted and jeered at by the great companies of the industry, particularly those great supply organizations that manufacture high-class ice cream making equipment? Study out the matter and find out how many men in this industry began in that same way—men who today are spending thousands and thousands of dollars for the best equipment they can buy.



No man should be ashamed of a humble business beginning any more than any man should be ashamed of his parents because of humble birth.

ANYONE who is trying to make up his mind whether a "little man" can ever amount to anything in this industry will do well to heed the advice and step out and try. Put away the obsolete plunder that has been in the way so long. Step out and equip your plant with the best you can afford. Remember that others have been just as small as you are, and that they believed in themselves and their industry and had the faith to take on the equipment that would help them up the ladder.

Up the ladder that other men have climbed we also can go—even the humblest of us.

A Can Puzzle Already Solved

JOBBERS AND WAREHOUSE STOCKS IN ALL PARTS OF THE COUNTRY

Sales Campaign Centered Around Iceless Cabinets by Arkansas Manufacturer

Dealers will Keep Down the Price, Improve Salesmanship Methods, and Take More Interest in Handling Ice Cream, Under Plan Formed by Terry Dairy Company of Little Rock

USING the iceless cabinet to bring about better merchandising methods among dealers is the plan of one of the South's leading ice cream manufacturers, Will Terry, head of the Terry Dairy Co., Little Rock. His ideas suggest some features of automatic refrigeration which indicate that the new cabinets may do more than anything that has developed in the past toward making dealers take more interest in ice cream and in advanced methods of serving the product, and particularly toward enabling dealers to hold down the price.

Mr. Terry has ordered a carload of iceless cabinets. He has made arrangements to establish them in the best stores on his routes. Dealers who do not come up to the standard he has set for better merchandising methods will not receive cabinets. They will be told that they must "step up" and earn their rights to iceless cabinets by making better efforts to sell more ice cream.

WILL TERRY.

These cabinets will fit into a general merchandising campaign that the Arkansas manufacturer will conduct. Posters advertising ice cream, giving the names of the dealers handling the product and the fixed prices, will be posted in prominent parts of the city. Other posters, particularly for this purpose, will appear in the dealers' store. Approximately $20,000 will be spent in the campaign, $15,000 for 36 iceless cabinets, and $5,000 for the advertising campaign.

IT WAS because of trouble over retail prices that Mr. Terry hit upon this scheme. Dealers were planning to raise the price of plain ice cream in the dish from 10 to 15 cents, which would have had a serious effect upon volume of sales. By preventing shrinkage through the uses of the cabinets, dealers, according to the Arkansas man, will be enabled to hold down the price of ice cream bricks to 50 cents a quart and 30 cents a pint. Six-hole cabinets will be used. Four holes will be for bulk and two for brick. The posters will tell the public to "take home a brick," and with the price named in the ad the dealer, backed by this good advertising, will not be in position to name a higher price every time the mood strikes—indeed, will have no such mood in the future, Mr. Terry hopes.

"There seems to me to be every reason why the cabinet should fit in perfectly with merchandising schemes in the ice cream industry," the Arkansas manufacturer declared to a representative of The Ice Cream Review. "We have trailed along with dealers for a long time, always letting them feel that we are under obligations to them, that they have the burden on our shoulders, that they have nothing to do but let us haul around ice cream to their stores, where they can let it stand and wait till somebody calls for it.

"By my plan I hope to arouse among dealers the feeling that this thing of merchandising is up to them; that they have at least as much to gain as I have by fighting for more sales, and certainly more to gain than they ever had before.

"By keeping their ice cream in better condition, the dealers naturally will find this product more convenient. Since we are to own the cabinets and let the dealers have them for paying the electricity and water, operating expenses, it is much to their interest to have one of these cabinets. Knowing they cannot have one unless they sell so much ice cream, they will naturally increase their efforts.

"Furthermore, I believe the psychology of the situation will tend to make for better salesmanship in the retail stores. It will naturally spur them on when they see the manufacturer co-operating with them from the sales angle. I always have had a feeling that we manufacturers have been bothering ourselves about giving too much service to the dealers when all of us should have been arousing him to the importance of giving better service to the public, which, after all, means more to all of us."

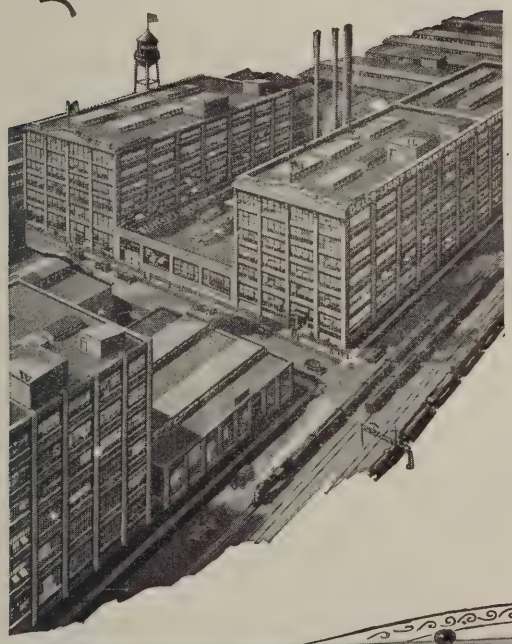
MR. TERRY also has contracted for a large shipment of cartons to be used in this undertaking. His plant in Little Rock is one of the

(Continued on page 144)

Who Has the Cabinets?

There are approximately 18,000 iceless cabinets in operation in the United States. It is customary for dealers to pay the current and water costs. These costs vary in accordance with the current rates in different cities. A four-hole cabinet should not consume more than one k. w. every 24 hours. A six-hole cabinet should not consume more than 1.6 k. w. every 24 hours, and an eight-hole cabinet not more than 1.9 k. w.

The Telling-Belle-Vernon Co., Cleveland, has 1,800 cabinets in operation. This company's largest order was for 250 cabinets. The investment in the 1,800 cabinets is approximately three-quarters of a million dollars. The Detroit Creamery has about the same number of iceless cabinets. The Arctic Ice Cream Co. has 660 cabinets in operation.



It is estimated that it would require an investment of $1,500,000 to equip the Hydrox Co. of Chicago with automatically refrigerated cabinets.

Frigidaire

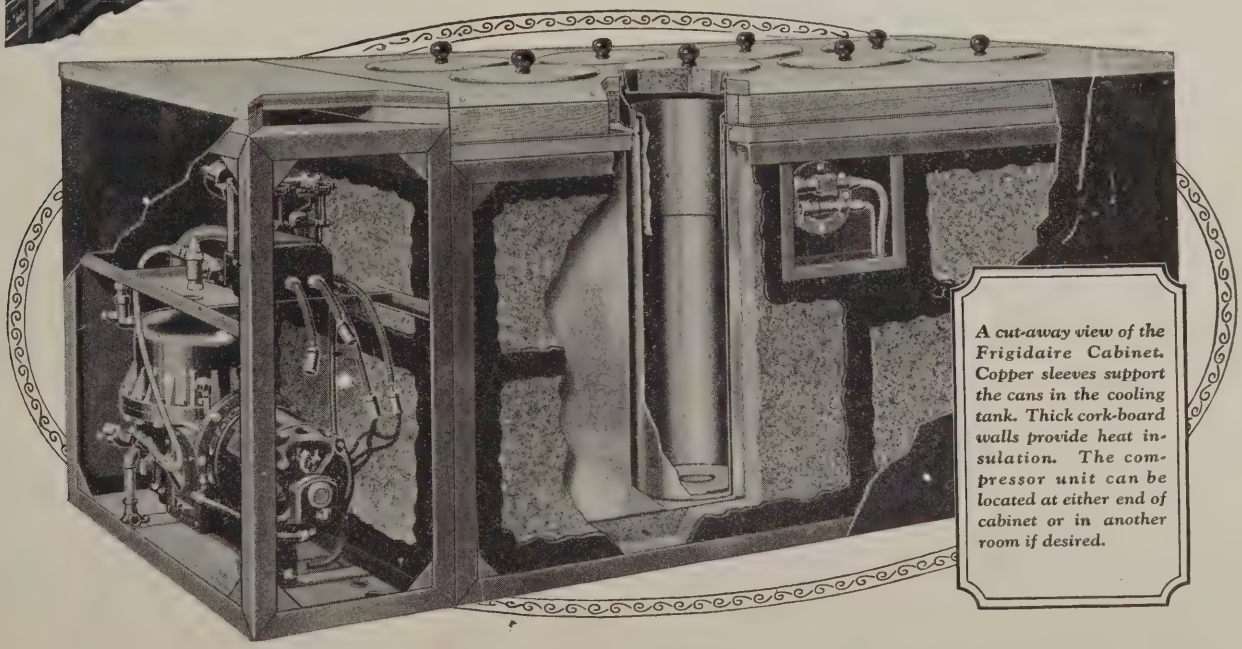
ELECTRIC ICE CREAM CABINETS

— backed by a Nation-wide Organization

In the engineering laboratory and production departments of the Delco-Light factory every precaution is taken to assure the highest possible mechanical perfection in the Frigidaire Electric Ice Cream Cabinet.

IN the selection of any equipment so important as an electric ice cream cabinet, you naturally want to *know* that you are assured of dependable and continuous service.

Frigidaire is made by the world's largest manufacturers of electric refrigerating equipment. It represents the engineering skill and resources of the General Motors Corporation. It is backed by an organization of over 2500 sales and service representatives covering the entire country.



You are *sure* of satisfaction with Frigidaire.

Frigidaire Cabinets are made in four and six-hole, single-row, as well as four, six and eight-hole double-row models, assuring a cabinet of proper capacity for practically every installation.

DELCO-LIGHT COMPANY

Subsidiary of General Motors Corporation

Dept. J-1, DAYTON, OHIO

A cut-away view of the Frigidaire Cabinet. Copper sleeves support the cans in the cooling tank. Thick cork-board walls provide heat insulation. The compressor unit can be located at either end of cabinet or in another room if desired.

Iceless Cabinets Will Not Cause a Revamping of Ice Cream Industry

Mechanical Refrigeration Here to Stay and Must Be Met With Sound Business Judgment, Convention Speakers Say

THERE is no ground for the fear that refrigerated cabinets will become a bigger proposition than the ice cream industry itself, or that this industry will have to undergo a revamping to dovetail in with the adoption of these cabinets throughout the country. This assurance was given by L. W. Roszell, prominent Illinois ice cream manufacturer, in one of the most interesting addresses delivered thus far this winter on this subject. This attitude was characterized by the speaker as "pure bunk" when he appeared before the national convention last November. Manufacturers should face the matter squarely, consider it carefully and arrive at their conclusions on the basis of "good, common, sound business judgment," the speaker declared, adding that there is not any question about the desirability of this method; that there is not any question but that manufacturers of this equipment have "exerted great effort and are entitled to the fullest commendation for perfecting efficient units." There is not any doubt that this is a "great forward step in the matter of equipment," but—

"It is, in my opinion, an improvement that is just over the line from the actual manufacture and sale of ice cream by the ice cream manufacturer. By this I mean that it is an improvement that is rightly and justly to be placed in the classification of retail equipment.

"There is not any question but what a dealer can sell his ice cream in better shape out of a refrigerated cabinet. There is not any question but what there will undoubtedly be an increase in the sale of ice cream sold out of one of these cabinets in proper condition at all times, but this same thing is true when applied to a clean-cut up-to-date store, The store with modern, up-to-date fixtures and a clean, inviting appearance will sell more goods than the other kind of store with which we are all familiar, yet the ice cream manufacturer has never felt that it was his place to go out and re-equip with modern, up-to-date store equipment, the store of any dealer for the purpose of increasing the sale of ice cream. This is a matter that is up to the individual retailer and is across the line from the responsibility of the ice cream manufacturer.

"Let us for a moment then, calculate this proposition as belonging to the retailer. He is the man who is going to develop an increase in business if there is any by reason of the use of this equipment. He is the man who is going to have less muss in the handling of his ice cream. He is the man who is going to benefit by less shrinkage. He is the man who is going to increase his popularity by selling at all times ice cream that is solid and in good condition. In view of these facts then, is he not the proper party to carry the investment of this equipment? It is true that he will probably say to you that he is effecting you a saving in ice and salt. He is entitled to this saving to apply against the investment and the cost of operating the equipment. This saving has been discussed and various methods for figuring saving have been used by different manufacturers throughout the country. I do not believe there is any set rule that can apply to this situation. I do feel, however, that the retailer who installs this equipment is entitled to the fullest saving that a careful analysis by the manufacturer shows can be made."

THE speaker showed that the investment in the ice cream business at this time is large, and that a great many manufacturers are cautious from the fact that they have too large an investment for the volume of business they are doing. This brought the speaker into a most interesting phase of the refrigerated proposition—economic conditions. He pointed out that many students of the matter have concluded that many of the ills of business and industry in all lines for the past several years have been high overhead. In this connection, he pointed out that many of the out-of-line high prices on various commodities at this time are due to excessive overhead, pointedly asking, "Isn't it true and isn't it a fact that the desirable thing is the reduction of overhead and consequent lower prices to the consumer of ice cream which will very greatly tend to increase the consumption?" The speaker continued:

"Let us for a moment consider this proposition of refrigerated cabinets from a standpoint of overhead. For the purpose of comparison, so that any man in this room can calculate his own business on this basis, I am going to take a factory with a $100,000 investment. So far as I am able to learn, a factory can produce and sell about two gallons of ice cream for every dollar of capital invested. With our $100,000 plant then we have a volume of 200,000 gallons. A 200,000-gallon business will very probably consist of between 300 and 350 active customers. In the adoption of the refrigerated cabinet by an ice cream manufacturer, is it going to be possible to furnish a very few of these customers with this equipment or are you going to have to furnish them all? I believe that experience will teach you that you will have to furnish them all. This being the case, to equip in the neighborhood of 300 stores with refrigerated cabinets will cost at the absolute minimum between $300, to $550 each, or an amount well in excess of $100,000. In one step you have doubled your capital account. In place of having $100,000 invested in your business you have $200,000. Now, let's see what this does to overhead—this $100,000 additional capital on your books for investment in refrigerated cabinets. One of the foremost items of overhead is depreciation. There is, at this time, no experience that tells us what depreciation upon these refrigerated cabinets is. It is largely a matter of conjecture. Some manufacturers are assuming that the life of these cabinets will be three years; others are assuming, and the manufacturers of them are advocating their life to be five years. For the purpose of this calculation let's strike an average and say that the life of these cabinets is four years, and I am frank to say to you that I believe a mechanical device of this kind, put out in the hands of retailers to receive the consequent it is bound to receive and which is borne out by the treatment accorded our present ice and salt cabinets, that a four-year life on this equipment is the absolute maximum. Our chief item then, of overhead, will be 25 per cent depreciation of this new $100,000 investment of $25,000 a year."

He reminded delegates that the next item going into overhead is interest on investment and taxes. He took the minimum of 6 per cent interest and 2 per cent taxes or total of 8 per cent assessed against the new investment of $100,000 or $8,000 a year, and stated that the next question to be considered is the absolescence of present cabinet equipment. In all probability, he believed, the 200,000-gallon factory will have in the neighborhood of 400 cabinets at a value of approximately $25.00 each or $10,000, which led the speaker to urge:

"Let's be fair in this thing and not charge off this obsolescence all in the first year, but spread it over the four-year period and we have an additional $2,500 a year. This gives us a total on this $100,000 investment of approximately $36,000 annually that we increase our overhead, or 18 cents a gallon. Now, if this transformation from ice and salt cabinets to refrigerated cabinets could be made overnight which, of course, is not true, very probably the figure of 7 cents for ice and salt saving could be increased by some saving in labor, lighter trucks, etc. But quite on the contrary, while the transition is taking place it is going to be necessary to maintain dual service in order to take care of the stops that do not have the mechanically refrigerated cabinet and also the fountains that have to be packed which makes up a considerable quantity of the service required by retailers, so it would appear that the 7 cents per gallon ice

Michigan Manufacturers in Record Convention

Ice Cream Men Gather With Dairy Interests of State at East Lansing to Discuss Important Topics and See Exposition of Dairy Boosters

MICHIGAN is getting ready for its greatest ice cream and dairy conclave as this issue of The Ice Cream Review is going to press. A large attendance of ice cream manufacturers is expected for the annual conventin of the Michigan Association of Ice Cream Manufacturers, which will follow its usual custom of meeting with other organizations of dairy products manufacturers affiliated with the Michigan Allied Dairy Association, of which Lloyd L. Hughes is secretary.

The ice cream and dairy pageant will be featured by an exposition by the Michigan Dairy Boosters, the aggressive organization of supplymen operating in that territory, of which C. J. Yuncker is president.

The convention and exposition will be held at East Lansing, February 2, 3, 4, 5 and 6. All meetings will be held in the Michigan Agricultural College building.

THE exposition will be held in the college armory from Tuesday noon, February 3, to Friday noon, February 6. The annual banquet will be at Kerns Hotel, Tuesday evening. The boosters are confident of staging a record exposition. They have made plans for entertaining the delegates in a most pleasing way, officials say.

A program of events follows:

Tuesday, a. m., February 3, Business meeting. Tuesday, p. m., February 3, Joint meeting, with Farmers' Week Program. Don't miss this program.
Wednesday Evening, Annual Banquet, Kerns Hotel.
Thursday Evening, Dance at Kerns Hotel, courtesy of Michigan Dairy Boosters.
Wednesday, February 4, Morning and afternoon sessions.
Wednesday Evening, Michigan Allied Dairy Association, banquet, Kerns Hotel.
Thursday, February 5, Morning session only.
Thursday Evening, February 5, Dance at Kerns Hotel, courtesy of Michigan Dairy Boosters.
Exhibition in Michigan Agricultural College Armory daily from Tuesday noon, February 3, to Friday noon, February 6.
Tuesday Evening, February 3, Kerns Hotel, Annual Banquet and election of officers.
Wednesday Evening, February 4, Michigan Allied Dairy Association Banquet, Kerns Hotel.
Thursday Evening February 5, Annual Dance. All members of Michigan Allied Dairy Association invited. Admission by badge or invitation only.

Iceless Cabinets to Feature Minnesota Convention

Preparations Made for Exhaustive Study of this Subject at Annual Gathering at Minneapolis, February 19 and 20

ICELESS cabinets form a subject now strong in the minds of Minnesota ice cream manufacturers. This topic probably will take up more of the program at the annual convention of the Minnesota State Association of Ice Cream Manufacturers than any other. The convention will be held at Minneapolis February 19 and 20. The new Nicollet Hotel will be convention headquarters.

Preparations for the meeting were made at a special meeting in Minneapolis on December 16. At that time certain plans in connection with cabinets and soda fountains were put on foot, and these plans will come up for considerable discussion at the annual convention, it is indicated by President W. W. Dunn, Jr., of St. Paul.

W. A. Schwindeler, chairman of the national association's advertising committee, will outline the plans for the nation-wide co-operative advertising campaign soon to be launched, which already has received hearty endorsement at virtually all conventions held this year.

Dakota Manufacturers to Discuss Iceless Cabinets and National Advertising

Annual Convention, February 3, 4 and 5 at Sioux Falls, Convention Headquarters, Hotel Cataract

ICELESS cabinets and co-operative advertising will feature the annual convention of the Ice Cream Manufacturers' Association of South Dakota, to be held at Sioux Falls, February 3, 4 and 5. Hotel Cataract will be convention headquarters.

W. W. Dunn, Jr., president of the Minnesota association, will address the convention on "Iceless Cabinets — Possibilities and Limitations for the Average Ice Cream Manufacturer." In this address the association expects to hear a discussion of the subject from an angle that will show the rank and file of the industry some new points on the subject. The subject also will be discussed by H. F. Shipley, Sioux Falls; W. C. Gagnon, Huron, and E. R. Binder, Yankton.

The convention will be held partly in connection with the meeting of the state dairymen's association. Following the ice cream manufacturers' convention proper there will be a banquet at the Hotel Cataract.

Announcement last month from C. C. Totman, secretary of the association, indicated a large attendance is expected. An attractive program has been prepared for the convention. Iceless cabinets, national co-operative advertising and cost accounting will feature the program. Among those to discuss phases of the iceless cabinet situation are H. F. Shipley of Fenn Bros., Inc., Sioux Falls. Prof. W. B. Combs will discuss the homogenization and viscosity of the ice cream mix. J. E. Finneran will go into matters concerning co-operative advertising.

The convention proper will be followed by the ice cream manufacturers' association and the state dairy association's annual banquet at Hotel Cataract.

With regard to the scoring exhibition, Secretary Totman announces that samples of ice cream will be purchased and some will be made especially for the exhibition. These will contain high total solids and low fat and overrun, so as to enable the judges to point out defects and desirable qualities in ice cream. There will be no prizes or placings. The object of the demonstration is purely educational.

The program follows:

PROGRAM.

February 3, 7:30 P. M.

Call to Order by President—I. J. Bibby, Brookings.
Report by Secretary-Treasurer—C. C. Totman, Brookings.
Talk—"Co-operative Advertising"—J. E. Finneran, St. Louis.
A member of the National Association of Ice Cream Manufacturers.
Talk—"Iceless Cabinets—Possibilities and Limitations for the Average Ice Cream Manufacturer"—W. W. Dunn, Jr., Minneapolis.
Discussion—Same Subject—Led by H. F. Shipley, Sioux Falls; W. C. Gagnon, Huron, and E. R. Binder, Yankton.
Appointment of Committees.
Election of Officers.

February 4, 8:30 A. M.

Ice Cream Judging and Scoring Demonstration—W. B. Combs, St. Paul, Dairy Dept. University of Minnesota.
Talk—"Homogenization and Viscosity of the Ice Cream Mix"—W. B. Combs, St. Paul.
General Discussion—"Co-operation of the Members of the South Dakota Association"—Led by W. G. Arlt, Rapid City.
Report of Committees, Business, Etc.

12:00 — Noon — Banquet.

Following are the officers and board of directors of the association:

I. J. Bibby, president, Brookings; Wm. Arlt, vice-president, Rapid City; C. C. Totman, secretary-treasurer, Brookings; W. C. Gagnon, Huron; M. Langenfeld, Watertown; F. J. Herrick, Mitchell; M. M. Carpenter, Aberdeen; E. E. Skoug, Sioux Falls.

I. J. BIBBY, President.

W. C. GAGNON, Director.

W. G. ARLT, Vice-President.

K-W Type A CANS

Tinned on all surfaces — inside and out.

(Patented)

Soldered in just one essential place — where the bottom is set in.

TO SOLDER OR NOT TO SOLDER

We will make you entirely solderless Ice Cream Cans, if you wish them. You are the customer, and we aim to please.

BUT — and it's a big but,—

We have been making Ice Cream Cans for a good many years, and it is reasonable to suppose that we have learned something about the making of cans, and our earnest advice is to use a SEMI-SOLDERED TINNED-ON-ALL-SURFACES CAN LIKE OUR K-W TYPE A CAN.

This Can is soldered in just one essential place—where the bottom is set in—the ONE place, in our opinion, where every Ice Cream Can SHOULD be soldered to give longer life and service.

You may have your choice — entirely Solderless or K-W Type A —but we recommend K-W Type A. Ask us to tell you in detail why.

Keiner Williams Stamping Co.

THE ASSOCIATION OF ICE CREAM SUPPLY MEN — MEMBER

New England Manufacturers Hold Good Convention

Cost Accounting, the Refrigerated Cabinet and National Advertising are High Lights in One of the Best Meetings Ever Held by that Splendid Organization

SEEMINGLY all the lords and earls of ice creamdom in New England turned to Hartford Conn., for the fifteenth annual convention of the New England Association of Ice Cream Manufacturers January 22 and 23. The attendance was very large, over three hundred being registered. Many timely topics were included on the program for discussion.

Promptly at 10:30, Thursday morning, the first meeting was called to order and an address of welcome was delivered by a representative of the city of Hartford, in the absence of the mayor. Response was by Charles G. Morris, ex-president of the national association.

Principal among the topics discussed by President Platt during his address were the following:

"I have made it a point to attend all meetings of the the association, also some of the sectional meetings. We held a meeting at Lowell, Mass., and Brocton, Mass., with the local dealers and manufacturers and felt that we accomplished quite a little at these two meetings. We certainly got the manufacturers together and had a good talk at both of these meetings, and think we got a special sale proposition straightened out a great deal better than it was, although I, personally, feel that if the manufacturers want to hold special sales in a locality they should all get together and hold the sales on the same days, possibly three days, twice a year. If this were done, each manufacturer would be working on the same basis, and I feel that it would stop a lot of petty jealousy regarding the sales. It certainly would not leave the market so that people could buy ice cream at half price most of the time by going from one manufacturer's dealer to another, which seemed to be the case in two towns.

BY THE NEW PRESIDENT, J. C. TAIT:

"I believe my first duty as President of this Association is to devise some way to sell more good ice cream to our present customers, and to let competitors' customers alone."

"AS YOU all know, the National Association of Ice Cream Manufacturers selected a national slogan and while I have heard some comment that it is a very poor slogan, I, personally, feel that it is a very good one, and the more I see of it the better I like it. I think that every member of the national association should get back of this slogan and use it on their advertising matter wherever possible, so as to get the general public talking about it.

"Seven million, one hundred thousand gallons of ice cream represented in pledges of support for national advertising signed at New England Convention by association members. Five and one-half million gallons more signed for by delegates from other states."

"The biggest thing I think which we have accomplished this year was to get the largest ice cream manufacturers in New England to join our association and work with us. This cannot help but strengthen our association and should promote a great deal more harmony among our members.

"You all know that this has been a year of ups and downs in the ice cream business. There has been a great deal of talk all over the United States regarding the refrigerated cabinets, and I, personally, feel that it is not the time to go into this proposition, as I feel that inside of two years there will be so many improvements on the cabinets that the ones they are putting out now will be obsolete, and, as it has been brought out at some of our meetings, if the manufacturers own the cabinets the store keepers will not be willing to use a cabinet which is not right up to date, and the manufacturer will be compelled to stand the loss on the cabinets instead of the customer. If the customer owns the cabinet, he will go right on using the same cabinet, although there might be much better cabinets on the market. But if we own it, that is a different story.

(Continued on page 150)

Banquet held in connection with the Association of New York Ice Cream Manufacturers' convention, at Buffalo, January 7 and 8. A complete report of the convention begins on page 86.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

Cleveland opens up with 5¢ DIXIES in December. Telling, Tabor, and Baker Evans will repeat the success of Boston, Pittsburgh and Washington. 5¢ DIXIES have come to stay—there's no novelty about 5¢ worth of ice cream in a sealed package! The big people of the industry recognize this and are climbing on the DIXIE Band Wagon.

5¢ DIXIES

"— — we feel that we have increased our sales of ice cream considerably and consequently cut down enormously the overhead for October — — — —"

—that's what one Ice Cream Manufacturer writes about DIXIES in October—and now, at Christmas time, in midwinter, DIXIES keep right on working for him.

DIXIES apparently make an appeal that is universal. Old and young, rich and poor alike take to DIXIES in the most spontaneous fashion.

A nickel's worth of any good product—raisins, crackers or ice cream—will sell at off seasons when larger bulk quantities simply do not move.

People do not consider the spending of a nickel an extravagance.

And DIXIES have long ago passed the experimental stage. The details in which you are particularly interested—the filling, packing, distributing and advertising of DIXIES—have all been thoroughly worked out. Worked out and actually tested by experienced, conservative and keen Ice Cream Manufacturers in the East and Middle West. And found a success! Success when it's most needed—in the dull, red-ink months of winter!

We have this information in handy form. Write for it at once—or, better still, appoint the day and hour when our representative may call on you.

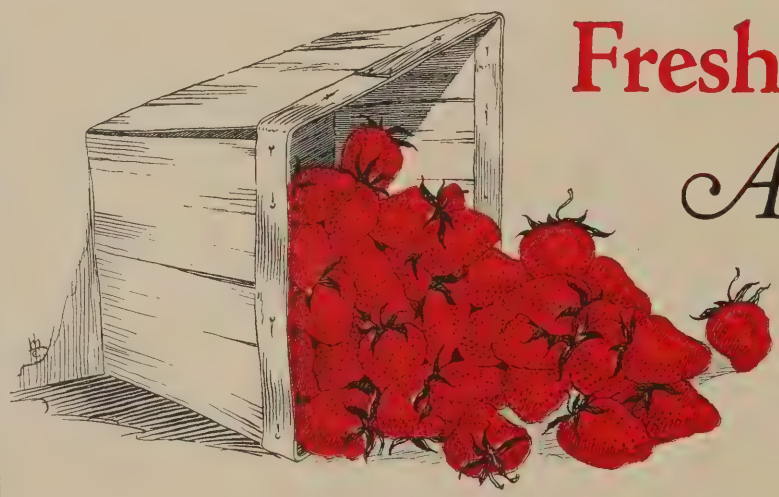
Bankruptcies Are Determined by Extent of Business Men's Knowledge, Training and Fitness, Such as Only Organized Thought Produces



FAILURES and bankruptcies don't come generally from business conditions, but from the fact that the man who is conducting the business wasn't qualified to run it. This statement throws an interesting side light on the matter of business costs. It was made before the national convention at New Orleans last November by C. I. Weikert of Minnesota. The average business man has had little schooling in his profession or business, the speaker pointed out, and if he had, he would be as well qualified for his work as is the banker of today.

Mr. Weikert told that he personally investigated fifteen trades and watched their trend in the past four years, and knows how many failures and bankruptcies they had every year, and why. Declaring that he liked to speak the truth, the speaker proceeded to speak it:

"Is the executive of every ice cream manufacturing plant qualified to run that business? Is he schooled? Is he sufficiently known in his trade so that he can conduct that business as he should? Let's analyze it and see how he gets his education, so to speak; and when I refer to education, gentlemen, I don't refer to schooling, I refer not to the public schools, but I refer to the knowledge obtained in business.

"The first means of education for the executive is experience. That is how he learned. My father told me that when I was young. He said, "Son, you will learn by experience." But do you know that when I was in the American army, if the American army had learned by experience, we would still be fighting the war. When we went over there we didn't try to experience everything out, we looked to the Allies and even to our enemies and took their experience and found out what they had discovered as a result of their own practices, and we profited from their experience in order to make our army a good army. So we didn't learn by experience. And when a business man today thinks that is the only way he can learn is by experience, he is going to take the prime of his life learning it, and when he has learned it, he will be ready to quit, and somebody else will have to start at the bottom and learn."

Business men need schooling today, he declared. He suggested that the ice cream manufacturers establish universities for the ice cream manufacturers and everybody quit in the winter time when they haven't any business and go to school. But since this cannot be done, as the speaker admitted, he added that the best means of education today is organization. Organizations such as they have in America are not found in Europe. Organizations are real schools, he said—means of education.

150 Gal. body on 1½-ton Dodge-Graham

The light refrigerator with the

BAIRD REFRIGERATOR BODIES are the lightest on the market. They always remain light because every piece of wood and insulation is thoroughly waterproofed by dipping in an odorless, elastic waterproofing compound which cannot crack at the lowest temperatures.

At 10c per ton mile the cost of hauling the extra weight of a soggy, water-logged refrigerator body an average of 35 miles a day will, in a year, exceed the initial cost of the body.

Durability and extra years of service are built into every Baird Refrigerator Body. Thick, non-corroding linings, welded seams which resist body stresses and permanently prevent leaks—plus below-zero temperatures—have merited for Baird Refrigerator Bodies the good repute they enjoy among ice cream manufacturers everywhere.

BAIRD

150 Gal. body on 1½-ton Atterbury

Body strong constitution—

FROM THE ELMIRA ICE CREAM COMPANY, of Elmira, N.Y., one of whose trucks is pictured above, we received the following letter:—

July 1, 1924.

"It gives us pleasure to express our opinion of your refrigerator bodies, as we have used two for some time now and found them highly satisfactory in every way. Our experience with these bodies enables us to recommend them without reserve to anyone requiring refrigerator bodies."

—W. L. Dart, Secretary, Elmira Ice Cream Company, Elmira, N.Y.

The prices of Baird Refrigerator Bodies are moderate and they are sold on terms to meet your convenience. The saving, during the first three months of service, in labor, ice and salt, and truck maintenance will exceed the price of the body.

DAIRY SHOW PREPARES FOR GREATER GROWTH.

The Pacific Slope Dairy Show has grown in four years to a point where it justifies an organization of its own, it was decided by the directors of the California Dairy Council at a meeting held in Oakland at the close of this year's show. The work has been done in the past by the staff of California Dairy Council, loaned for the occasion. Sam H. Greene, secretary of the dairy council, is secretary of the show and Robert E. Jones, publicity director, is show manager.

At the directors' meeting, Greene explained that California Dairy Council would continue to take every interest in the show and co-operate fully, but the time had come, he said, to incorporate the Pacific Slope Dairy Show Association. He mentioned the four-fold growth that has come since the first dairy show was held in Stockton four years ago, and ambitious plans for the future which make further expansion certain.

The directors chose Frank T. Murphy, former farm advisor for San Luis Obispo county, to be permanent manager of the show and he will devote his time the year around to extension and promotion work. Murphy served at the Oakland show as assistant manager.

Dr. C. L. Roadhouse, University of California, Davis, was re-electde president of the Pacific Slope Dairy Show Association; W. E. Haley, San Francisco; R. A. Condee, Chino; Geo. W. Prising, San Francisco; M. H. Adamson, Los Angeles, and J. N. Gilman, San Francisco, vice-presidents; Sam H. Greene, secretary-treasurer.

Directors were elected as follows: Albert Meister, Sacramento; C. E. Gray, San Francisco; D. M. Dorman, Los Angeles; Sam H. Greene, San Francisco; George H. Frampton, Artesia; George W. Prising, San Francisco; C. L. Roadhouse, Davis; Robert E. Jones, San Francisco; George E. Platt, Los Angeles; Merritt H. Adamson, Los Angeles; W. E. Haley, San Francisco; A. Johnson, Los Angeles; J. W. Coppini, Ferndale; P. H. Davis, San Anselmo; H. W. Low, Oakland; Robert A. Condee, Chino; Frank M. Helm, Fresno; W. T. Cole, San Francisco; J. J. Neil, Oakland; J. H. A. Jorgensen, Riverdale; Walter A. Haas, San Francisco; F. J. Bowden, Hanford; George H. Ball, Fresno, and William Regan, Davis.

THE TENTH EDITION.

When we attended our first dairy school session at the Minnesota state university in January, 1899, we purchased a copy of "Instructions for Traction and Stationary Engineers," compiled by Prof. William Boss, chief engineer at the experiment station and instructor in engineering at the university. During the years that have passed since that time the book has continued to be a real text book for the dairy industry.

Some idea of its popularity and world wide distribution may be gained from the fact that the tenth edition is just off the press. This means that nine different lots have been published and sold and that it is necessary to again print several thousand copies. Changes have been made from time to time in order to keep the book up to date.

The book is very practical. The author has kept it so with the idea in mind of appealing particularly to the young engineer. He has purposely avoided technical discussions.

The price has been kept within the reach of everyone. $1.50 will bring you a copy of the tenth edition, postage prepaid. Send your order to The Olsen Publishing Co., 5th and Cherry Sts., Milwaukee, Wis.

Manufacturers Now Favor

Mapleine Raisin Ice Cream

For the Family Brick

They do it for two reasons. The public is fond of both Mapleine and raisins. They are both widely advertised to consumers; their flavors blend perfectly. In view of this, Mapleine Raisin Ice Cream is bound to become popular. At the same time, it makes one of the most profitable specials that can be featured.

Although the combination of Mapleine and raisins in ice cream is new, it is making good wherever introduced. A Pacific Coast manufacturer who made Mapleine-Raisin Bricks his week-end special recently, is enthusiastic about his sales. Mapleine's delicious delicacy of flavor and soft rich color blended with the raisins—attracts the eye as well as palate.

As for cost—Mapleine Raisin Ice Cream is considerably more profitable than nut and crushed fruit flavors. The Mapleine and raisins for 10 gallons finished ice cream cost only 45c—4½c a gallon.

DIRECTIONS

To make 10 gallons finished ice cream, soak 4 pounds Sun-Maid Seedless Raisins in water and bring to a boil just long enough to thoroughly soften them. Then drain off water and add raisins to the ordinary mix after primary freezing. Do not grind, chop or crush raisins. Flavor with 2 ounces Mapleine.

Prove it Out

Write us or order Mapleine of your jobber, but for satisfaction accept no substitute. Genuine Mapleine is always identified by the Crescent Trade Mark. Look for it.

The What and Why of Uniform Cost Accounting from Practical Operating Standpoint

Many Managers Who Do Not Understand Full Meaning of Cost Accounting Have Some of Their Questions Answered Here

*By C. B. HARPSTER**

IN THE survey of accounting in the milk industry preparatory to the building of their uniform system I believe there were found only five or six firms of the large number studied who could be said to have real thorough-going cost systems showing them their product costs. I will, therefore, attempt to give you my idea of the difference between good financial accounting and cost accounting.

A good financial accounting system will set up in proper form on a balance sheet the assets and liabilities of the business correctly stated. It will group together all of the like items. For instance, the current assets will be shown in one group, arranged in their proper order, and in another group the property values will be shown, divided up as between buildings, machinery, land, furniture and fixtures, etc., and deducted from the totals proper depreciation will be taken. In another group will be shown deferred charges to future operations, such as prepaid insurance, prepaid vehicle licenses and interest.

*Auditor The Crane Ohio Ice Cream Company, Columbus, O. Submitted before National Convention at New Orleans in November.

On the liability side we will find grouped together in proper order the current liabilities. In another section will be shown the reserve and in still another the capital stock and the surplus properly analyzed. A good financial accounting system will go farther and show a profit and loss statement, setting up for a given accounting period, the profits or losses which have been made by the business and how they originated. It will show sales, cost of sales, gross operating profits and expenses. It will then show an expense schedule where the expense account is divided up into its various sub-accounts such as labor, repairs, depreciation, salt, ice, automobile expenses, and so forth.

If you had all the things mentioned and had only a very small business everything being sold from the platform or from one packing route and you handled only one product, say vanilla ice cream, and did **nothing else** you might be said to come rather close to having a cost system. There is probably no one in this audience who would meet such a description, however. Those of you who have gone the farthest with your financial accounting system, who have got the largest number of supporting schedules and the most details, have, undoubtedly, come much closer to knowing what is going on in your business than those who have stopped merely with a monthly balance sheet and operating statement and you have come much closer to the proper basis for real cost accounting. We cannot overlook the fact, however, that although we may have a very good financial accounting system there is still a real difference between that and what we know as cost accounting.

YOUR financial accounting system, to repeat, will give you your monthly balance sheet, profit and loss statement and perhaps an expense schedule, and will probably stop there. Your cost system on the other hand will give you the complete costs of all the various products which you manufacture and sell and these costs in turn will be divided into the various elements which go to make them up. Perhaps the best way to give you my idea of what a good cost system is, will be for me to outline the things I expect to show.

We shall expect to show the difference in cost between vanilla ice cream and strawberry or chocolate ice cream and these compared as to cost of sherbets or ices.

We shall expect to know the cost of brick ice cream in comparison with bulk ice cream. We shall expect to know accurately the true cost of all of the various specialties made out of ice cream which we put out to stimulate the winter business. We shall expect to know the cost of special orders and of fancy individual moulds such as are put out for the holiday season.

We shall most certainly expect to find out the difference in selling and delivery costs or expenses as we call them, for ice cream sold and packed in the city as compared with ice cream which is shipped out of town in tubs or not iced or serviced by the dealer. And we shall expect to know the difference in cost of selling

Why it pays to make your ice cream with **SKIMILFLAKES**

—the new dry skim milk in flake form

It's better Skimilflakes makes better ice cream than any other milk—fluid or dry.

Skimilflakes is a perfect body builder. Ice cream made with it remains absolutely smooth and creamy when bricked and frozen hard. It never becomes grainy or sandy when cut.

Skimilflakes never varies in quality. This insures perfect uniformity in your finished product—essential in good ice cream.

It's easier Skimilflakes is immediately and entirely soluble in cold water. Once in solution it will not separate or precipitate. This prevents waste and delay. It can be prepared at your convenience and used when you're ready. Always available for extra batches.

Because Skimilflakes dissolves perfectly, it will not clog up the homogenizer with lumps. The machine can be operated continuously.

It's cheaper Skimilflakes reduces manufacturing costs to the lowest possible figure. It eliminates all waste—cuts freight charges—saves time.

Send for folder giving further information and formulas using Skimilflakes. Prices and samples on request.

A Modern Scottish Chieftain is Successful Ice Cream Man

John Cunningham, Chicago, Past President of National Association and Head of One of West's Largest Ice Cream Plants, Came to America Thirty-Nine Years Ago

THE life of John T. Cunningham, who came to this country a wondering Scottish boy, 39 years ago, is one of the most interesting romances of the American ice cream industry. Some time in May Mr. Cunningham will celebrate his thirty-ninth year in America, the greater part of which time has been spent in building up one of the finest ice cream manufacturing concerns in the country. This information was gathered from a very interesting article appearing in the fall issue of the houseorgan "Milk," which is published by Mojonnier Brothers, milk engineers of Chicago.

JOHN T. CUNNINGHAM

Mr. Cunningham began as a driver of an ice cream conveyor for a man named John Berry, one of the first wholesale manufacturers of ice cream in Chicago. He had left his folks on the farm in Scotland to seek his fortune in the wonderland of America. His entire capital consisted of $400 when he landed in this country, this being in gold pieces sewed in a bag next to his skin in true Scottish fashion.

Having shown marked ability in creating good will, it was not long before Mr. Cunningham had a better job with the Thompson Ice Cream Co., then the largest in Chicago. This plant not only did a large city-wide business, but also distributed much ice cream throughout Wisconsin, Michigan and Illinois.

THE Scotch lad had complete charge of sales for this company on the west side of Chicago. A one-horse wagon was all that was needed for several years to distribute all the ice cream sold in his territory. It was in 1890 he drove the first double-team wagon used in Chicago. Some interesting side lights on the early history of the Chicago ice cream industry are given in the story of Mr. Cunningham in the magazine "Milk," from which the following is quoted:

"The scope of the ice cream business in those days can be more clearly understood when we realize that ten ordinary single-horse express wagons took care of all of the summer ice cream business in Chicago, as well as the business outside of the city.

"In the early spring of 1894, the year following the World's Fair in Chicago, Mr. Cunningham had an opportunity to buy out a small concern manufacturing ice cream on the west side. With much mutual regret he severed his connections with Mr. Thompson. All of the ice cream in this small plant was made with salt and ice. The total floor space was 22x42 feet, as compared to one-half of a city block now occupied by the Cunningham ice cream factory.

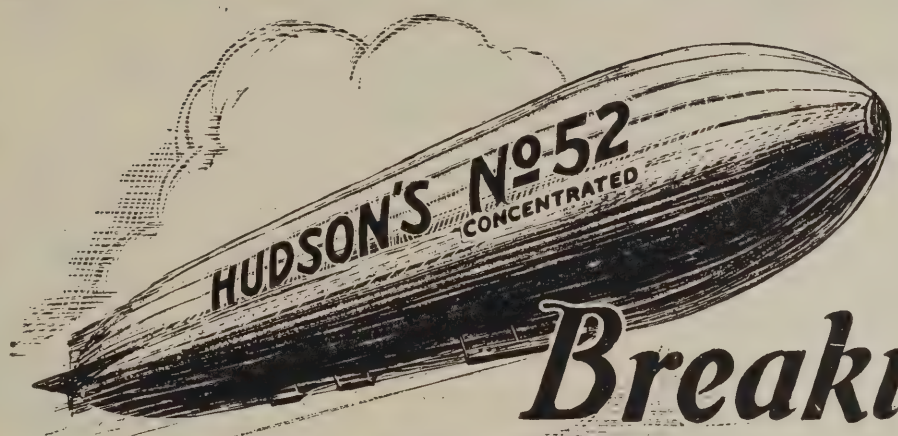
"During this time, real worries began. 1894 proved to be a very poor year. There was a reaction in Chicago after the World's Fair that left business in a very poor condition, causing a great deal of unemployment. All surplus nickels were being spent for bread and not for ice cream.

"The capital originally put into the business was soon used up and it was impossible to borrow any money from the banks.

"During this period there was scarcely enough ice cream business to pay for the cost of operating. It was not uncommon to deliver only 18 to 20 one-gallon tubs on days in the middle of the week. Three and five-gallon tubs were sold only on Sunday. Vanilla ice cream was regularly sold and occasionally chocolate and strawberry. On rare occasions quart molds were supplied for parties. All of the ice cream was delivered in tubs and these had to be iced twice daily, lest the ice melt and the ice cream float in the brine.

"This struggle to build up a business without experience and without capital, in a strange country, during a period of depression, lasted until 1900; in fact, at the end of this time an inventory of the actual assets of the company showed a deficit of $3,000.

"In 1910, business conditions became better and ice cream gradually began to come into its own. By continued hard work, Mr. Cunningham had added a number of good distributors to help swell its sales."



So it was that this hard-working man's streak of luck had begun to turn in the spring of 1903 when he bought out another ice cream company and moved to his present location. At that time it was just a modest little plant in which he conducted his business. But through dint of hard industry, business steadily began to increase. Today Mr. Cunningham has one of the largest ice cream manufacturing houses of the Middle West.

Breaking Records

ENTERING the thirty-seventh year of serving the ice cream trade with quality flavors—with 1924 a record-breaking sales year and with more ice cream manufacturers on our customer list than ever before—we can say, advisedly, there are reasons for this success.

Briefly, the reasons are: A rich, smooth, fascinating, appealing flavor which strikes the consumer palate with instant satisfaction; flavors with unusual purity and strength—and economy; flavors which come out of the freezers with full, wholesome taste and strength (they do not freeze out).

We recommend **HUDSON'S CONCENTRATED No. 52,** or **HUDSON'S No. 52 SPECIAL** Ice Cream Flavor for those manufacturers who appreciate economy without the sacrifice of quality.

Let us ship you a sample gallon of Hudson's Concentrated No. 52, or a sample keg of Hudson's Ice Cream Flavor No. 52 Special—express or freight prepaid to your City. You may return same to us if not entirely satisfactory.

Coast Associations Give :-: :-: Much Food for Reflection

Capable Men Are Behind Constructive Co-operative Work Carried Out in Far West

MEN who attended the great joint convention of ice cream manufacturers on the Pacific Coast this year have much food for reflection. The convention was a real eye-opener as to the progress made on the coast in the manufacture and merchandising of ice cream, particularly in regard to possibilities for future development due to the constructive work of those organizations known as the Pacific Ice Cream Manufacturers' Association and the California and Southwestern States Ice Cream Manufacturers' Association.

It is generally known that this is the first joint convention that the coast organizations have held. These organizations have had eventful careers. It was in 1915 that the California and Southwestern States Ice Cream Manufacturers' Association held its first convention, Los Angeles being the meeting place, and L. J. Christopher being the president. Mr. Christopher retained this office for three years, being president when the association held its first convention in 1915 and also when the convention was held in Oakland in 1917. He was succeeded by S. W. A. Carver at the Oakland convention. Mr. Carver presided at the convention held in Los Angeles in 1918, at San Francisco in 1919, at Catalina in 1920 and at Oakland in 1921. At the Oakland convention he was succeeded by L. W. Wilson, who enjoyed the distinction of having been the association's first secretary, serving for two terms at that post.

Corner of Pacific Slope Dairy Show, Municipal Auditorium, Oakland, Cal.

AT THE Stockton convention in 1921, Mr. Wilson was succeeded by C. J. Alfred as president of the association. It will be noted that there were two conventions in 1921. Mr. Alfred was succeeded in 1924, at the convention in Fresno, by F. H. Ames. Mr. Ames was re-elected at the convention at Catalina in 1924, and also at the joint-convention in 1924.

The California body has had six secretaries. Mr. Wilson was succeeded in 1917 by E. J. Cowing, after Mr. Cowing came Alfred Beaudry, who served three terms, being succeeded by Robert J. Dryden. Mr. Dryden was the association's able secretary for three years, but in 1921 he was forced to give more attention to his business and therefore had to give up the secretaryship. His unexpired term was filled by Harry F. Grosse. Jay H. Kugler has been secretary of the association since 1923, when Mr. Grosse gave up the work.

IT ISN'T generally known in the trade, even in certain sections embraced by the Pacific Ice Cream Manufacturers' Association, that Burt H. Walker has served as secretary of that association since the first convention at Spokane in 1916. No one on the coast is more interested in the up-building of the ice cream industry than this same energetic gentleman, and those members who have been in close touch with the secretary's office feel sure that he gets keen enjoyment out of the earnest work he does for the advancement of the association and the industry as a whole.

Another unique feature is the fact that Fred N. Martin of Spokane served as president for three years following the organization, being succeeded in 1919, at the convention in Spokane, by J. E. Dunne. In 1920, at the convention in Portland, Mr. Dunne made way for W. V. S. Robb, who has served as president of the association since. This body has held three conventions at Spokane, two at Portland, two at Seattle, and has made one trip to the Dominion of Canada in 1923, visiting the Canadian members, with Vancouver as the scene of the meet.

THIS little bit of history is very interesting food for thought after looking over the splendid convention held and exposition staged by the supplymen on the Coast in December. Like many manufacturers in the early days on the Coast, they had hoped that within a short time the ice cream industry in that vicinity would be sufficiently developed to stage such a splendid exposition as that conducted by the Supplymen of the Pacific Ice Cream Industry. This exposition has reflected good credit upon the progressive spirit of the Coast ice cream men.

⚜

NEW JERSEY SHORT COURSE.

A two weeks' course in ice cream making will be offered by Rutgers' College of Agriculture, New Brunswick, N. J., from March 2 to 14, according to announcement by Director F. G. Helyar. The plant in the new dairy building has been completed and will be used for the first time for this event. Prof. F. C. Button will be in charge of the work. Three or four practical ice cream makers will give talks to the students, in addition to members of the staff.

⚜

You can find the person who will be glad to buy what you wish to sell, by letting your desires be known through an advertisement in "The Ice Cream Review."

Electric Trucks for Ice Cream Delivery

New York Manufacturer Claims Electric Trucks Reduce Costs, Save Time, Are Easy to Run and Easy to Repair, Assure Sanitary Condition

*By EDWARD J. SHERIDAN**

FROM the fact that a request was made that something be said about electric trucks at this convention, it is fair to assume that there are some in this assembly who want to know about them, and possibly have been asking this question in their own minds: "As an ice cream manufacturer, am I giving fair and proper consideration to the transportation features of my business, if I fail to inform myself of the possibilities of a saving in my hauling costs, which many claim the electric truck produces?"

There are many sources of information, technical and practical, concerning the electric trucks. Volumes have been written about the operation and maintenance but, while all such information is valuable, I suspect that the real reason why this subject was requested is that you want to know something about the real experience of using electric trucks for ice cream delivery.

Edward LeSchum of the American Railway Express Company estimates that only four per cent of all city trucking is done by electric trucks. Operators of large fleets claim that it has been demonstrated beyond a reasonable doubt that electric trucks are more economical, speedier, and better adapted in many ways to over three-fourths of all city service, namely, the 75 to 85 per cent of such service which involves short hauls and frequent stops.

That there must be something in this statement is further demonstrated by the fact that the American Railway Express Company in 25 cities of the United States operate 1,459 electric trucks on the streets, to say nothing about the electric vehicles operated in warehouses and on platforms. Large fleets of electric vehicles are operated by John Wanamaker, R. H. Macy, Ward Baking Company, Marshall Field & Company.

Some of the reasons why users of electric trucks were first attracted to them are revealed by the following facts:

1. Electric trucks reduce costs.
2. They are the fastest trucks that there are on short haul or frequent stop routes.
3. It is a very simple car to run and easy to repair.
4. It is strong, rugged and reliable; rarely breaks down on the road.
5. Its life is much longer than any of the gas trucks.
6. The electric truck is clean always, insuring good appearance, and sanitary conditions for the goods which it carries.
7. It is quiet.
8. It is odorless.
9. It has all the speed necessary consistent with prudent operation.
10. The owner can absolutely control the speed at which the vehicle is to be operated, and is not dependent upon the operator for this feature.
11. Its tractive power is greater in proportion to horsepower consumed than gas trucks.
12. It costs less to operate and maintain.

These constitute a rather long list of what might be termed extravagant claims but every one of them is capable of proof. In the consideration of these facts, however, it must be recognized that the electric truck is not intended to do many things which the gas truck is used for. It will not travel long distances at high speed, but, within its cruising radius, which is approximately 30 to 40 miles, it will show a surprising performance. It is not intended for traveling in heavy snow. Neither is the gas truck. In the ordinary snow in our cities the electric truck can make its rounds as usual. If it is stalled, it is usually due to one of the other of these facts, neither of which is the fault of the truck:

First—The driver.

Second — Carelessness on the part of the person charged with the responsibility of charging the batteries.

It has been demonstrated that an electric truck which had exhausted its charge and had to be towed in, after re-charging went over the same course in the hands of an experienced man without difficulty.

Now for some practical questions:

1. Are the trucks dependable? There are probably some of my listeners who have seen old-time electrics pulled in at the end of a tow rope, not only when the rough weather of winter was encountered, but sometimes after a busy day in summer. The modern electric is a

LOWEST TRUCKING COST ON CITY ROUTES

Mississippi May Join Fight for 1926 Southern Convention

Capital City of Magnolia State, Jackson, is Possible Contender With Birmingham, New Orleans and Shreveport for Next Year's Convention

COMPETITION is opening up with an early start in connection with future Southern conventions. Although it has been definitely decided that Lexington is to get the 1925 convention, and arrangements accordingly are being made by officials of the association and of the Dixie Flyers, other cities are raising their voices and calling for their turn. It is the fact that cities that have been passed up in the past are asking for their chance, that makes it seem likely that New Orleans and Birmingham will have a hard contest on their hands to swing the 1926 convention their way.

Probably the outstanding city bidding against the so-called favored cities is Jackson, Miss. A determined movement for the 1926 convention has shaped up in Mississippi.

The gentlemen in the land of magnolias are moving quietly but with great eagerness toward their cherished goal.

Jackson's convention facilities cannot lightly be passed out of consideration when they are extolled by the Mississippians. A large auditorium for an exhibit and one of the finest hotels in the entire South—the splendid new Edwards Hotel—are features that are particularly stressed. Others are that Jackson is a popular convention city, the metropolis of its state, a rapidly growing city and has the advantage of having everything necessary to a successful convention well grouped.

Edwards Hotel, Jackson, Miss.

Probably no state has given more loyal support to the Southern association than have the Mississippians.

BIRMINGHAM seems to have the inside track in the race for the 1926 convention, however. The "Magic City" is centrally located, is one of the South's largest cities, with a population of approximately 225,000, and is a great convention city. People close to activities in the Southern association have a habit of speaking of Birmingham with a knowing look when the scene of the 1926 convention is suggested. That city has excellent hotel facilities.

But Shreveport also has able champions, particularly in W. W. Campbell. Mr. Campbell says the Louisianans' will not be deterred in their bid for this honor.

It happens that the Mississippi association already has selected Meridian as the scene of the 1926 state convention. But should Jackson be successful in winning the Southern convention, there is little likelihood that Meridian would be unwilling to make arrangements for both conventions to be held at the same place.

It was in 1917 that the Southern convention was held in Birmingham. Other cities that have had this convention are: Nashville, Memphis, Macon, Atlanta and Little Rock.

TALK of a Southern convention in Texas at some time in the future is not making much headway. Texans have expressed a wish to have the Southern convention in their state some time, but as yet there has not been sufficient assurance that Texas ice cream manufacturers will line up in the Southern association as largely as officials would wish. There is no doubt, officials point out, that the assistance of Texas would make the Southern association one of the greatest trade organizations of the South. Leading spirits in the South earnestly look forward to this happy development. Oklahoma has lined up with the Southern, and with Texas' support, the membership of the Dixie body should double in a very short time.

BUT that Mississippi should have its eyes on the Southern convention is a thought that few people out of that state had ever even entertained. Delegates from the Magnolia state have been listening, virtually every year, to such cities as Birmingham, Nashville, Little Rock, Lexington, Macon, Memphis, New Orleans, etc., to put in their invitations, and have been content to hold their peace and their tongue at the same time. Not even was Jackson mentioned above a whisper when the convention cities were under consideration at New Orleans last fall.

But such is not to be the case any longer. So say the Mississippians who have taken the bull by the horns. A little conference on this subject is supposed to have taken place just before the Mississippi convention at Vicksburg in January. Officials of the Dixie Flyers are known not to be unfavorably impressed with the idea.

Jackson is a city of some 35,000 inhabitants. It is the capital of the state. It has been growing rapidly in late years. The Mississippi association has shown marked preference for its capital city in holding its conventions. The present scheme that is thought to be under consideration is for the Mississippi and the Southern conventions to be held at Jackson at the same time. No official announcement has been made in this connection, though W. D. Seale, convention president at the past Mississippi gathering, is a Jackson man and is known to be partial to that city for a Southern convention.

Probably the outstanding feature of Jackson's convention facilities is its splendid hotel. The Edwards Hotel would do credit to any city of one-half million population in the country. Not only has it the most excellent accommodations possible, but it also offers a large hall particularly suitable for business sessions.

(Continued from page 10)

and salt saving which appears to be the average accepted figure, is the absolute safe margin that can be figured.

"Now, gentlemen, what are you to do with the extra eleven cents that we have demonstrated in this simple little problem is going to be assessed in additional overhead to each gallon of ice cream we manufacture and sell? Are we enjoying excess profit enough that we can afford to absorb this eleven cents a gallon out of our profits? Are we agreed that the time is right for an advance of eleven cents per gallon in the selling price of ice cream? One of the two is absolutely necessary to meet this situation in the event of the manufacturer installing this equipment."

IN TAKING up the "much mooted question as to what our competitor is going to do with this proposition," each ice cream manufacturer was warned that if his competitor feels called upon to take an "unfair, unjust and undue advantage by attempting the installation of the cabinets," he is going to increase his cost, less his ice and salt saving, eleven cents a gallon. Not only this, but he also will be compelled to advance the price of ice cream eleven cents a gallon, or take eleven cents a gallon less in profit, and since "this is not an era of price advances in the ice cream business," the manufacturer of refrigerated cabinets has no other alternative than to absorb this eleven cents out of his profits. Now what happens when the eleven cents is taken out? Mr. Roszell explained:

"There isn't a man but who has come to this convention knowing very closely what his profit per gallon was this year. He can figure here in a moment just exactly what would happen to his profits this year had he taken eleven cents a gallon out of them. This is the very thing that is going to happen to your competitor. Just for the sake of argument we are going to assume that the net profit to this 200,000-gallon factory which we have been using here as an example was 15 cents a gallon. Take out the eleven cents and you have left four cents a gallon profit. Now, gentlemen, here is where the situation will have to be met by manufacturers, who have judgment enough to stay away from this gigantic investment, with a good stiff backbone. If the installation of a refrigerated cabinet is going to cost a manufacturer 18 cents a gallon, less 7 cents ice and salt saving, this same installation is going to save the manufacturer who does not make the investment, 18 cents a gallon less 7; ice and salt saving which allowance he will, of course, make to the retailer who makes his own installation."

This summed down the matter to the point that the manufacturer who does not make installation has the advantage over the man who does, at least to the extent of eleven cents, the speaker brought out. He referred to this eleven cents per gallon as constituting a "defense fund," which enables the manufacturer to argue with the retailer that the latter is in much better position to remain independent, not obligated to any ice cream company.

ANOTHER convention speaker, H. B. Graham of the Graham Ice Cream Co., Omaha, is not opposed to the refrigerated cabinet, only in such places as "it does not fulfill the bill," he declared addressing the Iowa association in December on the subject, "The Soda Fountain and its Relationship to the Ice Cream Manufacturer," he called the cabinet "the greatest invention in the development of the ice cream industry since the entrance of the homogenizer, brine freezer, cold storage room, and automobile adaption to this industry." Adding that although the cabinet "has performed wonders, and has its place," the speaker pointed out that with the down-town dispenser who is short of floor space, and who pays high rent, the cabinet has no place and in such places his own company has been unable to estab-

Equipment For Sale

We have the following ice cream plant equipment available for sale which has been used less than three seasons and is, therefore, in good guaranteed condition:

2—40 Qt. Perfection Brine Freezers, Model "G," Serial No. 372-3, direct connected to General Electric Motors, 60 cycle, 3 phase A. C., 220 volt, 1140 RPM, 3 H. P.....$400.00 each

1—30 Gal. Improved Haughdahl Starter Can, Serial No. 2945.....$60.00

1—400 Gal. Model No. 1 Perfection Ice Cream Batch Mixer, Serial No. 550, direct connected to a General Electric, 3 phase A. C., 60 cycle, 220 volt, 1140 RPM, 2 H. P. Motor.....$475.00

2—400 Gal. Jensen Cream Ripener, Steel Body, Serial No. 6339-6602, direct connected to 3 phase A. C., 60 cycle, 220 volt, 1140 RPM, 2 H. P. General Electric Motors....$400.00 each

One thousand more or less packing tubs and cans.

This equipment is offered subject to prior sale and f. o. b. a West Virginia shipping point.

ADDRESS ALL LETTERS TO THE COMPANY P.O. Box 158 STA. C

LOS ANGELES, CALIF

August 5, 1924.

O. J. Weber Co.,
759 S. Los Angeles St.,
Los Angeles.

Gentlemen:

We are pleased to advise that the Lathrop-Paulson Ice Cream Can Washing machine is installed in our plant, and has been in operation for the past week, and we find same is giving very satisfactory results. In fact, it is the first ice cream can washing machine that we have seen in all of our experience that delivers perfectly clean and dry cans.

Kindly consider this letter as our acceptance of the machine.

Any references you may wish from us, will be gladly given.

Wishing you success, we are

Yours very truly,

L. J. CHRISTOPHER COMPANY,

TEC:h By Thos E Chapman

L.-P.

ICE CREAM CAN WASHER & DRIER

Only two men are required to operate the machine at maximum speed, and one man can handle the work efficiently at the 300 speed. Cans are washed on outside as well, freeing the cans, lids, pans and covers from brine. This machine eliminates the necessity of washing cans and covers separately. Cans which have been stored and coated with oil do not have to be brush washed. They come out ready for service, or may be piled in storage racks without danger of rust. Machine will also handle brick tanks up to 12 qt. size. All cans are placed in machine upright, and are delivered **absolutely clean, sterile and dry.**

The machine is sturdily constructed and heavily galvanized. Temperatures are thermostatically controlled. Soda solution is automatically controlled by L.-P. Patent Soda Regulator.

Machine is sold on a results-guaranteed basis. Names of users will be gladly submitted upon request. It will not obligate you to obtain full information and price. Send the coupon today.

will stop it. It will build up valuable GOOD-WILL for you. It is not expensive, is easily installed, is fool proof, uses no electricity, and will not wear out. Equip your Cabinets 100%.

Crowell AND Glasson

418 East Sixth Street

WATERLOO, IOWA

lish it. This was the reason he ascribed to the fact that there is not a refrigerated cabinet in operation in the down-town district of Omaha.

Mr. Graham does not believe the refrigerated cabinet is the ultimate answer to relieving the druggist from all troubles in handling ice cream, but he is sure it has been a "wonderful help." The old ice-and-salt system of handling ice cream will be a thing of the past in the next ten years, the greater part of it in five years, in the opinion of Mr. Graham. He said this with the explanation that he did not wish to appear radical, but went a step farther by adding that the old soda fountain, salt and ice wagon, and the old shipping tub as well, are doomed to discard.

The speaker strongly favors the refrigerated soda fountain, especially for a large dealer. He also believes "the iceless shipping bag is coming and coming fast," and he thinks that within one year manufacturers will be able to procure a "shipping bag" that will carry a can of ice cream as long as is necessary to deliver it within shipping distance. This conclusion was especially influenced by the fact that the express companies have narrowed ice cream manufacturers' shipping territories by "establishing prohibitive rates on long distance shipments." This container, he declared, works hand in hand "beautifully" with the cabinet and soda fountain.

BUT in order to eliminate ice and salt in shipping, it is almost necessary to have artificial refrigeration equipment installed in your agency ready to receive shipment made in this way. Mr. Graham said, and he added.

"This will be one of the greatest advantages in the soda fountain because the express companies have recently placed rates into effect wherein ice cream shipped in jackets will be receipted for at its actual weight—namely, about 45 pounds. This will cut the rate in two for the dealer and will also save the ice cream manufacturer the expense of labor, salt and ice in shipping, and further than that you can throw about 75 gallons in the back seat of a Ford sedan, whereas, on the other hand, one 5-gallon tub packed in salt and ice is about all that can be carried in a car of that type. This is one argument in favor of both the cabinet and soda fountain.

"It seems to me there is little or no argument needed in behalf of the soda fountain especially for large dealers as compared with the cabinet. A 16-foot soda fountain is now on the market that holds 50 gallons of ice cream—20 gallons of it at a zero temperature for bricks, sherbets, colored cream, and 30 gallons of it for vanilla, and ice cream manufacturers will never get away from the dual expense of maintaining their cabinet investment and service as long as it is up to them to keep the cabinet and the soda fountain iced up as well, and I fail to see any common sense in icing up one style of compartment within the soda fountain with salt and ice and then refrigerating another one along side of it, which certainly is double expense and double service all along the line in spite of any figures you can produce and you can bet safely that the retailer will not absorb any of it."

Before leaving the discussion of the refrigerated cabinet, Mr. Graham pointed out how manufacturers of his city, Omaha, agreed upon a way to draw the line on certain dealers as to volume. First, it was thought possible to be able to draw the line on dealers handling a thousand gallons, but the dealer handling 800 gallons the preceding year would feel sure that with the iceless cabinet he could handle 1,000 gallons in twelve months. This prompted the manufacturers of Omaha to adopt this plan:

The 900 gal. class we charge a rental of	$27.00	a year
The 800 gal. class we charge a rental of	36.00	a year
The 700 gal. class we charge a rental of	45.00	a year
The 600 gal. class we charge a rental of	54.00	a year
The 500 gal. class we charge a rental of	63.00	a year

Back of GMC

GMC Trucks show very plainly the superior resources behind their manufacture. For every GMC owner, these trucks are accomplishing definite results in lower cost, more accurate performance.

This is simply because they have features of design not possessed by ordinary trucks; and which enable GMC's to do better work, longer.

Back of such design are these factors which have made it possible; truck building experience that began when the truck industry began;—experimental resources without parallel in General Motors Research Laboratories;—thrifty purchasing power as a Division of General Motors;—and above all a determination of General Motors to let no one build better trucks.

This backing means dollars added to your profits by long-lived, constant-duty GMC delivery trucks. Ask for the new GMC booklet on Motor Truck Operation and Care. Mail the coupon for your copy.

Alabama Adopts Advertising Program

Quality Improvement Seen in Ice Cream Manufacturing at Annual Convention of Alabama Association.

ADOPTING the national advertising program with 100 per cent endorsement, the Alabama Ice Cream Manufacturers' Association held the best convention since the organization of that body early in 1923. The third convention was held at Birmingham January 23.

President A. W. Kratzer opened the convention with a short address in which he spoke of the association's activities during the past year, and expressed pleasure that so many members were present. Mr. Kratzer referred to the work that has been done with the health department and the department of agriculture during the past year and expressed appreciation of the co-operation given by these departments. In his opinion, the quality of ice cream is improving each year and the manufacturers of Alabama are making every effort to protect the health of the consuming public and to put ice cream on even higher standards.

A short talk was then made by Vice-President Bethea, who stated that the state association had been of great service to the industry in his part of the state during the past year. He also commented on the work done by the secretary during the past year.

J. W. Clopton, secretary-treasurer, gave an outline of the work done through his office for the past year, which included personal visits to Montgomery and other points in the interest of the state association. The report showed that the association has been active in undertaking to get constructive legislation that will protect both the ice cream manufacturer and the consumer.

NEW OFFICERS.

President—J. P. Bethea, Mobile.

Vice-President—J. W. Parkman, Dothan.

Secretary-Treasurer—J. W. Clopton, Decatur.

Directors: J. C. Beene, Huntsville; C. E. Suttle, Selma, and A. W. Kratzer, Montgomery.

Representative to National Convention: P. Schilleci, Bessemer.

Legislative Committe:. D. W. C. Yarborough, chairman; A. W. Kratzer, Montgomery, and John L. Whatley, Opelika.

Bids were entered by Tuscaloosa and Birmingham for the next convention, which will be a two-day session. Birmingham won by a small margin.

Mr. Clopton took occasion to congratulate Mr. Anderson, who is working under the department of agriculture, and stated that the work he is doing has been of great value to the Alabama manufacturers.

The report of the treasurer showed a "very nice" balance in the bank at that time.

At the conclusion of the report President Kratzer appointed an auditing committee consisting of S. J. Smith, Anniston, Ala.; J. W. Parkman, Dothan, Ala., and J. P. Bethea, Mobile, Ala.

This committe retired—checking the accounts of the treasurer—and reported that they found them accurate in every way.

THE possibility of shipping ice cream in jackets and iceless containers was discussed by D. W. C. Yarborough. At his suggestion the secretary was instructed to take the matter up with the express companies and the public service commission, so as to arrive at a satisfactory rate for interstate and intrastate shipments in these containers.

W. R. Anderson, state inspector working under the department of agriculture, was then called on and in the course of his remarks he assured all present that he would do everything in his power to have all tubs and cans returned promptly and to see that all requirements of the Alabama law were complied with. Mr. Anderson asked for the co-operation of the ice cream manufacturers in carrying out his duties.

After some other discussions the meeting adjourned to the ball room of the Tutwiler Hotel, where a luncheon was enjoyed. Those present with their wives and children were guests of the Alabama association at lunch.

AFTER a general discussion, in which President D. S. Cox and Secretary N. D. Brookshire of the Mississippi association, stated that the Mississippi manufacturers had adopted the national program. Motion was made at the afternoon session by C. R. Ault, which was seconded by John L. Whatley of Opelika, that the Alabama manufacturers adopt the national advertising program. The motion was virtually unanimous for adoption and those present authorized their signatures to the resolution.

Secretary Clopton discussed a plan for an arrangement of convention dates for 1925 and 1926 and those present felt that it would be an excellent plan to arrange the dates so supplymen can attend all state conventions.

Mr. Cox and Mr. Brookshire extended cordial invitation to the Alabama manufacturers to attend the next meeting of the Mississippi association, which will be held in Meridian.

At the suggestion of Mr. Clopton, the association adopted a resolution expressing the appreciation of the Alabama manufacturers to the Alabama State Board of Health and to the commissioner of agriculture for excellent co-operation shown during the past year and assuring them that they would at all times have the co-operation of the ice cream manufacturers throughout the state for any constructive legislation.

INTEREST IN CREAMERY PURCHASED.

J. S. Carpenter, secretary-treasurer of the Patton Creamery Co., Springfield, Mo., has purchased the interest of C. F. Baggett, president. Associated with Mr. Carpenter in the purchase was W. E. Barclay, who will become actively associated in the creamery company. The purchase price is reported as being approximately $90,000.

After being president and manager of the American Butter Co. of Kansas City, Mr. Carpenter came to the Springfield company in 1922, when he purchased the majority holdings of Fred R. Patton, founder of the Patton Creamery Co. Mr. Baggett was connected with the company at that time.

According to Mr. Carpenter, the business will be continued in the same manner as in the past. The company has enjoyed a steady increase in business, now having an annual output of approximately 150,000 gallons of ice cream and 1,000,000 pounds of butter, this representing an increase of nearly a thousand per cent since the company's organization in 1913.

THE only controversy in the matter of mechanical refrigeration on one hand and the ice-and-salt system on the other hand lies in methods to hasten the situation, declared Mr. Palmer of the Liquid Carbonic Co., speaking for the National Soda Fountain Manufacturers' Association, in an address before the national convention last year, declaring that there is a legitimate place for refrigerated cabinets as storage cabinets, and the speaker added that he thought there was a "very serious mistake" being made when the cabinets are installed for substitutes for soda fountains. He declared the retailer has been quick to appreciate the advantages of mechanical fountain, and that it is to the interest of ice cream manufacturers that the retailer has such equipment as will enable him to build sales.

GEORGE L. BOEDECKER of Texas, in addressing the Southern convention last November, gave some interesting side lights of his experience with mechanical refrigeration, the speaker explaining that his company started on the residence section with refrigerated cabinets, since these routes sell about one-third of the company's output, the speaker said:

"In January, 1924, these routes were about 35 per cent refrigerated cabinet equipped. New cabinets were added each month until October, when they were about 90 per cent equipped. This year we have handled this same territory with from three to five trucks, and with no helpers except during the month of October. On the chart I have condensed delivery cost figures for the first ten months of 1923 and 1924.

"You will notice that the first refrigerator cabinets are shown on the chart in June, 1923. As a matter of fact, the first cabinet was installed on May 23 and the next five in the month of June.

"In taking these figures, I want you to remember that 1923 was a great deal better ice cream year than 1924, and that had they both been normal years, the savings in 1924 would have been much greater.

"In the various columns you will find the month, number of routes, number of stops on routes, number of refrigerator cabinets on routes, gallonage sold, delivery cost per gallon, ice used per gallon and savings in delivery costs. Naturally, in the winter months, your savings show up greater per gallon, and though we had but 40 and 58 refrigerator cabinets on the routes, the savings were practically fourteen and sixteen cents per gallon.

"In arriving at these figures the following cost items are figured. Repairs on trucks, depreciation on trucks, gas and oil, ice and salt, drivers' and helpers salaries, depreciation on refrigerator cabinets, power and water costs for operating the cabinets, salary and expense of service man with service car, and garage rental.

"Depreciation on trucks is figured at 33 1/3 per cent. Ice is figured at $4.00 per ton, salt at $10.00 per ton, drivers at $30.00 a week and helpers at $22.50 to $30.00 a week. Garage rental at $20.00 per car per month. All other costs are as actually paid out. Our service men make about 75 per cent of our installation as well as take care of trouble calls. From these figures you have a saving of $4,132.62 from a cabinet investment, figured on the average in use per month of $36,089.00. Interest on this amount for ten months at 6 per cent totals $1,804.44, leaving a net saving for ten months of $2,328.18, or almost 7½ per cent above everything, and in figuring against the ice and salt cabinets no depreciation on such cabinets or interest on such cabinet investment is made."

The speaker explained that the point he was trying to make is that with the route more completely covered with cabinets, the savings in the coming November, December, January, February and March will be much greater than any classified. He is confident the year 1925, if the company's cabinet arrangement is not materially changed, it will be able to show an additional saving of not less than 5 cents a gallon for the entire year.

HARRY HELMAR of the Gate City Ice Cream Co., Atlanta, told the Southern convention his experiences based on about six months' operation of mechanically refrigerated cabinets, stating that so far

his experiences have been very satisfactory. Seventy cabinets cost him approximately $35,000. He listed savings as follows:

On returned cream, $2,500; on ice which formerly had to be purchased from an outside source, $8,500; on salt, $3,000; on power bill, $6,000; and on trucks, characterized by the speaker as the greatest saving of all, $18,000. He listed his total saving at $38,000.

Discussing this saving, the speaker said:

"Whereas, without the electric cabinet, we formerly used eight packing trucks, we are now using four trucks and can see the possibility of reducing this number to three.

"I was first attracted to the Frigidaire cabinet as the best one for me to adopt because of the flexibility of this company's policies and their willingness to co-operate with the ice cream manufacturers, depending on their local conditions and requirements, and also because of the many models of cabinets which they manufacture to fit the various conditions which the ice cream manufacturer will encounter in making installation.

"My experience has been that it was quite an advantage to be able to secure both double and single tier cabinets which could be installed either as a complete unit or by placing the motor and compressor in some out of the way place.

"It has also been my experience that it is an advantage to have a local representative of the cabinet manufacturer near me who can be consulted on installation and service problems and who is able to provide service if I should desire to call upon him.

"Installation: This item varies much under different conditions and the expense may be estimated to average from $35.00 to $50.00 when a large enough number of cabinets are to be installed which will warrant a crew of men efficient in this class of work.

"Operating Expense: This item is borne by the dealer and has shown some interesting figures. The machine, of course, must be mechanically right. Our current is 9 cents per kilowatt hour on the lighting circuit and 6 cents on the power circuit. The expense of what power meters have been installed has been ours. Our water temperature this summer has been very high and the fact that so many heat units must be removed from the gas by water passing through the machine, it is natural that the difference in water consumed in summer and in winter is a matter of guesswork. Apparently the average cost of operation over summer and winter will be about $7.00 per month for both current and water. It might be well to mention here that in my locality the water rate is quite high as compared to water rates elsewhere over the country, from what I have been able to learn.

"Upkeep: We have experienced no difficulty in the upkeep of our cabinets and find that one of our engineers can keep all machines in good shape by spending about one-half time in inspection work. We cannot estimate what this expense will be when the machines begin to wear.

"Dealers' Attitude: A majority of dealers are very enthusiastic about cabinets. In many cases the distribution of ice cream is materially increased, while the actual gallonage bought may not be increased; but the fact that it is a 100 per cent condition the dealer realizes a much greater profit which will naturally make him more interested.

"We have some accounts that even if the amount in volume may not warrant our supplying a cabinet, but the fact that the truck must pass by this door and that only an average of less than five minutes each day is required to serve this customer, then it may not be so profitable, yet the volume at the plant, less the expense of present service, warrants the installation."

THE problem before the industry today is one rather of merchandising the idea of the refrigerated cabinet to the dealer and the matter of type of cabinet which, in the short career of the industry, has proved best, according to W. E. Drake, general manager of the Union Ice Cream Co., Nashville, Tenn., in an address before the Southern convention. Speaking on the latter phase, the speaker said:

"To begin with, the Union Ice Cream Co. advocates the policy of loaning cabinets to the dealer rather than encouraging the dealer to own his own cabinet. We do this for several different reasons. First, because we believe the loan of a cabinet to a dealer is a strong tie between him and the manufacturer; second, because the manufacturer can keep an eye on the cabinets and see that they are kept in a hygienic and sanitary condition; third, because the line of least resist-

ance makes it possible to put an iceless cabinet into a dealer's fountain if he does not have to buy it himself.

"Perhaps, however, the outstanding reason for the manufacturer owning the cabinets is that it enables him to secure good customers and, if the manufacturer does his part, to keep the customers after he gets them. There have been two instances in our own business when we were able to patch up what otherwise may have been a serious difference resulting in the loss of customers had it not been for our iceless cabinet dealer contract with them. A dealer who buys his own cabinet is free to change at will to any manufacturer's ice cream he wishes—often to the dealer's as well as the manufacturer's disadvantage. But the dealer who has the loan of a cabinet from a manufacturer is a bound dealer, and the manufacturer who cannot hold such a dealer as a permanent customer has only himself to blame for it. For the duty of the manufacturer does not stop with installing a cabinet and stocking it with any sort of ice cream. The cabinet is only a means toward establishing good will between the manufacturer and dealer. The relationship is not complete unless the ice cream remains at the standard sold the dealer in the first place, and unless the service that goes with the cream is good.

"To get back to the method employed by the Union Ice Cream Co. in loaning mechanically refrigerated cabinets to its dealers:

"This year, our first with iceless cabinets, we contracted only for 25 cabinets. Early in the year we selected a dozen druggists, all of whom were doing approximately a 2,000-gallonage business, and none of whom were on our own dealer list. We also selected druggists at far points, working in toward Nashville as the months advanced. Our cabinet proposition attracted these druggists and we were enabled to develop our business very materially thereby. By June 15, we had every cabinet placed, about half of the number being among dealers in Nashville and half within a hundred-mile radius of the city. Every dealer who installed one of the cabinets had an increase in business over the previous year, and thus our company as well as our dealers profited thereby. We do not place these cabinets with dealers using less than 1,500 gallons a year, and we figure that at this rate of gallonage the cabinets pay us for the investment within two years."

A DECIDED stand against the proposition to sell cabinets to dealers was taken by Mr. Wilhoite of the George K. Brown Co., Chattanooga, Tenn., at a convention address last fall with the following explanation:

"Therefore, preparatory to the inauguration of our cabinet policies, we considered and discarded, one after the other, all plans contemplating the sale of cabinets to the dealers, and adopted the plan of supplying electric refrigeration as an integral part of our service. The experience which we have accumulated during the past season has served to confirm the soundness of our judgment in abandoning at the outset the idea of selling the cabinets to the dealers.

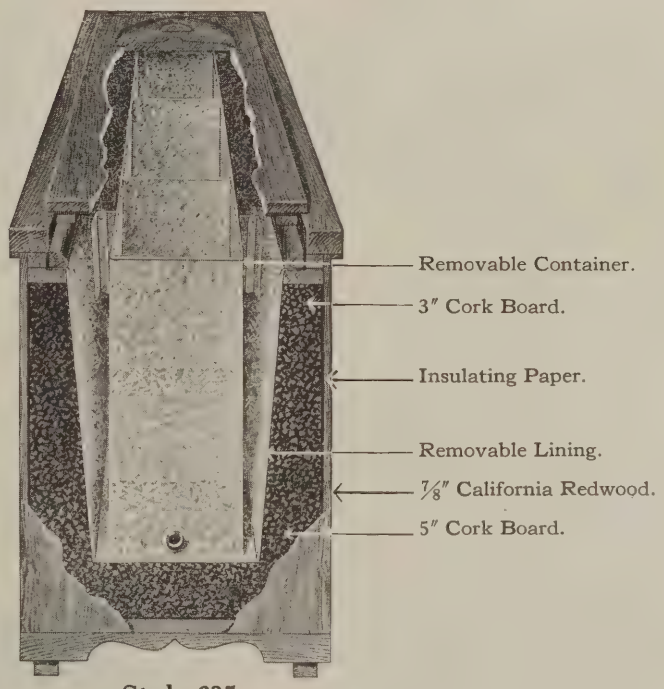
"By furnishing the cabinets as a part of our service and absorbing the cost of the price of our products, we have been enabled in one season to completely electrify our service and thus avoid the heavy expense that would have been incidental to the maintenance of dual service over a long period of transition. Further, we have been enabled to demonstrate in five or six months to every doubting Thomas the superiority of the electric method, an accomplishment that no doubt would have required years instead of months had we endeavored to vest cabinet ownership in the dealers. By our seemingly unlimited confidence in mechanical refrigeration as evidenced by our readiness to "hold the sack," we have convinced practically every dealer in our territory that the iceless method is worthy of his utmost confidence.

"Even though we assumed all risk and defrayed all expense in the making of cabinet installations, we encountered considerable opposition on the part of many dealers, and it was only after much persuasion that all of them were converted and finally gave their consent to install the machines. But now they have been given a first-hand opportunity to see the difference, there is not, in our opinion, a one of them that would consider reverting to the old method.

"The ice cream dealer quite naturally and quite justifiably resents any efforts on the part of anyone to "tie him up." Thus you will readily appreciate the necessity for cutting all of the tied-up clauses out of your cabinet agreement before presenting it to the dealer for his signature. Our dealers have the privilege of discontinuing our service at any time they wish to do so and our cabinets will be removed without expense or obligation to them. It might be added here that no dealer for whom we have installed a cabinet has, as yet, exercised this privilege."

Here's Your Solution

to the cabinet question



Nelson Duplex Zero

The last word in cabinet construction for Salt and Ice. Insulated with time proven insulator Sheet Cork—will not Settle or Change in texture—everlasting.

OUR DEALERS PAY OPERATING COSTS.

By R. E. Slonaker.*

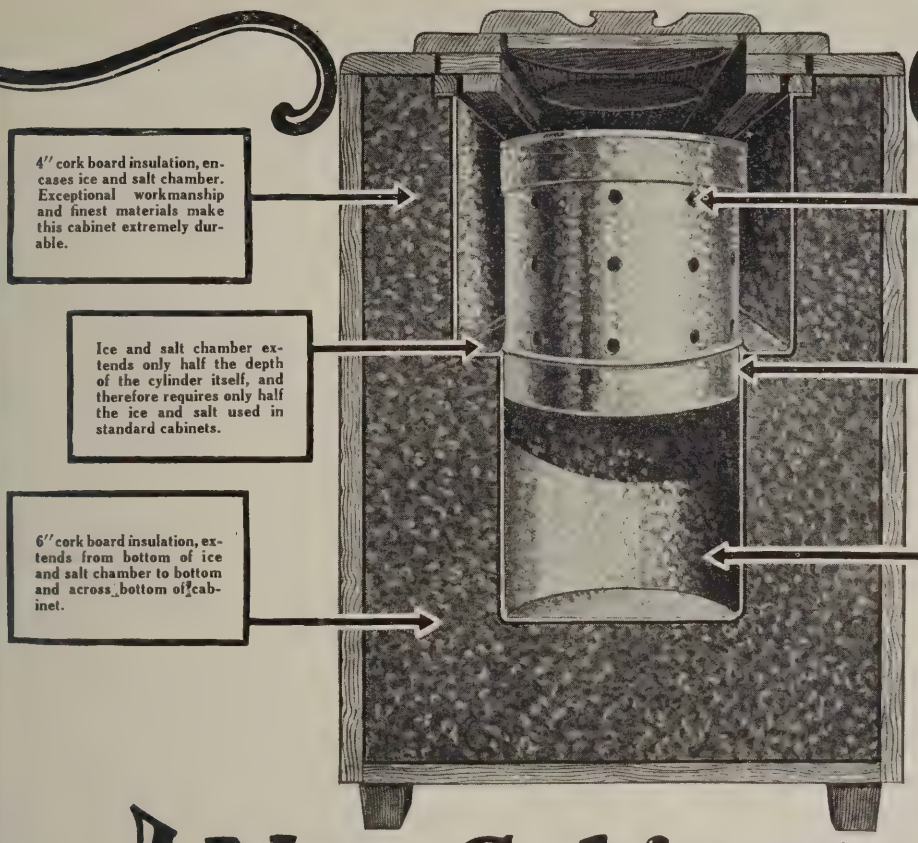
SINCE May of this year we have operated on an average of 57 iceless cabinets per month at one of our plants. The average cost of installation was $35.06 per cabinet. This includes cost of additional wiring and water pipe necessary at some places.. The average cost of servicing these cabinets for six months is less than ten cents per day per cabinet. This includes a mechanic's time and cost of operating a light car. From our experience we have found that one man could service twice the number of cabinets. This would bring the charge down to less than five cents per day per cabinet. As a few of the cabinets are located out of the city this also helps to increase the service cost.

During July and August, the average current consumption of an 8-hole cabinet was 2½ K. W. a day. For same cabinet during October and part of November it has averaged 1½ K. W. per day. Water consumption averages around 60 gallons per day.

The service calls averaged less than one call per day for six months. Thirty per cent of all service calls were false calls. By this we mean that there was absolutely nothing wrong with the machine. Thirty per cent of the calls were to make control adjustments due to the fact that the cut in and cut out were set too high at the factory. The balance of the calls were only minor troubles that did not amount to very much—which shows the cabinets can be counted on to give dependable service.

We have equipped one complete route with iceless cabinets and have found that one truck can take care of double the number of stops on city routes. This has also effected a saving in ice and salt.

Our customers all seem to be well pleased with these cabinets for the cream has always been in good condition.



All cabinets are installed on a three (3) year contract and the dealer pays all operating costs. No ice is given to any dealer for fountain or other use.

* With Burdan Bros., Inc., Pottstown, Pa. Submitted to national convention at New Orleans in November.

In our January issue we announced the sale of the Crawford County Creamery Company, Pittsburg, Kan., by Tom O'Connor. Mr. O'Connor was a minority stock holder and disposed of his holdings to F. W. Haigler. The transfer of this stock does not change the management in any way.

The American Copper & Brass Co. Exhibit at Milwaukee during the National Dairy Exposition.

A New Cabinet and a Better One

NEW in design—no other cabinet like it; ***better in service***—requires less attention, costs less to operate. There you have in a sentence the fundamental facts behind the success of the New Jamison Ice Cream Cabinet. It is built on an entirely new principle of cabinet construction—a principle by which ***one-third to one-half*** the ice and salt required by all ***other cabinets*** is replaced with insulation. Examine the phantom view illustrated—the most casual observer cannot fail to instantly appreciate the ***enormous savings*** which this new type of construction makes possible.

SAVES—ice—salt—trucks—men—money

One icing lasts from thirty-six to forty-eight hours. One service man can make nearly double the number of calls. One truck load of ice and salt will go nearly twice as far. One carload of salt will last nearly twice as long. One ton of ice will do the work of nearly two. Are such savings worth while—ARE THEY?

It will pay you to get all the facts on the New Jamison Cabinet **at once.** Over 700 of these cabinets have been in constant use for over two years. They have proved our strongest claims. A request will bring descriptive literature and prices without obligation. **Write us today.**

Jamison Cold Storage Door Co., Hagerstown, Md., U. S. A.

Advertising Value of Packaged Sundaes Stressed by Manufacturers

Instead of Competing With Ice Cream in Higher Priced Forms, the Sundaes Serve to Boost Sales all the Way Around, Some Manufacturers Report

THE advertising value of the sundae package through taking the name of the ice cream manufacturer into many homes that it otherwise would not enter is a point brought out by different correspondents to The Ice Cream Review on the subject of the profitableness of packaged sundaes. The fear that the comparative inexpensiveness of ice cream in this form might hurt the manufacturer's general business is not well founded, it is indicated by one correspondent, who cites the experiences of automobile people and the movie houses. The coming upon the market of a certain inexpensive car made many believe the high-priced auto was doomed, but, instead, high-priced cars immediately began to sell more rapidly than ever before. Five-cent movie houses made a great bid for all the movie trade, and, although they succeeded with the children, who had a nickel, and a nickel only, to spend, the great throngs of movie fans preferred the better theaters that charged fifty cents or more, even the kiddies themselves when they grow up.

With this analogy applied to the ice cream industry we are told that the packaged sundae has a place in the trade.

The Alfred Pure Ice Cream Co., Los Angeles, Cal., believed the packaged sundae "helps develop a larger gallonage by getting your name before the public on the package, which cannot help being read by the person seeing the package or eating the sundae. An official says that in this way the package has proved an advertisement for the company's other business. So far as actual profit is concerned, this official says, it would be necessary to have "a tremendous volume before the profit would be as it should."

A Scranton, Pa., firm filled one hardening room with 100,000 packaged sundaes before beginning the sale, and found the supply exhausted before the end of the week, we are told. At Washington, D. C., a factory went at once on three shifts, and when the superintendent found the plant falling behind in filling orders, special equipment was devised to double the machine output.

AN OUTSTANDING success in handling this form of ice cream merchandise is reported from the Scranton-Wilkesbarre district in Pennsylvania, where three manufacturers advertising jointly and producing only since last October, are reported to have run up remarkable sales in a single month. At one time recently they were selling, daily, about 50,000 packages a day, with no indication of a let-up, we were told with this report. This sales achievement was brought about in a territory of 500,000 population.

A New England manufacturer is very fond of the packaged sundae business, communicating as follows on the subject:

"Even if it had to be sold at a loss I'd favor the package as a boost to winter business."

Mr. Smith of the Smith-Clark Co., Scranton, says: "It's great for winter business; I recommend it."

A Washington, D. C., manufacturer gives an interesting discussion of the subject:

"Question No 1—There certainly can be no doubt that there is a demand for a 5c ice cream package, neither can there be any doubt that there is a demand for a 10c ice cream package. Naturally, there are more people who can buy a 5c article than a 10c article, on the principle that there are more people who have a small sum of money to spend than have a large amount to spend. The number of spenders increases at a very large ratio as prices decrease.

"As there is a demand, the intelligent manufacturer tries to supply it. There is no such thing as "can't," so that the

up-to-date ice cream manufacturer experiments with 5c and 10c packages until he finds something that is satisfactory to him from the profit standpoint.

"From our point of view, both the 5c and 10c ice cream packages (which we are now using) are profitable, much more so than when we began to first manufacture them. The increase of profit is due to the improved methods of manufacturing. There is still plenty of room for further improvements.

"During the winter season, when ice cream sales are slow, the dealer is naturally not in a good humor towards his ice cream business, this is the season of the year when the ice cream manufacturer has most to do to keep the good will of his dealer. Nine-tenths of the dealers do not know whether they are making a profit or not on the ice cream business. They judge the value to them of the ice cream business by the number of sales they make. Naturally 5c and 10c packages bring frequent sales to the dealer, even in winter time, and this tends to keep him in good humor because of the psychological effect of the frequent sales of the small packages. This factor alone makes the 5c and 10c package of value to the manufacturer.

"As we see it, there is absolutely no question but that the small paskage is a fine advertisement for the manufacturer. If he makes no profit and no loss on the packages, it is the only advertising we know of which costs nothing. If he makes a profit on the packages, then it is the only advertising we know of which brings in a direct income.

"Question No. 2—The small packages produce us a reasonable margin of profit.

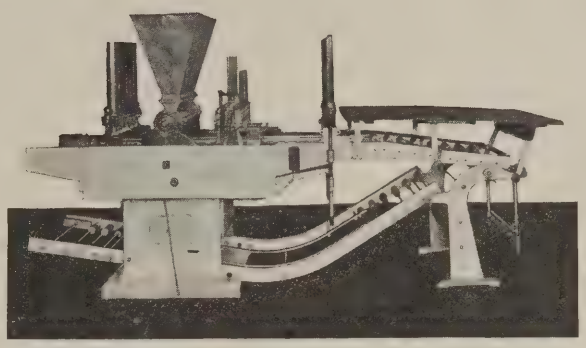
"Question No. 5—The profit on the 5c and 10c packages, as compared with the profit on the bulk or brick ice cream is not nearly so much per gallon of ice cream involved.

"Question No. 7—The small package has proven an advertisement for our business generally.

"Question No. 8—We consider the small package ice cream a permanent feature of the ice cream business.

Writing on the subject of the five-cent package, concerning cost, etc., The Fadden Ice Cream Co., Scranton, pointed out that—

"If you figure on getting 50 sundaes from a gallon of ice cream, which can be done with an automatic machine, and you sell these to the dealer for 45 cents a dozen which we can get just as readily as we can 40 cents per dozen, you will then get a gross selling price on the basis of bulk ice cream of $1.87½. The cost of the cups and spoons and labor devoted exclusively to the Dixies would be about 50 cents for every gallon of ice cream manufactured into Dixies. This would leave a net selling price of $1.37½. From this price of $1.37½ must be deducted your overhead and delivery costs.



"There are so many ways of figuring that it is quite impossible for everybody to agree on just what the proper charges for overhead and delivery should be on the Dixie's alone. There is no direct profit from the Dixies, but as all ice cream manufacturers would agree the profit on bulk ice cream during certain winter months is little or nothing and we feel that the Dixies by increasing our sales and giving us more revenue than we would ordinarily receive during these winter months enables us to lose less money than we would ordinarily during certain winter months. Consequently we feel that if one can get a certain volume, they are a good thing.

"We do not feel that the sundaes have increased the bulk or brick sales; rather, they might have a tendency to decrease them slightly. There is, however, a distinct advertising value in having good many thousands of these small packages in the hands and homes of the consumer.

"We feel that the sundae container is a permanent thing as far as the winter is concerned, but do not believe that they can be handled satisfactorily in the summer months."

NEW JERSEY SHORT COURSE.

A one week's course in milk testing for those desiring to be proficient in this work for use in creameries, advanced registry testing, ice cream plants, and so on, will be offered by the Rutgers College of Agriculture and the State University of New Jersey, New Brunswick, N. J., beginning February 23. On February 28 the college will conduct a test for a state license. Professor F. C. Button will be in charge of this work.

BERGMANN ICE CREAM PACKAGING MACHINE—

¶ The practical machine for filling and sealing Packaged Sundaes. Fast, efficient, fool-proof and rustless. Reduces labor costs to a minimum. Used by prominent ice cream manufacturers.

¶ Automatic operation. Motor driven. Sanitary. Handles tray of 24 cups, filling and capping six cups at one time. Capacity 6000 cups per hour. Ice cream controlled by vacuum and gravity which maintains maximum run of freezer.

¶ The expansion of the demand for small size packages of ice cream necessitates this machine. Its use places profits on a new level. If you are marketing packaged sundaes you are interested in the Bergmann Machine. We'll be pleased to send complete information.

Facts and Figures on Packaged Sundaes

Summer Demand Reported Growing for Sundaes in Containers. Frederick Dodge Compiles Interesting Manufacturing-Cost Figures

THE packaged sundae has grown into a spring and summer factor, an inquiry seems to indicate. While most manufacturers once considered the packaged sundae in the light of winter merchandise only, last summer showed the demand to be growing in warm weather. Investigators, therefore, believe the packaged sundae has developed into a twelve-month proposition. They point out the package no longer is a novelty. While it filled an especially desirable purpose in the slow-selling season, there are reasons to believe that, with sufficient margin of profit, the manufacturer can derive profit from pushing it all the year around; for, as one correspondent views the matter—

"The demand during the summer months has been greater than during the winter months. The packaged sundae is no longer a novelty. The opportunity for sale during the summer season, with the road-side stands, base-ball parks and other outdoor activities, is unlimited.

"It takes ice cream to the purchaser in convenient form. The appeal is as great to grownups as to children. Ice cream in a package can be served on the front porch or in the dining room without soiling dish or hands. The public appreciates these facts. A package with the ice cream manufacturer's name prominently displayed proves a valuable piece of advertising, and without expense. The packaged sundae eliminates the question of shrinkage so important to the dealer. It increases his profits, saves time and labor."

SOME interesting figures on the manufacturing cost involved in handling the packaged sundae have been compiled by Frederick U. Dodge, head of Frederick U. Dodge, Inc., one of the leading advertising concerns connected with the ice cream industry.

Because manufacturing costs differ in various plants and localities, Mr. Dodge made no attempt to arrive at figures including overhead, such as labor cost for filling and handling cups, delivery, icing and selling. But taking up just two items, ice cream and cups, Mr. Dodge shows that 33 cups of the 10-cent size can be filled from one gallon of ice cream. To fill one million cups it requires 30,303 gallons of ice cream. At $1.40 a gallon the cost of ice cream is $42,424.20. At $12 a thousand cups, 1,000,000 cups cost $12,000. The combined cost of ice cream and cups for 1,000,000 packaged sundaes, therefore, is $54,424.20.

The 10-cent sundae is sold to the retailer at an average price of 78 cents a dozen (6½ cents a cup,) which means the ice cream manufacturer receives $65,000 from the retailer for 1,000,000 cups. Since the cost of furnishing these 1,000,000 cups is $54,424.20, this gives the manufacturer a profit of $10,575.80, from which overhead must be deducted.

THIS brings the matter down to the point of how long it will take a manufacturer to dispose of 1,000,000 cups and how long he can hold up this turnover at a fairly good rate. In other words, as in most other propositions, it largely depends upon the manufacturer himself, how energetically he will push the matter and how alertly he will watch for opportunities to promote the business. In this respect the packaged sundae is no different from any other article of commerce. Just as Mr. Dodge could not accurately figure overhead for different manufacturers in different cities, using different classes of labor and working under different conditions, just so cannot one of us lay down a fixed yard-stick with which to measure the merchandising capacity of ice cream manufacturers as a whole.

HOUSEWIVES in Scranton, Pa., have hit upon a new dessert to serve company, expected or unexpected, in the shape of the sealed package of ice cream. Each

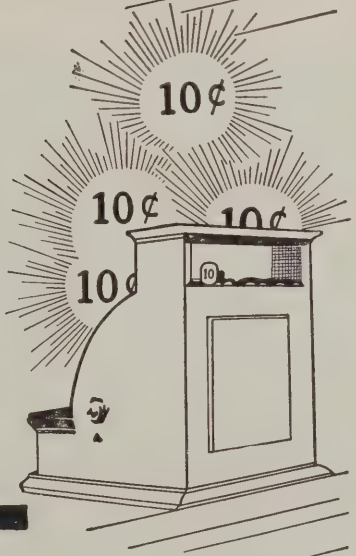
NORFOLK, VA. WILMINGTON, N. C.

There is a Real Profit making and selling the 10c Package of Ice Cream

The manufacturers and retailers margin of profit (on the 10c Package) is great enough to produce earnings in excess of those received on bulk ice cream. Increased gallonage and greater earnings should prove of interest to every ice cream manufacturer and retailer.



1000 gallons of ice cream sold in bulk to dealers at $1.40 per gallon returns $1,400 to manufacturer. 1000 gallons packed in 33,000 packages (10c size) sold to retailer at 78c per dozen returns $2,145 to manufacturer. Less cost of 33,000 cups at $12 per M or ($396) and handling cost for cups at 6½c per dozen ($178.75) leaves $570.25 or 57c per gallon additional profit over bulk on each 1000 gallons sold in 10c packages.

help Your Dealers to fill their Cash Registers —

1000 gallons of ice cream purchased by the dealer at $1.40 and sold at $2.40 returns him a profit of $1,000. 1000 gallons packed in 10c packages costs the dealer $2,145 at 6½c each. Selling them at 10c each he receives $3,300 or $155 additional profit over each 1000 gallons sold in bulk. No shrinkage in repacking. The 10c package assists the dealer to sell a greater quantity of cream. Progressive ice cream manufacturers assist dealers to greater volume — more money and greater profits in the cash register.

KLEEN KUP

The Package That Sells Its Contents At A Profit———

cup, with its delicious two-flavor combination, in a neat mold, proves to be, either when served in the cup or when slipped out and covered with a fruit sauce, as attractive to guests as it is convenient for the hostess.

The women are said to be taking to the package in Scranton because there the manufacturers have called it to their attention. In Washington, however, this use has rather been frowned upon by the producers, because it is thought to encourage buying the cup as a substitute for the more expensive types of package or bulk ice cream. The supposed disadvantage of this is open to debate, but it is not an unreasonable objection. The use of cups by hospitals, too, put on the patients' food trays, is possibly one that sells individual packages merely as a substitute for the bulk product.

Granted that this is so, cups still are a boost to the ice cream game, proponents say, "for anything that makes even a favorite product more attractive or convenient to its users is likely to cause the sale of more of the product."

FOR the most part, the sale of packaged sundaes represents absolutely new and additional business. The dealers handling it are not the down-town silver-and-doily fifteen-cent-sundae trade, but the little outlying storekeepers—the business men of the future—selling to the children, the consumers of the future. Many cups are put directly into school lunch rooms, as, for instance, a high school with 5,000 students at Washington, D. C., where the Carry company sells "a whale of a lot of them." Others are handed out to the kids at the rate of 150 a day by practically any little store than handles them. In Boston, a peddler with an automobile truck carried the cups to the children on the street corners so successfully that he was able to increase his equipment to five trucks before the first year was ended.

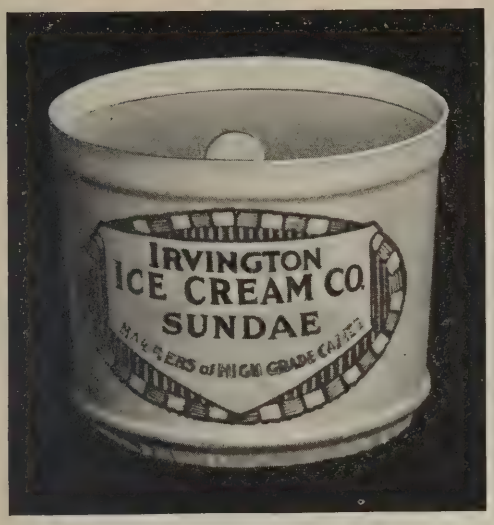
NORMAN A. KENNEDY PASSES AWAY.

Norman A. Kennedy, president and general manager of the N. A. Kennedy Supply Co., 1311 West Thirteenth St., Kansas City, Mo., recently dropped dead in his office. Physicians claim that death was due to heart failure.

Mr. Kennedy was only 55 years old, and his untimely death will be the cause of remorse among his numerous friends in the industry. Local friends advise that many out-of-town guests were on hand to pay their last respects to the deceased, and the floral offerings are said to have been unusually numerous and very beautiful.



Mr. Kennedy founded the firm of which he was president in 1905 as a manufacturing and jobbing concern, dealing in creamery, dairymen's and produce dealers' supplies. In addition he headed the N. A. Kennedy Butter Tub Co. in the Armurdale district of Kansas City, Kans. The supply company maintained branch houses in Omaha, Sioux City and Oklahomt City. Mr. Kennedy was born in Hornell, N. Y., and he had been very active in social and civic matters and was held in high esteem in his community.

The widow, Mrs. Jeanne W. Kennedy, and a nephew, Harold P. Kennedy, Chicago, survive him. It is reported that the business will be carried on as usual for the time being.

The American Kron Scale

Just Load and Look

WITH modern methods of making ice cream mix it is highly essential to have speedy, accurate and practical weighing apparatus.

Speedy—to handle large batches in limited time; its action is instantaneous; it saves half or more of your weighing time.

Accurate—so that you will know that each batch contains the proper amount of each ingredient.

Practical—so that it will save labor, simplify the recording of weights, and lower your weighing costs.

The KRON Scale gives you *all* of these advantages, and speeds up the entire plant. It has no springs to put it out of adjustment. Its uncanny accuracy eliminates the possibility of dispute, and removes your weighing worries once for all.

If you will tell us briefly the capacity of your plant and your weighing requirements we shall be glad to recommend the proper KRON equipment for your use and tell you exactly what it will cost you.

Accumulative Indicator

AN added and exclusive feature of the KRON Scale. Not necessary to add the separate weights—the second indicator does that for you automatically and instantly, always giving the total at a glance. Saves work, eliminates mistakes, avoids disputes.

There's a KRON Scale Exactly Fitted to Your Needs—Let us Tell You About It

MISSISSIPPI MAY JOIN FIGHT FOR 1926 SOUTHERN CONVENTION.

(Continued from page 34)

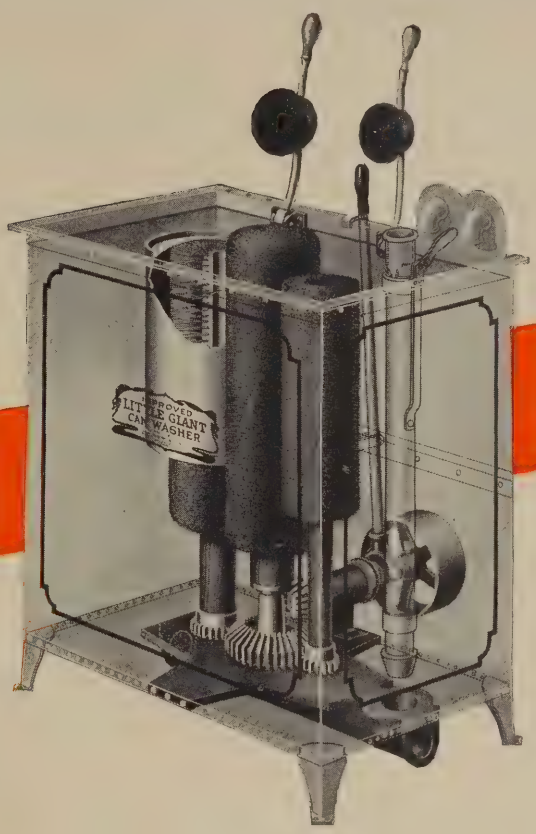
ANY actual movement in Jackson's behalf is almost certain to swing the support of every Mississippi city to that side. This not only would create stiff competition for New Orleans, but would draw away much of the support that has been the Louisiana city's mainstay in past campaigns of this nature. New Orleans is known to have already been under more or less consideration for the 1926 convention.

"But," the Mississippi people can say, "Why go back over the river again. The Southern association has gone West of the Mississippi for three years in succession—New Orleans in 1922, Little Rock in 1923 and back to New Orleans in 1924. In 1925, Lexington spoke up and said it was time for somebody else to have their turn. It seems to us that it is time for this dog to have his day."

It is significant that the most successful conventions the Southern association has ever held have been in New Orleans, beginning with the very organization meeting of the body. But the Mississippi people probably won't hesitate to say they have had something to do with the success of New Orleans conventions, and now they probably want the manufacturers of the Crescent City and the state of Louisiana to help them put over a successful convention in their state, which would be the first gathering of Southern ice cream manufacturers ever held in Mississippi.

Jackson is almost equidistant between Memphis on the north, Birmingham on the east, and New Orleans on the south.

AMONG the prominent ice cream men in the state is S. N. Sutton, for two successive terms president of his state association and now president of the Southern association. This gives the Magnolia state a distinct advantage, for although Mr. Sutton has made no statement in this connection, it is easy to surmise where his heart would be when the ballots began dropping into the hat.



Other prominent ice cream men in Mississippi who no doubt could make their voices heard to good effect, should they line up in this cause, are: W. D. Seale, convention president of the Mississippi association; N. D. Brookshire, secretary of the state association and active in Southern association affairs, Charles McNair, D. S. Cox, N. C. Pearson, A. A. McLeran, V. L. King, J. W. Hardy, charter members of the Southern association, and several others. And one cannot overlook Byron Morris, treasurer of the Dixie Flyers and one of the most loyal men to Mississippi in the entire state.

But at this time it is not certain just who will take action, if any, in this movement; this discussion is simply to let our readers know that such action, according to the drift of the trade winds, is not at all unlikely. The rest of it is something for Southern association officials to trouble themselves over.

A small modern ice cream plant was recently opened by Edminston Bros., Crockett, Tex. The plant has a capacity of 100 gallons daily and is equipped with a Cherry freezer, viscolizer, Cherry mixer, Cherry cooler, and all other necessary equipment to make the plant complete in every detail.

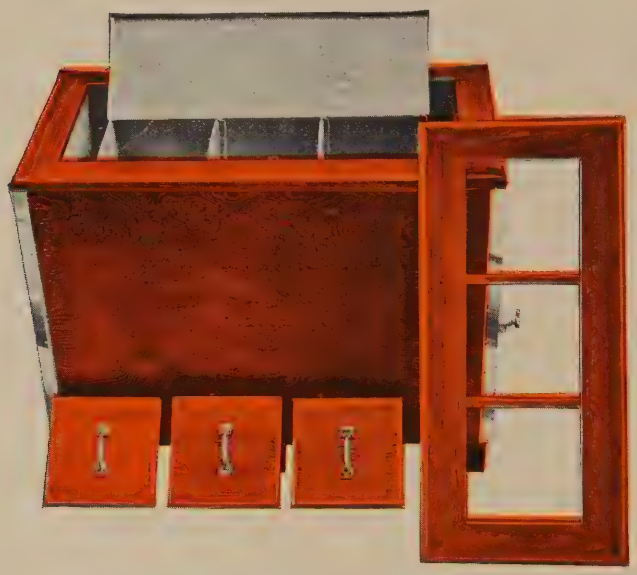
Officers of the company advise that they plan to install a brine tank and hardening room in the future. Approximately $2,500 has been invested in machinery.

Little Giant

The Improved
Little Giant
Can Washer

Capacity 200-250 Cans per hour — in sizes from four to forty quarts.

Big factories find profitable use for the Little Giant Can Washer because it turns out such a large volume of clean cans with so small an investment. Small factories make money by having a Little Giant Can Washer because it cuts the job down to short hours and allows the extra time for other more profitable work.



An investigation will prove the profitableness of installing a Little Giant Can Washer.

Only one icing in 72 hours

and the cream was still in fine condition

An advertisement based on the experience of Mr. E. W. Walter

As a test, E. W. Walter, ice cream manufacturer of Chambersburg, Pa., recently iced a 3-hole A-B Ice Cream Cabinet in a retailer's store—then kept close watch on it. Afterwards he wrote:

"The A-B Cabinet kept the cream nice and firm for 60 hours; in the next 12 it softened up slightly, but not too soft for serving. One icing kept it in fine condition for 72 hours.

"The A-B Cabinet is the only salt and ice cabinet I will buy hereafter. It saves half the ice required for ordinary ice cream cabinets and keeps the cream in much better condition. I can keep a 5-gallon can of ice cream nice and firm all the way to the top of the can—one thing I could never do with the can cylinder cabinets."

The A-B Ice Cream Cabinet gives perfect refrigeration on less ice and less salt than any other. An unusually effective insulating material surrounding the ice and salt chamber on all four sides keeps cold air inside the cabinet and warm air out. Even the lid is fully insulated, and fits tight.

Cream compartments are square and perfectly dry. All sizes of bulk ice cream can be inserted with greatest ease—square pockets permit carrying all package cream in compact facility.

Full details and prices gladly furnished on request. Write

Put this powerful advertising to work for you

ABOVE is illustrated just a part of a complete 5c ICE CREAM CUP Advertising Campaign. It is a new addition to our regular service free to users of "Kist" Fruit flavors.

Typical of all "Kist" Advertising, its mission is to INCREASE GALLONAGE! Each newspaper advertisement, hanger and poster features your product, brand and name—all distinctively yours *and available to only one Ice Cream Manufacturer in a town.*

Let us tell you the correct facts about merchandizing a 5 cent Ice Cream Cup package proposition, with details on costs, packing, handling, profits, how it will increase your Sales, particularly now and continuing throughout the year! (*One manufacturer records sales of over five million during a five month period.*)

At the same time we will acquaint you with "Kist" Advertising Service which brings you Increased Gallonage through a Week-End Special Campaign, on Brick and Bulk Specials over the entire year—*all free.*

Sounds almost too good to be true, yet hundreds of Manufacturers from coast to coast have tested its efficacy and recorded Increasing Gallonage and Profits.

Just mail one of your cards or your letterhead with a request for complete details on 1925 plans. Address CITRUS PRODUCTS COMPANY, Ice Cream Division, 54 East Kinzie Street, Chicago, Illinois. *Do it today—now!*

Invert Sugar-Splitted Sugar Sweetener

Explaining Sugar Phases That Have Puzzled Ice Cream Manufacturers

*By BENJAMIN I. MASUROVSKY**

WHAT is "splitted" or inverted sugar? How does the comparative sweetness of this sugar rank? These questions are frequently asked by men in the ice cream industry and various trade and other publications have widely disseminated contradictory information regarding invert sugar thus requiring further elucidation. Considering the fact that sugar is one of the chief ingredients of ice cream, ranging from 12 to as high as 15 per cent or more it becomes essential to familiarize oneself with the sweetening value of sugars available for the ice cream industry. It goes without saying that the primary function of sugar in ice cream is its sweetening effect, which imparts palatability to the frozen product. With this in mind let us get a clear conception of the invert sugar and its sweetening value.

In the first place invert sugar exists in the form of a thick syrupy mass, which is prepared by either of the two processes described below. The acid method of inversion consists in using 0.5 N hydrochloric acid or N tartaric acid which act on highly refined cane or beet sugar. The chemical action of the acid is hastened by boiling the sugar syrup for about 40 minutes, whereby the ordinary sugar (sucrose) is splitted up into two kinds of sugars, namely, dextrose and levulose. Dextrose is also known as glucose, dextro glucose, grape sugar, corn sugar or corn syrup and is prepared largely from starch and starchy substances by action of mineral acids. According to Paul the sweetness of dextrose is 52, when compared with sucrose as a 100.

Levulose is also called fructose or fruit sugar and is found in fruits such as grapes and in honey. Its relative sweetening value is 150, according to experiments made in the Water and Beverage Laboratory, Bureau of Chemistry, U. S. Department of Agriculture.

When 342.236 (= molecular weight) units of sucrose or ordinary sugar are inverted, 180.126 units of dextrose and 180.126 units of levulose are obtained theoretically in the syrupy mass which is known as invert sugar syrup.

THE other method of preparing invert sugar is by means of autolyzed yeast extract (from yeasts of the sacharomyces species) which acts on ordinary sugar solution causing the sucrose to split into dextrose and levulose as described above in the acid method of inversion. The active part of the autolyzed yeast extract is called invertin, also invertin zymase or invertase. The inversion takes place at room temperature for a period of 48 hours.

Invert syrup prepared with invertase and concentrated by boiling under reduced pressure is superior in

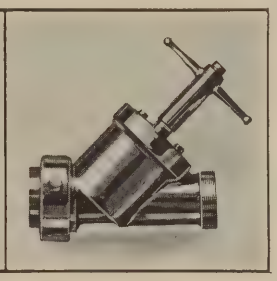
Pfaudler No. 10 Straight-way Valve (dissembled).



Pfaudler No. 16 Cap, complete with nut.

Pfaudler No. 6 Tee, center and one end threaded.

Pfaudler No. 11¾ Angle Valve.

Pfaudler No. 10 Straight-way Valve (assembled).

These Valves and Fittings can be interchanged with any of your present valves or fittings. Send for complete price list.

Announcing a New Line of Sanitary Fittings

The new Pfaudler Valves (only part of our complete new line of fittings) call for a special word in making announcement to the trade. They are compression valves which is one reason for their being absolutely leak-proof.

The ground-key type of valve now being used in dairy work has been abandoned in almost every other field of industry. Even the stop and waste valves used in residences are no longer ground-keys, but are the compression-type. Ordinary bibs used to be ground-keys—now they are compression. Oil cans used to have ground-key valves—now they are equipped with compression valves. Volatile essential oils and alcohol are held in all up to date plants with the compression-type valve.

The Pfaudler Valves will not only withstand pressure in the tank, but they will hold vacuum also! If you want a valve that will absolutely not leak, here is one.

Can Be Sealed by Hand.

Our valves, unions, etc., can be sealed by hand and you do not have to be tightening them continually with wrenches. They deserve their name "Hand-tight."

We furnish a complete line of Tees, Crosses, Valves, Unions, Couplings, Adapters, Reducers, Caps, etc.

OUR VALVES WILL HOLD ALCOHOL WITHOUT LEAKING

Alcohol, the most volatile of ordinary products will leak through the average ground seat valve as used in dairy work. The Pfaudler valve will hold Alcohol! At our laboratories recently, one of our regular dairy valves held alcohol at 90 lbs. pressure, without even the slightest odor detectable, or any leakage. At the present time we have a number of alcohol valves installed. The valves have also been installed in a large eastern dairy (The Bartholomay Co. Inc., Rochester, N. Y.) prior to this announcement.

YORK TRUCK
Ice Cream Can and Cover

Large Capacity—Easy Rolling
Durable—Built for Long Life

A REASONABLY priced, heavy, durable, strong, well built truck of large capacity, yet easy to handle. A truck that will stand up under hard usage and actually help reduce can handling costs.

Designed and built by engineers who are thoroughly experienced in the manufacture of trucks for the dairy industry.

Every detail of construction is carried through "to a point of perfection," both as to material and workmanship.

A better, more durable and efficient truck for the ice cream manufacturer.

CAPACITY
106—2 gal. cans; 96—3 gal. cans; 78—5 gal. cans.

Send for YORK Can Truck Bulletin giving all the details.

quality to the invert syrups prepared with acid. Most of the prepared invert sugar syrups possess a distinct candy gavor.

In a recent set of experiments conducted by the Water and Beverage Laboratory, Bureau of Chemistry, U. S. Department of Agriculture,† the relative sweetness of invert sugar prepared in five different ways were tested and the following table represents the results obtained:

Kind of Solution	Sugar in 100 c.c. of Solution 2 Grams	Relative Strength of Solution	Order of Relative Sweetness by Tasting (3)
		Trial A	
Sucrose 3	2.0	100	a
Sucrose 3	2.2	110	b
Sucrose 3	2.5	125	c
		Trial B	
Sucrose 3	2.0	100	a
Sucrose 3	2.1	105	b
Sucrose 3	2.3	115	c
		Trial C	
Invert 1	2.0	100	a
Invert 2	2.5	100	b
		Trial D	
Invert 1	2.0	100	a
Invert 2	2.2	110	b
		Trial E	
Invert 1	2.0	100	a
Invert 2	2.0	100	a
Sucrose 3	2.0	100	b
Invert 4	2.0	100	a
Invert 5	2.0	100	a
		Trial F	
Invert 1	2.0	100	a
Invert 2	2.0	100	a
Sucrose 3	2.0	100	b
		Trial G	
Invert 1	2.1	105	a
Invert 2	2.1	105	a
Sucrose 3	2.0	100	b
		Trial H	
Invert 2	2.2	110	a
Sucrose 3	2.0	100	b
Invert 4	2.2	110	a, b
		Trial I	
Invert 1	3.0	150	c
Invert 2	2.5	125	b
Sucrose 3	2.0	100	a

Remarks: (1) Invert 1, hydrochloric acid used for inversion.
Invert 2, tartaric acid used for inversion.
Sucrose 3, plain sucrose solution.
Invert 4, invertase used for inversion, concentrated at atmospheric pressure.
Invert 5, incertase used for inversion, contrated in vacuum.
(2) Error is negligible if figures in this column are termed per cent by weight of sugar.
(3) a=least sweet; b=sweeter than a; c=sweeter than b.

From this table we can learn the comparative sweetness of invert sugar prepared by five different methods. Trials E and F show conclusively that the four invert sugar solutions, each containing 2 per cent of invert sugar, were equally sweet disregarding the fact that they were differently prepared. Also it shows that a 2 per cent sucrose solution is sweeter than any of the 2 per cent invert sugar solutions. Furthermore, in trials G, H and I the results indicate how much sweeter sucrose is than invert sugar at a concentration of about 2 per cent. This pointing to the result that a 2 per cent sucrose solution is about as sweet as a 2.35 per cent invert sugar solution. Now then, if we calculate the units of sweetness on the basis of sucrose = 100 we find the sweetening value of invert sugar = 85, or, in other words, 117 units of invert sugar are equivalent in sweetness to 100 units of sucrose.

† J. W. Sale and W. S. Skinner, Jour. of Ind. and Engineer. Chemistry, Vol. 14, No. 6, pp. 522-525 (1922).

COURSE TWO—IOWA TEN-DAY COURSE FOR ICE CREAM MAKERS AT AMES.

The ice cream laboratory is equipped with two horizontal direct motor-driven forty-quart brine freezers, one tub freezer, an over-run tester, ice crusher and hardening box. The homogenizer installation is located in a separate laboratory.

Standardization.—This will be practiced as applied to sweet cream for ice cream making and the ice cream mix using sweet butter, milk powders, condensed milk, etc.

Homogenization.—For comparison, ice cream will be made with homogenized cream and homogenized mix.

Testing.—The various tests for butterfat in milk, condensed milk, cream and ice cream will be carried on in the laboratory. Tests for fillers in ice cream will also be made.

Extracts.—These will be tested for purity.

Preparation of Special Ice Creams.—The methods of preparing the various kinds of ice cream, parfaits, mousses, puddings, etc., as well as water ices, frappes, punches, lactos and souffles will be given detailed attention.

Freezing.—This will include, among other subjects, a study of the factors which influence the yield and consistency of ice cream.

Brick Ice Cream and Fancy Molds.—Plain and fancy bricks and special molds will be made. The decoration of ice cream cakes, fancy molds, etc., will be demonstrated.

Lectures.

Afternoons will be devoted to lectures on the following subjects: Standardization, Pasteurization and Homogenization of Cream, Standardization of the Ice Cream Mix, Manufacture of Various Kinds of Frozen Products, Marketing of Ice Cream, Daily Records, Losses in the Ice Cream Plant, Ice Cream Factory Refrigeration, Bacteria in Relation to the Ice Cream Industry, Fermented Milk, Soft Cheese Making, Testing of Milk, Cream and Ice Cream.

The course runs from February 11 to 21, 1925.

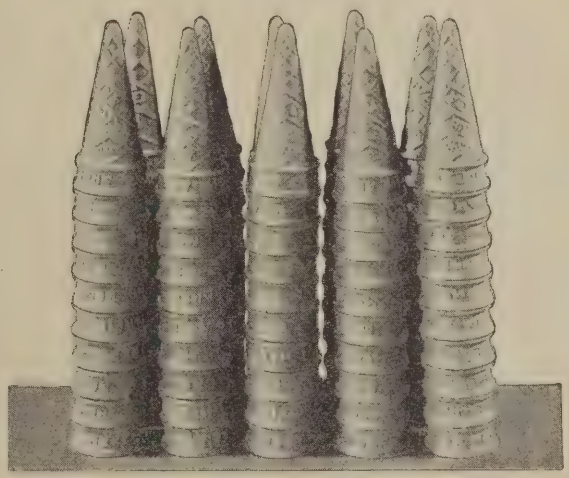
EMPLOYEES INSURED.

Announcement has been made by officials of the Olympic Ice Cream Co., Inc., Tacoma, Wash., that employees of that concern have been insured against death, permanent or total disability under a group insurance policy. This applies to employees who have been in service one month or longer. The amount of insurance on each employee depends upon the length of his or her service with the company, ranging from $500 to $2,000. The insurance is presented by the company to its employees without cost.

LARGE ICE CREAM MANUFACTURER REPLACES 43 HORSES WITH ELECTRICS.

The Chapin-Sacks Corporation, one of the largest ice cream manufacturers in the South, with headquaters in Washington, D. C., ordered 12 three and one-half-ton electric trucks to replace 43 horses and 23 wagons for delivery service in Washington. The decision to replace horses and wagons with electric trucks was arrived at after a thorough investigation which proved beyond all doubt that city delivery work could be done much more economically and efficiently with electric trucks, officials say.

McLAREN'S CONES



Every Cone in Every Row is Uniformly Baked

INSIDE and outside, from tip to top, McLaren's Cones are baked to an even brown color. This result can be obtained only through the scientific use of fully-automatic cone machines. Heat adjustments must be exactly right, and the finished cones must be ejected from the moulds at precisely the correct time.

McLaren's Cones have no soft spots to dry out and shrivel up. No turned points. No intermixture of light and dark colors. No steam cracks to weaken wall of cone.

You would find it a pleasure to sell these good cones,—profitable too.

Every Cone is Guaranteed

CHEMICAL TREATMENT OF REFRIGERATION BRINES TO PREVENT CORROSION

Chemical Brine Control is Important Means of Inhibiting Corrosion of Metals by Contact with Brine

By EMERSON P. POSTE, Director of Laboratories, Elyria Division, The Pfaudler Company

THERE is a growing appreciation on the part of refrigeration engineers and milk plant operators that chemical brine control is an important means of inhibiting the corrosion of metals coming in contact with brine. The fact that certain experimental and

commercial observations have been made in connection with this problem warrants the publication of another paper on the subject.

Alkaline Brine.

Previously published data ("The Corrosion of Metals by Refrigeration Brines," Emerson P. Poste and Max Donauer, The Milk Dealer, February, 1923, "The Chemistry of the Brine Tank," B. S. Hull, Ice and Refrigeration, March, 1923) and various private communications from engineers interested in the problem from the several points of view of suppliers of chloride, manufacturers of dairy and refrigeration equipment, and operators of plants, all agree on certain fundamental principles which may be summarized as follows:

Alkaline brines are less corrosive than acid;

Strong brines are less corrosive than dilute;

Calcium chloride brines turn acid on contact with air;

Calcium chloride brines free from magnesium chloride may be rendered alkaline by chemical treatment;

Sodium chloride brines may be rendered alkaline.

There seems to be some difference of opinion as to the relative corrosive action of sodium and calcium chloride brines of like gravity and reaction, although data indicating a greater corrosive action from sodium chloride brines are on record.

An obvious conclusion from the above is that it is necessary to maintain alkalinity in the brine to reduce corrosion. This fact furnishes the starting point of the investigations herein.

Methods of Producing Alkalinity.

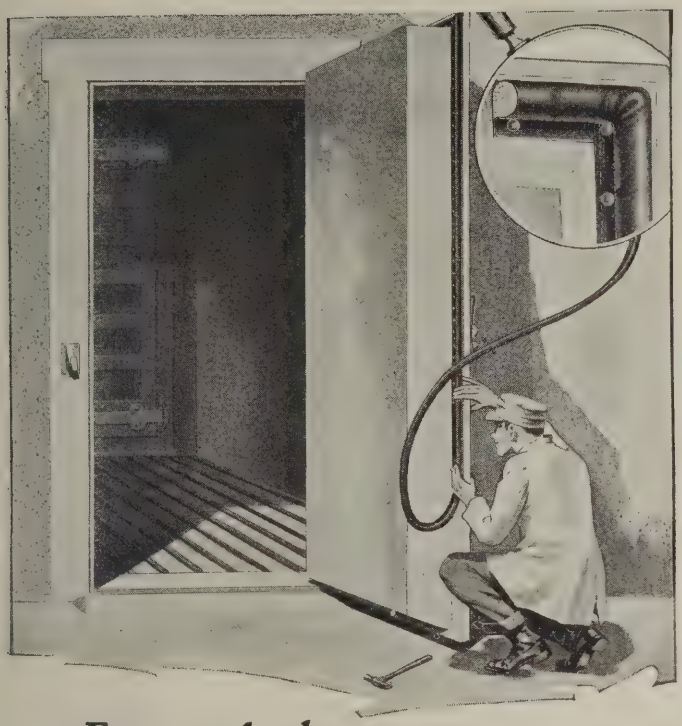
AS TO the method of producing alkalinity, the general recommendation has been to hang a bag of lime in a brine tank using 10 pounds burnt or quick lime per 1,000 gallons of brine. The less frequent suggestion is a like use of caustic soda to the amount of 13 pounds per 1,000 gallons. Occasionally the use of soda ash has been advised.

Of these three methods, the first two have commercial possibilities; the third has not. The addition of soda ash to a calcium chloride brine would cause the precipitation of calcium carbonate without the production of alkalinity. Even in a sodium chloride brine there is some calcium chloride as an impurity and this would be thrown out by the soda ash. The use of soda ash, in any event is, therefore, not to be recommended.

In discussing the treatment of calcium chloride brine with lime it is to be assumed that no magnesium chloride is present. The addition of lime produces an increasing alkalinity till a certain point is reached beyond which a basic salt separates out making further alkalinity impossible. The actual alkalinity realized before this precipitation begins depends on the temperature and strength of the brine.

In the treatment of sodium chloride brine with lime a like condition arises but the amount of alkalinity possible, again varying with strength of brine and temperature, is different from that to be had with calcium chloride.

If calcium chloride brine is treated with caustic soda the same limiting factors come in as with the lime treatment.



When sodium chloride brine is treated with caustic soda, however, there is no separation of an insoluble product and so higher alkalinities are possible than with lime treatment.

References in the literature and experimental work in the laboratory have made possible the summarizing of these facts in a chart.

Alkalinity is expressed in per cent normal solution and grams of lime per liter. It so happens that the former figure also represents the number of cubic centimeters of tenth normal acid necessary to neutralize 10 c.c. of the brine.

AS TO the interpretation of the curves, two temperatures will be considered. At atmospheric temperature, 70 degrees F., calcium chloride brine with a gravity of 1.10 has as its maximum alkalinity 4.0 per cent normal, while brine with a gravity of 1.2 has its max-

imum at 4.9 per cent normal. At the same temperature sodium chloride brine with a gravity of 1.1 has its limit at 4.0 per cent and with a gravity of 1.2 the limit is 2.1 per cent. At 20 degrees F. the corresponding limits are: Calcium chloride, gravity 1.1, 2.5 per cent; gravity 1.2, 2.0 per cent; sodium chloride brine, gravity, 1.1, 5.1 per cent; gravity 1.2, 2.9 per cent.

The recommended treatment of 10 pounds burnt lime per 1,000 gallons of brine represents an alkalinity of 4.5 per cent normal assuming that the lime is pure and all goes into solution. Reference to the chart suggests that it is theoretically possible to get this amount of lime into solution in a calcium chloride brine with a gravity of 1.2 at a temperature of 70 degrees F. but under no other conditions of strength or temperature for this type of brine. If the brine were treated to saturation at atmospheric temperature, followed by cooling to refrigeration temperatures, the amount of alkalinity would be reduced by the precipitation of the basic salt. On the other hand, if sodium chloride brine were treated at atmospheric temperature and cooled to refrigeration temperature, the alkalinity would increase with drop of temperature. The weaker brine would take all the lime into solution finally, but not so with the stronger.

In other words, treatment of either type of brine with the prescribed amount of lime would result in saturation at refrigeration temperatures, and the prevention of any excess alkalinity in the solution by the precipitation of the basic salt. If the lime used were of commercial grade, falling well short of 100 per cent calcium oxide, the excess precipitated would be proportionately less.

Therefore, it may be concluded that with strong brines and refrigeration temperature of 10 degrees F. calcium chloride brine may be treated to produce an alkalinity of 1.0 per cent normal while that possible in sodium chloride brine is 3.0 per cent. In terms of corrosion, either of these alkalinities should be sufficient to greatly inhibit action on metal.

Experimental Brine Treatment.

Following these theoretical considerations as to the possibilities of alkalinity it will be well to see how nearly these results can be realized in practice by various methods. Several laboratory studies will be covered, followed with records of commercial cases.

The first tests involved placing an excess of slacked lime in a small canvas bag hung in a jar containing three gallons of calcium chloride brine with a gravity of 1.10. The temperature was about 70 degrees F. The brine was gently agitated with compressed air during the day-time.

FROM the chart it will be seen that the alkalinity theoretically possible in this brine is 4.0 per cent normal. The alkalinity went up to 1.7 per cent normal on the sixth day, then began to drop off. Thinking that the bag involved was too close meshed to allow circulation of the brine through it, the same charge of lime was placed in a cheese cloth bag. Again the alkalinity went up at first to 2.0 per cent normal, then dropped back. The lime used for this treatment was a commercial grade analyzing 63.0 per cent lime and 36.0 per cent magnesia. It was thought that a purer lime might produce better results. Therefore a fresh supply of pure lime was placed in the cheese cloth. The alkalinity again failed to come up to the expected. In fact on several days standing the value dropped off.

In all cases the meshes of the bag became clogged with crystals taken to be the basic salt which, under these conditions, formed around the lime and prevented reaction with the brine.

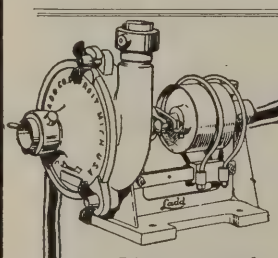
The above indicated that the type of bag and the purity of the lime were not determining factors, but that the general method of treatment would not produce results under the conditions involved.

As a check on the above test, and to note the parallel case involving sodium chloride brine, two test jars were set up as follows: A—calcium chloride brine, gravity 1.1, definite excess of burnt lime in a burlap bag; B—sodium chloride brine, gravity 1.1, same treatment. The lime analyzed 77.0 per cent lime and 22.0 per cent magnesia. The test was continued for 51 days. At first there was a gradual rise in alkalinity, followed by a drop. At no time did it approach the theoretical.

Another jar of calcium chloride brine, gravity 1.1, was treated with an excess of caustic soda in a burlap bag. In this case the alkalinity went up quite rapidly

Small Sized Vacuum Pans

and Milk Condensing Equipment for the Laboratory, Colleges and Ice Cream Mix Manufacturers



Vacuum Pan.

We can furnish these small size equipments in vaccuum pan size ranging from 8″ diameter to 36″ diameter, with suitable forewarmers and pump. These small compact outfits require but little space, are provided with suitable heating and condensing capacity and prove a valuable addition for experimental and study purposes as well as for the condensing of small batches.

Special Thick Brine Covering. Compare the thickness with that of Brine Thickness at the right.

Brine Thickness Cork Covering for the same size pipe.

Where Should We Use Special Thick Brine?

Special Thick Brine is the heaviest thickness in which Nonpareil Cork Covering is made. It is intended to be used, and for satisfactory results, *must* be used, on all lines carrying a refrigerant at 0° Fahr., or colder.

Remember that line temperatures are some 10 degrees lower than room temperatures, and suction temperature about 10 degrees lower than brine. Remember, too, that your lines are exposed to relatively high temperatures. They run along ceilings in the hottest part of the room, often near steam lines, in pipe shafts and tunnels, and sometimes right over the boilers. Remember that what you are insulating against is a *temperature difference* that may be as high as 100 degrees.

Special Thick Brine gives you the extra thickness of insulation that low temperatures require. Use it on your lines for exactly the same reason that you put more insulation on a freezer than you do on a cooler. In a word, use Special Thick Brine Nonpareil Cork Covering for economy.

A sample of Special Thick Brine with full details will be sent you on request.

ARMSTRONG CORK & INSULATION COMPANY

Nonpareil Cork Covering

For All Cold Lines

at first, then increased more slowly, till after 51 days it had reached 2.95 per cent normal, much higher than had been produced in any of the other cases but still well below the theoretical.

In all cases the bag soon became hard with crystals in the meshes. At the end of the test with sodium hydroxide the bag was nearly empty.

These tests indicated the impossibility of getting results with lime in a bag, but the possibility of treating successfully with caustic soda by the same method.

Commercial Brine Treatment.

The first test with calcium chloride brine involved a small installation, using only 300 gallons of brine.

The first method to be tried was the use of lime in a burlap bag, 10 pounds per 1,000 gallons. The brine had been freshly made up and therefore was definitely alkaline. This method did not even maintain the alkalinity initially present. After 90 days the bag was removed and found to be hard with the meshes full of crystals. This treatment was followed with a bag of flake caustic soda, 13 pounds per 1,000 gallons. The alkalinity came up promptly, reaching a value somewhat below that to be expected for the strength and temperature of brine involved.

A second commercial case coming under observation involved the treatment of a brine that had become slightly acid. Burnt lime in the amount of 10 pounds per 1,000 gallons of brine was put in a bag and hung in the tank. Several weeks later the brine showed an alkalinity of only 0.15 per cent normal.

Another case has afforded valuable data. The brine, initially quite weak and about neutral, was strengthened by adding fresh calcium chloride. This was followed by treatments with lime, 10 pounds per 1,000 gallons, added as a slurry.

Alkalinity came up promptly to 1.85 per cent normal, then gradually increased to 2 per cent normal, following which it gradually dropped off. When it had reached 1.40 per cent normal another treatment, 5 pounds per 1,000 gallons, was made. This immediately produced an alkalinity of 2.5 per cent normal. After a few days this began to drop. When it had reached 1.0 per cent normal another treatment, 5 pounds per 1,000 gallons, was made and a bag of lime was hung in the tank. The figure again went up to 2.5 per cent, dropping off in a few days as before.

The lime used in the above test was a commercial grade of builders lime, quite impure. This, no doubt, accounts for the fact that it took more than the prescribed amount to produce maximum results.

In considering the above, it should be kept in mind that the theoretical maximum alkalinity for the brine involved is 2.5 per cent normal.

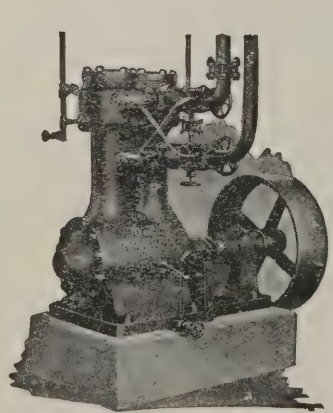
These studies indicate that the desired alkalinity can be reached by the use of lime as a slurry but that the treatment with the bag of lime will not even maintain previously established alkalinity, to say nothing of producing alkalinity.

Several cases involving sodium chloride brine have been noted. In the first the brine was initially practically neutral. Lime hung in bags over the side of the tank produced only a very slight alkalinity.

IN ANOTHER case brine with a gravity of 1.16 was treated by direct addition of slaked lime in water suspension. An alkalinity of 3.5 per cent normal resulted, approaching the theoretical for the brine involved. It was found impossible to maintain this alkalinity by means of lime in a bag hung in the tank but direct additions made from time to time accomplished the desired results.

The cases which have been cited are typical of a larger number on record. The conclusions to be drawn from the various studies are substantiated by all of the data at hand.

Conclusions.



Our present knowledge of the subject of brine treatment leads to certain very definite conclusions:

1. For making calcium chloride brine a chloride free from magnesium chloride should be used.

2. The gravity of the brine should be kept in the neighborhood of 1.20.

3. Either calcium or sodium chloride brine should be treated with pure quick lime on the basis of 10 pounds

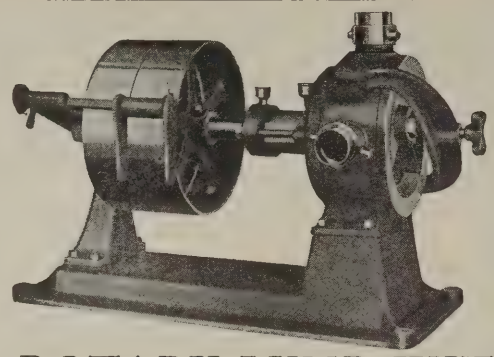
This is the second of a series of advertisements designed to give glimpses of the Jamison Plant. It is our hope that the camera can reveal something of a picture which would interest, and perhaps amaze you, could you see it in person.

Here's a Latch that *Stays Put!*

IT HAS often been said that a ***cooler door is only as good as its hardware***—and the fact that we are repeatedly called upon for Jamison Hardware to replace hardware of other makes on other doors, would seem to bear this out. There isn't much hardware on a door, to be sure, but what there is, ***is highly important.*** That's the reason we have spent considerable time, and considerable besides time, to equip Jamison Doors with a latch that stays put.

The impracticability of cooler doors that won't stay shut dates farther back than I do. But so far as I know the Jamison Self-Tightening Fastener is the only latch which absolutely prevents a rebound, due to air compression, after the door is slammed. And equally important, it seems to be the only latch that has the inherent strength to do its hard, heavy work day in and day out, year after year, without ever once "missing fire" and without breaking down "every so often."

Certain it is that the Jamison Fastener is heavier than any other—and if the testimony of several thousand Jamison customers can be accepted as proof, ***it is better designed.***



J. J. Jamison Jr.

President.

It *Had* to be *Steel!*

WHEN Thomas A. Edison invented the nickel-iron-alkaline battery—which Dr. Steinmetz declared "does not age and has no definite life, but its life is limited, theoretically, only by mechanical destruction"—it was necessary to find a material strong enough to equal the long life of the elements.

It *had* to be *steel!*

Every metal part of the Edison cell is built of nickel-plated *steel*—grids, tubes, pockets, poles and container.

That is why an Edison battery out-lives two or three lead-acid batteries operating under similar conditions—why it is the least expensive battery made.

Leading Electric Street Truck Manufacturers gladly furnish Edison Batteries.

The Greatest Invention of the Greatest Inventor

In 1898 Thomas A. Edison first started work on the development of a storage battery free from the self-destroying diseases of the lead-acid type. After hundreds of thousands of experiments, the Edison Steel-Alkaline Storage Battery was perfected and marketed in 1909.

Now, after 16 years, over 55% of the batteries used in heavy industrial service—street trucks, industrial trucks and tractors, and mine locomotives—are Edison Steel-Alkaline Storage Batteries. Truly a wonderful tribute to the economy and satisfactory service of the product and to the genius of the inventor.

Merchandise Thoughts Mark Arkansas Convention

Speakers See Possibilities to Develop Sales Outlets Through Advertising, Use of Iceless Cabinets and Generally Closer Co-Operation with Dealers—School for Dispensers Recommended—Arkansas Travelers Organize

MERCHANDISING of ice cream was approached from many different angles at the seventh annual convention of the Arkansas Ice Cream Manufacturers' Association. Legislation, long a flesh-thorn to the industry in Arkansas, also received considerable thought at the convention, which was held at Little Rock January 6 and 7, with a good attendance.

Recommendation of a school for training dispensers of ice cream in better methods of presenting the product to the public in the most favorable manner was an outstanding point in an outstanding address by an old friend of Southern and Southwestern associations—Prof. A. C. Baer, head of the Oklahoma A. & M. College, Stillwater, and "technical editor" of The Ice Cream Review. His speech at the Arkansas convention put this able dairy educator in new high ground in the Arkansans' esteem. His reference to merchandising methods came after an interesting discussion on production problems. It was brought out by the speaker that Arkansas manufacturers have made considerable progress in overcoming manufacturing and legislative ills in late years and that with this happy background they are in position to work out merchandising problems as never before.

He lauded the proposed national co-operative campaign which seems to be meeting with so much favor in different parts of the country. He used this proposition as a reason why manufacturers not only should strive to "get over their story" to the public but also why they should more actively work for the co-operation of dealers toward selling more ice cream.

"More intelligent manufacture of ice cream is noticeable in all parts of the country," the professor declared. "In Arkansas we are making a good product; in fact, an article in a recent issue of The Ice Cream Review shows the Southern states to be making more progress in ice cream production than are the states of other sections. This is undoubtedly due to improved manufacturing methods, for we have done little in this section to improve merchandising conditions, easily one of our truly great problems.

"In the South we have more room for development, of course. For we got away to a slow start in the upbuilding of this industry in this part of the country. But as we have gone forward and continued, year after year, to improve the quality of our product, we have grown nearer the point where we could go to the public and say, 'We have a story to tell.' For we really have an interesting story. The public knows little about our industry — exceedingly little. It is largely our fault. This must be corrected. Different new methods of distributing ice cream have been introduced in late years and have enabled manufacturers to get more ice cream into the home, the place where our greatest potential outlet lies.

"We have learned to make a good product. Some years ago conditions in different sections were not such that we could accurately call ice cream a national industry. We could not count upon finding quality ice cream uniform in different parts of the country. But our progress in the South has largely overcome this condition. Our effort now should be in the direction of fighting to maintain quality, keep high our business standards and let the public know that we have something to sell—for we have."

The iceless cabinet was featured by different speakers as an aid toward better merchandising of ice cream, particularly the keeping down of the price by dealers, a condition that is absolutely imperative to con-

tinued expansion of ice cream consumption, speakers agreed.

CONVENTION thoughts on ice cream salesmanship centered around the speech in which Will A. Schwindeler, St. Louis, chairman of the national advertising committee, related how other industries have co-operated and increased outlets for their products many times over through methods this industry can follow with reasonable assurance of increasing the consumption of ice cream by several hundred thousand gallons in the near future.

STARTLING facts concerning other industries' success with national advertising were brought out by the speaker. Particular emphasis being laid upon the success of those industries with products and conditions similar to those of the ice cream man, some of them highly seasonal, most of them perishable.

He told how the cranberry people once thought they could not sell to any great extent in warm weather, the public having formed the habit of thinking of cranberries as being for cold weather. But a national co-operative advertising campaign remedied this condition. He showed that in 1914 a test advertising campaign was

CHARLES HOOBERRY,
President.

GEO. F. CRESS,
Vice-President.

R. L. HARGROVE,
Director.

Although this campaign as now outlined centers around national advertising through national publications, the speaker explained that arrangements had been gone into for linking up the national movement with local advertising, chiefly newspaper advertising, that would directly benefit those manufacturers who actually put up money for carrying out this work. This thought was brought out by way of re-assuring the delegates on virtually the only point that has aroused opposition in any quarter. The spirit of the convention went with Mr. Schwindeler, and it was only because different members want further information on the local angle of the proposition that the association did not go farther than to endorse the proposal and agree to wait out developments before actively lining up in the crusade.

carried out in Chicago by the cranberry people. There was an increase of 57 per cent per capita consumption over the preceding year. In 1915 the per capita consumption increased 47½ per cent over 1914.

He featured the results of national advertising by the sauerkraut people, selling a product that was more or less the butt of public jokes for many years. Through this campaign the public was told about the striking food qualities of sauerkraut that never before had been impressed. The result was an increase of 257 per cent in kraut sales for the period from 1921 to 1923 over average annual sales in the past. Very pointedly he reminded the delegates that if ice cream consumption had kept pace with the development of sales in the kraut

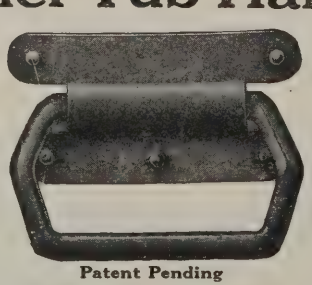
Trade Paper Advertisement—No. 6, 1925



industry, production last year would have been 585,000,000 gallons, instead of approximately 294,000,000 gallons for the nation, adding even more pointedly, "Here we are, gentlemen of the ice cream industry, with ice cream, the finest and most palatable of food products, and if we cannot at least equal the achievements of men who have had to overcome prejudice and adverse sentiment to develop their industry, it will only be because we lack the vision to understand our opportunities."

Equally as interesting was an outline of the advertising achievements of the coffee people, who made no attempt, the speaker pointed out, to laud coffee for food qualities, but centered their efforts simply around the argument that coffee is not harmful. The ice cream manufacturer, with his good arguments for ice cream as a wholesome food, was reminded by the speaker that his industry has a decided advantage in national advertising. But, despite the great drawback imposed upon the coffee people, they were shown to have increased consumption to the extent that if the ice cream industry had prospered in similar manner, consumption of ice cream would have grown by now to 327,264,000 gallons, several hundred thousand gallons more than the figure estimated for the 1924 consumption of ice cream.

THE value of co-operative advertising was stressed when Mr. Schwindeler gave results of achievements in advertising ice cream in different American cities. For instance, according to the speaker's figures, if the industry generally had advanced as it had in Chicago, where ice cream men advertise ice cream, the annual production for the nation now would be around 311,000,000 gallons. If the industry, nationally, had kept pace with the advertised industry in Detroit the national annual consumption would be around 328,000,000 gallons, he said, while Philadelphia's good work, if nationally applied, would make the ice cream industry produce the startling amount of 612,000,000 gallons.

Just how conservatively the national advertising committee is figuring on results from the proposed campaign was indicated when the speaker stated that if this industry increases the per capita consumption just one-third the extent that other industries have boosted consumption of their products, the per capita figures for ice cream would show an increase most highly gratifying in every way, particularly in proportion to the amount of money to be expended. This amount, by the way, has been set a half million dollars for the first year, $5,000 of which has been appropriated by the national association, the remainder to be raised from the industry at large through contributions by manufacturers based upon one-half cent a gallon as produced in 1923.

Beehler Steel Products Co., 1437 No. 13th Street ST. LOUIS MO.

THE association took steps to combat proposed legislation that members believed would show discrimination against the ice cream industry and others. The proposed tax is to raise additional funds for educational purposes in the state, an undertaking that, in itself, was lauded by the manufacturers as being praiseworthy if fairly handled. Resolutions were adopted, copies of which were forwarded to legislators, and to the daily newspapers, as follows:

Whereas, Our association is keenly interested in and deeply in sympathy with the purpose of advancing education in this state, and is willing to contribute its support on an equitable basis that will not throw an unfair burden upon ice cream manufacturers, or involve discrimination against this of other industries; and

Whereas, This association is agreed that unnecessary burdens thrust upon certain industries will hamper the advancement of those industries, and consequently will operate against the industrial advancement of our great state; and

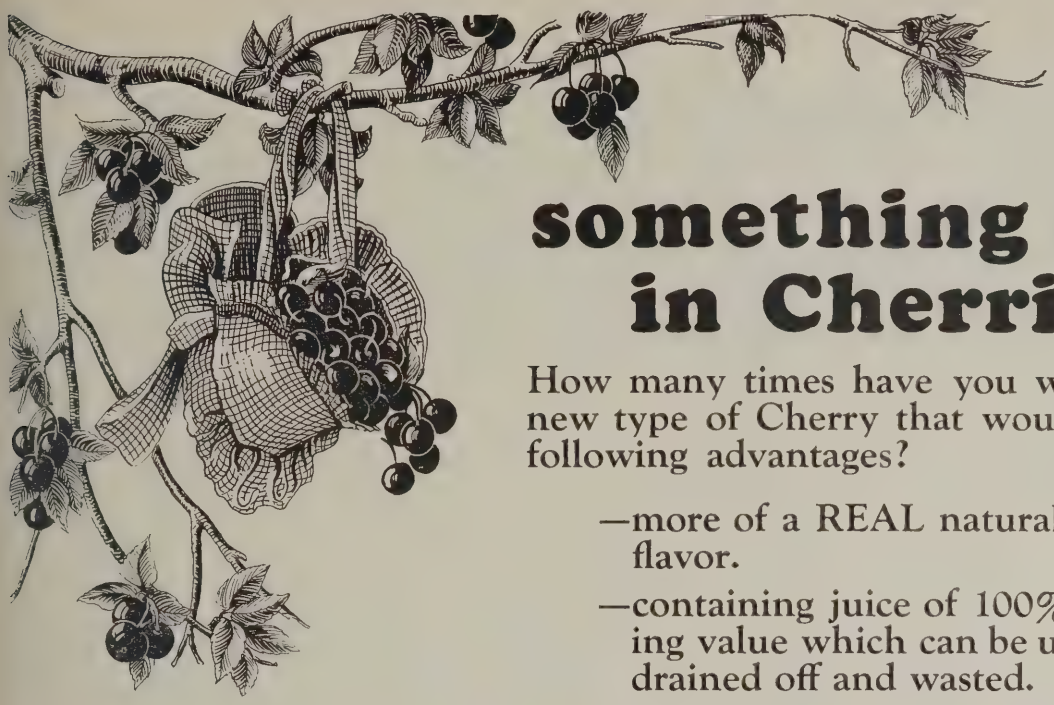
Whereas, This association feels that unnecessarily heavy taxation against such a great food industry as ours would not encourage members to maintain high quality standards, which is a matter of greatest importance to public welfare. Be it

RESOLVED, That this association go on record as opposed to any and every movement toward special taxation against our, and other special industries, and for this reason takes the stand that any taxation for education or other meritorious purposes, should be worked out on a general and equitable basis; and be it further

RESOLVED, That this stand on our part be set forth as an unselfish wish to see this matter handled in a spirit of fairness for the best interests of our great state; and be it further

RESOLVED, That the Arkansas Ice Cream Manufacturers' Association endorse the bill for a 100 per cent valuation of personal property (real estate) and urge its adoption in lieu of the special tax bill, which is hereby opposed as unjust and discriminatory, and unfair to the ice cream and dairy industries of the state.

A REPRESENTATIVE of the local chamber of commerce welcomed the convention delegates. His address was responded to by President R. L. Hargrove, Texarkana. The president's annual address called attention to different matters facing the industry—proposed legislation, etc. He expressed gratification over the spirit shown by the membership in the past year. Secretary Charles Hooberry's report showed the association to be "in splendid working order."



A national touch of color was given the convention by the presence of men prominent in the industry, including W. W. Campbell, vice-president of the National Association of Ice Cream Manufacturers and past president of the Southern association, and Will A. Schwindeler, who already has covered himself with glory for the splendid fight he has made to sell the idea of co-operative advertising to the industry which he so ably serves.

Mr. Campbell's address was on the subject of "Abuses in the Ice Cream Industry," and it was a strong plea for greater development of the very highest ethics in the relations of members of the industry.

The first day's session was followed by a dinner dance at the Rainbow Roof Garden for guests, as well as delegates. The supplymen of the convention were hosts.

Louis Chamberlain of the Nizer Corporation, Detroit, opened the business end of the program the last morning of the convention after the famous Earl W. Hodges of Little Rock, one of the South's great orators, and one of the nation's most gifted entertainers, had led off with one of his characteristically strong speeches, in which he told of the South's opportunities toward industrial development.

something new in Cherries!

How many times have you wished for a new type of Cherry that would have the following advantages?

—more of a REAL natural cherry flavor.

—containing juice of 100% flavoring value which can be used, not drained off and wasted.

—only two quarts needed for a 5-gal. mix.

—no added flavor needed.

—no added color needed.

Such a Cherry is now ready! Best of all, it actually costs less to use this better Cherry.

Let us send you one dozen No. 10 cans of this new Special Cold Pack "Home Grown Cherry." If it doesn't measure up to your expectations in every way, return the unopened cans and our entire charge to you will be canceled.

ICELESS cabinets featured the session. Mr. Chamberlain gave the history of automatic refrigeration and said it is generally estimated that 18,000 iceless cabinets are now in operation in the United States, and that "outside the average trouble one finds with machinery as a whole, the cabinets are giving complete satisfaction."

"The big question in the manufacturers' minds," Mr. Chamberlain said, "is how to install the cabinets so as to show a profit for themselves and complete satisfaction to the dealer. I have found a great many methods being used from one end of the country to the other and believe it bases down to the fact that each territory must work out a plan that suits them best, and absolutely co-operates with each other."

Mr. Galloway of the Delco Light Co., Dayton, discussed the same subject.

The round table discussion in the afternoon found delegates in an optimistic and congenial frame of mind. Officers were elected for the coming year, Charles Hooberry of Pine Bluff being promoted from secretary to president, G. F. Cress being elected vice-president, and Thurston Runyan being made secretary. Selection of the 1926 meeting place was left up to the board of directors. The two new directors are J. D. Purdy and R. L. Hargrove. A rising vote of thanks was extended to the outgoing officers in a speech by Will Terry, who lauded the officers as having "done a good work well."

* * *

Arkansas Travelers Organize at Little Rock.

THE Arkansas Ice Cream Manufacturers' Association has joined the ranks of those state associations who have enlisted the aid of the supplymen in fighting their trade battles. Under the direction of R. L. Hargrove, convention president of the manufacturers' association, with the co-operation of P. N. Miller, Jr., secretary of the Dixie Flyers, a large number of supplymen gathered at the Marion the morning preceding the opening of the convention. The purpose was set forth by Mr. Miller, who then gave way to let the body name a president.

M. E. Prewett of the J. B. Ford Co., with headquarters at Little Rock, was elected president, Mr. Miller was elected secretary-treasurer. The association did not name a vice-president.

The Ice Cream Review was named the association's official organ. The association immediately got to work by arranging entertainment for lady visitors, particularly the dinner-dance at the Rainbow Roof Garden the first evening of the convention.

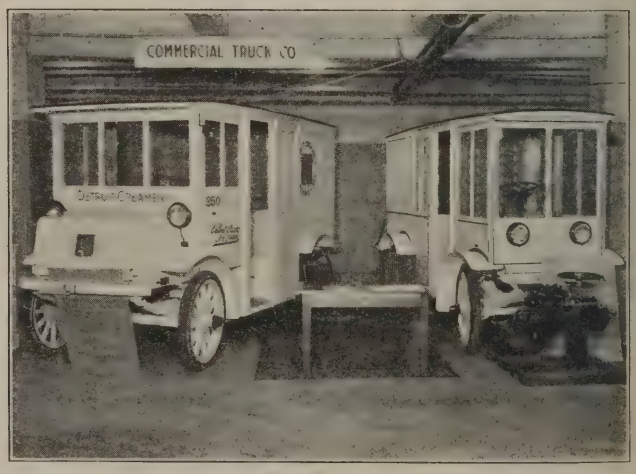

Exhibit of the Commercial Truck Co., in October, at Milwaukee during the National Dairy Exposition.

Nothing Changed But the Label

WE COULDN'T improve on nature's products—but we have improved the name by which these products are known to the trade and the public.

In absorbing the business of our principal competitor, the Mission Orange Juice Company of Los Angeles, we have acquired a trade name of great value and appropriateness. Today the pure California fruit juice products of this corporation are known as **Mission Orange** and **Mission Lemon**.

With our greatly increased production and distribution we are now prepared to make California Mission citrus fruit juices available to ice cream manufacturers in every part of the country.

California Mission Orange Juice comes to you ready-squeezed for instant use at a great saving in cost and convenience over the juice you squeeze yourself—a cost that now makes it unnecessary to use synthetic extracts.

Calif. Crushed Fruit Corp.
LOS ANGELES, CALIFORNIA

Gentlemen:

Please send me samples and quote me quantity prices on the juices I have checked.

( ) Mission Orange ( ) Mission Lemon

It is not one bit too early to prepare for warmer days. A request on your letterhead or on the attached coupon, indicating which fruit juice you are interested in, will bring price schedules and a generous sample by return mail.

HOME CONSUMPTION AND THE PACKAGE.

Ice cream containers are here to stay as they are the proper way to get ice cream into the home, it was declared in an address before the Oklahoma convention last fall by P. C. Mojonnier, Mojonnier Bros. Co., Chicago. This stand can be taken, the speaker pointed out, because it is in the home that more ice cream must be sold if the industry is to expand. He said, more than anything else the package will work toward making ice cream the national dessert, being served on the table of virtually every American home at least once a day.

This is a big problem facing the industry today, the speaker believed. He pointed out that just as ice cream is in a class by itself when it comes to meeting the good favor of virtually all people, young and old, that it also is in a class altogether by itself when the system of dispensing or selling is considered. Continuing, he said:

"A purchaser seldom buys the same quantity of ice cream twice for the same price when dished out over the counter and especially when dished out in bulk. I have a number of weights I will present showing the ridiculous amounts of ice cream dished out by a representative retailer in one of our large cities. In each instance (37 in all) one pint was purchased, then taken home and weighed. As you know, a pint of ice cream containing 100 per cent overrun, should weigh 9 unces or thereabouts. The actual weights dished out were as follows: One of the 37 dished out, 8 ounces to the pint; four, 9 ounces; one, 10 ounces; two, 11 ounces; six, 12 ounces; thirteen, 13 ounces; six, 14 ounces; five, 15 ounces; six, 16 ounces; two, 17 ounces, and one, 19 ounces. The variation found ran from 8 ounces to 19 ounces. The average amounts dished out on the 37 sales were 13 4/10 ounces. As a gallon of ice cream containing 100 per cent overrun should weigh about four and a half pounds, or 364 ounces, so a gallon should contain 40 4/10 pints. Taking these 37 sales as a good average out of every 40 4/10 pints of ice cream bought, there were only 27 4/10 pints sold, or a loss of 13 pints on each can, or 32 2/10 per cent dipping loss.

"If the system of dispensing bulk ice cream is correct, it is needless to worry about package ice cream. If a dealer were to buy a 45-pound tub of butter and found he could dispense an average of 30 6/10 pounds from that tub, it would not take long to show him that he is on the wrong track, and yet the fellow buying 5 gallons or 40 pints of ice cream from day to day and selling about 27 pints from that 5-gallon can, in serving that out as bulk ice cream, is just as much on the wrong track. In view of that one factor alone, it would appear as if package ice cream is bound to grow in favor, since in serving it a definite amount is measured, packed, bought and sold at a definite price."

He declared that brick ice cream is merely one method of selling package ice cream and where handled properly is selling better right along.

PLAYS SANTA CLAUS.

P. H. Baker, head of the Baker Ice Cream Co., Cleveland, helped one of his local newspapers play Santa Claus to little boys and girls of his city on Christmas day. The Cleveland News and Leader started a campaign for a fancy Christmas. Mr. Baker took it upon himself to see to it that the poor children in the district around the Baker ice cream factory on Denison Ave. were remembered by the "chimney explorer." His company gave ice cream.

In addition to this, the Baker company decided to have a little Christmas cheer of its own. A large Christmas tree was placed on the roof of the plant. It was 36 feet high and had hundreds of bright lights.

The discord in Dresden has reached such volume now there is a growing suspicion Saxony was the home of the saxophone.—Philadelphia North American.

Now—

WHEN you are turning over in your mind the various improvements which this season's business has shown to be advisable, consider **this.** That the most important and beneficial change you can **possibly** make is an improvement in the quality of your **Vanilla Ice Cream.**

There is a particular **Vanilla** which fits **your** Ice Cream better than any other. **You** should buy **that** Vanilla. Sethness Company has, by means of a series of freezing tests, determined the particular type of Vanilla Flavoring best suited to each mixture of the various dairy products used in Ice Cream manufacture.

We believe there is room for improvement in the flavoring of every Ice Cream. We will be highly pleased to offer you the result of our labor along this line.

Get in touch with the Sethness salesman in your territory or write Sethness Specialty Department. Both are at your service for the increase of your Ice Cream Volume.

Building For A Strong Industry

New York State Manufacturers Meet at Buffalo and Discuss Subjects of Vital Importance. C. E. Kilburn, Malone, N. Y., Elected President. Ambitious Plans Made for 1925

NATIONAL advertising, cost accounting, delivery and icing costs, and other matters of considerable import occupied the attention of leading ice cream manufacturers of New York state at the annual convention in Buffalo, January 7 and 8.

The first meeting was called to order precisely at 11 o'clock, being the usual "New Yorker" custom. After several committees had reported, and others had been appointed, President P. J. Smith of Glens Falls, reviewed, in his annual address, the work accomplished by the association during the past year, most important of which was the work accomplished in preventing the passage of legislation that would be detrimental to the industry.

President Smith expressed his belief that the ice cream industry is about to begin an era of prosperity, and cited the 1924 gallonage, in spite of adverse weather conditions, as proof of his statement. He urged members of the association to "get their ears to the ground," get their heads together and work together to solve constructive problems and for the general good of the industry.

"Practically every industry," he says, "has its organizations, not to control prices or obtain a monopoly, but to work together for the good of their industry, and for greater service to humanity." The office of the New York association, according to its president, is to serve the public through the combined efforts of the large and small manufacturers of the state, welded together so as to be a power for good.

H. D. Sanford, Syracuse, N. Y.

The New York State Experimental Station at Geneva has begun some exhaustive work with the view of determining the factors that affect the texture of ice cream. The work accomplished thus far was reported by Professor A. C. Dahlberg. His address was in substance, as follows:

A theory has been advanced by certain educators that the texture of ice cream is dependent upon the size of the air cells. Texture is generally used to mean the internal structure of ice cream which in a practical way is called smoothness. A theory is a supposition based upon circumstantial evidence but lacks accurate data to prove it to be a fact. According to this theory small air cells are stronger than the large ones and they divide the ice cream into such small spaces that the ice crystals formed must be small and the product smooth. Large air cells break, thus, permitting the growth of ice crystals. It has also been theorized that the air cells are made small by mixes of high viscosity and that gelatine, fat, and milk solids not fat, exert their effect upon texture through viscosity. It is reasonable to assume that if this theory should be correct it would be possible to measure the size of air cells in ice cream soft from the freezer and accurately predict the future smoothness of the ice cream.

A microscope was placed in a hardening room held at 0 degrees F. for the purpose of measuring the size of air cells in ice cream. Sections of soft ice cream were prepared by placing a small amount of the ice cream freshly drawn from the freezer upon glass slides and striking off the surplus with a sharp edge. The ice cream was examined under low or high power lenses. It was found that the composition and texture of ice cream could be varied greatly without affecting the air cells. The fat was varied 6 per cent, the milk solids not fat 4 per cent, the sugar 4 per cent, and the gelatine 0.7 per cent without affecting the size of the air cells. The average air cell in unhomogenized ice cream had a diameter of 80 microns, but ice cream made from homogenized mixtures had an average size of 60 microns. In addition to homogenization continued freezing in the freezers reduced the size of the air cells. It is very doubtful that the effect of homogenization is exerted through the air cells and later work gave evidence of another effect. The size of the air cells in commercail ice cream did not differ from those in the experimental products. No definite relationship existed between the size of the air cells and the texture of ice cream.

Microscopic sections of hard ice cream cut with the razor showed that smooth ice cream was not materially affected by the hardening process. The air cells were round and comparatively free from ice crystals. In coarse ice cream large ice crystals and spines had formed which had greatly distorted the shape and size of the air cells.

The Effect of Sugar.

The action of sugar was studied in water ices to eliminate any effect of the milk solids. That sugar makes water ices smooth was readily determined by freezing mixtures containing 15, 25 and 33 per cent sugar, with and without gelatine. An increase in the sugar content always resulted in a smoother product.

Why does sugar make ice cream smooth? A study of super-cooling during the freezing process showed that although sugar induced super-cooling the rapid agitation and short period of freezing reduced this phenomenon to such an extent that it could not account for the effect on texture. Likewise the effect of sugar on the initial freezing point is of minor consequence because a varia-

The BEST Vanilla Sells the MOST Ice Cream

Put the public's palate on your payroll!

Capture the public's appetite, and your fortune is made. Win favor through flavor. It is a cold fact that

MICHAEL'S Mexican Vanilla Powder

"America's Flavorite"

increases sales on an average of 25%. There is no mystery about it. People simply eat more ice-cream when it is flavored with this deeply delicious, mellow-mild Mexican Vanilla. Certainly, it costs a trifle more. But it more than pays its way with larger sales. You can prove this without a penny's risk!

DAVID MICHAEL & CO., Inc.
Front and Master Sts. Philadelphia, Pa.

Make This Test at Our Expense

Place a trial order. Use all you can to give it a full, fair trial. If MICHAEL'S Mexican Vanilla Powder does not produce the finest vanilla ice-cream you ever tasted, return the remainder at our expense, and we will cancel the charge. DO this, by all means.

tion of 15 per cent in the sugar content of water ices affected the freezing point only 2.7 degrees F.

It was observed that when frozen water ices containing 15 and 30 per cent sugar without gelatine were placed in the hardening room, a concentrated sugar sirup could be drained out of the water ices several days later. The greater the sugar content, the greater the quantity of unfrozen sirup. Determinations of the quantity of ice in these water ices showed that when the percentage of sugar was increased in water ices a smaller percentage of the water actually froze. If sugar reduces the quantity of ice formed in ice cream, the product with increased percentages of sugar must be smoother for this reason. The water in the water ices froze out until a super-saturated sugar solution was produced that had a freezing point below the temperature of the hardening room.

The Effect of Gelatine.

The dairy literature contains many references to theoretical considerations of the effect of gelatine in ice cream which imparts smoothness to the product. It has been assumed that since gelatine is an excellent protective colloid it must make ice cream smoother by this property. I have not been able to find any published investigation which has given this theory special attention. The value of any substance as a protective colloid has always been measured by its effect on colloidal gold and the value obtained has been designated as the "gold number." Gelatine has been found to be equal to or twice as valuable as casein in protecting colloidal gold from precipitation. Casein being present in ice cream in much larger quantities than gelatine must have a greater total protective colloid action than gelatine and the protective colloid theory seems rather dubious.

The property of gelatine to form a jell might be related to the effect of gelatine on the texture of ice cream providing it is possible to show that gelatine forms a jell in ice cream and that the effect of gelatine in ice cream is dependent upon the jell formation. The freezing point of water was lowered sufficiently by glycerine to prevent freezing in the hardening room without noticeably affecting the properties of the gelatine when dissolved in the mixture. In commercial ice cream 0.5 per cent gelatine is dissolved in a mixture containing 70 per cent or less of water and the gelatine concentration in water is 0.7 per cent or more. At 0 degrees F. in 24 hours a 0.7 per cent gelatine solution formed a very soft, yet distinctly recognizable jell. Some grades of gelatine formed a jell at 35 degrees F. in a concentration of 0.7 per cent. Gelatine must, therefore, form a jell in ice cream during or immediately following the freezing process.

Water ices were prepared containing 25 per cent sugar and 0.4 and 0.8 per cent gelatine, calculated on the basis of the water in the mixture. The water ice with only 0.4 per cent gelatine could not form a jell in the hardening room, but the one with 0.8 per cent gelatine began to gelatinize in the freezer and formed a complete jell in the hardening room. Another series of water ices were prepared containing 25 per cent sugar and 0.4, 0.8 and 1.6 per cent casein. On the basis of gold numbers the gelatine and casein water ices were exactly comparable so that the smoothness of the duplicates should have been the same unless the presence of a jell materially affected smoothness. The results in every instance showed casein to be equal to gelatine in making water ices smooth when the concentrations were low, but when the concentration of gelatine was sufficient to form a jell in the hardening room, casein was very inferior to gelatine. The action of gelatine in ice cream is dependent, primarily, upon jell formation.

Granting the accuracy of this conclusion, it should be possible to predict the effect of gelatine in water ices by a knowledge of the jellying power of gelatine. Ten grades of gelatine furnished by four gelatine manufacturers were tested for jellying power as follows: A series of gelatine solutions varying from 0.7 to 1.3 per cent were prepared with 0.1 per cent variations between samples. The solutions were stored at 35 degrees F. for 24 hours. The lowest percentage of gelatine required to form a very soft, yet completely formed jell was determined by gently tilting the bottles containing the samples. The samples of gelatine required from 0.7 to 1.3 per cent to form a jell as described. These samples of gelatine when used in water ices to the extent of 0.8 per cent affected the smoothness in direct relation to the jelly tests. Similarly it was possible to calculate the amount of any grade of gelatine required to make the water ices the same smoothness regardless of the jellying power of the gelatine with the exception of the two lowest grades.

The results of this portion of the investigation clearly indicated that the simple method of grading gelatine by the lowest percentage required to form a jell under specified conditions should prove helpful to ice cream manufacturers in selecting the better grades of gelatine. It is my opinion that all of the gelatine used in this work was good to excellent in quality and that none of it was really poor. Another observation of practical value was the fact that water ices with sufficient gelatine and sugar could be made very smooth and any desired overrun up to 100 per cent could be readily obtained. The percentage of gelatine that was used to make a

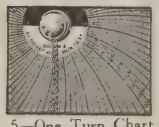
The FACTS *in the* CASE



1—Pen Pressure and Position Adjustments

2—Fountain Pen Point

3—Fixed Pivot

4—One Size Chart

5—One Turn Chart Holder

6—Improved Case

Inside the case you will find the reason for the extraordinary ruggedness and accuracy of TAG Recorders. By reason of a patented cam arrangement, the TAG is the ONLY Recorder with uniform chart graduations for ALL ranges. A special seasoning process prevents "setting" of the spiral spring. The development of a single-piece welded bulb and of a capillary tube of exceptionally fine bore are other TAG achievements. The following distinctive structural features also contribute to TAG superiority.

1—Pen pressure adjustment and pen position adjustment, the latter providing an exact and convenient means for correcting accidental bending of pen arm.

2—Fountain pen point writes a clean sharp record line and requires less frequent filling. The non-corrodible pen arm is inverted so that ink cannot run down into operating mechanism.

3—Accuracy of time indications is assured by mounting pen arm on a FIXED pivot so that pen point will always follow radial lines of chart (with clock stopped). Positive pen-arm stops, specially designed clock, convenient clock starter-lever are other features.

4—By standardizing on one best size of chart, manufacturing costs have been reduced making possible unusual refinement of construction at the usual price.

5—Improved chart holder, secured to case by light chain, is attached and removed with a single turn. Charts are printed in green ink on specially seasoned high quality ledger paper.

6—Improved case construction incorporating moisture-proof feature, if desired.

TAG DIAL-INDICATING Thermometers embody the same improved construction and operate according to the same reliable principles as TAG Recorders. The exceptionally easy reading dial is a feature.

water ice very smooth was calculated on the basis of the water alone and was the same as that required to just form a distinct jell in water at 35 degrees F. after 24 hours standing. For water ices of coarser texture the percentage of gelatine was reduced 0.1 or 0.2 per cent or the percentage of sugar was decreased below 30 per cent.

The Effect of Milk Fat.

The effect of milk solids in preventing ice crystal growth was studied in three ways: First, the effect of fat in water ices; secondly, the effect of milk solids not fat in water ices, and lastly, their combined effect in ice cream. It was readily determined that a smooth frozen product could be made from unsalted butter, sugar, and water, if they were homogenized together in the proportions of 30 per cent fat, and 13 per cent sugar. When 0.5 per cent gelatine was added the body resembled that of normal ice cream very closely. Since the solids not fat in this product did not exceed 0.3 per cent in the finished product they can be considered of minor importance. Milk fat has no chemical effect in sugar solutions by which the smoothening property could be explained. The probable explanation of the effect of fat alone in water ices is that the fat globules which were so hard and close together, mechanically interfered with the growth of large ice crystals.

The Effect of Milk Solids not Fat.

Water ices were made containing 30 per cent milk solids not fat and 10 per cent cane sugar. When these mixtures were drawn from the freezer they were exceedingly smooth and buttery in consistency. It was very surprising to find that after hardening these mixtures became very coarse in texture. Even with gelatine and extra sugar these mixtures were much coarser than normal ice cream, a result which was very different from that obtained with fat in sugar solutions. The solids not fat from milk, homogenized or unhomogenized, when frozen without fat had very little effect upon the smoothness of the water ices. It should not be forgotten that in normal increases the proteins stabilize the fat emulsion and the incorporated air during the whipping, so that their presence in proper quantities is fundamental even though they alone do not materially affect texture.

The Combined Effect of the Milk Solids.

The fact that ice cream of fine texture can be made from mixtures containing 18 to 24 per cent of total milk solids combined in proper proportions, whereas, it required 30 per cent of fat alone to make a smooth texture and 30 per cent of milk solids not fat alone did not make a smooth product, it appeared that the fat and solids not fat work together to improve the texture of ice cream. A correct balance of the milk constituents seemed to be more essential than the total quantity of either. Furthermore, although homogenization greatly affected the texture of ice cream it had no noticeable effect upon the texture of products which did not contain both fat and milk solids not fat.

A clue to the probable combined action of the milk solids was noted in the preparation of slides or microscopic examination of the air cells in fresh ice cream. Ice cream made from unhomogenized mixes spread evenly like a heavy paste, but ice cream from homogenized mixes often cracked and rolled like dry window putty. Observations were made to learn if the dryness of the homogenized ice cream could be detected by taste, with the result that the difference between the two products was readily distinguishable by this method. Data to establish the exact effect of homogenization on

Dunn's Gelatine

THE ICE CREAM REVIEW COVERS AMERICA LIKE THE DEW.

the condition of the ice cream constituents including water, is very difficult to obtain and I can present to you only theoretical considerations based on circumstantial evidence.

When ice cream mixtures were homogenized the fat globules were reduced in size and the extent of the exposed fat surfaces was greatly increased. The quantity of protein absorbed on the fat surfaces was also greatly increased. Using these two facts as the basis for an hypothesis, I have reasoned that some water must be held between the surfaces of the round fat globules and the round protein particles that cover them. When homogenization increased the proportion of protein that was on the fat it also increased the water mechanically held or occluded on the fat by the protein. Numerous efforts were made to gather evidence to establish this theory, but only one method of attack gave any results. If a colloid is added to an ice cream mixture containing occluded water the collidal particles are too large to reach the occluded water and would not be dissolved by it. Therefore, the concentration of the colloid in the free water would be greater than it should normally be.

A certain brand of gelatine in a concentration of 0.9 per cent formed a distinct soft jell in water at 35 degrees F. when held undisturbed for 24 hours. When this same brand of gelatine was added to an unhomogenized ice cream mixture only 0.7 per cent gelatine, calculated upon a water basis, was required to form a jell. After homogenization the same ice cream mixture required only 0.5 per cent gelatine to form a jell. The theory of occluded water would explain these results. If this theory is correct and if gelatine and milk proteins have the same absorptive powers on fat surfaces then the order of adding the ingredients should affect the concentration of gelatine in the water of ice cream mixes. It was found that if pure milk fat was homogenized in a gelatine solution so that the gelatine became dissolved in all the water before the homogenized milk solids not fat were added, a weaker jelley was formed than when the gelatine was added after the fat and milk solids not fat had been homogenized together. This evidence again tended to show that some water was occluded by fat and proteins in a manner that prevented a colloid subsequently added from being dissolved in it. Occluded water must be finely divided and when it froze the ice crystals formed were so small that they were not detected when eaten, and the product was said to be of a fine texture or smooth.

A complete report of this work will be published in bulletin form and distributed from the Geneva station in about two months.

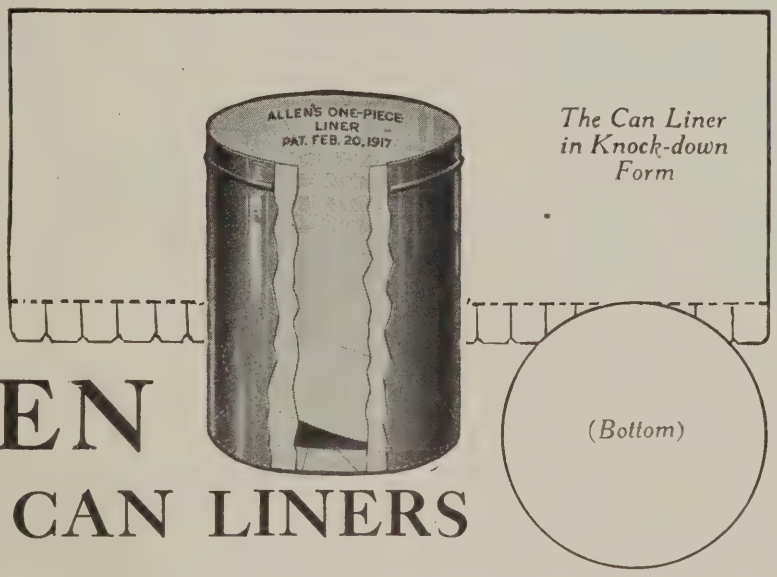
WHAT is the matter with the ice cream business? Professor W. W. Fiske of Cornell University at Ithaca told the delegates in a few plain simple words just what he thought is wrong in the ice cream industry. He recalled, in the beginning of his talk, conventions held years ago, when he first began to look upon such old timers as Ed Sutton, Ed Lewis, and Al Hoefler with respect, considering them geniuses, and believing they knew all about the ice cream industry. He supposed they at that time considered him a sort of "upstart." He has now come to the conclusion that no one knew much about the ice cream business in those days, and have a lot to learn now.

The average ice cream man seems to be tired with so many suggestions to improve the quality of ice cream. There are so many methods of improvement offered that the average ice cream manufacturer, were he to try them all, would not have time to make any ice cream.

Professor Fiske advocated a clearing house for the dissemination of information in most concise form. He made the suggestion that the national association issue bulletins monthly, placing before the ice cream manufacturer, in the briefest possible form, new ideas that will enable him to produce a better quality product, cut costs, render better service, etc.

He cautioned ice cream men to remember in the processing of their mixes that the greater the acidity of the mix, the less is the viscosity, in other words, the sweeter the mix, the better will be the ice cream, and the more uniform the overrun will be. It was intimated that the occasional sour tasting ice cream may be due to the belief of many ice cream manufacturers that the acid must be developed in the mix to a high degree in order to obtain viscosity and uniform satisfactory overrun.

The consumer, he believes, is going to take a keener interest in the production of ice cream. He is going to make the ice cream manufacturer live up to certain requirements, governing the amount of swell, fat, solids, etc.



With remarks on the merchandising of ice cream, the ice cream manufacturer at this session swallowed his bitterest pill. He was told how the ice cream business started, with a small plant or two in the city, delivering to a few retailers nearby. Then shipments were made by express, the motor truck followed, and in the meantime, the city business was maintained regardless of cost by furnishing dealers with soda fountains, cabinets, advertising signs, free ice and salt, and a lot of other things more or less necessary. Cash discounts and gallonage discounts followed with equally heavy losses to the industry.

On the refrigerated cabinet question, Professor Fiske stated he believed the ice cream men would put in ice-

Safest, Sanest, Most Sanitary!

The Allen One Piece Sanitary Can Lining enables you to use your old ice cream cans with perfect propriety. Absolutely the safest and most sanitary way to put up your cream. In it the food cannot possibly touch any metal. Linings in stock to fit any size cans. And just see how simple these protectors are. Note the illustration.

Linings of best paraffined paper are easy to put into cans, and ice cream can be taken out more readily when they are used.

Give patrons tangible proof you wish to protect them. Packing ice cream directly into discolored and rusty tins will not do it.

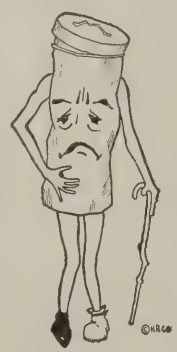
less cabinets unless they do what they say they will do. But they don't. They go to conventions, make a lot of good resolutions, promise this and that, and go right home and do what they say they wouldn't do. The ice cream manufacturer, he believes, is too willing to give away good money, or its equivalent, for business that returns a questionable profit.

Another angle to the iceless cabinet question which the professor brought out was the possibility of the dealer installing a freezer and making his own ice cream. With a good refrigerated cabinet, he has a miniature hardening room, just about as efficient as in the most modern ice cream plant. The next step he fears will be the installation of freezers in the dealers' windows with the big cabinets to take care of the product.

The practice of sending out expensive trucks to deliver a few gallons of ice cream here and there received its full share of the criticism.

MR. C. H. KIMBERLY of the Dairy Laboratories, Philadelphia, New York and Baltimore, spoke on the food value of ice cream, reviewing investigational work done by Dr. McCollum, Dr. Weis and others on the food value of milk and its bearing on the food value of products made from milk. Dr. Kimberly observed that the ice cream industry has developed for a century, but only during the last few years has the food value of it been brought out in ice cream advertising, and very feebly at that. Dr. Kimberly's address will be published in full in a later issue.

A VERY instructive and interesting talk on the growing and handling of vanilla beans was given by Robert Rosenbaum of David Michael & Co. of Philadelphia. Moving pictures illustrating methods employed by the native Mexicans in developing the finest quality vanilla beans were shown in connection with this address. A complete report of it will be published later.



In his address on "Our National Association" Thursday morning, Vernon F. Hovey of Schenectady, president of the national association, outlined briefly the benefits derived by the association of those engaged in industry. He stated, in substance, that the association is the only agency that can successfully promote co-operation. This has been proven true in other industries, and the ice cream industry is no different. Co-operation is brought about largely through contact with each other, and the opportunity thus offered to meet each other at the conventions.

"I do not believe," he said, "that there is any one thing the matter with the ice cream industry more than greed on the part of its members, and this is also true in many other industries. There is always a disposition to get out and get extra gallonage, some part of which is unprofitable. Branch plants are established in localities where there is a present capacity to produce as much as a hundred per cent more ice cream than the people demand. Stepping on toes of competitors has resulted in practices that are not at all profitable. We owe it to ourselves, the public and our stockholders to consider carefully whether proposed expansions will be profitable or unprofitable, and whether they are fully justified.

"Supply men have encouraged the building of new ice cream plants, induced newcomers to enter the business and build factories where the field was already overcrowded. Such practices are excusable when they get their money, for they cannot be criticised for creating all the business they possibly can, but the supply men cannot be excused when they finance the building of an ice cream plant and expect their returns out of the profits that may or may not be created. Supply houses show little judgment when they encourage the building of new plants where they are not needed, and we need a farther sighted vision on the part of the machinery men. The National Association of Ice Cream Manufacturers is working very closely with the Association of Ice Cream Supply Men, and I believe that some influence can be brought to bear, whereby capacity will not be increased in a territory where there is already sufficient capacity to supply demands 100 per cent greater than they are at the present time.

"The national association has done some protective work, part of which was on express rates. A request has been made of the Interstate Commerce Commission to have the billing weight reduced to 100 pounds on five-gallon shipments. The Interstate Commerce Commission sent out inspectors to determine the actual

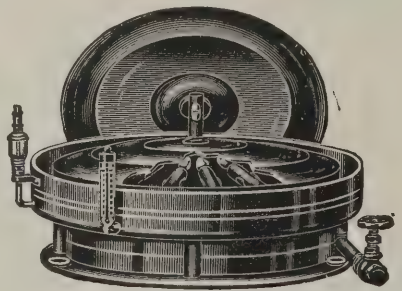
weight. The association sent questionnaires to members, but so few replies were received that the commission believes the apparent lack of interest on the part of the ice cream manufacturer indicates a reduction is not justified at this time. I believe the reduction would have been obtained if the association had had the support of the members. If service is expected from any association the members must contribute some measure of support. We will have another hearing in the next few weeks, and I believe the members who fail to answer questionnaires are to blame if we are not successful.

"Then there is the ice cream standard as proposed by the joint committee on definitions and standards. A 12 per cent fat standard is wanted because it seems to be a public preference, but it would be a mighty poor policy to fix a minimum standard of 12 per cent, when 75 per cent of the ice cream is made in states having a minimum standard of eight per cent or less. It is a notable fact that the per capita consumption of ice cream in states having an eight per cent standard is 2½ to 4½ gallons, and in states having 12 per cent standard or higher, the per capita consumption is only three-fourths of a gallon. In this standard proposition, we seem to have the opposition of the butter men. They want a high standard for ice cream because they consider the ice cream industry a good outlet for butterfat. Professor MacKay of the American Association of Creamery Butter Manufacturers says, we cannot say that butterfat is not a good, essential ingredient in ice cream. We don't say that. We admit that to a certain degree butterfat is necessary, and I wonder what Prof. MacKay would say to our suggestion that he exclude milk from his children's diet, and give them butter instead.

"I believe the failure of the South to develop the same per capita consumption of ice cream as has been developed in the North is not entirely due to lack of education of a part of the South's population. I believe the warm climate creates a reaction against rich foods. When people go North they want rich foods. It is known that people living in the Arctic regions relish fats and oils. In the South, on the other hand, they are consuming enormous quantities of soft drinks. The hot climate is responsible for the demand for liquid refreshments. I believe the more richness that is put into ice cream in the South, the lower will be the per capita consumption. Practically all of the best nutrition experts in the United States have endorsed an eight per cent standard for ice cream. Professor Fiske of the New York Life Extension Society recently said the health of many business men has been impaired not only by lack of proper exercise, but by the eating of over rich foods.

"As to the proposed weight standard, there is not necessarily any relationship between weight and value. An ice cream high in fat and solids, and with 100 per cent overrun or more, has a higher food value than ice cream with low fat and solids, and less overrun, with a consequent greater weight.



"Although there was so much discussion of the refrigerated cabinet, those in charge of the program at the new Orleans convention believed there must still be some interest in the ice and salt cabinet. We wanted to determine whether or not it is possible that an ice and salt cabinet could be built that would keep ice cream 48 hours. If such a cabinet can be developed, it will effect an enormous saving for the ice cream industry. The saving will not be only in ice and salt, but in the time required for icing, delivery, number of trucks required, efficiency of delivery equipment. We have asked Mr. List of Newark, to conduct an investigation on this, and the results obtained demonstrate there is a difference of 50 per cent or more in the efficiency of cabinets. These cabinet manufacturers know their cabinets are under test, and if we don't accomplish anything more, we do know that those cabinet men are going to make better cabinets.

"One of the speakers at the New Orleans convention said, there is a law against carrying dangerous weapons; there is a law to take care of the fellow guilty of reckless driving, but there is a fellow more dangerous to business than the wielder of the weapon or the reckless driver, whom the law cannot touch. He is the reckless business man, who has no system of accounting, knows nothing of his costs, and apparently cares less. The national association is now trying to formulate a system of accounting that will tell what costs in various departments are, and provide some means for determining what they should be. We want a system that will be

"VALUE"

The value of a dairy cleaner depends upon the nature and quality of the service it performs.

Creameries, dairies and cheese factories demand the highest degree of safe, wholesome, sanitary cleanliness because the products they handle are the easiest foods to contaminate, and therefore require the most careful handling.

This need for dairy sanitation is being adequately met in thousands of dairy plants by the use of

Wyandotte
Dairyman's
Cleaner and Cleanser

Indian in Circle

a cleaner that for over eighteen years has performed a distinctive service to the dairy industry.

Every day the unvarying quality and dependability of Wyandotte Dairyman's Cleaner and Cleanser is greatly assisting the production of vast quantities of milk products of uniform high quality, and this valuable service is performed at no increase of cleaning cost.

An order on your supply house will bring this service to your use.

It Cleans Clean

The J. B. Ford Company *Sole Manufacturers* Wyandotte, Michigan

simple, yet complete, and which will be as valuable for the small ice cream manufacturer as the large. We want to know what the cost of all the different operations are. In the paper industry, for instance, a system has been developed that is very satisfactory, and the paper people have gone so far as to have an accounting bureau to study cost sheets. When costs in a department appear to be excessive, a study of methods is made and a means for bringing the costs in that department down is devised. The ice cream manufacturer must determine his costs and bring them down to the lowest point to render a greater service to the public. I hope the ice cream manufacturers will take an active interest in the work of the accounting committee of the association.

"As I see the ice cream industry, I do not believe it is making any progress. It is practically at a standstill. I believe if we can teach the public the food value of ice cream, it will eat more of it, and that very little progress will be made toward this end except through the national association. Ice cream men have been guilty of doing the rankest sort of advertising. Food value of milk, the principal constituent of ice cream, seems to be forgotten entirely in ice cream advertising. The consumption of milk has been increased to a great extent by advertising it as a food; it is now commonly known that milk is a good food, and I believe that little progress will be made in the ice cream industry until the public has been told to buy ice cream because it is a good food."

UPON conclusion of Mr. Hovey's address, National Advertising was discussed by K. W. Snell of Malone, who stressed the value of the national slogan, and pledged the support of his company to the campaign. Mr. Gentleman of the Gardner Advertising Company of Chicago, illustrated his talk with samples of the advertising of the citrus growers, walnut growers, pineapple, orange, and the walnut and mahogany associations, and explained what results the ice cream manufacturers might expect from a similar campaign, and why it would be conducted. Members of the advertising committee of the association, Mr. Schwindeler, chairman, and Mr. Kenison, also spoke. Mr. Schwindeler has attended many of the state conventions enlisting the support of their members. Iowa is behind the movement with 80 per cent of the gallonage of that state, and Secretary Crowley has promised 90 per cent before his work is completed. Kansas is 75 per cent for national advertising; Arkansas, 90 per cent; Texas and Oklahoma, 100 per cent.

The electric truck was given an unqualified endorsement in the address of Edward J. Sheridan, in charge of transportation for the Hoefler Ice Cream Co. A resume of his talk will be published elsewhere in this issue.

FOLLOWING Mr. Sheridan, W. A. Dart of the Lake Shore Ice Cream Co., Erie, Pa., spoke as follows, regarding his experience with dry pack shipping containers:

"We have used the jackets for shipping ice cream for six or seven years, possibly eight. We have never used anything else, and we have used these jackets on shipping customers that it takes six or seven hours to arrive at destination. We also use them in town. On interstate shipments there is a 25 per cent allowance on the express. The express on a tub is 115 pounds, and in what is known as the first zone it is 84 cents. That jacket of ice cream, 5 gallons, would go for 44 cents. If you shipped two it would go for 67 cents. If you

GLASCOTE

Type "J" Tank

The "Glascote Type 'J' Tank" has proven its worth in all operations as a pasteurizing unit, its proportions, heating efficiency, agitation and dependency has made it an extremely popular piece of equipment especially where 500 gallons or less are to be handled. The modern readily cleansed spray coil and the scientific jacket construction not only insure a most positive cooling operation but present the ideal conditions for holding.

In purchasing Glass Lined Tanks for Pasteurizing, see that the proper spray coil for checking the heat at the fixed temperature you wish for your pasteurizing standard has been incorporated. Without this proper spray coil you cannot arrive at the definite temperature which is essential to keep and preserve your cream line. This is done perfectly in "Glascote Type 'J' Tanks."

How Are You Doing Your Tying?

Others have found that hand tying always means a big loss of time and money—to say nothing of waste string which Machine Tying Saves.

The "Saxmayer" Bundle Tyer is entirely successful with your kind of work because it is

Simple
Fool Proof
Requires no experience to operate
Ties as fast as any operator can pass the packages across the platform.

Many of the best equipped plants in the country are tying with Saxmayers.

It will cost you nothing to give one a Free Trial —Ten Days—No Obligation.

The National Bundle Tyer Co.
Blissfield, Mich.

shipped three it would go for 97 cents. And in the second zone it is $1.08 for a tub, one jacket 56 cents, two jackets 85 cents and three jackets $1.24. In what is known as the third zone the tub would cost $1.26, one jacket 67 cents, two jackets $1.08 and three jackets $1.58.

The American Express Company have a bulk tariff rate where the more jackets you ship the cheaper the cost per jacket. Of course, that is a big saving to our shipping customers as we do not pay the express.

We have had some difficulty, of course, with the ice cream. In the summer time we bring our hardening rooms down to at least 15 below, and then this last summer we got to wrapping them with paper and shipping. Another good stunt is to turn the can upside down, putting the lid down. Then when they take it out it slips out easier. Whether that saves any shortage or shrinkage I do not know, but we got a little better result that way. I believe we were the first ones to use jackets, and while they have not been used by a great many shippers, this last year they were. We are paying 15 cents for return empties on a jacket and a can. It is 16 cents on a tub. As soon as more of you people use jackets, I believe, we should get to work and reduce this return express.

In regard to the saving of ice and salt on tubs, there is not a tremendous saving, but there has worked in our territory an allowance that some of our competitors are giving, and they are giving too much. So that if you do not start using jackets, do not let your customers work you into giving an allowance, or if you do not make it too big. We have been making an allowance in our territory for a jacket shipment of 25 cents, which is wrong, but we are forced to it.

I might add that we have made a dozen brick caves. We have taken a brick cave and lined it with cork, and then put another brick cave around it and put a cap on that, and are using that some in shipping bricks. You save considerable in that way. They go for about 55 pounds and the bricks arrive in nice shape without salt or brine in them. I know that Montgomery-Washington are putting out a brick cave jacket. That we have not used. We have used our regular round jackets by putting a 16 or 12-quart cave in the jacket and ship the bricks that way. But on the whole, the jackets have worked fine with us and we like them.

Service Charges

By L. M. McGINLEY, Schenectady, N. Y., at Buffalo Convention, Jan. 7, 8, 1925

BUSINESS executives from all sections of the United States will meet in Washington on Jan. 14 and 15 of this year, under the auspices of the United States Chamber of Commerce in a convention to devise plans to cut down distribution costs. These business executives will represent retail, wholesale and manufacturing establishments.

The call to this national conference has resulted from a survey by investigators who have found that nearly 50 per cent of the cost of commodities is traceable to the cost of distribution.

The purpose of this conference will be to discuss methods by which expenses in this field may be reduced. Periods of high prices bring about an insistant demand on the part of the public as to why the cost of articles should be double or even treble between producer and consumer. Some economists estimate that 60 per cent of the energy of mankind is expended in moving goods.

We are all pretty well satisfied with our present policy of operation, up to the point our product leaves the platform, but from there on we seem to develop ills, These ills certainly need correction, if we wish to merit the public's confidence, that we are conducting our business in economical and efficient manner. A consideration of the cost of our product to us at our platform, ready for delivery, and the cost to the consumer, should drive home to our manufacturers the thought that we are asking the public to pay for either our lack of knowledge in the economical fundamentals of efficient operation, or for the lack of sufficient confidence in our convictions to put them in operation.

A charge for service as pertaining to the ice cream manufacturers was once referred to as a fundamental change of policy. After actual observation and experience, the manufacturers of Schenectady are of a very firm opinion that a charge for service similar to the one in operation in Schenectady is fundamentally sound.

A brief synopsis of the service charge to the Schenectady dealers is as follows:

On April 1, 1923, we instituted a charge for service of $1.25 per cabinet hole per week, for the period from April 1 until October 1, and for the other six months a charge of 75 cents per week per cabinet hole. At the time the service charge was introduced we lowered the price of ice cream to the dealer twenty cents per gallon. From its inception we have not in any way changed the original plan.

There are, of course, many important factors which any progressive manufacturer should consider very carefully before making any changes and with that

SOLVED!

The Pioneer Manufacturers of ICE CREAM CABINETS Now Present the Solution of Your Most Trying Problem

"TRAY-PACK"

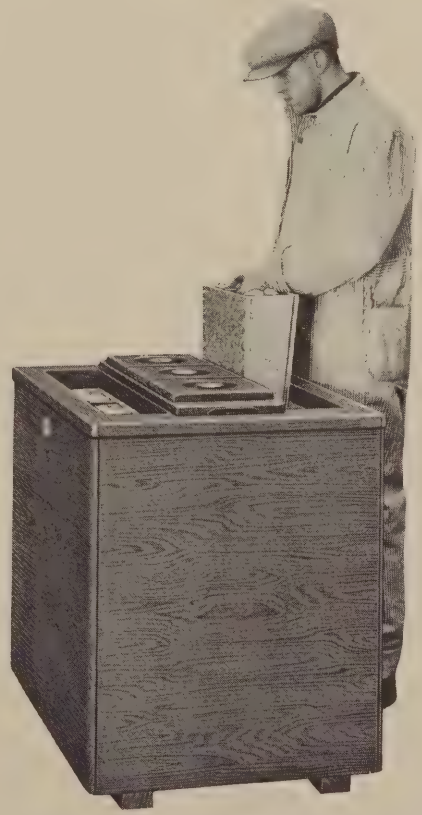
The 100% DRY-PACK Cabinet

(PATENT PENDING)

TRAY-PACK with its absolutely new and exclusive system of packing marks the greatest advance that has ever been made in ice cream cabinet construction.

TRAY-PACK eliminates the big objection to ALL other iced cabinets — the disagreeable mess and clutter of packing. With TRAY-PACK all packing is done at the delivery truck in the street. Even the brine is disposed of away from the fountain. TRAY-PACK does away with the old troublesome faucet. THINK WHAT THIS FEATURE will mean to your trade.

But that isn't all! READ THIS: BY ACTUAL TESTS made with standard recording instruments and covering a long



PRICES REASONABLE

period, TRAY-PACK conclusively demonstrated its improved refrigerating qualities. TRAY-PACK maintains uniform consistency of ice cream (whether can is full or one-quarter full) WITH LESS ICE than any other cabinet made.

In all other details of construction these cabinets are up to the high standards of quality which for over a quarter of a century have made Grand Rapids Ice Cream Cabinets leaders in the field.

Pay-load protection—

from a roof sun-heat can't penetrate

Your entire pay-load stays at the exact temperature desired under the superb roof of an ABC Refrigerator Truck Body. Blistering summer heat can't slip past that splendidly insulated protector—even in a driving rainstorm, not a drop of water can get thru. Moisture-proof, plug-type hatches fit snug and tight, and are insulated to give the same positive protection as the roof itself.

This means perfect refrigeration regardless of outside temperature or weather conditions. It means that the added weight of a water-soaked body is eliminated. It means that delivery costs are cut to the lowest possible level—*and kept there!*

Every part of the ABC Body matches the excellence of its roof. All the good, cold brine is retained in a seamless brine tank and circulated over and over again. Brine drip, the cause of rust on truck chassis, is eliminated, and the useful life of the chassis itself prolonged. This seamless brine tank is an exclusive ABC feature.

ABC Refrigerator Truck Bodies are adaptable to any type or size truck from 1-ton to 7-ton capacity.

ABC Refrigerator Motor Truck Bodies and Wagons

ANHEUSER-BUSCH, *Builders,* ST. LOUIS, U. S. A.

MODERN PLANT COMPLETED IN ST. LOUIS.

The new ice cream plant of the City Dairies Co., 4200 Laclede Avenue, has been completed. The building, which cost $100,000, is constructed of reinforced concrete and is located on a lot 100 by 100 feet. It is two stories high. Hellmuth & Hellmuth, architects, designed the building which was erected by the Gamble Construction Co.

The capacity of the plant is 2,000,000 gallons of ice cream yearly. The hardening room capacity is 18,500 gallons. There is 19,000 feet of ammonia expansion coils in the hardening room. The salt bin in the building has a capacity of four carloads.

The new plant is one of seven operated by the City Dairies Co. Other plants are located in Ohio and Indiana. The first factory was opened five years ago.

A garage which adjoins the main building has a frontage of 90 by 60 feet. W. L. Jones of Fort Wayne, Ind., is president of the company, J. M. Antrim of Indianapolis, vice-president, and P. Holly of St. Louis, secretary-treasurer.

BREYER ICE CREAM CO. PLANNING ANOTHER MAMMOTH STRUCTURE.

When the Breyer Ice Cream Co. completed its splendid new plant in Philadelphia early in 1924, thereby tripling its production capacity in that city, it was believed at that time that this plant would be sufficient properly to care for the requirements of all the distribution stations for many years to come. Now comes announcement of that company's plans to erect another model plant in New York better to serve its customers in that section. The company's steady increase in business in the state of New York pointed out the advisability of establishing a third large plant. The Breyer Ice Cream Co., one of the biggest producers of ice cream in the world, has purchased the newly-constructed four-story concrete building on Queens Boulevard and Moore St., Long Island City, N. Y., from the Ridley Candy Co., and has also purchased the plot of land adjacent to the new building, thus acquiring ownership of the entire block. On this plot will be constructed a mammoth plant to give additional manufacturing facilities to the Breyer company, it is reported.

The Breyer Ice Cream Co. operates two plants in Philadelphia, having sales and service stations in main centers reaching from New York to Washington, D. C., and reports have it that the company serves the people of seven states with its product.

You'll make better ice cream if you subscribe for "The Ice Cream Review." It is a standard authority.

SERVICE CHARGES.

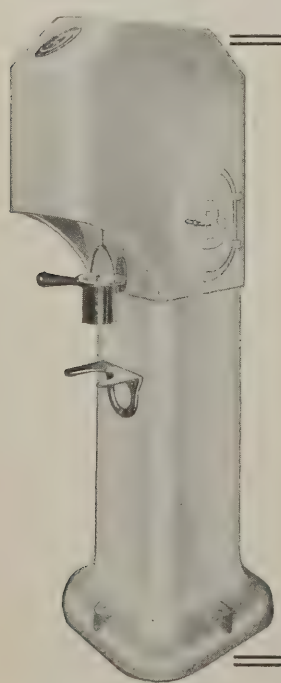
(Continued from page 100)

thought in mind I asked the other manufacturers of Schenectady the following questions and from their answers find that their opinions and experiences were identical with ours.

Let us consider just what effect the service charge has had upon:

First, the Consumption of Ice Cream. We find that the service charge has had no apparent effect upon the consumption of ice cream, and we believe that the sale of ice cream would have been neither more nor less had there been no service charge in effect.

Second, Elimination of Dealers. Placing a product as convenient as possible before the consuming public certainly has had a great deal to do with the increase in the amount of our sales during the past few years, and we should feel satisfied with a policy that places our product convenient for nearly every purchaser. But when we find two or three dealers convenient to every purchaser then we must admit we have developed an ill that certainly needs correction. Any one of you can recall when there was but one dealer in a certain territory and today, in the same territory, we find four or five dealers. But when you analyze your sales for that particular territory you will find your sales have not increased proportionately with the number of new dealers. We find that the service charge has had the effect of limiting the new dealers so that the proportion of sales to the increase in dealers has been kept rational and economical. The service charge has never failed to give us as complete a distribution as we desire.



Third, Cabinet Space. When we curtail cabinet space we eliminate ice, salt, cabinets and time for packing, which means that a driver will be able to take care of more customers during a specified time. Our experience, based upon record, shows we have enjoyed a saving in cabinet space of 30 to 40 per cent. From a standpoint of economical operation this factor of saving is of great importance, and the elimination of cabinet space in our dealer's store has resulted in what we believe is a more favorable condition, namely, that we are selling more ice cream per cabinet hole, which assures our product of reaching the consumer in a fresher and more favorable condition, thereby holding its original flavor, than we can expect when our product is permitted to stay in the cabinet for a long time because a dealer is handling more flavors than he should. Let us disregard all other advantages of a service charge. The sole fact that we are obtaining a quick turn-over of our product in the cabinet holes is giving us a very satisfactory method in merchandising ice cream properly. Another very great advantage of a service charge is that the dealer does not add extra flavors earlier in the spring than is desirable, and it has a very decided effect upon his reducing cabinet space in the fall.

I have here a chart (see table below) showing number of cabinet holes serviced by our company, on one route, on June 1, 1922, before a service charge of 75 cents per cabinet hole was introduced, and the number of holes used in 1923, after the service charge was effective. You will note a reduction in nearly every case, and some that were not profitable were discontinued entirely. Although the total number of holes serviced was reduced from 140 to 90, and the number of stops reduced from 38 to 31, a greater amount of ice cream was sold on this route in 1923 than in 1922. This route is not cited because it is exceptional in any way. It is just an average route picked at random.

Cabinet Space History for 1923.

No. of customers	No. of cabinet holes packed 1922	1923

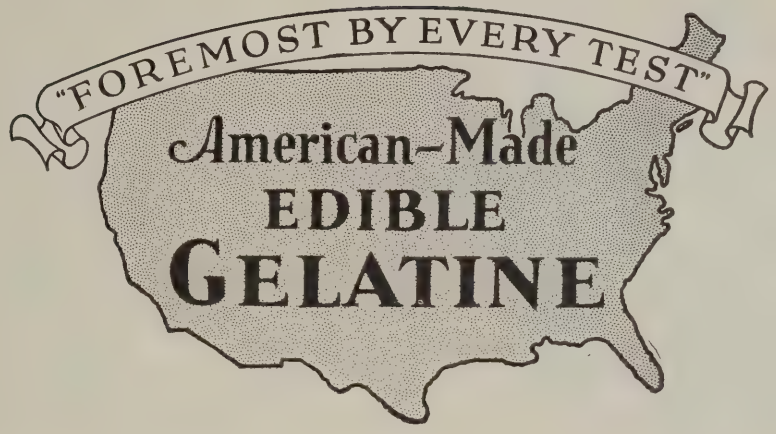
Sommers Ice Cream Over-run Tester

Simple in Construction—Quick Acting and Accurate

SMOOTH, SIMPLE CUP IS USED.

No loose weights or adjustment on Cup necessary.

Adjustments for variation in specific gravity of the mix are easily made on the Tester itself.



The Cup hanger is easily accessible.

The reading is always made at one place, right under your eye as you stand in front of the Tester and tilt your head slightly forward.

Damrow Brothers Company, Fond du Lac, Wis.

Something to Remember

THE pure food laws of the United States are more exacting than those of any other country in the world.

American-made edible gelatine surpasses in cleanliness, purity and quality, the highest standards of the U. S. Government and the U. S. Pharmacoepia.

Now that the stabilizing and health values of our edible gelatine in ice cream and confectionery have been fully established by scientific authorities, the above facts should be remembered by all gelatine users who are proud of their product.

Fourthly, On the Attitude of Dealers. Many manufacturers, including those who consider themselves progressive, have ignored as far as possible the attitude of the dealers and consumers. I believe we shall increase our sales constantly in proportion as we do our utmost to gain the good will of our dealers by helping them solve their problems. With a service charge we have been able to show the larger and worth-while dealers where they can save money. Of course our smaller dealers have not tendered us any rising vote of thanks because of the service charge. But you will find that any dealer will show consideration for the wants of his customers. The small dealer cannot say he is being discriminated against, because our larger dealers pay exactly the same base price and the same service charge per cabinet hole as our small dealers.

Lastly, On Special Delivery. It would not be unusual if such a change of policy possessed some unattractive factors and we have learned from past experience that the service charge has increased our special delivery. But the more recent experienc of our particular company has shown that this condition can be reduced to a minimum. We have found that by doing a great deal of missionary work among our customers and by showing to them in a frank manner that special delivery is an uneconomical operation, and that, if not curtailed, would result in an extra charge for special delivery, we have secured the co-operation of our dealers so that special deliveries are of minor importance with us. We have also instructed our drivers to leave ice cream packed in tubs, whenever it will be needed within a few hours. This increased special delivery is due to the fact that the service charge has encouraged many of our dealers to get along with less cabinet space than they really require.

In making a charge for service I would recommend that it be based upon a weekly charge, and not upon a

Test one

alongside any other cabinet and you will adopt them for regular use.

STOUT

Brine Well Cabinet

It bridges the serious problem between the costly ice and salt system of ordinary cabinets and the tremendous investment required to do away with them completely.

It Saves Money—Uses 30 to 50 percent Less Ice and Salt—carry that much more "cream" in your trucks.

It holds the proper temperature, evenly.

No brine comes in contact with the cans.

No sloppy dripping when removing them.

Holds either Bulk or Brick without changes.

Insulated with three to six inches cork board alternating with three layers of heavy asphaltum paper.

Here's How One Manufacturer Feels About them:

"When we adopt this cabinet exclusively, which we intend doing,we will be able to reduce our load cost materially."

Let Us Tell You All About Them.

STOUT MFG. CO., 610 Sycamore St., Milwaukee, Wis.

daily charge, because with a daily charge there is more or less friction and dissatisfaction when you ask a dealer to pay for service on a day he happens to be closed. It will serve your interests better to have a service charge less than your service costs, because a lower service charge will be more serviceable than a higher service charge if you, as manufacturers, intend to pass along a reduction of price that is any way consistent with a service charge you intend making. You cannot, and should not, expect the enthusiasm and co-operation of your dealers without an adjustment in price fair to them. In arriving at a proper base charge, do so with the utmost thought and consideration, as a proper base price is of the most importance.

The reason for a service charge of $1.25 per cabinet hole, per week, in the summer months and 75 cents per cabinet hole in the winter months is obvious when you consider that about 75 per cent of your business is done between April 1st and October 1st. And, of course, your ice consumption per cabinet hole is much less during the winter months and it would seem that a small service charge during the winter months might retain business when your distribution is none too great.

A charge for service has been tried out in other localities and, I believe, in most cases with little success, due, perhaps, to the fact that the proper fundamentals were never considered and that there may have been lacking the proper co-operation of all manufacturers. In some sections there has been an attempt to charge a certain sum, usually $1.00 per week, for service, regardless of the number of cabinet holes packed, when the dealers take less than a certain number of gallons per week. Under this arrangement the average deoler is not asked to pay for service rendered and the charge is the same whether little or much service is demanded. Where there is no reduction in the price of ice cream the smaller dealer will resent any such charge because he feels he is being discriminated against and, realizing that he is paying for service, he will demand more service than ever before, and because the service charge is so small it is negligible in the amount of money collected. There is nothing to commend the adoption of such a policy because a manufacturer is placing himself in a position that will bring forth a great deal of criticism by the dealer and a manufacturer cannot truthfully defend himself.

I remember one time the manufacturers of ice cream in a large city in this state were considering the adoption of a service charge. A representative delegation of these manufacturers called upon Mr. Hoovey of the International Ice Cream Company for his theory of a charge for service similar to ours. Following their interview with Mr. Hovey they sought out our dealers' opinion of such a charge. They interviewed our dealers at a time after the service charge had been in operation about three or four months and had not sufficient time to show the average dealer its real advantage. The delegation returned to its native city firmly of the opinion that, theoretically, the service charge was perhaps correct, but from a practical point of view it was unworkable, because of the attitude of our customers at that time. Generally speaking, it is a known fact and particularly among the medical profession, that castor oil is beneficial to the health of a child. However, I have yet to see any testimonials signed by children put forth by any castor oil companies. It has been neither my intention nor my desire to sell anyone the idea of a service charge, but merely to present thoughts, experiences and observations of others and myself. Our thoughts must always be to give the consuming public the biggest possible value for its money. This means the elimination of unnecessary service, the performance of necessary service in an efficient manner and the making of the best ice cream we know how to make.

As for showing a dealer whereby he may effect a saving by a service charge, let us consider the following:

Assuming a dealer selling 40 gallons of ice cream a week requires 3 holes of cabinet space.

Without a service charge: 40 gals. at $1.35 per gal. . . $54.00
With a service charge: 40 gals. at $1.15 . . . . . $46.00
3 holes $1.25 . . . . . 3.75
$49.75

Saving passed on to dealer, 11 cents per gallon.

Assuming a dealer selling 20 gallons of ice cream a week requires 2 cabinet holes.

Without a service charge: 20 gals. at $1.35 per gal. . . $27.00
With a service charge: 20 gals. at $1.15 . . . . . $23.00
2 holes $1.25 . . . . . 2.50
$25.50

Saving passed on to dealer, 7½ cents per gallon.

Assuming that a dealer in the winter sells 15 gallons of ice cream a week, requires 2 cabinet holes.

Without service charge: 15 gals. at $1.35 per gal. . . . $20.25
With a service charge: 15 gals. at $1.15 . . . . . $17.25
2 holes at 75c 1.50
$18.75

Saving passed on to dealer, 10 cents per gallon.

The afternoon session for members followed. This was given over to committee reports, discussions and election of officers. Thus closed one of the most instructive and helpful conventions held by the Association of Ice Cream Manufacturers of New York State.

"Insulation is the thing"

JOHN SCHROEDER LUMBER CO.

"A Dozen Cabinets or a Dozen Carloads"

WALNUT ST. MILWAUKEE, WIS.

PHILADELPHIA CONCERN TO COVER WIDE TERRITORY.

The United States Dairy Products Corporation, Philadelphia, recently announced the purchase of the Burdan Bros. & Co. of Pottstown, Pa. The sale price was said to be nearly $1,500,000. The company manufactures and distributes ice cream throughout Pottstown, Harrisburg, Lebanon, Reading, etc., in Pennsylvania, and in Wilmington, Del.

C. C. Burdan, who has been in charge of the Burdan company, will continue as a director and will be in charge of the ice cream department of the corporation, which will consist of the Burdan property just acquired. and the Colonial Ice Cream Co. of Philadelphia, was also acquired by the United States Dairy Products Corporation a short time ago. The combined capacity of the two companies runs into enormous figures.

The United States Dairy Products Corp. owns the Scott-Powell Dairies, Inc., the Gloucester Sanitary Milk Co., and other properties which are now combined under one operating head and supervised by Harry W. Scott. The milk department distributes to Philadelphia and suburbs, and in Candon, Gloucester, Collingswood, Audubon, and other cities in Philadelphia as well as New Jersey. Its distribution also covers a large number of hotels, restaurants and hospitals in Philadelphia.

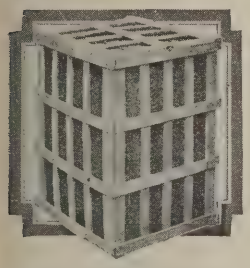
THE GUEST OF HONOR.

Those fellows on the Pacific Coast are always doing things differently. This is just another way of saying that they are very original when it comes to working up for a dairy function.

At the Pacific Slope Dairy Show they pulled off a banquet as one of the outstanding social features of the big doings. Now a banquet is a banquet most times and men who have been charged with the job of arranging for them have a mighty hard job to make one banquet different from all the rest.

So what did that bunch of Westerners do? They just invited the foundation of the whole dairy business to come and sit with them at the banquet table as guest of honor. Mrs. Helm Veeman Woodcrest, whose latest photo accompanies this brief story, marched into the big banquet hall as one of the late arrvials and took her place on the stage to the blare of many trumpets and the cheers of over 700 assembled delegates. She was escorted by a couple of winsome lassies, posing as dairymaids, and she bore her honors without blushing.

In fact a returned pilgrim assures us that Mrs. Woodcrest seemed to be expecting the plaudits that came her way and was very much at home as the guest of honor at the big banquet.



The barreling of peaches for use in making ice cream was advised by Dr. J. S. Caldwell, physicologist, in the bureau of plant industry of the department of agriculture, at a meeting held in Macon, Ga., under the auspices of the Georgia Peach Growers' Exchange and the Macon Chamber of Commerce.

A Chinese Tomb

You inspect the *inside* of every sheet of **NOVOID Corkboard**

Every sheet 12″x36″
All material crated—No breakage

The **second** of a series; read it and watch for the next!

No "Hidden Secrets" in NOVOID!

Recognizing that "green-centers" (the under-baked center of a sheet of corkboard) — so disastrous to any insulation job **only** after the corkboard has been erected and in service for some time — CANNOT BE DETECTED BY INSPECTION when the corkboards are made in 12″x36″ molds, and that it is virtually impossible to regulate the baking process so that **all** "green-centers" are avoided, it is obvious that the usual factory inspection is insufficient to guarantee **every** corkboard of UNIFORM HIGH QUALITY.

In a word, there is no stable bond between the cork particles in an underbaked or "green" sheet; and if moisture enters the imperfect sheet, as it surely will under cold storage temperatures, disintegration will follow. To overcome this weakness in manufacturing process, it is necessary to bake in double-width molds and split the corkboard sheets in half so that these "culls" may be discarded.

NOVOID CORKBOARD, manufactured in conformity with this principle—one of six basic principles followed by Manufacturas de Corcho, S. A., at their modern plants in Spain, home of cork—is justly entitled to be known as a UNIFORM HIGH QUALITY insulation, absolutely dependable in **actual** service. Manufactured 24½″x36½″, SPLIT and finished full standard 12″x36″ in 1″, 1½″, 2″, 3″ and 4″ thicknesses. NO OTHER CORKBOARD is made in this way, with consequent **complete** protection to user against dangerous and costly "green-centers."

Furthermore, proper processing eliminates all voids between particles and confines the "dead-air" entirely to the hermetically sealed microscopic air cells contained in the cork bark itself. The elimination of these "air-ways" offers still another barrier against the ever present destructive forces encountered in cold storage work, and makes Novoid Corkboard the first choice of discriminating buyers.

CERELOSE

CERELOSE is a pure white refined corn sugar which has been found to be of advantage to ice cream manufacturers for use in conjunction with cane sugar in the proportion of 25 to 50% Cerelose instead of 100% cane sugar, for the following reasons:

1.—Cerelose emphasizes the richness of the butter fat with the result that Cerelose develops the natural flavor of ice cream.

2.—Cerelose produces a smoother cream.

3.—Cerelose is the new solid builder for ice cream because it improves the body and texture. It will not crystallize nor form sandy cream.

4.—Ice cream made with Cerelose is more digestible than when made entirely with cane sugar because Cerelose is a dextrose sugar being directly assimilated by the blood, therefore, more ice cream may be consumed, particularly by infants and invalids.

5.—Cerelose is approximately 25% cheaper in price than cane sugar.

Cerelose should be used in the same manner as cane sugar, the amount depending upon the type of cream desired. 25 to 50% is recommended.

Replies to Inquiries

Dear Sir:—Will you please publish in your next issue the percentage of butterfat contained in the formulas written below? Also let me know if table two is correct. If not, please inform me how I can remedy this.

Table 1.

10 gallons of cream, 40 per cent.
10 gallons condensed milk.
10 gallons sweet milk.
24 ounces gelatine.
42 pounds sugar.

Table 2.

5 gallons cream, 40 per cent.
10 gallons condensed milk (whole).
10 gallons sweet milk.
20 ounces gelatine.
35 pounds sugar.

Trusting you will give me an immediate reply and thanking you in advance for the information desired.

—J. E. J.

Reply: You will find the calculations of your two formulas given below in table one and table two:

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
10 gal. or 80.00 lbs. 40% cream	32.00	4.28	36.28
10 gal. or 92.00 lbs. cond. 8%	7.38	16.56	23.94
10 gal. or 86.00 lbs. 4% milk	3.44	7.35	10.79
42.00 lbs. sugar	.....	.....	39.90
1.50 lbs. gelatine	.....	.....	1.42
301.50 lbs. mix	42.82	28.19	112.33
Per cent	14.20	9.01	37.30
Per cent sugar	14.00		

Table 2.

Ingredients	Fat	Serum Sol.	Total Sol.
5 gal. or 40.00 lbs. 40% cream	16.00	2.14	18.14
10 gal. or 92.00 lbs. cond. 8%	7.38	16.56	23.94
86.00 lbs. milk 4%	3.44	7.35	10.79
35.00 lbs. sugar	.....	.....	33.25
1.25 lbs. gelatine	.....	.....	1.12
254.25 lbs. mix	26.82	26.05	87.24
Per cent	10.60	10.20	34.30
Per cent sugar	13.80		

You will notice that there is considerable difference in the composition of these two formulas, one of them testing 14 per cent butterfat and 37 per cent total solids, and the other 10.5 per cent butterfat, a little higher milk serum solids and 34 per cent total solids. Your number two formula is very well balanced for a 10 per cent butterfat ice cream and you should get good results using formula number two.

You stated in your letter you wanted to know whether number two was correct. I do not understand just what information you want about this formula, except as stated above.

* * *

Reply to A. R.: I have your letter which apparently seems to indicate that you are having considerable trouble in getting a satisfactory ice cream and also a satisfactory overrun. I have analyzed your three mixes and you will find this analysis given below in tables one, two and three:

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
63.00 lbs. sugar	.....	.....	59.850
2.50 lbs. gelatine	.....	.....	2.375
18.00 lbs. skim powder	.....	17.10	17.10
40.5 lbs. butter	34.02	.....	34.02
326.00 lbs. 3% milk	9.78	28.13	37.91
450.00 lbs. mix	43.80	45.23	151.255
Per cent sugar	14.00		
Per cent gelatine	.55		
Per cent	9.73	10.00	33.60

Table 2.

Ingredients	Fat	Serum Sol.	Total Sol.
56.00 lbs. sugar	.....	.....	53.20
3.00 lbs. gelatine	.....	.....	2.85
16.00 lbs. skim powder	.....	15.20	15.20
36.00 lbs. butter	.....	30.24	30.24
286.00 lbs. 3% milk	8.58	24.66	33.24
4.00 lbs. water	.....	.....	.....
400.00 lbs. mix	38.82	39.86	134.73
Per cent	9.7	9.96	33.68
Per cent sugar	14.00		
Per cent gelatine	.75		

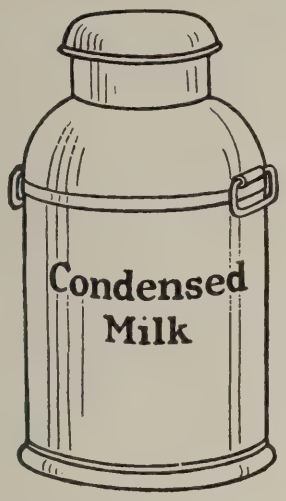

Table 3.

Ingredients	Fat	Serum Sol.	Total Sol.
42.00 lbs. sugar	.....	.....	39.90
2.25 lbs. gelatine	.....	.....	2.13
12.00 lbs. skim powder	.....	11.40	11.40
27.50 lbs. butter	23.1	.....	23.10
228.50 lbs. 3% milk	6.84	19.60	26.40
312.25 lbs. mix	29.94	31.00	102.93
Per cent	9.6	9.9	32.98
Per cent sugar	13.4		
Per cent gelatine	.7		

You will notice that there is very little difference in the composition of these mixes and you should have gotten similar uniform results. I noticed, however, that you have used different amounts of gelatine between mix Number one, two and three. I believe that the difficulty you have is due to reasons other than your mix.

First, give me the method of processing. Is your mix processed through a viscolizer, homogenizer or emulsor? If you use an emulsor, what type of emulsor are you using? If a centrifugal emulsor, how is the machine working? Where do you keep the mix when you age it for two days? What is the temperature at which it is aged? What type of freezer do you have? At what temperature of brine do you freeze? How long does it take you to complete a freezing? How do you draw the cream from the freezer, soft, medium, stiff, or frozen quite stiff, How do you harden the cream after drawing from the freezer? Have you hardening room or are you packing in salt and ice? Does the mix with the two varying amounts of gelatine look comparatively thick or does the mix appear thin?

I believe if you will give me this information I can assist you in solving your difficulty.

Spoils easily
Not uniform
Uncertain supply

Reply to S. G.: I have your letter of recent date stating that you have difficulty with the re-standardizing of your ice cream mix. I am glad to give you below what would be my method of re-calculating your 300 pound mix and re-standardizing so as to be exactly 10 per cent fat and 36 per cent total solids. I believe that if you will look this over carefully you will understand how this was done and how in a similar manner you can re-standardize any mix.

Step No. 1. To correct fat.

3000 pound mix, 10.4 per cent fat, contains 312 pounds of fat.

To test 10 per cent fat it would require 3120 pounds of mix. If fat was the only ingredient to correct the addition of 120 pounds of water to make the 3120 pounds of mix would be all that is necessary.

Step No. 2.

To add 120 pounds of non-fat ingredients it is also necessary to add some sugar. If you use 13 per cent sugar, 13 × 120 would be 15.6 pounds sugar.

3120 × 36 per cent = 1123.2 pounds total solids required. Subtracting 1089 from 1123.2 leaves 34.2 per cent of solids extra for the addition of 120 pounds of ingredients.

15.6495 = 14.83 pounds solids furnished by sugar leaving 34.2 less 14.82 is 19.38 pounds milk solids to be furnished. 19.38 divided by 95 per cent equals 20.4 pounds of skim milk powder.

The correction then is:

15.6 pounds of sugar.
20.4 pounds of skim milk powder.
84.0 pounds of water.

120.0 pounds total added to mix.

Or if plain condensed skim milk 27 per cent serum solids is used it would require 19.38 divided by 27 or 72 pounds of condensed in place of the skim powder. It would then be:

15.6 pounds sugar.
72.0 pounds condensed.
32.4 pounds water.

120.0 pounds.

The mix would then be:

3120 pounds containing 312.0 pounds fat and 1123.2 pounds total solids and test 10 per cent fat and 36 per cent total solids.

If you are tired of your business, don't worry over it. Advertise it for sale in "The Ice Cream Review" Want Department. A sure result getter.

NEW HAVEN DAIRY EXPANDS.

A very handsome building has been purchased in Norwalk, Conn., by the New Haven Dairy Co. of New Haven, Conn. According to officials, the company will build additions for the storage of ice cream, ice storage, ice manufacturing tanks, engine room, garage, offices, etc., with a total floor space of 10,134 square feet.

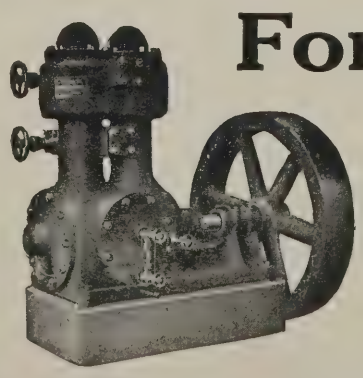
Ice cream will not be manufactured at the Norwalk branch. That plant will be used as a distributing station only, with facilities for manufacturing ice. The equipment will consist of 60 tons of refrigeration, twenty-five ton ice making tank and storage space for 6,500 gallons of ice cream, which will be supplied from the company's plant at Bridgeport, Conn.

Besides the three plants mentioned above, the company operates branches at Hartford, Meriden, New London, New Britain, Waterbury and Middletown. Headquarters of the New Haven Dairy Company are located at 201 Hazel St., New Haven. This company is reported as one of the oldest and largest dairy products manufacturing companies in the New England states.

INVERT SUGAR-SPLITTED SUGAR SWEETENER.

(Continued from page 64)

The information presented in this article is an endeavor to bring to light the essential make-up of invert sugar, and its rank in comparative sweetness. Bearing in mind the fact that ice cream makers at times resort to the use of other sweeteners than cane and beet sugar it is desirable to get acquainted with the most reliable facts concerning the sweetener in question. In the case of invert sugar the references discussed in this article "meet the bill."



CALIFORNIA COMPANY EXPANDING.

The Benham Ice Cream Co. is not only to enter the Bakersfield and Kern county territory, but proposes to erect there a plant equally as large and which may later be made larger than the one in Visalia. This announcement came following the announcement from Bakersfield that the company had acquired land there for the building, and is coupled also with the statement made in Visalia that Charles Martin, will become chief electrician for Benham, installing and maintaining the electrical refrigerating and storage cabinets.

You can't afford to miss a single copy of The Ice Cream Review. Have you sent in your renewal?

For Lasting Satisfaction

York
Refrigerating Equipment

One reason why there are so many installations of York Refrigerating Equipment is that its satisfactory working condition does not pass with the seasons. York Equipment does not mean satisfaction until the first signs of wear show up, but a year in year out dependable service that stands the strain of rush seasons without injury to its long life.

Let us show you just why York Equipment lasts longer.

Prospects for the Dairy Industry in 1925

By E. W. CHANDLER, President of The Creamery Package Manufacturing Company

NINETEEN TWENTY-FOUR is now history and has passed into oblivion. But we are face to face with another promising year that is pregnant with possibilities. Can we tear the mysterious veil of the future aside for a moment and foretell what the new year has to offer?

Surely the giant dairy industry with an income of over two billion dollars is at the gateway of unlimited opportunities. Despite the fact that our industry ranks fourth in size in the country, it is in many respects only in its swaddling clothes.

E. W. CHANDLER.

For only a small percentage of farmers in the country appreciate the profit-producing possibilities in a herd of good grade or pure bred cows.

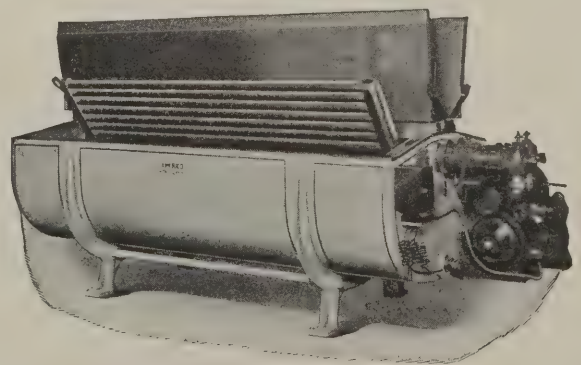
On the other hand only a small percentage of the people in the country fully appreciate the economy and the health giving quality of pure dairy products.

The U. S. government will continue its invaluable assistance to the dairy farmer and the National Dairy Association is planning on broadening its activities during the coming year, teaching through the dairy show and other ways to the one crop farmer the value of dairying and teaching the diversified farmer ways and means of more profitable dairying.

There will be drives from various directions to educate the public to use more dairy products during 1925. The National Dairy Council will increase the splendid work it has been doing, the National Ice Cream Makers' Association is planning a national advertising campaign on a huge scale and various associations of creameries in different parts of the country are preparing territorial butter advertising campaigns. All of this activity will stimulate the advertising of local dairy products manufacturers and distributors and will result in considerable increase of dairy products consumption all along the line.

For the first time since the great European conflict the new year has arrived with the world at peace. Consequently the exports from this country will show considerable growth with marked benefit to everyone.

The farmer is now sitting on the top of the world, figuratively speaking. He has received good prices for his autumn harvests and the prices he must pay for many necessities have been lowered. His prosperity will be reflected in the prosperity of everyone in the country.



The railroads have had a prosperous year and now that the fear of government ownership has been removed, for the present at least, they will go ahead with many needed improvements. This, too, will help the prosperity of the country.

In fact, in whatever direction we care to gaze we find encouraging signs and while most of us will have to work for what we get, the opportunity for profitable activity will not be lacking.

And no man is in a more favored position than the man in the dairy industry.

Several years of prosperous times are ahead of him. He can go ahead with needed improvements and additions to his business with the full confidence that the public needs his product and will generously reward him for supplying it. He will prosper most who is prepared the best.

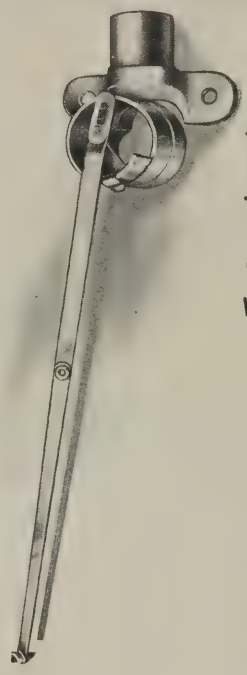
Increase Your Business in 1925

By Judicious Advertising

Resolve now to go after business aggressively during 1925. You can use the magical power of advertising to build your business just as successfully as Wrigley of chewing gum fame, Gillette of the safety razor or Ingersoll of the dollar watch. Let the public know early and often that you can serve them well and that you want their business and your reward is certain.

Send today for a copy of "The Sale and Advertising of Dairy Products." It will tell you how to plan an advertising campaign that is within your means and it will show you how to conduct it every step of the way.



This book contains hundreds of sales creating ideas that are carefully explained—any of which are worth several times the cost of the book. In addition it has scores of charts and illustrations which explain the subject matter with crystal clearness.

"The Sale and Advertising of Dairy Products" consists of over 100 pages, is abundantly illustrated with reproductions of actual ads and is well bound in blue cloth, lettered in gold.

It contains chapters on Milk, Ice Cream, Butter, Cheese and Dairy Farm advertising. It has become by far the best seller among dairy books. Send for your copy today.

ERECT MODERN PLANT.

Announcement was recently made of the erection of a brick structure, 60 by 40 feet, by the Magnum Ice Cream Co. of Magnum, Okla. The plant will have a capacity of 800 gallons of ice cream, and a five-ton ice plant will be installed. The installation of other equipment had not yet been definitely decided upon when the announcement reached The Ice Cream Review offices. Among the equipment to be added will be engine, motors, 40-quart freezer, pasteurizer, homogenizer and cooling coils.

The plant will be completed about March 1, 1925. Officials of the company are: G. M. Cowan and Chester Wicker.

PREPARING FOR EXPANSION.

Purchase of a two-story building at 2923 Hennepin ave., Minneapolis, Minn., occupied by Chapman's, ice cream manufacturers, was announced recently by Ralph H. Chapman, owner of the company, providing for expansion of the business next fall with a new equipment and additional floor space. The building was bought by Mr. Chapman from H. V. Mercer for $60,000, and a 100 year lease was closed on the property, which has 45-foot frontage on Hennepin Avenue.

RAW MATERIALS FOR SEVEN MILLION GALLONS OF ICE CREAM.

Figures on the raw materials used in the production of seven million gallons of ice cream, the reported production for last year of the Breyer Ice Cream Company, Philadelphia, proves interesting reading. It is stated that the company purchased for its 1924 production over six million pounds of granulated cane sugar, fifteen thousand pounds of real vanilla beans, one million pounds of fresh fine strawberries, fifty thousand dozen oranges and larger quantities of other fresh fruit used in season; three thousand pounds of real chocolate is used annually. The Breyer Company maintain its own creameries in Pennsylvania, Delaware, Maryland and New Jersey, where its veterinarians constantly inspect cows and see that the strict sanitary code of the company is maintained on the farm, while its field men, mostly college graduates, educate the farmer up to the company's standard of milk and cream production. Business is done with over two thousand farmers who own approximately fifteen thousand cows.

Exhibit of the Nizer Corp., Detroit, at the Pacific Slope Dairy Show, Oakland.

Plan now for greater summer profits

"Rush season" days will soon be here—days when the high expense of inefficient equipment and methods cuts deeper into profits.

Now, while there is time for changes in plant layout or equipment, plans should be made for reducing operating costs this summer.

The five views above show but five plants of many hundreds that are making greater summer profits through the use of one or more types of G-W Equipment.

Our engineers will be glad to tell you how ice cream plants of all sizes, in all parts of the country, are using G-W Equipment to crush their ice and automatically convey it to waiting trucks, hoist it to overhead storage bunkers, or take it to any point in the factory where it is to be used.

May we help you make this summer more profitable by using the proper type of G-W Ice Crushing and Crushed Ice Handling Machinery? Just address the nearest office below.

Mississippi Manufacturers See Dream Come True

National Advertising Program, Similar to One Urged by Mississippi Association in 1923, Endorsed at Vicksburg. Higher Retail Standards Urged

A DREAM came true when the plan to advertise ice cream on a national scale was outlined at the Mississippi convention in February. The Mississippi association had been looking forward to such a development for two years. Its convention president, W. D. Seale, long an enthusiast over possibilities through national advertising, two years ago set in motion action looking to that end.

Unfinished business faced the ice cream manufacturers of the Magnolia state when the matter was brought up at the annual convention of the Mississippi Ice Cream Manufacturers' Association at Vicksburg. The convention was held January 13 and 14. It was featured by 100 per cent endorsement of the program launched by the national association, a step which the Mississippi association probably was the first to urge upon the industry. This action was sought in Mississippi at the 1923 convention at Jackson. At that time a resolution was adopted providing for the Mississippi association to join in such a movement should full national support be assured.

It did not take officials long to bring this resolution to light from their records and to see that the present movement tallies in virtually every respect with the plan outlined in Mississippi two years ago. For this reason the association wasted no time in pledging its full support.

In following the lead of the Texas, Oklahoma, California, New England and other associations, the Mississippians wiped off a piece of unfinished business that ended an earnest fight for co-operative advertising advocated by W. D. Seale, the convention president of the association. The plans of the national advertising committee were presented by W. W. Campbell, vice-president of the National Association of Ice Cream Manufacturers, in the absence of J. F. Finneran, who was to have represented the national advertising committee.

UPON Mr. Campbell's request that the association line up in this program, President Seale asked the secretary to refer to the records of the 1923 convention, and from those records Mr. Brookshire read the following resolution adopted at that time:

"In connection with Mr. Seale's paper. In the matter of national advertising as discussed by Mr. Seale, the Mississippi Ice Cream Manufacturers' Association go on record as being ready to join with all other states in the United States in a constructive campaign of national advertising, providing that not less than 80 per cent of all ice cream manufacturers of the country join in said campaign on an equal basis, and further provided, that the pro rata cost of such advertising shall not exceed one-half cent a gallon on the total amount of ice cream made, and provided further that this association have equal representation in the United States in administering such national advertising."

The regular pledge presented by the national advertising committee expressed the matter in different language.

ICELESS cabinets were discussed. Representatives of iceless cabinet firms told the manufacturers that the cabinets are a permanent fixture in the industry, and that, although changes will come about from time to time, there is no likelihood of the present type of iceless cabinets soon becoming obsolete. They stressed the importance of manufacturers having a thorough understanding before embarking upon this venture.

Mississippi is going forward in the upbuilding of the ice cream industry with the same enterprise that characterizes the state's forward development in virtually every line of industry and agriculture, delegates were told by C. C. Cromer, representing the office of P. P. Garner, commissioner of agriculture, who was unable to fill his place on the program.

Not one prosecution of an ice cream manufacturer for making cream not of the proper standard, or for any infringement of the state laws governing the manufacture of the product, was made last year, Mr. Cromer said.

ACTION looking to checking up on retailers of ice cream was indicated at one stage of the convention. Recommendation was made by A. A. McLeran for the passage of a law enforcing every man who makes mix to have a recording thermometer. This was not taken up definitely, but Mr. Cromer at this juncture expressed the opinion that he hoped "to see the time come when no drug store will manufacture ice cream." He urged the manufacturers who possibly can to buy their milk locally, to enable dairymen of the state to tide over.

The association gave a vote of confidence to the Dixie Flyers and the men traveling the Mississippi territory. This action followed discussion in which officers and members of the Mississippi association paid tribute to the Flyers' expostion at New Orleans last fall. President Harry A. Benners promised that every effort would be made to make the Lexington exhibition even better next year.

W. W. Campbell, vice-president of the National Association of Ice Cream Manufacturers, one of the feature speakers, told the convention that constructive work outlined for the ice cream industry, such as national ad-

As built by HERCULES—

The Improved D-Z Cabinet Assures Full Satisfaction

Now that the Hercules Corporation of Evansville, Indiana is building all D-Z cabinets according to the *new specifications*, full satisfaction is assured.

The Hercules Corporation, whose factory is shown above, is an $8,000,000 organization with a country-wide reputation for quality products and quick service. Every facility is available for the proper construction of D-Z cabinets, and besides, central location insures prompt deliveries.

To give you an idea of the type of firm we have as our sole manufacturer we cite these interesting facts:

1. The Hercules Corporation annually consumes 20,000,000 feet of lumber.
2. The Hercules Corporation annually uses 9,350 tons of steel.
3. The Hercules Corporation owns and operates its own paint factory in order to assure getting paints most suitable for the particular requirements of their products.

Substantially constructed D-Z cabinets are now, more than ever before, an absolute reality. Just as ice cream manufacturers have found that the D-Z cabinet actually cuts icing costs 40 to 50%, so will manufacturers all over the country find that every new D-Z cabinet incorporates those construction features which *guarantee* longer and better cabinet life.

Construction Features

1. Panels are of a 3 ply rotary cut fir laminated with waterproof vegetable glue.
2. Tops are made of good solid oak.
3. Veneer joints are protected by hardwood strips.
4. Smith and Mann one piece spigots are used exclusively.
5. Tank joints are heavily sweat soldered and thoroughly tested for pinhole leaks.
6. Tanks are surrounded with insulating lumber allowing them to be removed whenever necessary without disturbing the insulation.
7. Cabinets are made with 3" solid oak legs to provide more and better ventilation.
8. Cabinets are finished in old mahogany.
9. Stains, varnishes and shellacs have been rigidly tested for heat and salt water resistance.

vertising, the advent of the iceless cabinet, a national standard and a uniform cost accounting system, "show progress and the great possibilities of our industry."

ICE CREAM'S COMPETITORS ADVERTISE.

The tea people have spent about $120,000 to investigate tea and ascertain selling points to convey to the public, delegates to the Mississippi convention were told by W. W. Campbell. Mr. Campbell suggested that maybe the ice cream men some day will wake up to find another competitor at the soda fountain, lined up with coffee and soft drink, other commodities more or less widely advertised. Mr. Campbell did not say anything about the extensive national advertising carried on by a certain soft drink company of the South, probably the largest organization of its kind in the world.

RESOLUTIONS adopted expressed the association's thanks to the newspapers, which gave the convention splendid publicity; to the National Park Hotel, local officials, and to Mr. and Mrs. S. N. Sutton, who set an extremely high mark for convention hospitality. Delegates were high in praise of their official host and hostess for what they termed "hospitality unsurpassed at any previous Southern convention. The trade journals were thanked in the resolutions.

"Co-operation is an economic necessity, and when we cultivate this thought among our competitors we are casting bread upon the waters that will not return unto us void," the convention was assured in a speech by Mr. Sutton, who is president of the Southern association of Ice Cream Manufacturers, and for two successive terms president of the Mississippi association.

The consumption of ice cream will show a marked increase after the national advertising campaign gets under way, according to the speech of J. W. Clopton, secretary of the Southern association of Ice Cream Manufacturers, and one of the Mississippi association's annual feature speakers. His subject was "Progressive Aims and Accomplishments," and the advertising proposition was lauded by the famous secretary as one of the great forces figuring in the industry's present development.

In referring to the growth of the Southern association, Mr. Clopton said, that after beginning 12 years ago with a half dozen members, the Southern has grown to be next to the national association in both membership and prestige.

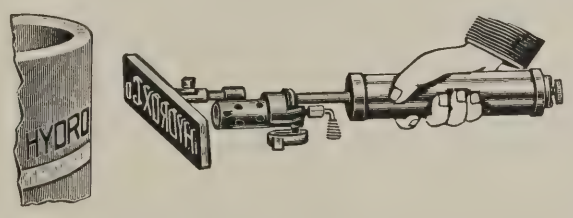
"We are today recognized as an active, wide-awake organization and we expect to keep pace with progress, to do our part in the advancement of this great industry, to co-operate with our brothers in the North, the East and the West that we may more firmly establish the ice cream industry throughout the country at large, and that it may be recognized as an industry that is operated to the highest standard of ethics."

OTHER interesting speeches were delivered by H. F. McWilliams, Hattiesburg; A. A. McLeran, Tupelo, speaking on the subject "Mutual Interests of Employer and Employees; V. L. King, West Point, speaking on the same subject; D. S. Cox, Columbus, "Specialties in the Ice Cream Business, and the representatives of two trade publications, who spoke on "Organized Thought in the Ice Cream World." These speeches will be dealt with in subsequent issues.

Meridian won the next convention after a spirited contest in which Jackson, Vicksburg and Columbus fought for this honor. Mr. Cox was unanimously elected president. He was elected vice-president of the association at the convention at Laurel last year. N. D. Brookshire, who has been secretary-treasurer since the organization of the body, was unanimously re-elected.

Entertainment features were provided at the convention for lady visitors. The first day of the convention found the ladies guests at a luncheon at the home of Mrs. S. N. Sutton, followed by an auto ride through the National Park. There was a theater party the afternoon of the next day.

The association's annual banquet was held at the National Park Hotel the evening of the first day. Convention President Seale presided.



"Mississippi Magnolias."

THE Mississippi Magnolias is the name of an organization of supplymen formed at Vicksburg in February to co-operate with the Mississippi Ice Cream Manufacturers' Association. The association was formed by Harry A. Benners, secretary of the Dixie Flyers. Byron Morris, Jackson, Miss., widely known among Southern supplymen, was elected president of the organization. F. W. Hooton, Birmingham, was elected vice-president, and T. P. Hogan, Kentwood, La., was elected secretary-treasurer.

The association's first act was to buy a bouquet to present to the president of the Mississippi association at the annual banquet.

Among the supplymen represented at the meeting were Thomas Bernstein, P. N. Miller, Jr., secretary of the Dixie Flyers; Howell D. Taylor, Andrew Thompson, Jr., L. Harry Evers, Herman Allenberg, A. H. Anderson, Paul Mojonnier and others.

MY IDEA IS—DON'T PAY THE DRIVER A BONUS.

By F. J. Bridges, Hydrox Corp., Chicago.

We do not pay our ice cream drivers a bonus, owing to the fact that their rate of pay is really higher than they are entitled to in comparison with what we are able to pay our other employees. Nor do we pay a bonus, except on Christmas, to any of our other employees.

We are not sold on the value of bonus plans for employees, as from our observation we feel that they are not appreciated by employees, who look upon them more or less as, you might say, deferred compensation, and which they would much rather receive each payday. when they think they are entitled to it.

The Hydrox Corporation has all of its employees in various departments in conference frequently throughout the year, and plans are discussed freely by both employer and employee.

There is no doubt about it, that the best interests of everybody can only be maintained by a spirit of close cooperation.

Flavor Strips Positively Sell More Ice Cream

Ryan & Timberman, Inc.
Ice Cream Advertising Headquarters
WILKES-BARRE, PENNSYLVANIA

Stick our Flavor Strips on the windows and back-bars of your dealers this season, then see your gallonage jump up like a thermometer under a sizzling July sun. Only a few weeks more until robins and blue birds are flying northward again. This means that NOW is the time to make out your Flavor Strip order, so as to be ready for the new season.

Write today for our illustrated circular and Special Flavor Strip Club Plan, so there will be no delay in delivery.

And speaking in particular of these wonderful Flavor Strips as an advertising medium. No guesswork at all about what they do in boosting business for the Ice Cream manufacturer.

Our records show scores of testimonials, actually reporting the doubling and trebling of business through the use of this "point of sale" advertising.

If you count yourself among the live ones; if you want to succeed as other Ice Cream manufacturers are succeeding; if you want a short cut to bigger gallonage and bigger profits, do as hundreds are now doing regularly. No business is too big, no business too small, to profit immensely by the Flavor Strips.

If you're sold on the idea get busy now. If you want further proof, ask us for names and experiences of many of America's best known Ice Cream manufacturers.

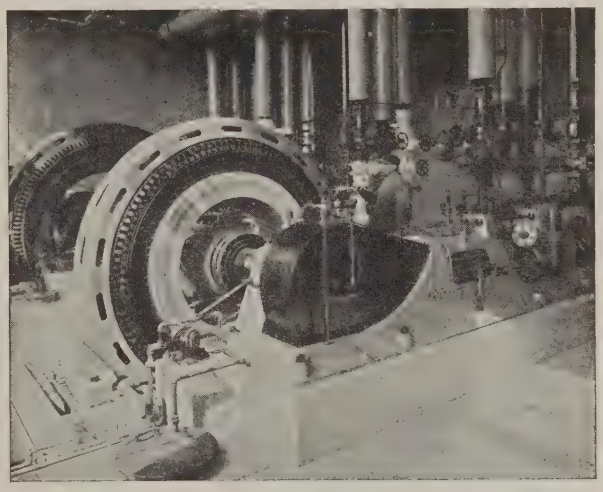
Another Triumph for Frick Equipment



—the New Plant of Seattle Ice Cream Company

The refrigerating equipment installed in the Seattle Ice Cream Company's new plant is modern to the last bolt.

The main ammonia compressors are very heavily built and work on the long stroke principle. They are equipped with central and forced-feed oiling systems, metallic packing, plate valves, and triple suction connections.

A 5"x5" enclosed ammonia compressor is installed for standby service. The condensers, ice tanks, brine coolers, and room coils are built on most recent designs.

Frick machinery was chosen by the owners after extended inspection trips, covering all types of machines. The plant is a living testimony to the worth of Frick Equipment.

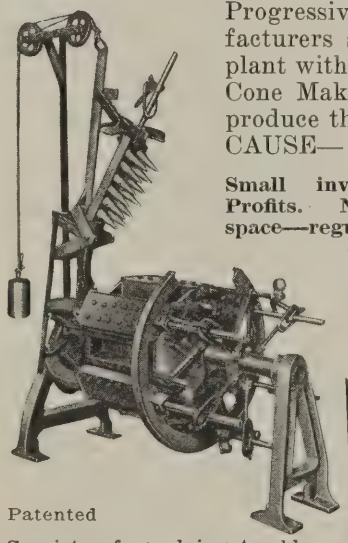
THE WHAT AND WHY OF UNIFORM COST ACCOUNTING FROM PRACTICAL OPERATING STANDPOINT.

(Continued from page 26)



and delivering ice cream on rural packing routes in comparison to our packing routes maintained in the city.

A GREAT many of us, I know, have a pretty strong conviction that special delivery costs are quite high in comparison to regular delivery costs for the same volume of ice cream delivered or sold. We shall, therefore, expect to see these special delivery costs separated out and know what this all amounts to.

We shall further analyze our delivery costs for the various kinds of outfits, for instance, what are the costs for delivery by horse-drawn vehicles in comparison with gas or electric trucks. Under what conditions is it profitable for us to use one method of delivery and under what conditions is it profitable for us to use the other? In setting up our service costs we will probably want to show them per cabinet hole serviced, and while we are talking of service or cabinet costs we will most certainly want to know in detail the cost of these new mechanically refrigerated cabinets.

I believe that you will agree with me that we will want to know the cost of manufacturing a ton of ice, and of building refrigerated bodies so that we can compare quotations from outside manufacturers with our own costs when we build these bodies ourselves in our own shops. We will want to know the cost of painting a wagon and how we can reduce our wagon painting costs.

NEW FIELD Opens for Ice Cream Manufacturers

Progressive ice cream manufacturers should equip their plant with the "Philadelphia Cone Making Machine" and produce their own cones BECAUSE—

Small investments net big Profits. No extra labor or space—regular salesmen solicit orders — helpers bake cones. Fresh, Crisp, Delicious Cones increase ice cream consumption.

This machine saves time, space and positively produces a better cone at less cost than any other machine on the market — Write for details today.

Patented

Consists of revolving tumbler containing six sets of moulds of 12 cones each baking 72 cones each revolution.

THE PHILADELPHIA ICE CREAM CONE MACHINERY AND ART METAL WORKS.

68 N. Fourth St. Philadelphia, Pa.

THEN there are the various departmental costs such as receiving at the country stations and at our city plant, pasteurizing, storing and cooling and homogenizing. We will want to know these things to be able to determine accurately the cost of our mix as it is ready to go to the freezers. Many manufacturers sell mix to other smaller manufacturers and perhaps some ship it to branch plants where it is there frozen and in order to keep any accurate check on the operations of these branch plants it is of course necessary to know accurately the cost of this mix which is turned over to them.

It is our aim to establish for the ice cream industry a uniform system of cost finding by working through this national association. We mean that for all of the members who participate in this work, it shall be made possible for them to obtain all the advantages of cost accounting that I have tried to outline to you.

We mean to prepare a system whereby there will be a uniformity in the cost finding methods of all the members adopting this plan. We mean that for all of the members working under the proposed system that,

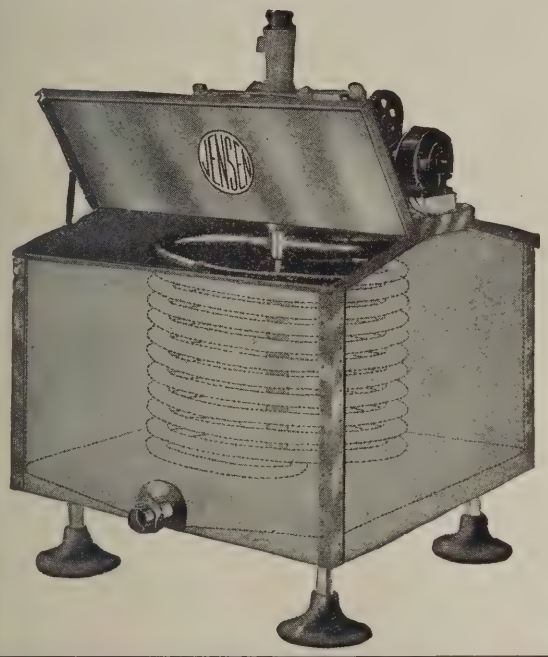
1. Their business will be departmentalized substantially in the same manner.
2. That the same elements of cost are included in these figures.
3. That there is a definite control of raw materials.
4. That there is the same distribution of labor.
5. That a common method for distribution of burden is used.
6. That there is a tie up between financial and cost records.

We do not mean that the accounting of each one of these plants must be done in exactly the same way nor do we mean that it will be necessary to destroy much, if anything, of that which is good in your present financial accounting system. We do not mean that you must throw out all of your present books and install new books.

What we do mean is that the accounting facts and figures in any one plant using this system, will be arrived at in substantially the same manner or rather will include the same elements as those of the other manufacturers using this system, and that it will be possible and practicable for one plant to compare their costs with another plant and that in these comparisons both will be talking the same language and will mean the same thing when they speak of certain items of cost.

I do hardly think that it is necessary for me to argue the case of cost accounting. There are, however, a few points which come to my mind which I should like to give you.

First, the fact that we go seriously into the matter of cost accounting will bring to our attention a great many refinements all along the line and suggest many improvements which we can make even in our financial accounting records. We will find that our financial accounting will be much improved through having to tie in with a good cost accounting system.



The cost system will give us the maximum of business information concerning all of our operations.

It will suggest the proper course of action concerning the many and various problems which confront us every day and it will enable us to avoid the many pitfalls that lie in our paths.

SUPPOSE that we want to purchase a new plant or sell one of our present plants, or change in a fairly large and important way, any of our operations. I believe that our cost accounting system will give us the data and information which will make it possible to fore-

JENSEN

The Mark of Merit

"20 to 50%" "GREATER OVER-RUN"

A Mix Free From Air as It Comes to the Freezer Will Give a 20 to 50% Greater Over-Run

This statement was made before a meeting during a convention of ice cream manufacturers of two Eastern states. The man was fully qualified to make such a statement and had charts and experimental data as proof thereof.
JENSEN REVOLVING VERTICAL COIL BATCH MIXER is the only ice cream batch mixer that expels air and gases. The verticle (entirely suspended) coil always revolving from the bottom up constantly pulls the air and gases out. This is accomplished before pasteurizing temperature has been reached. Therefore undesirable odors are not cooked into the product, thus the mix is delivered at the freezer free from air and having a pure natural flavor.
The action of the vertical absolutely prevents air incorporation through eddies during the ageing period.

case quite accurately what will be the effect on our business as a whole of such a purchase, sale or change in method of operation.

It certainly will enable us to determine definitely which are the profitable and which the unprofitable customers. The same will be true with our various routes and with the various products we manufacture and sell.

I believe that our cost accounting system will give us the real knowledge which we desire concerning the details of our business, worked out in the proper form. This information moreover will be readily forthcoming without our having to ask for it and then wait days to have the information dug out from the records and even then have our questions answered somewhat on guess.

It is perfectly possible, of course, that each of us in our own plants might have very good cost systems and still these systems might not be uniform, but for each of use to develop them ourselves would be quite a costly project. The first reason then for the development of the uniform cost accounting system within the ice cream association, is that for the industry as a whole and for each one of the manufacturers participating in this system, it will be immeasurably cheaper to do it in this manner.

In the second place, by bringing together the accounting brains throughout the entire industry we will certainly get a much better system than we would if we had only one or two or three accountants working on the problem.

THEN comes the question of the comparison of costs as between one plant and another plant. Every year we meet in a national convention, and most of you meet in state conventions also. And why do we hold these conventions? Certainly it is for no other reason than that we may come together to talk over and discuss our problems, exchange ideas, and give to our brother manufacturers the benefit of our experience, and take back to our plants in turn, the combined experience of the other men engaged in this industry.

We see machinery exhibits and we are told by the exhibitors the many advantages of their equipment and that one machine costs less to operate than another machine.

We discuss our problems from the convention floor, and, no matter what angle the discussion may take, if you go back a step or two you will find that it all focuses on the matter of costs and profit and loss.

It seems to me, then, to be quite fitting that we, as manufacturers, be able to come together and discuss our problems from a cost standpoint. In other words, that we are able to compare one with another the costs of our various products. Then we shall be able to learn from each other how we can reduce those costs and thus earn more profit for ourselves and still serve the public better and cheaper.

If we are able to do this it is necessary that we have a uniform cost accounting system. When we set out to discuss certain costs, it is essential that we know when we talk about a certain cost that we all mean exactly the same thing, and that each knows what he other is talking about. If we do not have a uniform accounting system this will not be true. **I know, for I have tried it,** —and you know that many of the discussions that you have heard between members from the floor of this convention would have been much clearer and more to the point had each man understood the other man.

There is value to be gained also from uniformity in the matter of taxation, with special reference to federal taxation. I believe that the great majority of manufacturers are willing, and do not object to pay their fair proporion of the taxes. They want to, and try to render fair and proper income tax returns. There are, however, a great many unpleasant situations which do arise, the great majority of which I firmly believe would be averted by the manufacturers adhering to a standard system of accounting adopted generally throughout the industry.

We must give proper consideration to the fact that we do have to deal with the regulatory bodies. In our convention session on Monday you heard from Mr. Brink that certain Eastern manufacturers had been forced to combat a rather stubborn legal proceeding. You heard from Mr. Matlin that the commissioners of his city had passed certain regulations, and from our president you had the statement that the federal government was expecting action to be taken by us within our own industry looking toward the elimination of certain undesirable conditions.

In dealing with these regulatory bodies certainly it could not help but be of great value to us to have available at all times our various costs divided up into their elements in the right form for presentation to such regulatory bodies as we may find it advisable or necessary to do so. Such figures when presented would, of course, be of much more value and carry much more weight were they arrived at in accordance with standard accounting methods, and if, in addition, they could be substantiated by figures from other manufacturers in other parts of the country arrived at in the same manner.

THIS proposed system is to be built by, installed and operated by, the accountants, engineers, managers and other practical men within the ice cream industry. It will not reflect the theoretical ideas of any one account-

ant who may have ideas of accounting that do not fit our own practical operating conditions. The system will be built to fit exactly our needs. It will aim to include everything of value that we do need and to exclude everything that may be superfluous.

In the building of this system, and in the continuance of it in operation after it has been built, there will be brought togeher scores of ice cream accountants from all parts of the United States. The system will not be allowed to become antiquated but will be kept right up-to-date and will meet changing business conditions as they arise. This will be done through what we term cost council work, or the bringing together of the accountants periodically to discuss their problems, the value of which from my experience in the milk association work, I cannot overestimate.

In the discussions yesterday you heard put forward the propositions of developing an experimental laboratory for the study of technical problems of general interest to the industry, and that is fine. You passed a resolution placing your O. K. on the continuance and development of a certain phase of this work.

You also heard the recommendation that the programs of our convention be so arranged as to permit the dividing up into sectional group meetings.

In the development of the cost council work, to which I refer, we will do this very thing. We will divide off for group accounting meetings, and in this way we will develop the finest cost investigational laboratory which it is possible to produce.

In conclusion, let me review briefly:

We need uniform cost accounting, because in this present day of keen composition our very ability to exist depends on a definite knowledge of our costs.

It is necessary for us to know what these costs are first, so that we can take action to reduce them, and our ability to reduce these costs will come very largely through the comparison of experience, one plant with another, and in finding out how some one does a certain operation cheaper than we do it.

We stand between the producer and the consumer, and have a social and economic purpose to serve to the extent that we shoulder that responsibility. Just to that extent will we minimize the attention that will be paid to our industry by the regulatory bodies.

However, we cannot compare our costs and thereby reduce them unless we are able to talk in a common language.

We cannot talk the common language unless we have uniformity in our cost finding methods.

If we will all take this matter seriously and work the proposition out, I believe that we will stabilize our business, and I also believe that we may look calmly and with an assurance which comes through knowledge, on the problems which have heretofore been upsetting and agitating us. We will have a more secure and stable return on our investments and we will have a satisfaction that we are conducting our business in accordance with basic economic principles and in the beneficial interests of the general public.

I have now tried to give you what I conceive to be the meaning of this uniform cost accounting proposition. I have tried to give you a practical look at it and tell you just what it means to me.

I have pointed out what we do mean and what we do not mean by cost accounting and uniform cost accounting, and why we need both. I unhesitatingly say that I believe it to be a very vital, practical proposition which should command the attention of every manager who is here.

A MODERN SCOTTISH CHIEFTAIN IS SUCCESSFUL ICE CREAM MAN.

(Continued from page 28)

DEFINITE reasons are given for the steady growth of this fine business. The main one, according to the writer in the magazine "Milk," who is none other than J. J. Mojonnier, is that Mr. Cunningham always maintained highest standards of quality. This writer declares that Mr. Cunningham always has produced his raw materials from the best source possible.

It was due to his interest in high standards for dairy products that the manufacturers of Illinois delegated Mr. Cunningham as a member of the food and drug committee to meet with federal food officials, of whom Dr. Wiley was the chief, his purpose being to establish a standard of quality. This was accomplished.

Mr. Cunningham was rewarded for his efforts by being made president of the National Association of Ice Cream Manufacturers at the convention held in Chicago in 1908. The following year, at Pittsburgh, he was re-elected. Some time later he was made head of the executive board of the National Dairy Association, which post he has held for the past ten years.

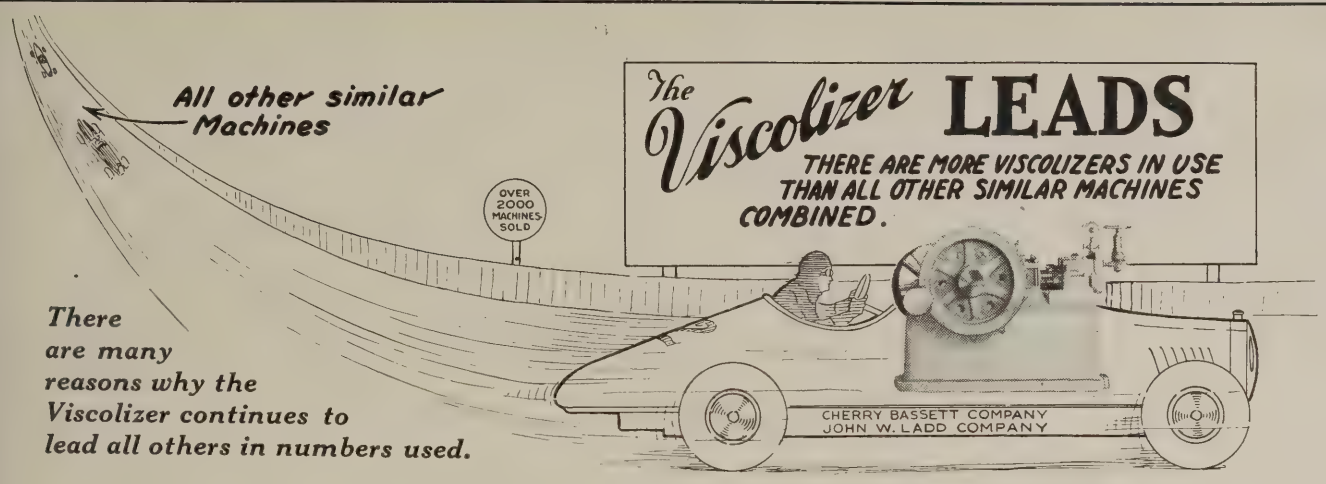
IN NEED OF WATER.



Every year in London newsboys are given an outing on the Thames River, where they can swim to their hearts' content. As they were getting into the water on one occasion, a street urchin called, "Tommy, you're pretty dirty."

"Yep," replied Tommy, "I missed the train last year."

* * *

"Did you tell father that you intend to marry me?" asked the girl.

"Yes," answered the young man. "All he said was that he wasn't very well acquainted with me, and he didn't see why I should tell him my troubles."—Moulton's Live Wire.

There are many reasons why the Viscolizer continues to lead all others in numbers used.

1. The Viscolizer is the Best regardless of Cost.
2. The Viscolizer manufacturer and jobbers all over the country of high financial standing, back the machine.
3. The Viscolizer gives complete satisfaction.
4. The contagious enthusiasm of Viscolizer users forces the machine to remain in the lead.

We recommend "UNEEDA BAKERS" Ideal Wafers. National Biscuit Branches thruout the U. S. can supply Ideal Wafers for Sanisco Machines at $1.70 per container of 725 wafers, or you can order direct from us.

"Results Surpass All Claims"

"In all my experience," says Wm. Tarr of Orchard Island Beach, Ohio, "we do not know of any article but this machine that surpassed in our estimation what was claimed by its manufacturer."

HERE'S EVIDENCE ENOUGH

"While much more profitable than ice cream cones, the rapidity with which a customer could be served makes it ideal for a place where people gather. In spite of the cold season last year, the fact that the operator actually had blisters on his hands would indicate the popularity of Saniscos, and this ought to be evidence enough of their popularity. For that reason it will be quite necessary to place an additional machine there next summer."

Are YOU Letting Such Selling Opportunities Slide By?

Get in touch with us today on the different ways you can get Sanisco machines into your territory.

The Sanisco Company, 1019 Third Street, Milwaukee, Wis.

ADDRESS BY EDWARD J. SHERIDAN, ON "ELECTRIC TRUCKS," AT NEW YORK CONVENTION.

(Continued from page 32)

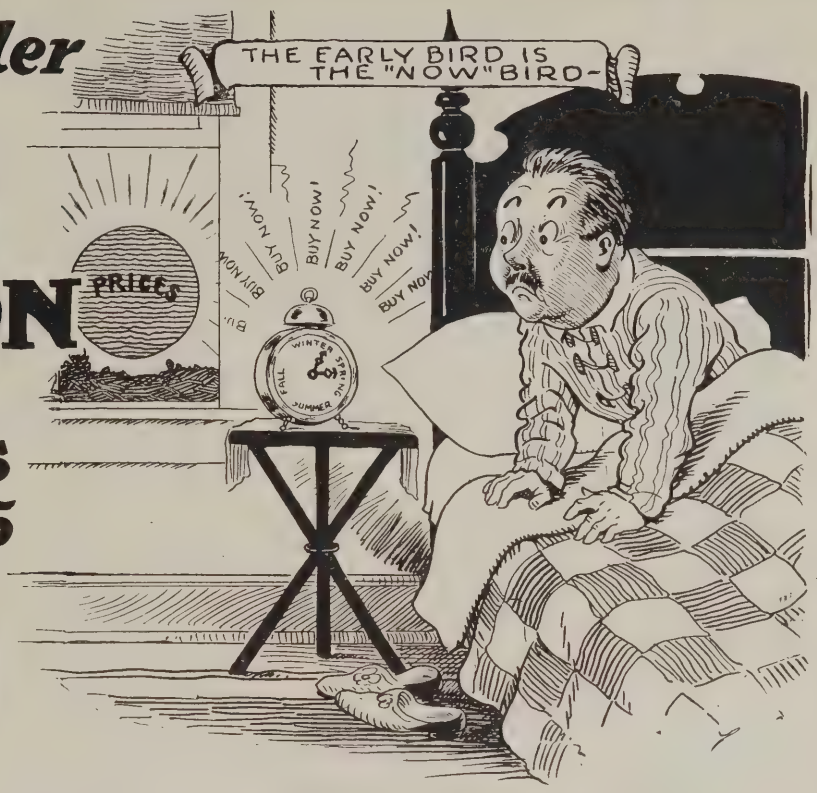
more efficient unit than the old one, because the drive is direct and consumes much less current than the old-time chain drives, besides which, of course, motors and batteries have improved in their efficiency. Old-time electrics were limited to short routes, but the improvements that have been made, particularly during the past ten years, have brought the electric vehicle up to the point where it is a dependable unit on routes of 40 miles per day, or less. Such mileage is being given on trucks in service of such companies as the Iroquois Gas Corporation, National Biscuit Company, and others. Such tow-ins as occur with modern electric trucks on an average city route are infrequent, either winter or summer, and we usually find in such an instance that the truck for some reason or other was not fully charged the night before.

2. How many miles is it possible for a truck to travel on one battery charge? This question comes up frequently, and is about as difficult to answer as it is to tell a man how many miles he can drive a truck with a given amount of gasoline. The consumption of electric current, as also with gasoline, is influenced by several factors; namely, the load carried, the type of driver, the physical road conditions, the number of stops and starts, etc. The electric truck manufacturers try to find out, before selling a truck, what the job consists of and then apply to the vehicle a battery of sufficient size to carry the required amount of energy. In other words, the battery is comparable with the size of a gasoline tank. A small battery will do certain short jobs while an oversize battery will yield a correspondingly greater mileage per battery charge. In this snow territory we do not figure it is safe or satisfactory to use electric trucks for routes of over 40 miles, but the truth is that 25 per cent of the average city routes, outside of large cities like Chicago and New York, do not amount to anything like 40 miles per day—the average delivery service is parcelled out in such a manner that trucks are not driven needlessly, and a day's work runs anywhere from 20 to 30 miles, which is easily within the capacity of a good storage battery.

3. Speed Comparison. Of course no one is going to say that the electric truck will not get over the ground as fast as horses, but there will be some doubt as to the comparative speed of the electric against the gasoline truck. In computing this speed, people forget that it takes quite a while for a driver to crank the engine of a truck. Of course, the average truck stands with the motor running, and in this way this loss of time is overcome, but at the expense of gasoline, oil and the wearing out of parts. Then, with the gas car, after the engine is started, there is a period of gear shifting. With the electric, the driver steps from the sidewalk immediately to a driving position, and has the truck at its top speed with a minimum of delay. In filtering his way through the traffic, there is no gear shifting to do. In a recent speech of the president of the American Railway Express Company, he says: "They (electric trucks) are the fastest trucks there are on short haul or frequent stop routes." A 3½-ton Walker electric is rated to run at 11 miles per hour under complete load. Since the average city route embraces only 20 to 30 miles, you can see that the wheels would be in motion only a small part of the day. On this question of speed, our drivers tell us that the electric picks up savings of time in a number of other ways. In the first place, it goes out of the garage at the scheduled hour of the morning and there are no last minute defects discovered or adjustments to make, as with a gas truck. Further, after it gets on its route, the truck goes along steadily, day in and day out, completing each day's work without interruptions for mechanical repairs.

4. What is the probable economical life of electric trucks in the ice cream business? There are electric trucks operating today that are 25 years old and, of course, these were built at a time when truck materials were not of the quality that can be obtained today. The Express Company of Buffalo has a fleet of thirteen electrics which were purchased in 1912, and this fleet is intact and likely to be in operation a good many years to come. They have expressed the opinion that the life of the electric, as built today, is undoubtedly twenty years, and they point to the fact that the first electrics purchased by the Express Company in 1907 are all in operation. This applies, of course, to the chassis.

Our own experience in the operation of these vehicles has been that the most reliable battery, and the one which gives us almost no trouble at all is the Edison battery. Its life is guaranteed by the makers at not less than ten years, and adjustments are made in the failure of any of its cells to comply with the guarantee.



You will be interested in the practical demonstration of the proof of some of these claims made concerning the operation, maintenance, etc., for the electric truck in terms of exact figures, which are the result of records kept by the speaker personally. First—we will compare the original cost of a standard 3½-ton gasoline chassis with a 3½-ton electric chassis—it being understood that both machines will be equipped ready to run, with operator's cab, etc.. There is no necessity for taking into consideration the cost of the body because it would be

To Keep Your Customers Your Ice Cream Must Keep Its Quality

No one thing is more important if you are to attain this end than the —SUGAR YOU USE.

FRANKLIN CALIFORNIA A after much experimenting, has proven to be a necessity for perfect ice cream.

If you will write our Service Department, we will give you the scientific reasons.

The Franklin Sugar Refining Company
PHILADELPHIA, PA.

"A Franklin Cane Sugar for every use"

the same in either case. Neither are we figuring on war tax.

The 3½-ton gas chassis, and cab, $4,400.00; 3½-ton electric chassis, and cab, with necessary batteries, $6,550.00. For the man who has never operated an electric truck, it is necessary to add a further cost in the way of the necessary charging machinery for charging the electric truck batteries. This runs at approximately $550.00 per truck, making the total electric investment cost $7,100.00. This shows a saving of the gas car on the original investment of $2,700.00.

Operating Cost.

	Electrics	Gas
License	$ 80.00	$ 64.00
Gasoline—electric current	90.00	388.91
Repair parts	87.18	132.74
Repair labor	147.24	174.29
Tire replacements	40.00	160.00
Oil	None	43.62
Total	$444.42	$963.56

Saving in favor of the electric, $519.14. Interest on investment figured at 6 per cent on the electric, $426.00; on the gas, $264.00. Saving in favor of the gas car, $162.00. Depreciation: average life of gas car, six years; average life of electric, ten years. Average life of electric battery, ten years; average life of charging machinery, ten years.

One-sixth of the gas car cost is $733.33; one-tenth of the electric trucks and batteries and charging outfit is $710.00. These two items would constitute the yearly depreciation charge against the investment, making a saving of $23.33 in favor of the electric car. The recapitulation of these costs show the following:

	Electric	Gas
Operation	$ 444.42	$ 963.56
Interest	426.00	264.00
Depreciation	710.00	733.33
	$1,580.42	$1,960.89

Saving in favor of electric trucks, $380.47.

Now, at the end of six years, the gas truck is exhausted and worn out and has no value, except as scrap, which may be from $300.00 to $500.00. At the end of six years the electric truck is still going strong and has approximately five to six years or more active service ahead of it. During the six years it has saved the owner $2,282.00 in operation costs over the same capacity of gas trucks and at the end of ten years will have saved over $3,800.00, or a net saving of over $1,100.00 over the extra purchase price, as compared with the original purchase price of the gas car.

The question of depreciation is one which cannot be absolutely stated because, as a matter of fact, no one knows the absolute life of the modern electric truck. The figures which have been given herein are not for the operation of one individual truck, but are the average figures for the operation of the entire fleet of them, as compared with the entire fleet of the same capacity gas trucks. No attempt is being made to show the saving in hauling cost per ton or per ton mile, because in the ice cream business those figures do not mean anything. It is our hauling cost per gallon which counts, and these are determined by the volume of our business and by the total of the operating and maintenance costs of the vehicles.

From the standpoint of safety in the city streets, the electric truck is far superior to the gas truck—its insurance rate is lower than the gas truck for this reason.

As these facts become more generally understood the electric truck will replace the gas truck in many city delivery routes.

Minnesota Manufacturers Will Decide Cabinet Matter

Special Committee Appointed at December Meeting to Report at Minneapolis Convention this Month

WHEN the ice cream manufacturers of the North Star State meet in Minneapolis in annual convention on February 19 and 20, they will be especially concerned with their future policy toward the refrigerated cabinet problem.

On December 16 a special meeting was held in Minneapolis and a full and free discussion of the cabinet question followed. At the close of the meeting the following agreement was signed by every member present:

AGREEMENT.

(Reads): "We, the undersigned, agree to support, financially and morally, a program of investigation to be conducted by a committee of five members of the Minnesota State Ice Cream Manufacturers' Association, two from the Twin Cities and three from other points, to be appointed by the members at large; said investigation to be confined to a thorough and conscientious analysis of the practical and economic value of diverse refrigerated cabinets and fountains; detailed report of committee to be submitted to members of this Association and to all others subscribing hereto, for their disposition, in convention in Minneapolis, February 19 and 20, 1925; report to include recommendations as to financing and distribution:

"Said committee expenses to include a reasonable charge for heated room space, power and light for mechanical experiments, postage and stationery for correspondence, traveling costs of committee members between points within this state, and consultation fees of practical refrigerating engineers; functioning of committee to cease with submission of report February 19 tnd 20, 1925, and expenses prorated and absorbed as follows: Fifty per cent by subscribers from St. Paul and Minneapolis in equal amounts and fifty per cent by other subscribers in equal amounts.

"We, the undersigned, in consideration of our faith in the worthiness of this investigation do also hereby agree to refrain from or immediately cease purchasing for, distributing to, or otherwise interesting in refrigerated cabinets or fountains any customer of other subscribers hereto, until said report is submitted, February 19 and 20, 1925."

Dated at Minneapolis, this 16th day of December, 1924.

The special committee provided for in the above agreement is hard at work and will be prepared to recommend a definite policy at the coming convention.

The following contract form has also been prepared by the committee and will be presented for consideration at the Minneapolis convention:

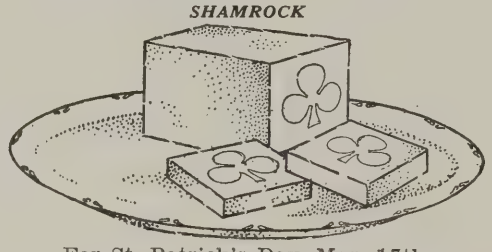
TENTATIVE CONTRACT.

THIS AGREEMENT, made and entered into this..... day of....., 192.., by and between....., hereinafter known as the Company, and....., hereinafter known as the Customer.

WITNESSETH, That said Company in consideration of the rents and covenants hereinafter mentioned does hereby lease and let unto said Customer and said Customer does hereby hire and take from said Company the following described personal property, viz: One.....hole mechanically refrigerated.....No.....for the purpose of preserving ice cream and sherbets exclusively upon the following terms and conditions, that is to say:

1. This lease shall be for a term of three (3) years from and after the date of the installation of said cabinet as endorsed hereon.

2. The Company agrees to forthwith superintend the installation of said cabinet in space to be provided therefor by said Customer in the store of said Customer situated as No.....Street, in the City of....., State of....., and when installed to maintain the same in repair and working order for a period of one (1) year from and after date of installation, except where repairs thereto are made necessary by the negligence of the Customer. The Customer agrees to pay all plumbing, electric wiring, freight, cartage, labor and other charges necessary for the installation of said cabinet, and to permit the Company to have access to his said store at any time during the life of this agreement for the purpose of inspecting said cabinet. Said cabinet shall not be removed from said store room without the written consent of said Company.



3. The Customer, as one of the considerations for this agreement, agrees to buy ice cream exclusively and to the full extent of his requirements from said Company at its regular wholesale prices, f. o. b. shipping point for a period of three (3) years from and after the date of the installation endorsed hereon, and to return all containers to said Company within twenty-four (24) hours after emptying the same, having previously rinsed the same out and removed all liners from the cans. And said Customer further agrees to pay for said ice cream and all other merchandise purchased from said Company promptly each week for and during the full term of this agreement.

4. Said Customer further agrees to and with said Company to pay said Company as rent, weekly in advance for the above mentioned personal property as follows: the sum of $....., April to September, and $....., October to March, commencing with the installation of said cabinet and continuing for the full term of three (3) years thereafter; provided, however, that said Customer may at his option at any time after one (1) year's rental has been paid hereunder, and said Customer not being otherwise in default in any of the terms or conditions of this contract, purchase the said cabinet by paying to said Company in cash Eighty (80) per centum of the rentals then remaining unpaid hereunder, whereupon this contract shall cease and terminate.

5. It is further hereby distinctly agreed that in case said customer shall make default in any of the rents herein re-

served or in any of the payments by him to be made or in any of the conditions or requirements herein on his part to be kept and performed, then and in that event, the said Company is hereby authorized and empowered, at its election, to at once without notice resume possession of its said property and to take the same from the premises of said Customer herein above described, or from any other premises to which they may be removed, and said Customer hereby gives the said Company, its agents, servants, or employees full and free right of ingress and egress to and from any premises of said Customer which it may be necessary or desirable to enter in resuming possession of said leased property.

6. It is understood that if, at any time during the continuance of this agreement, the said Company shall deem said property or its rights therein insecure, or said property shall deteriorate or be damaged more than by ordinary wear and tear, then and in that event, it shall be entitled to resume possession thereof at once, without notice and in the same manner as if default had been made by said Customer in any of the other conditions of this agreement.

7. In case it shall become necessary for any reason above herein provided for said Company to take possession of said leased property, then and in that event, all the expenses of removing the same from the premises of said Customer to the home of said Company shall be paid by said Customer to said Company upon demand.

8. The said Customer hereby agrees during the entire term of this agreement to keep said cabinet covered by insurance against loss by fire in the name of said Company in at least the sum of $....., pay the premium therefor and to deliver the policy to said Company; and in case the said Customer shall fail or neglect to so insure said property in the name of said Company the said Company may effect such insurance, and the sum or sums necessarily paid as premium therefor by said Company shall immediately become due and payable from said Customer to said Company and shall be paid by said Customer to said Company with the next weekly installment of rent falling due hereunder thereafter.

9. This contract and all conditions therein shall be binding upon the heirs, legal representatives, successors and assigns of said Customer, and said Customer agrees to secure acceptance of his successors and assigns thereto by proper endorsement hereon in event of a sale by him of the business conducted by him at the above described location; any such assignment of this lease, however, to be subject to the written consent of said Company.

10. At the end of said three (3) years period, all rents reserved hereunder having been fully paid by said Customer and said Customer not then being in default in any of the terms and conditions of this agreement, upon the payment of the sum of One Dollar ($1.00) by said Customer to said Company, the said Company shall execute and deliver to said Customer a Bill of Sale of the above described rented property. Until all said payments are fully made and said Bill of Sale given, the title to said cabinet shall at all times be and remain vested in said Company.

11. The date of the installation hereunder shall be endorsed hereon in writing under the signature of said Company.

IN TESTIMONY WHEREOF, the parties hereto have hereunto set their hands and seal in triplicate the day and year first above written.

ANOTHER ACKNOWLEDGMENT.

A very serviceable calendar for 1925, a little late but none the less useful, comes from the Creamery Package Mfg. Company. Each page carries the calendar of the current month, also the one preceding and succeeding. At the top of each page is the cut of an important item of factory equipment, a different one featured each month.

Sing a song of sixpence, when a country's dry,
A sixpence wouldn't buy enough to put into your eye.

When filtered the liquid gelatine is hurried to these great wheels and after a single turn is dropped directly into barrels. Our patent process requires less than 5 minutes from filters to barrel. The old tunnel drying process requires 16 to 48 hours.

The Preference of the Industry

Because of the matchless quality, adaptability and uniformity, produced only by our highly scientific wheel-dried process, *Ucopco* Wheel-Dried Gelatine is now *outstanding!* Already the choice of a predominating number of manufacturers in the gelatine-using industries, it is constantly gaining ground as each new user becomes convinced of its merits. Investigate *Ucopco* at once.

Let this trade-mark which appears on every barrel be your guide in selecting gelatine.

Cabinets and Winter Consumption Feature Carolina Convention

National Advertising Endorsed and Committee Appointed to Study Iceless Cabinet Proposition at Seventh Annual Convention

ADOPTION of the national advertising campaign and steps to make a serious inquiry into the matter of iceless cabinets featured the annual convention of the North Carolina Ice Cream Manufacturers' Association at Charlotte, January 13 and 14. Certain restrictions are carried with the adoption of the advertising program and with a satisfactory working out of present plans, the association's support will go to this movement, which was endorsed by the delegates.

The report of the committee on refrigerated cabinets was sent back to that committee for further consideration after it was submitted. Another report will be made to the officers.

The seventh annual convention was one of the most interesting of all previous meetings of the association, which has grown to be one of the outstanding trade organizations in the country. In thanking The Ice Cream Review for co-operation in connection with the convention, Secretary A. E. Dixon, who has become famous in national ice cream circles as one of the industry's most alert officials, added that it "was the best one we ever had, our membership being materially increased, and I am quite sure our members are closer together than ever before."

New Officers

PRESIDENT.

George H. White,
White Dairy Products Co.,
Raleigh, N. C.

VICE-PRESIDENT

Thomas C. Reed,
Chapin-Sacks Corp.,
Greensboro, N. C.

SECRETARY-TREASURER

A. E. Dixon,
Carolina Ice Cream Co.,
Fayetteville, N. C.

DIRECTORS

Geo. L. H. White, Raleigh; A. E. Dixon, Fayetteville; Thomas C. Reed, Greensboro; L. A. Corning, Hamlet; Leslie L. Taylor, Rutherfordton; J. G. Baldwin, Durham, and A. H. May, Charlotte.

ICE cream men all over the nation, are virtually agreed that the installation of iceless cabinets is a matter requiring the closest kind of co-operation among manufacturers in their respective territories, and although it is a popular opinion that the expense of the cabinet should be borne by the dealers, it is not likely that this plan will be found to be practicable at just this time. These thoughts were brought out in one of the outstanding addresses before the convention, delivered by T. C. Reed, district manager of Chapin-Sacks Corp., Greensboro. Mr. Reed had made an exhaustive investigation, having sent circular letters to prominent ice cream manufacturers in various parts of the country, including officials of different associations of ice cream manufacturers.

A SUPPLYMAN, L. O. Lindeman, representing one of the large manufacturers of iceless cabinets, told how members of the bread industry slowly educated themselves away from the ruinous habit of giving away profits through premiums, prizes, etc. After stopping these foolish practices, the bakers' national association, through the co-operation of a large yeast manufacturer, instituted a national advertising campaign that is materially increasing the consumption of bread. Similar results can be brought about for ice cream, the speaker pointed out, but at this time, according to the speaker,

"Ice cream manufacturers still are in the old rut, giving the assets of their business to the dealers in efforts to take away each other's customers. They are selling less ice cream than would be sold if an equal expenditure would be made to increase the consumption of ice cream through co-operative advertising."

REFRIGERATED cabinets are known to have increased consumption in given communities from 50 to 100 per cent, "for ice cream is served better, more sanitary, and in better and more uniform condition from the cabinets." He added that dealers like the new cabinets because there is less loss through shrinkage.

Mr. Lindeman mentioned two methods of handling the cabinets; first, let the dealer buy the cabinet if he has the money. He recommended that ice cream manufacturers not contract for the exclusive right to the use of iceless cabinets in their territory, for another manufacturer soon would make a similar offer, and competitive ice cream manufacturers would find themselves weighed down with heavy investments in dealer equipment. The second plan suggested is to buy the cabinet and sell it outright to the dealer, charge the regular price for ice cream and credit the dealer with the icing saving of 10 cents a gallon till the cabinet is paid for. Some cabinets are being placed on this plan, he said. The dealer makes an initial payment of 20 per cent of the price, and the balance in 10-cents-a-gallon installments.

DELEGATES were welcomed to Charlotte by Clarence Kuester, manager of the Charlotte Chamber of Commerce, who lauded the idea of national advertising. The response was by Charles E. Landreth, Winston-Salem, past-president of the association, who stressed the importance of working for the development of more winter business.

North Carolina has a foundation "for a real association," it was brought out in the secretary's report, Mr. Dixon declaring that splendid co-operation has been given by members. He reviewed the work of the national advertising committee.

A MAN is wanted who will tell the North Carolina ice cream manufacturers how to sell ice cream all the year around, declared President W. S. Obenshain, Charlotte, in one of the best addresses by a convention president that one hears taking the rounds of the convention from year to year. On this point he said:

"Manufacturers all over the United States have had original ideas of all sorts—they get out unique advertisements, they get up wonderful specials, they go 'over the top' in the hot summer time—but the man has not yet been discovered

in this section who can put over an idea that will SELL ice cream all the time during the cold winter months.

"It is true that some of the Northern ice cream manufacturers have worked out ideas whereby they have a good year-round business, and it is up to us to so educate the people that ice cream will be in demand as a year-round food.

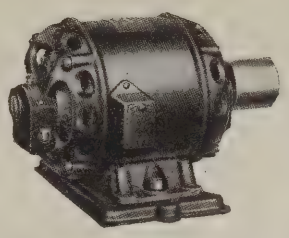
"We all know this is not an easy matter, but if we all get together and discuss ways and means we should be able at least to make some headway. 'Rome was not made in a day,' and of course we don't expect to make such wonderful increases in our winter business in one season, but by continually carrying on we should be able to say 'day by day in every way our winter business is getting better and better.' "

Another point he stressed was co-operative advertising. He had noticed that wherever advertising is carried on in this way each competitor has profited as much or more than before and it gives the public a greater confidence in them, "since being fair and square with each other would in turn lead them to be fair and square with their customers."

Uniform accounting should also come in for consideration, he said. By this term he meant each manufacturer should keep an account of his manufacturing cost, his delivery cost—in fact, the cost of his entire output of ice cream, figuring in depreciation on machinery, equipment, etc. In this way an accurate account can be kept of every dollar spent and every dollar made—and when this is done, he felt quite sure, manufacturers will have no more "cutting prices," as the manufacturer will be able to see that "when he cuts prices he is only cutting his own throat in the end." "There isn't enough money made in GOOD ice cream for any manufacturer to cut prices—he should have a uniform price and stick to it," he added.

He felt that in the future more stress should be laid on the food value of ice cream. Everyone knows that good ice cream is delicious, but it is surprising the number of people we run upon who know nothing whatever about the food value of ice cream, he pointed out, adding:

"A great many manufacturers seem to think the proper thing to do is to decrease the price of their ice cream. I say IMPROVE THE QUALITY and if necessary raise the price. There is nothing better than good ice cream and to my mind nothing worse than inferior ice cream. I have this to say about the man who is always reducing and cutting prices—he not only reduces the price but he also reduces his quality.



"In other words, the customer gets just what he pays for—a mixture called ice cream but a disgrace to the name. If he does not do this he will not be able to stay in business long, for a manufacturer cannot meet his expenses if he sells ice cream for practically what it costs him to put it out. Therefore, let us all make a New Year's resolution to IMPROVE THE QUALITY of our ice cream, if this is possible."

Roberts Everett, secretary-manager of The Association of Ice Cream Supply Men, delivered an address before the association, which is to be dealt with in another connection.

"Group Insurance" was discussed by G. L. Glendenin of Wilmington, representing the Metropolitan Life Insurance Company.

AN OUTSTANDING address was that by F. W. Gentleman of the Garden Advertising Co., who spoke on national advertising, using charts showing increases in sales effected by associations of walnuts, citrus fruits, pineapples, etc., and the lead and cast iron pipe manufacturers through co-operative national advertising. The subject of his address was the same as that delivered at the New York State Convention the week before.

With regard to the gain in sales enjoyed by those who do not participate in the campaign he said that the Walnut Growers' Association members' sales in 1915

¼ h. p. Century Repulsion-start Induction Single-Phase Motors

"They Keep a-Running"

QUIETLY

The brushes of Century Repulsion-Start Induction Single-Phase Motors are in contact with the commutator only during the period of starting. In many classes of service this means that the brushes ride the commutator only 1/900th of the time the motor is running. **Quiet operation**—no brush-friction noises, squeaks, sparking or chattering.

All iron and steel entering the motor assembly is liberally proportioned. **Quiet operation**—no electrical hum.

The "natural period of vibration" of these motors has been kept unusually low. **Quiet operation**—no induced or transmitted vibrational noises.

Every Century Type RS motor armature is given a very accurate dynamic or "running" balance test, during which mechanical vibration is eliminated. **Quiet operation.**

Because of these Century "quiet" features, these motors are widely used for organ blowers, household refrigerating systems, oil burners, house pumps and similar service where continuous and quiet operation is essential.

Built in all standard sizes from ⅛ to 40 h. p. Temperature rise not more than 40° Centigrade.

Send for Bulletin No. 29

In Bulletin No. 29 you will find a complete outline of the superior characteristics of Century Type RS Motors. Send for your copy today.

amounted to 15,000,000 pounds. This was increased in 1922 to 48,000,000 pounds, or an increase of 220 per cent. Sales of non-members of the association grew from 50,000,000 in 1915, to 100,000,000 in 1922, or an increase of only 100%. A similar difference in increase might be noted in the ice cream industry, he said. It must be remembered that increases in ice cream sales would be made without adding any additional "stops."

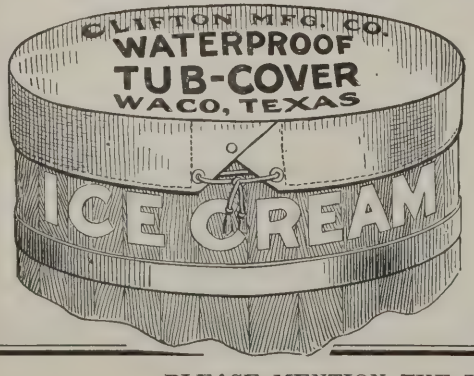
Representatives of different trade publications had proposed addresses, one being delivered in person and others being read by the secretary. The business meeting was held the afternoon of January 4.

California Legislative Committee in Session

The legislative committee of the California and Southwestern States Ice Cream Manufacturers' Association, recently appointed by President Frank H. Ames, was preparing for a meeting at San Francisco on January 31 as this issue was going to press. The personnel of the committee consists of Carl Plaut, chairman, Oakland; W. A. Hosking, Sacramento, and C. J. Alfred, Los Angeles. As the California legislature is now in session, members of the association, in a bulletin from the secretary, Jay H. Kugler, have been urged to carefully watch for any proposed legislation that might affect the ice cream industry and to report to the legislative committee.

CARL PLAUT,
Chairman,
Oakland.

W. A. HOSKING,
Sacramento.



C. J. ALFRED,
Los Angeles.

MINNESOTA CONCERN TO ERECT PLANT IN IOWA.

About $100,000 will be spent for erecting and equipping a modern ice cream and dairy plant in Des Moines, Iowa. The Northland Milk and Ice Cream Co., capitalized at $3,000,000, with headquarters at 11 W. 28th St., Minneapolis, Minn., recently purchased the Fairlawn Milk Products Co. of Des Moines, Ia., and the vacant property at the corner of East Grand Avenue and Sixth St., and, according to Edwin S. Elwell, president of the company, a modern structure will be erected, although definite plans are not yet completed.

It is estimated that the plant will employ about 200 people in the creamery, ice cream and dairy departments. A large fleet of trucks and wagons will be placed in service, it is reported.

ICELESS CABINETS TO FEATURE MINNESOTA CONVENTION.

(Continued from page 12)

WILLIAM F. LUICK, Milwaukee, past president of the National Association of Ice Cream Manufacturers, and one of the best posted men in the ice cream industry on the subject of interurban deliveries, will discuss delivery costs. Prof. H. A. Ruehe of the University of Illinois, a popular authority on ice cream making, will deliver one of the feature addresses. Fred High of Chicago will discuss organization.

The Minnesota Gophers, the body of supplymen affiliated with the association, will provide attractive forms of entertainment for the delegates. The association will give a banquet the first evening and on the second evening the Gophers will entertain.

J. J. Farrell of St. Paul is secretary of the Minnesota state association. Nels Baden of Wadena is treasurer, and C. E. Kester of Hutchinson is vice-president. The directors are President Munn, C. E. Kester, Nels Baden, Riley Thompson of Albert Lea, Charles W. Kiewel of Crookston, D. T. Carlson of Willmar, and Ralph Nelson of Hibbing.

H. E. Stinchfield, secretary of the Minnesota Gophers, has made the following announcement:

With respect to the Minnesota Gophers' part of the program, it has been arranged that the Gophers will handle all the entertainment of the convention. Thursday evening, February 19th, the ice cream manufacturers will be our guests at an affair which was originally planned for a stag party, but, on account of so many of the ladies having threatened to storm our party, we have decided to admit all the ladies who arrive at the doors before 7:30 p. m. This is going to be a stag party for both ladies and men, and we certainly hope that the ladies will wear their shock absorbers. It is going to be a real bowery party, with apaches 'neverything.

The following will give you just a rough idea of part of our program:

1. 7:00 p. m. Buffet supper, with orchestra and plenty of smokes.
2. Many cabaret stunts. Bring your opera glasses or wear blinders.
3. Jazz music (but you can't dance yet.)
4. SONGS: Solos, duets, trios, quartets, cabaret dancing, impersonations, 'neverything.
5. Big mystery act—very different and entirely new.
6. We all dance to the Nicollet Radio Orchestra.

We expect to make a record attendance at this convention, and we request every manufacturer and supply man to be present at this convention. It is the one big get-together party of the year, and we certainly feel that this convention this year will be well worth the while and money spent to attend it. We want everyone to bring a lady so that everybody can dance for the winding up of this party on Feb. 19th.

NEWS FROM FAR AND NEAR.

Sulphur Springs, Tex.—Frank Webster, experienced ice cream manufacturer, has consolidated with a syndicate of butter and ice cream manufacturers from Oklahoma and will put in operation an up-to-date factory with a capacity of 1,000 gallons of ice cream daily.

Winters, Tex.—A. M. Sparks has completed preparations for the manufacture of ice cream on a wholesale basis.

Salt Lake City, Utah.—A loss of $1,500 was suffered by the Keely Ice Cream Co. when its plant was damaged by fire.

Honaker, Va.—The Russell County Creamery was incorporated to develop the dairy industry in that section. The creamery will manufacture "Blue Grass Butter" and will also make ice cream. The capital of the new company is $10,000, and Ira Thompson is president, H. R. Davis, secretary and D. M. Hubbard, treasurer.

Auburn, Wash.—The Auburn Ice Cream Co., was recently organized with a capital stock of $30,000. The incorporators are Frank Lochridge and Frank Fulmer.

SALES CAMPAIGN CENTERED AROUND ICELESS CABINETS BY ARKANSAS MANUFACTURER.

(Continued from page 8)

most up-to-date in the South. He is past president of the Arkansas Ice Cream Manufacturers' Association, and for a long time has been prominent in Southern association activities, at different times being director and serving on important committees.

This idea of shifting to the dealer the share of his burden that the ice cream manufacturer has unfairly been carrying so long has been a popular convention subject for a long time. Ice cream manufacturers in virtually every part of the country have expressed themselves in convention speeches against the condition that has led many dealers to feel that ice cream is something they don't have to sell unless they want to. Mr. Terry's plan, for this reason, is sure to be watched with wide interest.

Readers will be interested in the form of contract to be used by the Terry Dairy Co. Accompanying each contract will be a special letter of explanation. A copy of the letter and the contract form follow:

Little Rock, Ark.

To the Dealer:

In order to increase the volume of ice cream sales, we contemplate purchasing and supplying to our customers, iceless cabinets for handling ice cream at the customers' place of business.

To do this will involve an outlay of approximately $25,000 for these cabinets and the necessary equipment for manufacturing and packaging brick ice cream in quarts and pints.

It is also proposed to erect large billboards in various parts of the city with attractive posters announcing the sale of these packages of ice cream at popular prices. A neat reproduction of these posters in small size will be furnished each customer for placing in his window, stating that these packages are for sale at his place of business. In addition to this, a campaign of newspaper advertising will be carried on, showing these posters and advising the public that this package ice cream can be purchased at your place of business. Before making the heavy outlay of capital necessary to carry out this plan it is necessary that we know whether you wish to take advantage of this or not.

Attached is contract outlining the conditions of this plan, submitted to you for your consideration.

Terry's Ice Cream—"That Good Kind."

Contract.

This agreement made this ——— day of ———, 192—— by and between the Terry Dairy Co. of the county of Pulaski and the state of Arkansas, hereinafter called owner, and ——————— hereinafter called customer.

Said owner agrees to install one Nizer mechanical ice cream cabinet, hereinafter called cabinet, in the store or place of business of said customer.

The customer agrees to provide the electrical and water connections to the point of installation of the equipment and to supply the necessary electric current and water to operate the equipment at his own expense and to provide a space ——— by ——— by ——— for a ——— hole cabinet. The owner agrees to keep the said cabinet in repair and in good condition, except where repairs are made necessary by the negligence of the customer or his employees, when the repair shall be made by the customer.

Said customer agrees to hold said owner harmless from any loss, cost or damage, by reason of leakage or alterations made necessary to install said cabinet, or for any other cause or reason due to the installation and use of said cabinet.

It is hereby mutually agreed and understood that said cabinet shall be used for the express storage of the ice cream sold by said owner, and shall not be used for any other purposes whatsoever.

It is further agreed by the customer to use his best endeavors to sell all the packaged brick ice cream at a price of 50 cents for quarts and 30 cents for pints, and said owner agrees to furnish customer said ice cream at a price of 35 cents per quart and 20 cents per pint.

It is hereby mutually understood and agreed that this agreement can be terminated by a written notice of 30 days from said owner to said customer or by a written notice of 30 days from said customer to said owner. Said owner shall have the right to enter the premises of said customer for the purpose of examination of said cabinet, to repair said cabinet, to remove said cabinet, without being liable for doing so.

It is hereby expressly understood and agreed that said cabinet shall be the sole property of said owner, and shall remain the property of said owner and shall not become the property of said customer, or his heirs, assigns, or any other person.

When Breaking Ice

A CREASEY ICE BREAKER will quickly and conveniently, without muss or noise, break ice for use in your cabinets, for cooling drinking water, for making ice cream, for icing foods and drinks, etc.

It breaks the ice to just the size you want it and involves no sloppy tubs and makes no muss from flying pieces. The Breyer Ice Cream Co., Colonial Ice Cream Co., French Bros., Bauer Co., Huyler's, Schraft's, Liggett Drug Co., Borden's Milk Co., Reid Ice Cream Co., Herschey Creamery Co., Benham Ice Cream Co., etc., etc., have for years made Creasey Ice Breakers a standard part of their equipments.

Write for catalogue R-1125, prices and name of nearest dealer.

Now Ready for Delivery-

The New
Ultra-Weld

NO SOLDER-NO RIVETS-NO HOOPS

This newly developed ice cream can we are offering to those who prefer the solderless or welded type. The bottom is made an intregal part of the cylinder by a continuous electric weld; it cannot leak, become loose, or drop out. The side seam joint is a genuine electric arc-weld and is built up with steel to securely bind the cylinder edge together; also notice the triple folded, rounded, "crackless" Ultra top band and bead.

Our new Ultra-Weld is exactly the same as our regular Ultra, except it is welded throughout instead of soldered. By all means see the excellent Ultra cans before buying your requirements for next season.

NOTES OF THE TRADE

News of Interest Concerning What Our Readers and Advertisers are Doing to Develop the Industry. We Invite Correspondence Relative to New Products and New Equipment.

ROY S. JENNINGS.

JENNINGS JOINS BESSIRE & CO.

Roy S. Jennings, Atlanta, Ga., has severed his connection with the Creamery Package Manufacturing Co., and has joined the Southern division of Bessire & Co., with headquarters in Atlanta. Mr. Jennings, who is widely known in the Southern trade, will cover part of South Caroline, south Georgia and Florida. For many years he was connected with Mojonnier Bros., leaving that company in 1923 to join the Creamery Package Manufacturing Co. He resigned this place to go with Bessire & Co. on January 1.

* * *

JOSEPH MILLER CO. MOVES TO LARGER QUARTERS.

The building at 919 Third Ave. North, Minneapolis, Minn., has been vacated by The Joseph Miller Co., and the company now occupies a spacious plant at 507-9-11 Ninth Ave., South. Four times as much floor space is available at the new place, and officials of the company advise that several new machines have been added to the equipment to meet the company's steady growth in business. W. H. Nein, secretary-treasurer, advises that "business is exceedingly fine."

* * *

PFAUDLER'S NEW PRODUCT.

The Pfaudler Co., Rochester, N. Y., is putting on the market a new line of sanitary fittings. They have been designated the Pfaudler "Hand-tight" fittings, and officials of the company claim that they have many features not duplicated in other lines. The valves are the compression type as contrasted to the ground-key type. The company believes that the compression type valve is an improvement. It is claimed that it will not only withstand pressure in the tank, but also will hold vacuum. A distinctive feature claimed for this valve is that it can be sealed by hand and does not have to be tightened continuously by wrenches. In sealing the valve, officials say, a knife edge seats against a special alloy ring seat cutting into the metal, and they say that this explains why there cannot possibly be any leakage. These alloy seats can be taken out of the valve and replaced when necessary. The average life of these seats is about three years and the price is only 35 cents.

* * *

RIEF IS FREE AGENT.

Although it was announced in the January issue of The Ice Cream Review that Anton Rief, formerly connected with Joe Lowe Co., had not accepted a place that he previously had been reported to have accepted, Mr. Rief announces in January that he had severed his relations with Joe Lowe Company. At that time he had not decided upon his future connections.

CALIFORNIA COMPANY EXPANDS.

"Suncrush Orange" is now "California Mission Orange Juice." The California Crushed Fruit Corp. of Los Angeles adopted this new copyrighted trade name recently when it absorbed the Mission Orange Punch Co. of that city. The new name will be applied equally to all the products of the merged company, including orange, lemon and grapefruit juices, and the peel by-products.

For several years these two California concerns have been big factors in the pure citrus juice field. Together, they are effecting many economies of manufacture and distribution. The principal officers of the Mission company are now executives in the California Crushed Fruit Corporation. W. R. Thomas remains president of the corporation, with C. F. Blattner, vice-president; W. T. Evans, secretary, and J. E. Hennessy, treasurer.

* * *

COLUMBIA METAL PRODUCTS CO. DESIGNS NEW MIXER.

A new type of mixer, known as the Dayton Mixer, is designed for mixing food products, and may be used with either wet or dry ingredients.

The new mixer has a capacity of 12 quarts. It is made by the Columbia Metal Products Company, which has designed it for mixing thoroughly and quickly any product for which it is adapted. A special feature is a spiral mixing element which lifts all ingredients from the bottom of the container towards the top. At different heights the materials are thrown out into the path of rapidly rotating and revolving beater blades which also are syiral in shape and tend raise the ingredients towards the top.

All mixing blades are removable and easily cleaned. General Electric motors are used in the new model.

* * *

PATENT PENDING ON NEW BROOM.

Visitors to the New Orleans convention were very much interested in a strongly constructed push broom designed by a practical ice cream manufacturer that claims the old style broom is not practical, when used on floors where there is lots of water and slush.

Everyone realizes that it is the water and filth which accumulates in the base of the wood block (which is also very unsanitary) that causes the fibre to rot, and the broom soon falls to pieces. These inefficiencies are said to be overcome in the Rainbow Push Broom by using a rubber skirt to protect the fibre from getting wet, and helps to keep the broom in a dry and sanitary condition; the rubber skirt also grips the floor and cleans thoroughly.

These brooms were on exhibit by The Rainbow Push Broom Company, Plaquemine, Louisiana, and they pledge to replace any of their brooms that wear out within four months. It is claimed that some factories are getting good service out of these brooms after eight months' usage.

* * *

UNGERER'S SIXTIETH ANNIVERSARY.

The House of Ungerer, purveyors of basic flavoring materials, essential oils, etc., this year will celebrate its sixtieth anniversary, basing this upon the hitherto temporarily forgotten fact that the late W. P. Ungerer first started in business in Rochester, N. Y., under the name of Ungerer Brothers, in partnership with his brother, Henry Ungerer.

The present firm of Ungerer & Company was incorporated under that name in 1901, succeeding the firm of W. P. Ungerer, which was first established by the late W. P. Ungerer, father of the present members of Ungerer & Company, in 1893. The business has remained in the family, passing from Ungerer Brothers, 1865, to W. P. Uugerer, and later to Ungerer & Company, incorporated. The members of the firm of Ungerer & Company, William G. and Frederick H. Ungerer, are sons of the late W. P. Ungerer, original founder of W. P. Ungerer Brothers, and the firm is still essentially Ungerer Brothers, although not doing business under that name.

* * *

FROZEN SUCKERS.

Frozen suckers are being used to good purpose by Southern ice cream manufacturers, it was indicated at recent con-

ventions. H. A. Benners, head of Southern Selling Service, 702 United Fruit Building, New Orleans, is national agent for Radford's frozen sucker units in that territory, manufactured by the E. H. Radford Sheet Metal Works, Los Angeles.

* * *

ALCO CONE COMPANY LOOKS FOR ACTIVE SEASON.

Increased manufacturing facilities have made it possible for the Alco Cone Co., Memphis, to extend its sales operations according to recent announcement. Herman Allenberg, head of the company, reports that the outlook is for an unusually active season in the Southern states this year. His company is making preparations for a large output of ice cream in the South, which section is rapidly developing its ice cream industry. Mr. Allenberg has been engaged in the manufacture of cones in Memphis for the past 15 years.

SAME TO YOU.

Among the greetings of the past yuletide season that reached the editorial department of The Ice Cream Review were those from Adolf J. Marschall, National Dairy Association, The Paterson Parchment Paper Co., Chr. Hansen's Laboratory, Inc., The Farrar Advertising Co., Indiana Manufacturers of Dairy Products, R. L. Hammond, general secretary; Horine & Bowey Co., The Abbott Laboratories, J. P. Dorsey, F. B. Fulmer., John J. Grothe Co., Inc., Franklin Co-operative Creamery Association and H. E. Van Norman, president of the National Dairy Association, and Westerlin & Campbell.

In this issue the Solar-Sturges Manufacturing Co. of Chicago, are calling attention to the new Ultra-Weld ice cream can. H. A. MacLaughlin, assistant general sales manager, reports that their regular ultra can has proved the most popular they have ever offered to the trade. They say there are approximately 1,000,000 of these cans in active, everyday use.

On the new Ultra-Weld can they are using the same inserted rolled bottom, except that instead of being soldered it it is welded in by continuous electric weld. This electric weld makes the bottom an integral part of the cylinder, and the absence of a separate top hoop and bead makes the can practically one piece. The side seam of the new Ultra is also electrically welded. The two edges of the cylinder being drawn together and welded before tinning, eliminating the overlapping side seam. The top hoop and bead of this can consist of the Solar-Sturges well-known triple fold, which is said to never crack or come off. The company is not intending that the new Ultra-Weld can shall replace its regular soldered ice cream can, but it has brought this out for those in the trade who prefer a welded or solderless type of can.

INCREASED SIZE FOR ICE CREAM TRADE JOURNAL.

The January issue of The Ice Cream Trade Journal, published in New York by Thomas D. Cutler, appeared January 15 in larger size. The type page of the magazine has been increased to 7 5/16 of an inch in width, and to 9 15/16 inches in length. Space on the front cover is given over to a list of the feature articles in that issue. There is no change in the make-up of the magazine.

* * *

HEAT TRANSMISSION OF INSULATING MATERIALS.

Under the title, "Heat Transmission of Insulating Materials," The American Society of Refrigerating Engineers, 35 Warren St., New York, N. Y., has just issued in book form the formal report of its insulation committee.

This book contains 114 pages of text, including charts, drawings, tables and half-tone illustrations; the page size is 8½x11 inches, the cover is paper; the price is $2.00 per copy. The subject matter of the book is divided into eleven sections, each of which is the contribution of a competent authority, and, with but one exception, each contributor is a member of the committee.

One of the main purposes of the committee was to suggest methods of testing the heat transmission of insulating materials; for this reason Section VI, which covers the **plate method,** and Section VII, which covers the **box method,** form the hub around which all the other sections revolve. The overall conclusion of the committee is (1) that both methods have merit, while each is not without some fault; (2) that the plate method is essentially adapted for determining the conductivity from which the transmittance may be computed; (3) that the box method is essentially adapted for determining the transmittance from which the conductivity may be computed; (4) that the plate method lends itself to the maximum evaluation of error.

While Sections VI and VII are each quite complete in the treatment of their respective topics, yet each of these two sections assumes that the reader has what is so essential to a profitable reading of these sections, namely, (1) a clear mental picture of the mechanism of heat transfer; (2) a correct understanding of heat transfer nomenclature; (3) a full appreciation of the significance of surface effects; and (4) a familiarity with the technique of temperature measurement. For this reason, Sections II, III, IV and V are provided, respectively, to cover the foregoing topics in the order indicated.

WASHINGTON—MAINE

News From Far and Near

CALIFORNIA—FLORIDA

ICE cream industrials in the central South section are fairly active for the winter season. There was in January a decided touch of cold weather felt in the South, though by no means so extreme as that reported in the lake sections. The temperature at its coldest was some five degrees above, and most of the time 12 to 14 degrees above.

The ice cream factories and wholesale interests enjoyed a good holiday trade and they put on the market many specially molded designs that found popularity at dinners, weddings and social entertainments. Many fine hotels and cafes have been opened in Tennessee and Arkansas this season, and others are to be built in 1925. These are a good source of trade for the very highest class of product. The Memphis, Nashville, Little Rock and Jackson, Miss., ice cream manufacturers also ship for quite a little distance both by rail and truck. The business by motorized trucks has not amounted to much but the building of hard roads in many localities, and the new viaduct on the Arkansas side of the Mississippi river at Memphis, where the Harahan bridge spans the river will develop some business by truck inaugurated to some extent the past year.

* * *

The development of ice cream factories in the larger cities and towns has been considerable. There are some large plants and many small ones. The cone business is a large and popular one at Memphis, Nashville and Little Rock.

The Alco Cone Co., who recently moved to 124 North

Front St. from 480 N. Front St., Memphis, and conducted by H. Allenberg, is a pioneer in the cone manufacturing business.

Bessire & Co., Inc., of Tennessee, has a large wholesale supply house in Memphis, and the Bessire Co. is also at Louisville, Atlanta and other cities.

Fortune's, Inc., Union Avenue, Memphis, is one of the largest shippers of ice cream from Tennessee. They cover a wide range of territory in the tri-states neighboring. Their plant on a fashionable boulevaard is modern in its arrangements, and their product is widely sold in Memphis.

* * *

The Clover Farm Dairy, on Walnut St. and Union Ave., several months ago completed the first unit of their ice cream department, and have been operating it something over a year. The refrigeration, icing, shipping and other departments are very fine. Several new retail distributing depots for their ice cream and dairy products have been opened recently near the plant on Union Avenue.

* * *

The Lilly Purity Ice Cream Co., on Madison, is a large and old established ice cream wholesale manufacturing company at Memphis. Their business has grown much in the past year, local and shipping. They get out bulk, small carton, and a variety of flavors in their product.

The Magnolia Ice Cream Co., at 234 Vance Ave., Memphis, Tenn., is one of the younger factories that does both a retail and wholesale business shipping some to neighboring states. O. M. Ingram is now the manager of this place. They use a beautiful magnolia design on their trucks and cartons and their business has developed considerably during the year.

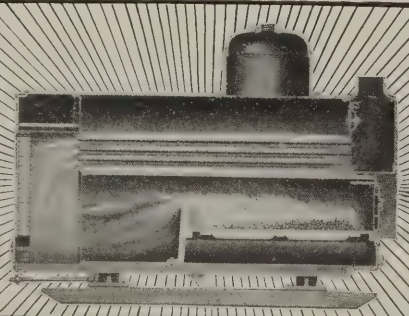
The Liberty Ice Cream Co., Walker Ave. and College St., Memphis, is an active concern under a new management since the early part of 1924.

The Poplar Ice Cream Co., 806 Poplar Ave., is one of the younger wholesale organizations conducted by Mr. Coleta, an experienced ice cream man.

A. S. Coletta Ice Cream Manufacturing Co. at 1290 Jackson Ave., Memphis, is also active in the wholesale trade.

McNair Ice Cream Co., at Jackson, Miss., enjoyed a large holiday trade and enters the new year auspiciously.

The Gem Ice Cream Co., at Jackson, Tenn., is active in the wholesale trade; about three years established.



for Economy—

Leffel Creamery Boilers

Examine the cross section illustration below and you will readily see how it is possible for users to report 35% to 50% fuel savings with the Leffel Creamery Boiler. Every heat unit is used to make steam as the hot gases of combustion travel *twice* the full length of the boiler through water-surrounded passageways.

These boilers are made particularly to meet the needs of the milk handling industry, and creameries, dairies; and ice cream factories all over the country testify to their efficiency and economy. Leffel Creamery Boilers are made in a range of sizes from 6 H. P. to 100 H. P. and meet the requirements of all state boiler laws.

Write for descriptions and prices.

The James Leffel & Co. BOX 333 SPRINGFIELD OHIO, U. S. A

Smith ice cream factory is an old concern at Jackson, Tenn., and covers neighboring counties by express and truck for seventy-five to eighty miles. They also have ice cream parlors in Jackson, which is a city of about 20,000 people. These two factories have the advantage of five steam railway lines for such shipping business as they do, and both have developed considerably during the past year.

Nashville abounds in large and well organized ice cream plants. John Decker & Son, on Church St., originally candy, retail and wholesale people, are now wholesale candy and ice cream manufacturers, making the very best.

The Union Ice Cream Co., on Broad St., Nashville, Tenn., one of the pioneers in the South, have, perhaps, the largest plant in the city of Nashville in ice cream lines, built about two years ago and very fine and complete.

Los Angeles, Cal.—Employees of the Globe Ice Cream Company were entertained by A. A. Comey, vice-president and general manager, at a banquet, given in Paulais banquet hall February 8. This banquet is a regular annual affair. Entertainment was provided, and a very interesting program arranged. The various department heads delivered short talks on topics pertaining to co-operation, efficiency, loyalty, and "a bigger and better business for 1925."

Christmas Day was an enjoyable one at the Globe ice cream plant. Departmental bonuses and Christmas remembrances in the form of cash, were distributed among each and every employee of the company.

Washington, D. C.—A combination in the ice cream business, embracing Wisconsin, Minnesota, Iowa, Nebraska and probably other Middle Western states and Pennsylvania, New York, New Jersey and other Eastern states, is a possibility that is being watched with interest. New York banking interests have already merged four large manufacturing concerns in New York City, Jersey City, Pittsburgh and Chicago, and that with this nucleus the promoters expect to take into the combination many other concerns in this territory. The prime mover in the deal is declared to be the National Dairy Products Co., which was formed by the amalgamation of numerous Middle West companies.

DeKalb, Ill.—Work is progressing rapidly on the new building being erected by the Peerless Ice Cream Co.

Marengo, Ill.—The Russell Ice Cream Co. of Cedar Rapids, Ia., purchased the ice cream business of the Iowa Valley Produce Co., Marengo Ave. and Miller St.

Jeffersonville, Ind.—The American Ice Cream Co. is enlarging its storage capacity and adding up-to-date apparatus to its research laboratory on East Chestnut St. The improvements will cost approximately $3,000, according to Mr. Miller, president.

Glascow, Ky.—Brown Bros., proprietors of the Glasgow Ice Cream Co. will erect a 50 by 85 feet plant on East Main St., at an estimated cost of $30,000. A fifteen ton refrigerating machine, mixing machines and large storage and hardening rooms of great capacity are included in the new equipment.

Lynn, Mass.—Jersey Ice Cream Co. is building a concrete factory with a 50-ton refrigerating machine, a six-thousand capacity hardening room, and a garage to accommodate fifteen 5-ton trucks. An ice house with a capacity of 6,000 tons of ice is also being built, according to L. C. Boehner, manager.

St. Louis, Mo.—The White Owl Ice Cream Co., 1410 S. Broadway, has increased its capital from $40,000 to $70,000.

Batavia, N. Y.—A three-story, brick and concrete building, 30 by 39 feet, will be erected by the Batavia Ice Cream Co., according to Warren B. Fargo, president. John Lennon Sons' Co. will be in charge of construction.

Brooklyn, N. Y.—The Reid Ice Cream Co. will build a three-story brick storage and garage building, and will add one story to its present plant on Waverly Ave. and Fulton St., at an estimated cost of $20,000.

New York, N. Y.—Articles of incorporation were filed by attorney H. Krauss, 198 Broadway, for the organization of the Grand Martin Ice Cream Co., with capital of $112,000. The incorporators are L. Oestreich, D. Besem and P. Chernick.

Saranac Lake, N. Y.—To meet increased demands for Purity ice cream in Lake Placid and Saranac Lake, the Kirk-Maher Co. is planning to construct a modern ice cream storage plant at the latter place.

Scottdale, Pa.—The Scottdale Dairy Co. has taken over the City Dairy Co. John I. McCurdy will manage the new concern and Wm. C. Mosch will be in charge of the plant. The new concern will manufacture ice cream and other dairy products.

Scranton, Pa.—The Nallin Coleman Ice Cream Co. has changed its name to the Nallin Ice Cream Co.

Wisconsin Committees Studying Cabinets and National Advertising

Associations Hear Prominent Manufacturers from Two Other States on Subject of Cabinets

MANUFACTURERS of two other states were called in to help members of the Wisconsin Ice Cream Manufacturers' Association get a full insight in the important matters now facing the ice cream industry. The thought and study that Minnesota manufacturers have given to iceless cabinets were fully brought out by the president of that body, W. W. Dunn, Jr., St. Paul. Mr. Dunn gave an outline of the ground covered on this subject as a special meeting of members of his association in December.

L. W. Roszell, widely known for the thorough study he has given to mechanical refrigeration, gave his listeners some interesting points on the subject, adding the same warning that he sounded at the national convention as to the ecessity for fair play in installing the cabinets, as well as intelligent advance thought.

As the result of the discussion on cabinets, there is likelihood that many Wisconsin manufacturers will be on hand for the Minnesota convention at St. Paul this month to go further into this matter with members of the industry in that state, who already have covered so much ground in their study of the proposition.

In the meantime, a committee from the Wisconsin association is giving some study to iceless cabinets.

ANOTHER committee appointed at the Wisconsin convention is thinking over the matter of national advertising, which was presented by Frank W. Gentlemen of the Gardner Agency, representing the national association's advertising committee.

The meeting was not open to the trade press, and for the first time in the history of the association supplymen were barred from attending the convention. For this reason the Badger Flyers, the association's affiliated body, did not hold its annual convention. Officials of the Badger Flyers announced last month that the association probably will not meet this year.

At the close of the Wisconsin association's convention it was announced that A. H. Kramer, Madison, had been re-elected president, and that Arthur H. Graeszel, Milwaukee, had been re-elected secretary. D. Bleser, Manitowoc, was elected vice-president, and Howard L. Carver, Oshkosh, was elected treasurer.

The directors are J. Fess, La Crosse; J. D. Hughes, Milwaukee; J. A. Kleinheinz, Wausau, and O. A. Elliott, Chippewa Falls.

Sanitary Ice Cream Truck

The Sanitary Ice Cream Truck facilitates handling cream from freezers to hardening room.

Will handle any size can in common usage. Avoids accidents in handling, as the operator does not touch the cans until he reaches the hardening rooms.

One man with truck will handle the cream from the freezers as fast as it will flow, no helper being necessary.

Substantially built to stand usage, nothing to get out of order. Can container revolves on a thrust roller bearing and is easily turned.

Style	Diameter	Capacity	Freezer Opening	F.O.B. Price
A	28½ in.	6 cans	30 in.	$50.00
B	23 in.	4 cans	24 in.	45.00
C	34 in.	8 cans	36 in.	62.50
D	40 in.	10 cans	42 in.	75.00

Two or three can containers, placed so that two or three freezers can discharge at one time, can be mounted on one truck, increasing capacity, making less trips to the hardening room necessary. Prices for these special trucks made on application, specifications required.

One regular size truck will be shipped, acceptance on approval.

Howe Scale Co., St. Louis, Missouri
Wright-Ziegler Co., Boston, Mass.

LOUISIANA MANUFACTURERS FACE CURRENT PROBLEMS

LOUISIANA ice cream manufacturers ran the gamut of popular trade topics at the state association's annual meeting at Shreveport January 15. The meeting originally was scheduled for New Orleans, following the Southern and national conventions, but it was postponed.

The association was the guest of W. W. Campbell, who made a hasty return trip from New York to be on hand and tell members the latest information on the status of the national co-operative advertising campaign, which is regarded in many quarters as the most progressive step ever taken by the industry.

C. A. Tooke, Arcadia, La., was elected president of the association. N. F. Manning, Monroe, for several years secretary, was made vice-president. He was succeeded as secretary-treasurer by Jack Seymour, Baton Rouge. The directors are: S. A. Dickson, Dickson Ice Cream Company, Shreveport; C. A. Kent, Kentwood Ice & Manufacturing Co., Kentwood; C. J. Pope, Bunkie Ice & Bottling Co., Bunkie, and Phil Draiss, Shreveport Ice Cream Factory, Shreveport. E. B. Geisel, Anheuser-Busch Corp., was named director for the national association.

It was a splendid meeting throughout, harmony and spirit of co-operation prevailing.

SUIT FILED IN DISTRICT COURT.

The Dry Zero Insulation Company of New York City intends to zealously guard its patent rights, according to a statement recently made by an official of the company. Right now a suit is pending against a truck body manufacturing firm in a U. S. district court, in which an injunction is asked in addition to payment of damages.

NEW ENGLAND MANUFACTURERS HOLD GOOD CONVENTION.

(Continued from page 16)

"I feel that the president's job is not near so much of a task as it was before we had a paid secretary, as it is very easy to pass over to him to handle, and from my experience, I have always found him very willing to co-operate and do everything which seems to be of benefit to the members of the association. While I was talking to him a while ago I asked him if he kept any track of the time he spent for the association, and he showed me a record which was kept in his office of the number of hours each day which were put in for the ice cream manufacturers' association.

"In going over this and totaling it up I found that he actually put in 750 hours time in the year 1924, which I figured more than one-third of his time when you figure 7½ hours each day, which most of the offices work in Boston, and when you take out for Sundays and holidays. I feel that we have a very efficient secretary, and would recommend that the new board of directors look the situation over very carefully and see if it would not be wise to give him an increase in salary for 1925."

THE report of the treasurer, W. H. Snow, followed, which showed a balance on hand in the association treasury of $7,203.40 after the year's expenses of $10,-713.29 had been paid.

Secretary Lockwood reported a registration at the 1924 convention of 313, and an active membership at the present time of 75. The actual gallonage of members of the association for last year was 9,030,000 gallons. This year the gallonage being reported to the association for 1924 will undoubtedly be less, due to unfavorable weather conditions.

One of the things Professor Lockwood mentioned of which the New Englanders should be proud is the fact that 16¾ per cent of the slogans suggested for adoption by the national association came from New England, or a total of over 18,000.

A new set of by-laws, or a constitution, as it was preferred to have it called, was adopted. It embodies all the features of the old constitution, and a few new ones which were deemed necessary at this time. Eligibility of membership was changed to allow all firms of fair repute making or selling ice cream in New England to become members. The words "of fair repute" were added, and eligibility extended to those who may be manufacturing in other states, but selling ice cream in the New England states.

Membership dues are fixed at one-tenth of one cent per gallon of ice cream manufactured, with a maximum membership fee of $750.

A REWARD of $100 is to be paid, according to the constitution, by the New England Association of Ice Cream Manufactureres, to anyone giving evidence leading to the detection of poisonous or unwholesome substances, or foreign fats as a substitute for butterfat in ice cream made in New England. This clause was first drafted to include only poisonous or unwholesome substances, but upon suggestion of several of the members, the foreign fats were included.

A new clause in the constitution provides that the new constitution may be amended by a two-thirds vote of members attending any annual meeting, or a special meeting called for the purpose of amending the constitution. Members are to be notified at least ten days in advance of any such special meeting. Charles G. Morris of New Haven, chariman of the committee on constitution and by-laws, reported for his committee.

MR. MORRIS next read a splendid paper on "Methods of Avoiding Heart Disease Over Your Business," from which we quote as follows:

"I HAVE nothing new to bring you—merely a new presentation of ideas that have been talked about and then perhaps forgotten. The old Greek motto, 'Know thyself,' is the text as applied to the medicine for business headaches. 'Know your business.' Do you think you do? When ice cream sales drop off in August do you know how much of the drop is normal and expected? Can you analyze your business well enough to know, not only whether the rate is more rapid or less rapid than normal, but what the cause of its variation from normal is? Now I'll tell you a secret. I don't begin to know as much about my own business as I should like to. My theory and my practice are wide apart. But once in a while when I feel my head fitting my hat band too snugly after a big season, and sometimes when I get cold chills running up and down my spine at the way business is dropping off, I set to work to cure my disease.

"The first medicine to apply to business heart disease is cold facts. A cost accounting system is immediately valuable. Without it, a business is groping in the dark. Two manufacturers competing without cost systems are like two blind men walking in opposite directions on a city street who ran into each other and both exclaimed angrily, 'Why don't you look where you are going.' The manufacturer who has no cost system is blind to his own interests. But on the other hand, a cost system can be overdone. A cost system can be overdone and give a business indigestion, but most of us would be better for more cost system than we have. It is not much to say that you are in a position where you don't care whether

From Forest to Finished Tub

Richmond White Cedar Tubs

Out of the primeval forests, dense with giant Virginia White Cedars, come the select logs that go to make Richmond Tubs.

Direct from these extensive forests through our acres of wood-working machinery, these logs are fashioned to make Richmond Tubs the best that you can buy, yet the savings in manufacture and direct handling makes their price very reasonable.

MAKE A COMPARISON

RICHMOND CEDAR WORKS, Richmond, Virginia

you are making money or losing it, so long as you know the truth about it and the reason why. The first remedy, therefore, is hard, cold facts. If you must make a mistake, do it deliberately so that the faults or losses will be emphasized, rather than the gains. Rose-colored glasses have their place in the world. They are great to use when you look through them at a landscape, but they are worse than a hoodwink when you look through them at the historical facts of your business. When you have your facts, however, you may not be able to see them correctly. This is the next medicine needed for business heart disease.

"I KNOW nothing better in most cases than a graphic chart. But you can spoil a graphic chart. I had to learn a few fundamentals before I could use a graphic chart. Here are a few of them. 1. A graphic chart is the best method of comparing records of a series of events or values, because the eye can grasp the relationship of many pictured figures which the memory could not hold. 2. Never compare more than three groups of facts and figures on a single chart. The eye becomes confused at the cossing of the lines. If you are comparing a series of figures that never cross, such as the growth of a business year after year, it may be possible to use more lines without confusion, but it is dangerous. 3. Always do the charting yourself. You can hire somebody else to keep the books, to give you the statistics you need, but the few moments spent in locating your points and drawing the lines will impress the truth on you as nothing else can. Now let's go back to a question I asked you earlier in this talk. Do you know how much of the drop in sales in August is normal?

Take a chart, for instance, of one factory's business showing its sales progress by months. If the manager of that plant had any fool ideas about what a competitor was doing to him in August and expected to set out to cut his competitor's throat to pay for it, that chart might cure his heart disease. We used to have heart disease over the way our milk business dropped off in the late spring. We prepared a chart showing the normal course of our spring drop. If the drop runs too fast the manager can start on a tour of investigation. If it runs too slow he can congratulate his employees on doing good work. And he won't go into insane dreams about a competitor's crimes or scold men in his own organization who are in fact doing better than average work, because of his own ignorance of the facts. He won't ruin his own business through ignorance or take the heart out of good workers through nervous or unjustified fear.

"So here is the cure for your business heart disease. Know your costs, know your facts. Make a picture of them, for the Chinese proverb says, 'One picture tells more than a thousand words,'' and then remember that the other fellow is no more a criminal and no less a fool than you are yourself, so deal as kindly and as intelligently with him as your own folly and limitations permit.''

VERNON HOVEY of Schenectady, president of the national association, full of suggestions and ideas and brimming over with enthusiasm, spoke of the work accomplished by the national association, and laid out a program of work to be accomplished during the year. He reviewed the work of the standards committee in preventing the adoption of a federal standard of 12 per cent butterfat in ice cream, using only sucrose for sweetening, no corn sugar or colors. He recommended that some action be taken by the New England association

regarding the federal standard, expressing their wishes so the standards committee may have greater influence with the national association. It seems the standards committee of the national association convinced some of the members of the food and drug departments of the different states the 12 per cent requirement is too high, and of these, some now favor an 8 per cent standard, and some 10, while others stick to the old theory that it should not be less than 12 per cent. It must be understood, as Professor Lockwood pointed out, that the committee is really not working for an 8 per cent standard, but an 8 per cent minimum legal limit. The association went on record as recommending whatever standard or minimum legal limit as the standards committee might decide upon.

The express rates proposition has again become active, and during the early spring representatives of the express companies and ice cream manufacturers will make tests in 116 representative cities to determine the actual weight of packers of ice cream.

Regarding selling ice cream by weight, President Hovey stated that a bill had been drafted by the Attorney General of New Jersey requiring the sale of ice cream by weight. The national association committees are watching the progress of this bill very closely, but Mr. Hovey believes the ice cream industry will not get very far with the New Jersey legislature by telling them of the difficulties in attempting to sell ice cream by weight. He believes it must be put before the legislature from the standpoint of the public.

THE general public will not be satisfied with a weight standard. They want to buy by volume. A lady serving four or five guests, for instance, will be thoroughly disgusted if she sends to her dealer for a couple of pounds of ice cream, happens to get a heavy bodied cream, and has scarcely enough for the required number of servings. The opinion of the public will be won by the ice cream manufacturer who gives greatest volume for a given weight, which will be to the disadvantage of both the ice cream manufacturer who is selling a normal cream, and to the general public. The weight principle is economically unsound. Dealers will demand ice cream with all the volume they can get, for they can give their customers a greater quantity for a pound. Many troubles will develop, such as a dealer sending back a can of heavy ice cream, demanding something lighter in weight.

Mr. Hovey also spoke briefly on the discussion of the ice and salt cabinets at the national convention, and the use of refrigerated cabinets. He also mentioned the work of his organization in the development of a uniform accounting system. This system shall be a simple one, equally valuable to a large or small ice cream manufacturer. In doing this work the advice of 50 of the best ice cream accountants in the country will be sought, men who are actually doing the accounting work for the executives in the industry today.

In Minnesota, he said, the manufacturers held a special meeting several weeks ago, and agreed that whatever they do regarding the installation of iceless cabinets, they would do collectively. They have appointed a special committee in that state to investigate the cabinet proposition, and report to the regular annual meeting in February.

IN HIS own state, he said the association adopted resolutions declaring that it is unethical for any ice cream manufacturer to offer refrigerated cabinets to dealers of competitors, also that a manufacturer should not feel privileged to adopt a general policy of furnishing refrigerated cabinets to his own dealers without the consent of competitors in his territory. The reason for this is that competitors would soon be forced to also furnish the new cabinets to their dealers, and the manufacturer who furnishes refrigerated cabinets would have an unfair advantage in securing all the new accounts. This was qualified to the extent that when a route becomes so unprofitable that iceless cabinets must be installed to make it profitable, the ice cream manufacturer may feel justified in installing the cabinets after securing the sanction of other manufacturers in that territory. Mr. Hovey stated he believed the refrigerated fountain is the only solution for the larger store and that the refrigerated cabinet is only part of the problem.

REGARDING the national slogan, Mr. Hovey reported the executive committee of the national association has restricted its use to only those who are members of the national association, but believed it probable that the use of it will be allowed also to those who participate in the national advertising program. It was found that most of the active members of the New England association are members of the national association also. There were only seven executives of non-member firms present, and one of these offered to join.

GEORGE W. KENISON of the Jersey Ice Cream Company spoke on national advertising, urging members of the New England association to join in the campaign. Mr. Gentleman of the Gardner Advertising Co., who has attended many past conventions, gave his talk on the increase in sales secured by other industries through national co-operative advertising. It is not necessary to report this in detail here, as this data has been given in previous issues.

Several members immediately signed pledges of support to the national campaign. One of the associate members, Glen W. Cowan of the Nizer Corporation, also general manager of the Arctic Ice Cream Co. of Detroit, signed the pledge for his firm, representing a production of 5,000,000 gallons.

The variation in weight of ice cream at the factory, and at the retail store, effects the overrun on shrinkage, and experiments with improvers were discussed by Dr. H. A. Ruehe of the University of Illinois. A synopsis of Dr. Ruehe's talk will appear in a subsequent issue.

At the buffet luncheon held on Thursday evening all keenly enjoyed the showing of the ice cream film which is owned by the association. A pleasing human interest story is the basis for the picture. A young couple wanted to be married but had no money. They saw an announcement in a paper that a prize of $1,000 would be given for the best story on how ice cream is made, and how it should be served. They decided to try for the prize. The young man wrote the story about the manufacture of ice cream (which was a part of the film, showing the different plant operations, equipment, etc.) and the girl wrote the story of how it may be served (on pies, cakes, cantalope, dressed with fruits, chocolate, etc.), and this was shown in the pictures. One day about two weeks later she received a letter from the New England association announcing that she got the prize, and of course, they lived happily ever after.

FRIDAY morning C. A. Reynolds of Tait Bros., Springfield, Mass., lead the discussion on special sales of ice cream. These special one-cent sales appear to have been originated by the chain stores, and have spread throughout a large part of New England, causing

Greater Volume Possible Through -:- -:- Mechanically Refrigerated Cabinets

Consumer Gets Product in Essentially Same Condition as it Leaves Factory

*By GLEN P. COWAN**

WITH mechanical refrigeration a degree of regulation of temperature is made possible that cannot be obtained in any other manner, with the result that the crystallization and loss of flavor which attends wide variation of temperature is eliminated. The consumer gets the product in essentially the same condition that it leaves the factory, and the manufacturer is not blamed for making a poor product, when as a matter of fact the low quality is a result of short comings in the method of preservation.

Another factor quite largely responsible for the adoption of the iceless cabinet is the convenience it affords the dealer. His ice cream is always at the right temperature for serving, much labor is eliminated, and the mess made by the salt and ice is done away with. When he opens his store his ice cream is ready to be served, when he closes at night there is no re-packing and covering up to be done. That the shrinkage and loss is greatly reduced is testified to by hundreds of dealers using iceless cabinets. A survey of dealers using successful iceless cabinets will disclose a great degree of enthusiasm for the cabinet, many of them have said they would discontinue handling ice cream if they had to go back to the old methods.

WE HAVE had many reports of increased sales of ice cream by the individual dealer after having been equipped with an iceless cabinet. This is attributable to the improved quality of the ice cream and in no small degree to the increased interest of the owner of the ice cream business.

Not all of these advantages accrue to the dealer, however. The manufacturer's delivery and service problems is simplified by the use of iceless cabinets, he renders a greatly superior service to his customers and the cost of distribution, after figuring in all proper charges on the investment in the cabinets is reduced.

This point, that is the reduction in delivery costs, will undoubtedly be dealt on at some length in papers to follow on this subject by manufacturers using iceless cabinets. While on this subject I would like to state briefly the experience of the Arctic Dairy Products Company of Detroit, in this respect. For the first nine months of this year the total delivery and service costs (I mean by this the total expense of distribution including ice, salt, garage and automobile expense, drivers' wages, cabinet maintenance and depreciation, maintenance of cans, workmen's compensation insurance on drivers, and including cost of electric current for cabinets—which is usually paid by the user) was seven cents less per gallon than for the corresponding period two years ago.

A comparison of the same items with last year shows a reduction of four cents per gallon. However, about one-half of the refrigerated cabinets used by that company in Detroit were installed last year, and the other one-half this year. The cabinets were installed throughout the year in both instances, and the full benefit of all the cabinets were not enjoyed for the entire period. Furthermore, these reductions are spread over the total gallons sold and would run higher per gallon if applied only to the gallons sold through the refrigerated cabinets. It should also be borne in mind that the deliveries per customer this year were smaller than they would have been had we had a normal season, which, of course, made the delivery cost per gallon higher than it would otherwise have been.

You will note that the distribution costs referred to include the cost of current. Considering the many advantages accruing to the dealer, there is every reason why he should pay the operating expense of his cabinet, and this is the practice in most places.

THERE has been much discussion as to the proper basis of putting out refrigerated cabinets by the ice cream manufacturers and quite a variety of opinion expressed, although a very large percentage of all refrigerated cabinets in use today are owned by the ice cream manufacturer.

We feel that it is very much to the advantage of the ice cream manufacturer to own the cabinets and in turn to loan or lease them to his dealers. In this way he establishes a closer relationship with his dealers and stabilizes his business. Where daily packing service has been rendered the cabinet is loaned to the dealer and mechanical refrigeration substituted for salt and ice refrigeration. Where daily packing service is not given, it is customary to collect a rental or make an advanced price for ice cream to cover the rental.

It is true that the investment is large, but to a certain extent that is offset by the elimination of additional investment in other equipment rendered unnecessary by the use of cabinets, or by the fact that sufficient of this other equipment is released to permit handling an increased volume of business without additional investment in such equipment.

We also think that the ice cream manufacturer furnishing cabinets is in the best position to render maintenance service on the cabinets he puts out. This service can be given more satisfactorily by the ice cream manufacturer and at less expense, and it is then under his own control.

Why did Ford offer real money for Muscle Shoals, when the product is free and unlimited along the Western Coast?

(Continued from page 152)

considerable unfavorable comment among manufacturers and dealers. Mr. Reynolds asked to have the cards laid on the table and that a decision be arrived at regarding the continuation of the practice.

Among the disadvantages given by Mr. Reynolds were lack of profit, failure to develop permanent larger consumption, disorganization of selling agencies, and adverse public opinion. Under the one-cent sale plan, that is selling an additional pint brick for an extra cent, the manufacturer is forced to gamble with profits. The increase in the use of ice cream under the one-cent sale plan is superfluous, one dealer's sales increasing enormously while the sale is in progress, while the other dealer's sales fall off, and when the sales are over, consumption goes promptly back to normal. On the disorganization of the selling agencies, Mr. Reynolds found that the transfer of the retail ice cream business from one dealer to another temporarily caused a great deal of dissatisfaction, demand is unsteady, and the total volume of sales is not affected. He doubts if the special sales have increased the per capita consumption of ice cream. Regarding public opinion, he stated the dealers and the consumers as well draw the conclusion that if the manufacturer of ice cream can afford to sell his product for such a low price at certain times, he can afford to do it all the time, and when there is no sale on, they believe they are paying too much for ice cream, and don't buy it.

Later on, one of the members brought out the point that the one-cent sale was the cause of shipments of ice cream being made from New York. Some of the dealers bought on the one-cent proposition, selling one brick for 30 cents, two for 31, and found they could buy ice cream cheaper in New York, something like 20 cents a brick. The one-cent sale caused the dealer to look for a source of cheaper ice cream.

Another member gave a resume of his experience, stating they had kept a record of expenses and revenue from one-cent sales, and have found that in almost every instance, the one-cent sale did not increase the sale of either brick or bulk ice cream, in fact, he believed that the sale did them considerable harm. At one particular town, he said they put up a thousand gallons of brick cream on the sale, and did not believe they have sold ten gallons of brick there since that time. He found the sale proposition of no benefit at all in the development of permanent greater sales.

Mr. Sheehan said he believed the special sale idea is sound, but he did not approve of the way the sales have been conducted in some localities. They should be conducted in a sane and business like way, say on a 20-cent basis, and not too frequently. He believes sales conducted every week or two have done great harm to the industry. Their purpose in conducting the sales is to get people to eat more ice cream, get them to eat it once a day instead of once a week, get every man, woman and child in the community to eat more ice cream. He said that with proper advertising, and proper preparation, the special sales are a good thing. His company is in the ice cream business only, and they have plenty of time and opportunity to help dealers prepare for sales, get them enthusiastic over it. His dealers, he says, make preparations for it, tidy up the store, re-arrange the goods, and as a result they report an increase in business in other lines of 20 to 25 per cent, which helps to retain the good will of the dealer. He suggested about three sales a year. They usually have sales along one route at a time, or part of a route, whatever a salesman can properly develop and conduct successfully. Mr. Sheehan found that the sales have increased the sales of brick ice cream. They have conducted such sales successfully for the past ten years.

Tait reported the opposite experience. He said their sales have caused people to expect to get ice cream for less money. People began to call up the factory to find out where sales were being held, and would go a mile to buy ice cream at that store. The business increased tremendously, but only for the period of the sale, then people seemed to have enough ice cream for a while, and sales slumped. Mr. Tait is not in favor of special sales.

At New Bedford, someone stated, the manufacturers held a meeting to decide what would be done about the special sales. Their competition had become so keen, brick cream was being sold as low as a dollar a gallon, and dealers demanded bulk cream for the same price. It was decided to discontinue the sales entirely.

President Platt stated the Ligget drug stores pressed them for a one-cent sale. They insisted, so they granted the request, but there was no noticeable increase in the sale of brick ice cream.

THE suggestion was made by Mr. Reynolds that if sales are going to be conducted, that they be held at the same time by all manufacturers in New England, and let the sale extend over three or four days. Call them "Health Days," or "Health Week," or whatever you like, advertise it throughout the whole of New England, and sell ice cream on its merits as a beauty and health promoting food. His company has furnished one-fifth pint of ice cream to a group of orphan children, and noted increases in weights and general improvement in health. As a result they have prepared some special advertising, "Kiddies—a Dollar a Pound," which he offered to the association to be used if desired before any concerted sales are to be conducted. The title, "Kiddies —a Dollar a Pound," was arrived at after it was discovered that the cost of the ice cream consumed was about equal to the weight gained by the children at the rate of a dollar a pound.

He recommended that sales, if conducted by the members as a body, be held about in March and November—in March to open the fountains and stores a little earlier and get people started eating ice cream a little earlier in the season, and in November, to hold the fountains open longer for the same reason. It was voted that the president appoint a committee to investigate and report upon the sales proposition.

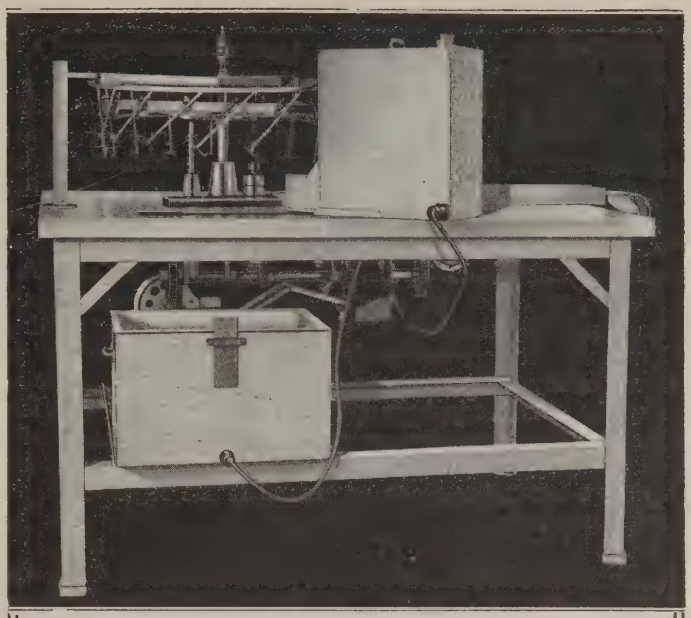
GEORGE B. CHANDLER of the Connecticut Chamber of commerce, spoke on the "General Business Outlook for 1925." He gave eight reasons for his belief that business will be good for several years hence:

1. Business men have confidence in the government at Washington, which releases capital that keeps factories running.
2. Capital is abundant and reasonably cheap.
3. Crops have been good and prices relatively high. Fundamental basis of prosperity of business is production of the soil. Wheat and other farm products have mounted to a figure which insures profits for the farmers.
4. Industries, generally, are thriving and employing.
5. Wages are good and consumption great.
6. At the present time labor conditions are fairly satisfactory. Strikes are few and labor is efficient.
7. Radicalism in this country is apparently on the decline.
8. Affairs in Europe are approaching some measure of composure.

(Continued on next page)

A TALK on the experience of bonding and surety companies in the theft and embezzlement of money from employers was given by Dr. B. F. Battin, vice-president of the National Surety Co. of New York. Burglary and theft, he said, are on the decline, while embezzlement is increasing.

H. F. Fogelman, formerly personal director of the Thomas Cusack Co., Chicago, delivered about the same address on "Personality in Salesmanship" as he did at the national convention in New Orleans. Mr. Fogelman is now in the real estate business in Chicago. We venture the guess that if he is as successful in selling real estate as he is in holding the attention of his audience, the transfer of real estate in Chicago will increase 500 per cent this year.



THE work of the national committee on ice and salt cabinets was outlined by W. H. List of the Puritan Ice Cream Co. of Newark, N. J. Mr. List is chairman of that committee. Actual tests have been made using eight makes of cabinets, and more tests will be made as soon as new type ice and salt cabinets, which four cabinet manufacturers have promised since the tests were begun, are ready for delivery to the committee. In the meantime, Mr. List urged ice cream men to write the committee suggesting what particular problems they have encountered in the use of the ice and salt cabinet, so tests on all phases may be made at one time. Mr. List believes if no other good is accomplished, the ice cream industry will at least get better cabinets, as four cabinet manufacturers have already made improvements. The purpose of these tests is not only to conserve on ice and salt, which is probably 12½ per cent of the delivery expense, but to determine if there are cabinets that will preserve ice cream satisfactorily 48 hours, and to make possible every other day deliveries in summer and every third day in winter in sections where more frequent deliveries are not required.

Discussions on the question of whether the dealer or the ice cream manufacturer should own the refrigerated cabinets were led by J. C. McNamara of the Producers' Dairy Co., Brockton, Mass., declaring the manufacturers should own them, and by E. W. Guardinier, New Haven Dairy Co., arguing the other side of the question. Both had good reasons.

Mr. McNamara said the Detroit Creamery Co., with 1,200 iceless cabinets in use, find them profitable when the dealer is selling 1,000 gallons or more of ice cream a year. Cost of installation for this company has varied between $430 and $450. They charge the cabinet account with $27 interest on investment, $38 a year for service, and $90, or 20 per cent, for depreciation, making a total of $155 for maintaining each cabinet in operation. If the dealer sells 1,000 gallons of ice cream, this is a cost of 15½ cents for each gallon sold; if 2,000 gallons, 7¾ cents; and 3,000 gallons, about 4 cents. If an allowance of 10 cents a gallon is made where the dealer owns the cabinet, the 2,000 and 3,000 gallon accounts prove very profitable.

On the question of service, Mr. McNamara said the average small dealer has very little mechanical ability. As a rule, he cannot even install a pipe to drain the brine from an ice and salt cabinet and he would be helpless if anything would happen to the mechanical cabinet. He wouldn't know anything was wrong till his cream began to get soft, and the cream would be returned or sold in poor condition.

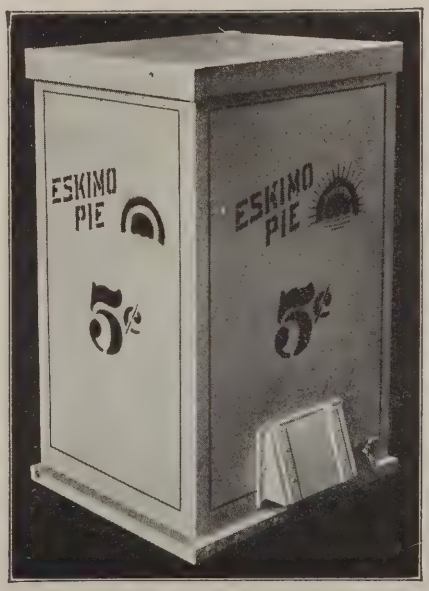
Training of help would be difficult because of the tendency of employers of this class to move from one store to another. Employees of ice cream manufacturers

Two Problems Solved

Production

The production of the 5c Eskimo Pie nets a profit on the Northwestern Cutting and Dipping Machine because its big capacity of 120 dozen pies per hour and complete investment cost of only $375.00 keep the cost down to a profitable basis.

Distribution



The Northwestern Bar Cabinet is a means that enables distribution of Eskimo Pies through all sorts of varied channels that are impracticable without this cabinet. They are the sales boosters that make production possible.

The success that over 300 users have had with this combination can be yours.

Send for complete details and list of users.

NORTHWESTERN CORPORATION

MORRIS - ILLINOIS

are trained in the handling and care of this type of equipment and would service the cabinets properly if owned by the ice cream manufacturer.

According to Mr. McNamara's belief, the manufacturers owning the cabinet would insure control of the sale of the product. There would be less changing in brands of ice cream, for the dealer would feel under moral obligation to the manufacturer because expensive equipment of this type was installed. He mentioned the policy of the Standard Oil Co. years ago to sell gasoline to everyone, and the recent change to the new policy of controlling the sale of the product, and demanding that their dealers sell only their gas. Dealers in ice cream owning the cabinets, he believes, would result in frequent changes in brands of cream sold, and considerable ill feeling among the manufacturers. They would sell several kinds of cream at one time, hailing a competitor's truck for a can of cream, if the regular driver were a bit late.

MR. GARDINER, who favored the dealer owning the cabinet, said most installations in New England have been made to please the dealer. He does not know of any other manufacturing business that gives retailers so much service and equipment as the ice cream industry does. He believes if ice cream manufacturers will delay the installation of cabinets as long as possible, competition will force the cabinet manufacturers to produce cabinets for less money, so they will be profitable for small dealers who are in the large majority.

Depreciation, he said, would be greater if the manufacturer owned the cabinet than if the dealer owned it. He (the dealer) would take a great deal of pride in the new machine. Sixty to seventy per cent of the fountains sold today, he said, are mechanically refrigerated, indicating the general trend of dealers getting away from ice and salt methods. The saving of 10 cents a gallon in the cost of the ice cream would net the dealer a good interest on his investment, and it would not be very difficult to sell the idea to the larger customers. The saving to them would warrant the installation of the equipment and produce a fair return.

If the manufacturer owned the cabinet the dealer would not be satisfied to use it 8 or 10 years. It would be out of date and he would demand a new cabinet. The pressure of competition would force the manufacturer to take out the old cabinet and install a new one, and he would have the old cabinet on his hands with no one to accept and use it profitably.

When the average business man invests several thousand dollars in equipment, he employs a competent man to take care of it. Mr. Gardiner wondered what the banker would have to say regarding the placing of that equipment in many different charges, incompetent to take care of it. He wondered what the banker would have to say if he knew that so many of the cheaper ice and salt cabinets were distributed freely among dealers, and come back at the end of the season in an almost wholly wrecked condition. Mr. Gardiner recommended that ice cream manufacturers consider not only his own opinion, but that of competitors as well, before installing mechanically refrigerated cabinets.

Discussion among members followed. President Platt pointed out that it would be necessary to run special trucks to take care of the refrigerated cabinets, which would be costly unless the stops were close together.

Mr. Semon said at the New York convention, a refrigerating engineer told him he knew of refrigerating plants installed in meat markets 20 or 25 years ago, still giving satisfactory service. The butchers owned the machines and took proper care of them. He believed the ice cream dealer would also see to it that long and satisfactory service is obtained from a mechanically refrigerated cabinet. If the cabinet belongs to the ice cream dealer he will take proper care of it. He said one of his customers bought a frigidaire cabinet upon his recommendation and later said he didn't realize how careless he had been with Mr. Semon's ice and salt cabinet till he put in the new type as his own property.

Mr. Sheehan of the Plymouth Dairy, North Abingdon, Mass., said if he were to install refrigerated cabinets, he would do it very slowly, determining cost of electricity, water, installations, etc., and would place them only on the contract drawn up by the association. He would install a limited number of various types of cabinets, and put in others only after he was convinced conditions warranted it.

Mr. Platt said he found dealers would put in novelties sold by other manufacturers, no matter who owns the cabinet.

Mr. Kenison offered the opinion that no one knows what may take place in the future, or what effect the cabinet may have on distribution and that the association cannot take a stand one way or another as to who should own the cabinet. If it is necessary for a dealer to have a cabinet, try to induce him to buy it outright. If that cannot be done, sell it to him, allowing ten cents a gallon on the purchase price until paid for. Handle shipping customers the same way, charging ten cents a gallon extra till the machine is paid for.

Mr. Tait is anxious to get away from the old practice of giving cabinets of any kind away. The giving of chairs, tables, awnings, decorations, etc., he said, was disposed of during the war, and now is the time for the New England manufacturers, as an association, to dispose of the cabinet question the same way.

OLIVER S. JORDAN, president of the Association of Ice Cream Supply Men, addressed the convention on modern sales problems. He discussed difficulties encountered nowadays in securing proper representation instead of misrepresentation by salesmen.

Professor Fisher of the agricultural college reported for the committee appointed to investigate causes for shrinkage of ice cream, and the relation between overrun and shrinkage. His summaries, together with several interesting tables, will appear in our next issue.

Officers for the new year were elected as follows:

President: J. C. Tait, Springfield, Mass.

Vice-President: Paul Harmon, Portland, Me.

Treasurer: W. H. Snow, Somerville, Mass.

Secretary: W. P. B. Lockwood, Boston, Mass.

Executive committee: G. B. Platt, New Haven, Conn.; T. J. Hancock, Chelsea, Mass.; J. G. Turnbull, Orleans, Vt.; W. R. Libolt, Waterbury, Conn.; W. J. Sheehan, North Abingdon, Mass.; Frank E. Boyd, Everett, Mass.; Weston Haskell, Auburn, Me.; C. A. Russell, Middleton, Conn., and E. W. Parks, Boston, Mass.

National Association Director: G. W. Kenison, Lawrence, Mass.

Just before adjournment Mr. Kenison reported that he had received pledges from ice cream manufacturers in New England, for the national advertising campaign, representing 7,100,000 gallons, or 75 per cent of the gallonage of the New England association membership. Pledges signed by manufacturers from other states brought the total gallonage signed up at the New England convention to 12,600,000 gallons.

MORDEN NIELSON.

Study This Out Yourself

NIEL MORTENSEN.

No, gentle reader, Morden Neilson is not the same man as Neil Mortensen. Some members of the industry who know both of these gentlemen are always confusing their names, especially those excitable people who try to hurry-up their words when talking.

The strange similarity between these two does not altogether stop with their names, as can be seen by a study of their photographs. But one of them, Mr. Neilson, lives at one extreme end of the continent in the North, residing in Canada, whereas Mr. Mortensen lives at another end of the continent, residing in the South, Louisville, Ky., being his home.

Both of them have performed distinguished service in the industry. Mr. Neilson has served as vice-president of the National Association of Ice Cream Manufacturers, probably being the only Canadian manufacturer ever to hold office in the American association. Mr. Mortensen is a past president of the Dixie Flyers, an association of supply representatives affiliated with the Southern Association of Ice Cream Manufacturers.

We did not ask the permission of either of these gentlemen to make these personal remarks, but although most people dislike comparisons, there are times when comparisons are extremely interesting, and this is one of them.

Mr. Neilson is just as fond of his great country in Canada as Mr. Mortensen is of that splendid Blue Grass country in Kentucky. You can study it out yourself as to which one of the two is the better looking.

Midnight on the Ocean

It was midnight on the ocean,
Not a street car was in sight;
The sun was shining brightly,
And it rained all day that night.

'Twas a summer's day in winter,
And the snowflakes fell like grass,
A barefoot boy with shoes on,
Stood sitting on the grass.

'Twas evening and the rising sun,
Was setting in the west.
And the little fishes in the trees,
Were huddling in their nests.

The rain was pouring down,
And the moon was shining bright,
And everything that you could see,
Was hidden out of sight.

While the organ peeled potatoes,
Lard was rendered by the choir,
As the sexton rang the dish rag,
Some one set the church on fire.

Holy smoke, the preacher cried,
In the rain he lost his hair,
Now his head resembles heaven,
For there is no parting there.

Many Flavors vs. Quick Turnover

Very Few Sales Are Lost Because of Dealer Not Having Certain Flavors, Declares Southern Manufacturer

TO CARRY several flavors of ice cream profitably a dealer must have a turnover that will justify moving his product so that each individual flavor will not remain in the fountain or cabinet for a period of more than two or three days, according to E. B. Geisel. Ice cream that has been in the dealer's fountain or cabinet for any length of time becomes icy, Mr. Geisel said, in a speech before the Southern convention on the subject of "Should a Dealer Carry Several Flavors of Ice Cream?"

The speaker declared that, contrary to the belief of most ice cream dealers, there are very few, if any, sales of ice cream lost due to a dealer not carrying a certain flavor of ice cream. He said in the majority of cases where the customer specifies his wish for a certain flavor, it has been found that the dealer by using a little diplomacy can, in most cases, have the customer try a flavor that he is carrying.

E. B. GEISEL.

The speaker illustrated just how most people order ice cream in the following manner:

"Suppose you asked me to have a plate of ice cream, and I consented—we then proceeded to a soda fountain. In going to the soda fountain, I did not have any idea as to what flavor of ice cream I was going to eat. My whole thought at the time was that I was going to enjoy a plate of ice cream. After arriving at the soda fountain we naturally ask the soda clerk what flavor of ice cream he has, and he mentions chocolate, vanilla, strawberry, tutti frutti, pineapple and any other flavors that he may have. After he has mentioned all flavors we finally decide on one of them, after giving it some thought.

"The next day you will again ask me to have some ice cream, and we proceed to another soda fountain. We approach the soda clerk and naturally ask him what flavors of ice cream he has. The soda clerk answers that he has vanilla and chocolate. You order chocolate and I vanilla. We both leave the soda fountain perfectly satisfied with having eaten a plate of ice cream. In both instances we were perfectly satisfied in having a dish of ice cream; however, at the soda fountain where the dealer was serving five or six flavors of ice cream, he could have just as well satisfied us with two or three flavors and a sale would have been made. In carrying the five or six flavors that he has in stock, the soda clerk loses a great deal of time mentioning the various flavors that he has, and if their stock of ice cream does not move rapidly, the ice cream is held in the fountain for too long a period and in most cases is not in condition to serve. I do not believe that a customer will walk out of a soda fountain place of business simply because the soda fountain has not the flavor of ice cream that is desired."

IF ICE cream manufacturers can work along the lines of getting dealers to use fewer flavors a considerable saving to the manufacturers could be affected, Mr. Geisel declared. This company has found that by handling fewer flavors the ice cream is in better condition to sell. Even though a dealer may be equipped with a refrigerated cabinet or fountain, the speaker will not recommend his carrying too many flavors.

BATAVIA CONCERN EXPANDING.

The Fargo Dairy, Batavia, N. Y., has made wide strides in the ice cream industry, as is evident by the announcement that the company will erect a three story concrete and steel structure, which will be devoted exclusively to the manufacture of ice cream. The building will be 30 by 40 feet.

The company's present plant, at 208 East Main St., will be maintained for the distribution of Grade "A" pasteurized milk and cream. C. L. Fargo is in charge of affairs.

Boosting Sales Through Plant Team Work

Co-operation Should Begin at Home, Says Convention Speaker, Who Shows Manufacturers Why Salesmen Should Know Something of Bosses' Plans

CO-OPERATION, like charity, should begin at home. That is the viewpoint of Harry A. Cuscaden, Louisville, Ky., who told delegates to the 1924 Southern convention an interesting story about results obtained in his company's ice cream plant through co-operation with and among employees. He stressed the value of encouragement, claiming it is the best tonic to produce good results.

One of the striking things brought out in Mr. Cuscaden's speech was that ice cream manufacturers are not getting the full benefit of their advertising. He says that although a large sum is being spent in advertising, some manufacturers fail properly to follow through because the selling organization is not properly co-operating with the advertising division, and therefore is not furthering the advertising campaign. This can be corrected through bringing the members of the department closer together from time to time, the speaker declared. "Each man knows his own line best," Mr. Cascaden said, continuing—

HARRY A. CUSCADEN.

"Therefore, when you are contemplating an addition or change of some sort in a certain department, call in your manager of that department and talk the situation over with him and get his views. It will prove to him that you have confidence in his judgment and that you do consider him a part of the backbone of your plant. Remember this, two heads are better than one, and ofttimes this judgment may change your viewpoint which may prove highly beneficial.

"A large sum is spent each year in advertising, but how many of us really cash in on it as we should? Call in your sales force, show them your advertising campaign for the year, and ask for suggestions. Go clear to the bottom and thrash out each point. After you have bought, tell them the cost and the results you expect from your advertising. Our product being a perishable one, it cannot be displayed, but our advertising can, so tell your salesmen it is up to them to display it and help you cash in. When your salesmen lay down on the job, it will soon be time to close shop.

"Now, we come to the drivers, and I believe we all will admit that this is quite a problem. This subject in itself is worthy of lengthy discussion, but time will not permit, so I will only attempt to give a few of the outstanding points which come to mind at this time. First, explain to them how to take care of their truck or teams, their cabinets and all other equipment. Let them know you have real money tied up in that equipment, and that it is their duty to look after it and to be as proud of it as if it were their own. Next, he must be taught the proper way to pack a cabinet, the correct amount of ice and salt to be used to each compartment to keep the cream in good salable condition. It is always well to inform him that the ice is to be used for packing ice cream and not soft drinks. Explain to him how necessary it is to be neat and careful when packing a cabinet. Don't spill ice, salt and water all over the customer's floor, be careful and considerate—it pays in the long run. A careless driver can lose more accounts in this way than your salesmen can obtain in a month."

HE STRESSED the importance of courtesy among drivers. He urged putting on a drivers' contest to create enthusiasm. His suggestion was that three prizes be offered on a weekly or monthly basis, prizes to be awarded to the driver scoring the highest number of points, a point to be awarded on the following items:

Gallonage, least ice and salt, least complaints, least special deliveries, return of empty cans and lids, general care of truck, equipment and personal appearance, and accidents.

A daily bulletin board on which to post the standings of the competitors each evening would do much to create interest. It was recommended that a special commission be offered for bringing in new accounts on each driver's route.

NEW MICHIGAN SECRETARY.

Lloyd L. Hughes Succeeds R. F. Frary as Secretary of the Michigan Allied Dairy Association.

When R. F. Frary, who served as secretary of the Michigan Allied Dairy Association so long and well, found it necessary to give up his work on account of failing health, the directors of the association engaged Lloyd L. Hughes of Detroit to take his place.

LLOYD L. HUGHES.

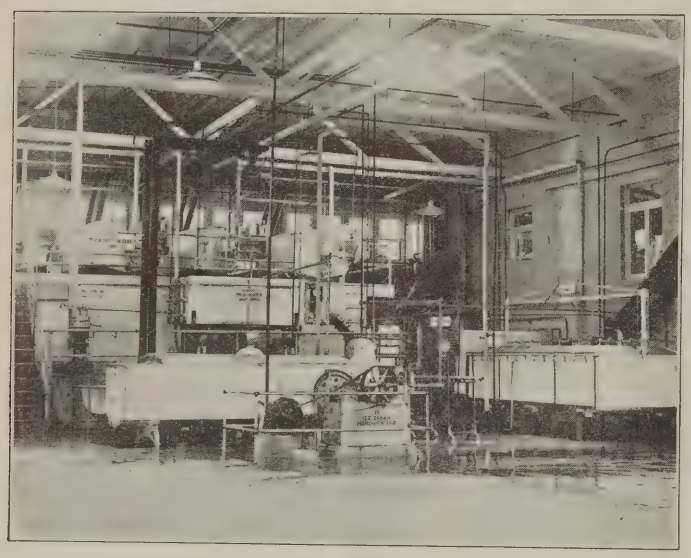
Mr. Hughes is president of the Hughes Gelatine Company of Detroit, and will, we understand, give whatever time to the association work as his business will permit. He is well known, especially among the ice cream manufacturers of the state, having been associated with his father in the gelatine business since 1907.

Mr. Hughes is a young man, full of energy and ambition, a splendid organizer and fully alive to the needs of the state's dairy industry. He has been a director of the Michigan Dairy Boosters for the past three years and is thoroughly familiar with trade association work.

One of the big jobs just ahead of him is directing the annual convention and show which will be held in Lansing, Mich., Feb. 2 to 6, in connection with Farmers' Week at the Michigan Agricultural College.

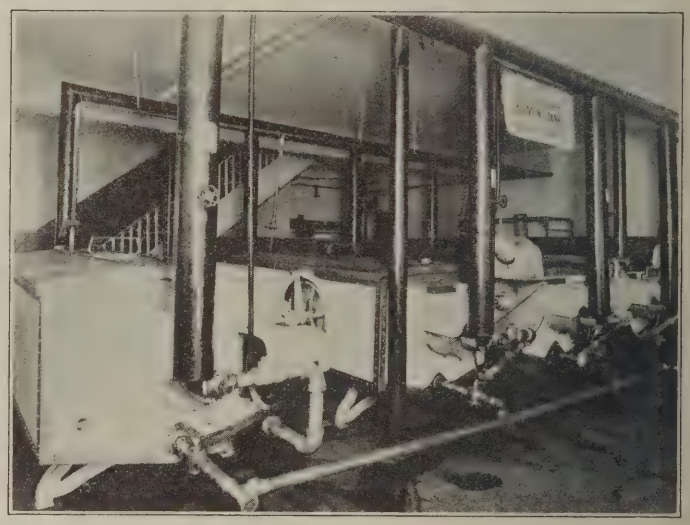
SOLID MAHOGANY.

"Captain, I'll have to go to the doctor; I have a splinter in my finger."



"Ye ought to have more sense than to be scratching your head," was the caustic reply.

Modern Policies Followed in California Dairy Plant



EDITOR'S NOTE—The November issue of The Ice Cream Review carried an interesting article about the Pure Milk Dairy Co. of San Diego, Cal. It is reproduced at this time because of typographical errors. This plant, a $750,000 plant, is one of the most up-to-date, not only on the Coast, but of the entire country.

THE last year has seen a number of modern milk plants built in Southern California, each new plant being a little more modern and embodying new policies. In this connection it is well to call attention to the Pure Milk Dairy Co. of San Diego, Calif., and their new milk and ice cream plant.

The Pure Milk Dairy Co. organized in 1912 by Henry F. Schnell, president, and managed by Wayne A. Hood, vice-president and general manager, has developed from a small business of $250,000.00 in 1913, to one of the leading businesses in San Diego today, the present volume of business being nearly $3,000,000.00 a year and having some 150 odd employees with a payroll of approximately $275,000.00 a year, owning and operating three modern dairy plants, a milk and ice cream plant, a butter plant and a sweet cream, condensed milk and casein plant, representing an investment of about $800,000.00. The company also operates two large producing dairies composed of some 600 odd registered and grade Guernsey and Holstein cows, all tuberculin tested and having a herd average extending over a period of two years, of forty pounds butterfat per cow per month.

Pasteurizing Room.

Ice Cream Mix Storage Room.

The Pure Milk Dairy Co. are distributors of certified milk, guaranteed milk, grade A raw milk, grade A raw-pasteurized milk, goat's milk, acidophilus and bulgarian cultured milks, modified baby milk, churned buttermilk, condensed milk, butter, eggs, cheese and ice cream, manufacturing about one and a quarter million pounds of butter, two hundred thousand gallons of ice cream and two hundred and fifty thousand pounds of cheese and casein, annually.

The management has been actively engaged in the dairy business for over thirty years, taking an active part in improving dairy conditions throughout the county, with the co-operation of the San Diego board of health, they have succeeded in eliminating all known tubercular market milk cows from the county, San Diego county having a 100 per cent supply of tuberculin tested milk and in addition has succeeded in lowering the bacteria content of milk to a very low degree. The raw milk received by this company averages less than 20,000 per C. C. This has been accomplished by buying only milk from tuberculin tested herds and paying for milk on a combined bacteria, butterfat, sediment and temperature grading basis, paying a premium for clean flavored milk of low bacteria content.

That the results have been satisfactory can be seen by a recent state and city milk scoring contest, samples were taken by city dairy inspectors from the company's delivery wagons for a period of six months, the final results being as follows: P. M. Dairy certified milk, 97.3; guaranteed milk, 98.0; P. M. grade A pasteurized, 96.3.

The stockholders of the Pure Milk Dairy Co. are actively engaged in the business, being officers and department heads. A surplus dividend is paid annually, out of the company earnings to non-stockholding employees, the amount depending on earnings of the company and length of service of the individual employee.

Contract price of milk to milk producers are based on retail price of milk, a maximum spread of 5½ a quart being the limit allowed the company. This spread was cut in October to 4½ a quart, the producer receiving $1.00 a pound butterfat of 8½ a quart for 4 per cent milk and the retail price being 13 cents a quart.

Milk producers are encouraged to feed a heavy balanced ration of concentrates consisting of raisins, rolled barley, oil cake meal, wheat bran, beet pulp, etc. Approximately 200 ton of raisins were used this last year as cow feed. The Pure Milk Dairy Co. assist their shippers by advancing money for hay and feed, permitting the producer to buy feed when market conditions are most favorable, the producer repaying the company by monthly payments. Frequent meetings are held with the producers and the most friendly feeling exists between the producer and the distributor.

In considering milk prices, Wayne Hood, manager, says, "We believe in and try to follow the four-square policy; pay the milk producer a price for his milk that will enable him to produce clean, healthy milk and yield him a fair price for his investment and labor, pay our

employees a fair wage, sell to the consumer at the lowest possible price that an efficiently run plant can sell for and return the stockholders a fair dividend on their investment, which we consider from 12 to 15 per cent a year.'' A comparatively low return for this class of business where a highly perishable product is handled and fluctuating market conditions are faced continually as is the case in the handling of butter, eggs and cheese.

The plants are models of efficiency and modern sanitation, large high ceilings, well lighted and ventilated, white enameled. The machinery and equipment is kept spotlessly clean, all exposed metal being kept polished to a mirror like reflection. A special glass enclosed milk cooling and a special enclosed milk bottling room, kept under lock and key, only the men employed in these departments being allowed to enter these rooms and a medical and physical examination certificate being required of all employees coming in direct contact with dairy products, are outstanding features.

A large and most completely equipped milk laboratory is maintained and is capably operated by E. L. Packenham, milk chemist and bacteriologist, and Omar Carrillo and assistants, a careful check being maintained on all dairy products sold by the company and analysis made of supplies purchased. All cultures and special milks are also prepared by the laboratory force, Mr. Packenham having entire charge and the responsibility of maintaining a uniform standard of quality of all dairy products handled.

A modified milk department and welfare educational department is in charge of Dr. W. O. Weeden, well known as a former manager of Walker Gordon Company and of the Fairfield Certified Dairy Co. of Montclaire, N. J. Dr. Weeden is actively engaged in visiting and conferring with the various medical, civic welfare and public health bodies.

The plant is well arranged for efficient operation and includes well-advertised dairy equipment; Meyer Dumore, Jr., bottle washers, Lathrop Paulson, can washers, 14 Wizard vitrified enamel pasteurizers, Creamery Package progress, 12,000-pound pasteurizing system, Davis and Milwaukee bottle fillers, Fort Atkinson freezers, viscolizers, Weibatch scales, Toledo overhead scales, Pfaudler glass-lined tanks, Mojonnier vacuum pans, brick filler, overrun control and laboratory equipment, New Era brick cutter and other equipment equally well known.

The advertising department in charge of Wayne Hood, is well worthy of mention for it's completeness, and to quote Mr. Hood, ''Our ambition has been to prepare clean, healthful, safe dairy products. Our problem has been, how to acquaint the public with the goodness of our products. We have nothing original, we have copied and in some cases improved on methods used by our best dairy product advertisers. Our best advertisement is our own plant, and we are accomplishing today our greatest results by inviting the public to inspect our plant and be our guests at noon-day luncheons.''

A MODERN dining room seating some 175 people is located on the top floor of the building. Invitations are given out by milk drivers to their patrons and to prospective patrons with an added invitation to bring a friend for inspection and luncheon on specified days. These invitations are given out until a group of 130 to 160 guests can reasonably be expected. These guests on arrival are conducted by department heads and officers of the company throughout the plant, the end of the inspection tour being the dining room, and there they are served with a piping hot dairy luncheon consisting of six courses, starting with creamed tomato soup and ending with ice cream and cake.

These luncheons have become so well advertised that a large waiting list is now maintained and invitations are mailed to those requesting them as fast as the company can serve the luncheons, which are being limited to three a week. Special luncheons to civic organizations, such as the Rotary, Lion, Advertising Club, Parent Teachers Association, being held once a week in addition.

One of the Company's Four Ice Cream Hardening Rooms.

A special educational newspaper advertising, a monthly milk magazine, milk bottle ringneck ads, window display signs, special window trims by a rapid fire water color artist, educational leafllets, outdoor advertising, direct mail, the gift of silver baby spoons and letters of congratulation to newly made mothers, special educational letters to doctors and educators are some of the many methods used in calling attention and building good will to this modern San Diego dairy plant, and a hearty welcome is given to all visiting dairymen.

MODERN PLANT AT GLASGOW.

A new plant, 50 by 90 feet, one story high, will be erected at Glasgow, Ky., by the Elizabethtown Ice and Ice Cream Co., whose headquarters is located at Elizabethtown, Ky. Claud Brown, proprietor, advises that the new plant will have a capacity of 1,000 gallons a day and will be equipped with latest type machinery. The contract for refrigeration equipment has been let to the York Company, and the Armstrong Cork & Insulation Co. will equip the cold storage and hardening rooms.

The new plant will cost about $30,000, and Mr. Brown expects it to be ready for operation on June 1st.

Improved Refrigeration an Important Factor in Ice Cream Industry's Development with a Major Machine

*By H. P. HOSPE**

REFRIGERATION is as old as the ages. History informs us that in the days of Nero slaves were bidden to go to the mountains, obtain snow and ice and to use these in making frozen dainties for the king.

In India the Hindu made ice by placing pans of water in shallow holes, which were lined and insulated with dry stalks of cane. On clear nights, the rapid evaporation of the water caused thin layers of ice to form. The natives gathered the ice in the morning, carrying it to their crude warehouses in baskets.

The Americans Indians were accustomed to placing porous earthen-ware jars filled with water out in the air. The evaporation of the water on the surface cooled the contents and thus they obtained refrigeration.

In more recent times ice has been harvested in wholesale quantities from lakes and rivers during the winter, and stored for subsequent delivery and use where and when needed during the summer. This practice is still in existence and large fortunes are invested in ice harvesting and storage plants. The absorption and compression system of refrigeration for artificial ice making in large quantities mark the next step in progress.

Today we have the individual refrigerating plant in all its ramifications from the preservation of food stuffs and perishables, and its very important application to the manufacture of ice cream, its preservation for, and delivery to the consumer.

The education of the public in the food value of ice cream, the prohibition movement, the progress in the industry itself by you enterprising individuals and companies in the business, have made ice cream manufacture one of the major industries, and as such you are seeking every available means of possible assistance to increase your efficiency and improve your product.

You have learned from others, as noted in your program, of the importance of the various other phases of your business, and possibly last but not least, you are interested in refrigeration, the ice machine, and its operation to obtain the best results.

These may be tabulated as follows:

Guarantee of per cent of overrun.

Guarantee of smoothness of ice cream.

Guarantee of minimum losses of raw and finished products.

Guarantee of economical operation of ice machine.

Guarantee of freedom from trouble, accessibility for repairs.

Moderate investment.

We will first review the principles involved in the refrigerating system and then apply them to these important points.

Component parts:

High pressure or compression side: compressor, condensor, ammonia receiver, gauges, oil separator and seal trap, valves, fittings and connecting lines.

Low pressure or expansion (evaporation side): Expansion valve, operating coils, and shut-off valve.

For brine work a brine tank and circulating pump with piping.

Mechanical refrigeration, by the compression system, is based on the natural law of physics that a liquid in changing to a gas absorbs heat. Water boils at 212 degrees F., at sea level, and gives off steam at atmospheric pressure. The boiling point is slightly lower at higher altitudes where the air is lighter, which means less pressure than at sea level. A thermometer will show that this steam is the same temperature as the water, or 212 degrees F. A fire is necessary under the boiler to convert the water at this temperature into steam at the same temperature. Heat is absorbed from the fire in the process of changing the liquid into the vapor.

ALL liquids require heat to convert them into vapor. Some liquids have very low boiling points, a few below the freezing temperature of water. Alcohol boils at 173 degrees F., sulphur dioxide at 14 degrees, ammonia at 28 degrees under ordinary atmospheric pressure. The ammonia compression system is most practical on account of the heat-absorbing capacity and low boiling point of liquid anhydrous ammonia. Anhydrous means free from water. Ammonia at ordinary temperatures and atmospheric pressure is a gas which can be liquified under moderately high pressure. The liquid ammonia in turn boils when the pressure is relieved and through the process of evaporation changes to a gas at temperatures considerably below that of freezing water and varying with the pressure. (Note table showing, Temperature and Pressure, A. B. C. of Refrigeration.)

In the process of simple refrigeration the liquid is vaporized or allowed to boil in the expansion coils placed in the refrigerator or other medium to be cooled. As the liquid changes to a gas or in the process of evaporation, heat is absorbed from the refrigeration or other medium just as heat is absorbed from the fire when water boils or evaporates into steam, except that ammonia evaporates at a much lower temperature. The gas leaves the expansion coils at a temperature slightly below the temperature of the refrigerator or other medium.

If it were not true that ammonia is expensive to manufacture and offensive when liberated, it would not be necessary to go any further with the process. In other words, the refrigerating effect is complete when the surrounding atmosphere in the refrigerator or the surrounding brine in case it is used as a medium of heat transfer has given off its heat to the ammonia.

IN ORDER to conserve the ammonia, it is necessary to confine it within the system and use it over and over again. It is, therefore, necessary that the heat absorbed by the gas in the coils must be removed in order to reconvert the gas to a liquid and use it again. Water used through a double pipe condenser or similar ap-

* Refrigeration engineer, Baker Ice Machine Co. An address at the 1924 Ice Cream Manufacturers Roundup, Lincoln, Neb.

paratus is used to remove this heat. The temperature of the incoming and outgoing water of the condenser will govern the pressure of the ammonia. (Note table, Temperature and Pressure.)

Again, referring to a natural law that heat will not flow from a cold body to a warm one any more than a liquid would flow up-hill without some mechanical means, work is necessary to transfer the heat from the cold am- gas compressor propelled by some prime mover such as monia to the warm water. This is done by means of the a motor or engine which exerts the necessary mechanical work of compressing the gas. The gas, when compressed, rises in temperature. Thus the cold gas coming from the refrigerator is compressed, increasing its temperature and pressure until it has reached a point higher than the temperature of the cooling water which is circulated through the condensers. The heat will then flow readily from the heated ammonia gas to the water which is cooler. The warm water is then carried to a drain. The heat from the refrigerator or other medium is, therefore, removed by the water through the medium of the ammonia compression system.

This completes the cycle and you have in your receiver located at the bottom of the condensers a supply of fresh liquid to be liberated in the expansion coils for use again. This process may be continued indefinitely as long as the ammonia is not contaminated with some foreign substances introduced into the system through oil, scale or from outside air. Or if it is not superheated and broken up into its component parts, as it is not only of the elements, but is made up of nitrogen and hydrogen. Its chemical formula being HN_3. Carbon dioxide gas as well as sulphur dioxide gas have been used in the compression system with partial success, but considering the latent heat of vaporization and operation pressures under which ammonia can be used, it has proven the most universally used. The term heat of vaporization merely means the amount of heat that one pound of liquid ammonia will absorb evaporating into ammonia gas at the same temperature. It is about four times that of ice melting. In the last year or so, sulphur dioxide has come into more popular use in its application to house-hold refrigeration on account of the very low pressure and the moderate temperatures needed, al- gas compressor propelled by some prime mover such as a motor or engine which exerts the necessary mechanical though its actual refrigerating effect and efficiency is far less than that of ammonia.

The foregoing is the complete cycle and covers all of the process involved in simple refrigeration. There are, of course, a great many elaborations of the application of this process for the sake of convenience, such as the freezing of ice cream, the manufacture of ice, the cooling of air for circulation in distant rooms, etc.

There is a mathematical relation between temperatures and pressures, and the consequent weights of ammonia gas under those conditions. The refrigerating effect or the absorption of heat units is, therefore, in reality measured by the weight of the gas which is used and not its volume.

Do not let this statement confuse you. A machine of two cubic feet volumetric displacement per revolution, will do twice the work of a machine of one cubic foot volumetric displacement, if both machines are operated at like pressures. However, the two cubic foot machine at four pounds suction pressure does only as much actual refrigerating work as the one cubic foot machine will do at twenty-four pounds suction pressure in actual heat units.

The returning gas from the evaporating coils in the case of four-pound pressure, is approximately minus twenty degreese Fahrenheit, while the gas at twenty-four pounds pressure, returning from the evaporating coils, is approximately ten degrees above zero, Fahrenheit. It is plain to be seen, therefore, that for hardening room purposes the lower pressure must be used, while for temperatures of thirty degrees and upward a twenty-four pound suction pressure, carried on the machine would be far more efficient. In both cases we are assuming sufficient evaporating coils to absorb the surrounding heat.

YOU will probably wonder why it is necessary to have the temperature of the returning ammonia gas twenty degrees below zero, when you desire only a temperature of from zero to ten above, and why it is necessary to have a ten-degree ammonia gas, where a temperature of thirty degrees or higher only is required. The explanation of this is very simple.

The heat must be absorbed through the medium of the steel pipe in which the gas is confined, and the atmosphere or other medium, which surrounds the coils. The steel pipe is, by its nature, a good conductor of heat. On the other hand, atmosphere is a poor conductor unless it is in circulation.

You often hear the expression, "We have insulated our room with boards and paper and a four-inch dead air space." To you who appreciate it, the four-inch dead air space is, of course, a huge joke, as we all know that unless air is confined to a very small area, it sets up a circulation, due to the heat or cold coming in contact with it. Reducing the volume of the gas in cooling and increasing the volume when the temperature rises, thus the heavier air falls and the warm air, which is lighter, rises. This circulation continues as long as heat and cold reach the air. This principle is used in transferring the heat of the room through the medium of the steel pipe to the ammonia gas circulating through the pipe.

YOU can readily appreciate that in the hardening room, where it is pretty much filled with coils and is not large in any event, that about the only circulation of air is caused by opening and closing of doors and by the very slight heat leakage through the heavily insulated walls, in addition to the heat in the ice cream to be hardened. It is placed in the hardening room at 20 degrees or above and is cooled further in the harden- room. Therefore, the transfer of the heat from the ice cream in the hardening room to the air, and from the air to the ammonia is very slow. For this reason considerable difference must be maintained between the temperatures of the ammonia gas and the room to cause the ammonia to boil. In the case of the thirty-degree room, where you store your cream and other raw products, there is usually provided an overhead bunker or a set of air deflecting baffles, upon which the coils are placed. Thus a considerably better circulation is set up on account of the up-draft on the sides of the refrigerator to the high side of the baffle and a down circulation from the lower side of the baffle to the center of the refrigerator.

It is true, also, that the tension or ability to hold together of gasses as higher temperatures is less than at low temperatures, and even without deflecting baffles a better circulation would prevail than where lower temperatures are maintained. It is, therefore, very important that the compressor be operated at the most efficient suction pressure to obtain proper gas temperature and the best and most economical results.

The evaporating coils should be defrosted frequently,

A Private Affair

THERE are times when you want privacy in operation — buying — selling—seeking—or acting in any way; when for a short time you would prefer to act independently of those associated with you.

At such times a classified advertisement will prove to be an ideal agent, working discreetly and privately. It will not reveal your identity nor disclose more details than you are willing to have disclosed. It operates silently and efficiently, introducing you to other individuals with whom you can negotiate by mail or in person.

Classified advertisements in The Ice Cream Review are the dairy products man's *confidential agent.* Insert them under any of the following headings:

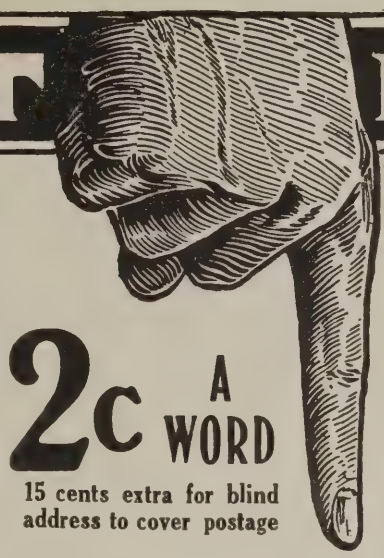
Classified Advertisements are found in the last pages of this issue.

as a heavy accumulation of ice and frost insulates the pipe and seriously hampers the heat transmission or flow from air to ammonia.

The starting and stopping of the machine is, no doubt, more or less familiar to all of you, at the same time a review of a few of the details might prove of value and in this connection you may have some questions that you wish to ask and you may not entirely agree with me in some respects. The best operating engineers differ on many points.

Some of the smaller machines are not equipped with starting valves, but most machines which you have anything to do with have what is termed a starting valve, which is really a bypass from the high pressure line to the low pressure line, and is opened in starting the machine to relieve the motor of the entire load except the mechanical friction in the compressor. Therefore, the first thing to do is to open this starting valve and release the water into the condenser. After starting the motor the discharge valve is opened, then the suction valve opens slowly, while the starting valve is being closed. Both gauges should be noted, and a check made from your table to see that your condenser pressure stands about as it should for the temperature of the water.

The low pressure gauge should be watched until the pressure reduces to a few points lower than that which you ordinarily operate. For example, if you are accustomed to running fifteen pounds back pressure, before opening the king valve, run the machine until the back pressure registers thirteen, then open the king valve, which is the main valve on your liquid receiver. Allow the liquid to flow unrestricted to the expansion valves, assuming that on closing down the day before you have left the expansion valves set so that they will need little or no adjustment.



An occasional glance at the machine to see that it is not frosting back too heavily, is a very good practice, and it is a very good precautionary measure to feel the discharge line to see that it is warm or hot. The more you open your expansion valve the more liquid is allowed to flow through the coils, and the more frost will accumulate back to the machine. On the other hand, closing the expansion valve will cut off the flow of liquid and take away the frost from the machine.

If the discharge line is allowed to get cold, you obtain a condition which will not give good results, because in order for the condenser to do its work, the gas being pumped into it must be warmer than the water, so that the water will absorb the heat from the ammonia gas. In other words, in order that the heat will flow from the warmer to the colder body.

There is danger, however, indicated by a cold discharge of carrying liquid into the compressor, which may cause the high pressure relief valve to operate, raise the safety-heads or possibly spring the head or bend a connecting rod, and it must be remembered that even though the pressure relief valve is intended for emergencies, that in order to give a tight seal under operating conditions there must be a lead seat in the valve, and each time it operates decreases its efficiency.

In closing a machine down the reverse process, of course, takes place, namely, close down the king valve at the liquid receiver, leaving the expansion valve set as in operating position, which should be from a quarter to a half turn open. Continue to operate the compressor until the low pressure falls half way between operating pressure and zero, unless you are operating with a vacuum on the machine, which is done only in extreme cases, and where very low temperatures are required.

THE CHERRY 40 QT. FREEZER

THIS freezer is the most talked of unit among the trade today. Experienced users marvel at our ability to produce such a finished machine at the price.

Cherry's manufacturing facilities and Cherry's skilled and experienced workmen are the only reasons that made it possible to build the "World's Finest Low Priced Freezer."

EVERY improvement and practical refinement has been included in this wonderful unit. It has the advantages of more costly machines.

The Cherry 40 Qt. freezer is entirely without competition—you need only to examine its specifications to appreciate this statement.

"The World's Finest Low Priced Freezer"

FOR many, many years the wheels in the big Cherry factory have been busy turning out freezers. The name "Cherry Freezer" has become a synonym for high quality freezers, capable of long service and hard usage.

More recently it became our ambition to give the trade a low priced freezer that was just as dependable and which had most of the refinements and improvements of our larger and more costly units.

Here is truly the "World's Finest Low Priced Freezer"—but to fully realize how different it really is and how much better it is than other freezers of similar capacity, you must read the interesting illustrated bulletin which describes this freezer in detail.

Send for Bulletin 2060.

SOME persons expect a trade association to guarantee their business profits. An association can only help.

Some expect a trade association to regulate —the other fellow's business. An association can regulate only impartially, by consent of its members.

A trade association ***can*** help make a field of business bigger. It ***can*** save it from attack and unfair exploitation. Its members then have bigger chances in that field —they are also saved substantial losses.

Should ice cream manufacturers belong to trade associations? They, of course, alone can answer.

But it is noticeable that many of them who do belong to state and regional ice cream associations, and to the National Association of Ice Cream Manufacturers, do not hesitate to say it pays.

MARCH 1925

BULLETIN OF EVENTS.

National Association of Ice Cream Manufacturers—Twenty-fifth annual convention to be held at Detroit, Mich., the week of October 19, 1925. Convention headquarters, Hotel Statler. Secretary, Fred Rasmussen, Telegraph Bldg., Harrisburg, Pa.

Southern Association of Ice Cream Manufacturers—Annual convention at Lexington, Ky., December 1, 2, 3 and 4, 1925. Convention headquarters, Phoenix Hotel. Secretary, J. W. Clopton, Decatur, Ala.

ICE cream manufacturers who are also in the milk bottling business enjoy a splendid opportunity for telling the story of ice cream to their milk customers. Not long ago we asked an ice cream man, who is thus situated, whether he made use of his opportunity. He replied that he had not. Never thought of it, but considered it a good idea.

The ice cream manufacturer who sells milk should have little difficulty in securing the interest of his milk customers in his ice cream. They have confidence in him and his wares or they would not be his milk customers. He has the opportunity to not only sell them on the food value of ice cream, but on his particular brand of ice cream. Why pass up this opportunity?

THE progressive milkmen in our larger cities have "turned a trick" the last few years that our ice cream manufacturers might well copy after. We dislike second hand things as a rule, even second hand ideas, but here is one that we believe is good.

Something that happened in our home town recently brought forcibly to mind the fact that the milkmen have been capitalizing public interest in milk. They have gone even further. They have lent financial and moral support to public health movements that have emphasized the importance of milk in a health program.

A five year old boy in our neighborhood came home from kindergarten one day and demanded a big glass of milk, in spite of the fact that he has never enjoyed drinking milk. His mother had even worried about his aversion for milk.

Here is the reason. A health worker had visited the school and had told the children that, in order to grow up healthy men and women they must drink plenty of milk. Now, this little boy's mother had repeatedly told him the same thing, and this little boy had abundant faith in his mother's judgment, but he had never become impressed with the importance of mother's advice. When he went to school he accepted everything told him at par value. What was told him "sunk in." The seed fell on fertile soil. It was more than advice in his childish mind, it constituted an order from headquarters, and he was there to obey orders.

This was pleasing to the mother, of course. Perhaps she felt just a bit incompetent when she learned that a health lecturer in the public school could do in a few minutes what she had been unable to do in many months, viz, induce that five years of precociousness and limitless possibilities to enjoy a glass of milk.

The results of this lecture were also pleasing to the man with milk for sale. That youngster's sudden conversion to milk drinking, along with hundreds of others, increased milk sales. Why shouldn't he be pleased?

Isn't it about time, friends, to admit that our milk friends have stolen a march on us? Isn't it about time for us to "cash in" on the fact that ice cream is a dairy food, therefore just as suitable as a health food as any other dairy product?

The milk dealers of the country have, through their advertising and co-operation with health authorities, "sold" their product to the mothers of the country. They are even reaching the five year olds and selling them on their wares. What mother will refuse her five year old a big glass of pure, wholesome milk if it is within her power to get it?

But what will the average mother do when that same five year old comes toddling home from kindergarten and begs for a dish of ice cream or an ice cream cone? Possibly he may get it, probably not. Possibly he has indulged in ice cream once before during the week and his little "tummy" can't endure ice cream so often, she believes. She finally compromises with him and he gets a piece of candy to satisfy his craving for sweets. The piece of candy probably contains more sugar than the ice cream he craves.

The mothers of this country are not, as a rule, sold on ice cream. To them ice cream is a dessert and desserts are not, as a rule, included in health diets. At least the mothers of five-year-olds are not just sure that ice cream is good for the little tots.

The ice cream manufacturers of the country have been selling dealers while the milkmen have been selling mothers.

The milkmen have an advantage, we admit, because they are, in most cases, dealing directly with the mothers, but this is not a good reason for the ice cream manufacturer to entirely ignore them. He knows where they live and even though his representative does not make daily trips to the homes of these mothers the mail man does make daily trips.

Haven't we been too interested in the dealer and too little interested in the home? Isn't it time to realize that any big increase in ice cream consumption in this country must come from home demand? That is where the milkmen have found their increased consumption and not so much by taking customers away from each other. Why shouldn't ice cream manufacturers profit by their experiences?

Let's sell ice cream as a pure dairy food, rich in vital elements, good for little "tummies" as well as old ones.

NOW that the conventions are over it is perhaps pertinent to ask ourselves where we are "at" in this industry, especially in reference to some of the big problems that have been so prominently "before the house" at these various conventions.

The question of a national advertising campaign is one of these. Prominent men in the industry have given generously of their time and funds to arouse interest in this national advertising program and to solicit support for it. The response has been encouraging in some sections and very discouraging in others.

We are heartily in sympathy with such movements. Besides advertising ice cream, general participation in such a co-operative program will surely result in a better feeling among men in the industry. They will get a taste of working together in a common cause—a result much to be desired in this industry.

Then, too, such a program will necessarily advertise ice cream to the consumer—another result much to be desired. The ice cream dealer will necessarily be lost sight of except as he takes a place in the picture as the distributing agent. No money will be spent in making the dealer dissatisfied with his present contract with the manufacturer. No money will be spent trying to induce a dealer to leave one manufacturer and take up with another. No money will be spent on dealer equipment and service in order to buy his good will. No money will be spent on painting a whole store in order to get a sign painted thereon, along with a contract.

No, all these things will be lost sight of in a nation-wide effort to educate the consumer relative to ice cream as a good food and a delightful dessert. We see abundant opportunities to popularize ice cream and in other ways benefit the ice cream manufacturing industry.

The milk bottling industry has greatly benefited through its co-operation with the National Dairy Council. With comparatively little money the story of milk has been told over and over again until not only has the per capita consumption of milk been increased in this country, but milk is now accepted everywhere as a good food. The milk story gets "first page next to reading matter" in our big metropolitan newspapers.

After talking with many ice cream manufacturers, some of whom have expressed disapproval of an advertising movement of this kind, we have reached the conclusion that the objections that have been raised can be easily eliminated. All seem to recognize the need of popularizing ice cream in the minds of consumers. All seem to be willing to spend money to do it. The means proposed form the basis for any objection we have heard raised.

Some manufacturers are of the opinion that magazine advertising costs too much money for the results possible to obtain. They want to see the money spent for direct advertising that will go right into the homes. Others are just as firmly of the opinion that best results will be obtained by depending largely on space in magazines of national circulation. Others propose other methods. We confess sympathy for the plan of carrying an individual message right into the home, but we don't want to see the whole movement endangered in order to see any particular plan forced through.

We have confidence in the men who will actually spend the money to spend it to the best advantage. We understand that the plan proposed by the national advertising committee is a flexible one and that it will be adjusted to carry out the advertising suggestions of the men who put up the money. On such a basis it should not be difficult to enlist the hearty support of the men in the industry. As matters now stand there is some objection to the plan submitted, and as we understand it, these objections can be met by changing the plan. We have heard no objections to **a** plan of national advertising. All objections seem to be aimed at **the** plan.

With the industry "sold" on the idea it should not be impossible to carry it through with great profit to the industry. There is danger in the fact that the busy season will soon be upon us. It's easiest to keep up interest in such a subject during convention season.

MIGHTY ICE CREAM EXPOSITION IN PROSPECT.

A mammoth exhibit of ice cream supplies, machinery, etc., is in prospect in connection with the national convention at Detroit in October, according to unofficial information reaching The Ice Cream Review just before time for this issue to go to press. Official confirmation of this report is expected soon. According to present information, the Detroit exposition will far surpass anything The Association of Ice Cream Supplymen has yet undertaken, even eclipsing the two great Cleveland shows.

LAST month we called attention in these columns to the fact that much good can be accomplished for the industry through trade organizations in the industry. We pointed out many trade abuses, centering largely around the ice cream dealer who has been pampered and petted in hopes of holding his patronage, or securing it at the expense of some other manufacturer, as the case might be.

Several have commented on that editorial. An eastern subscriber writes "as I read your first editorial in the current number I said to myself, 'well someone is waking up to the whole trouble in the ice cream business.' You have hit the nail on the head so far as the basic trouble is concerned."

Our friend further called attention to a statement recently made by Secretary Hoover as follows, "industries must do their own housecleaning or the government will step in."

There is nothing to be gained by ignoring the wasteful, ruinous trade practices that prevail in some sections. Instead of working together to build up the ice cream industry they have been, and are, trying to destroy each other. The way out is through the right sort of a trade organization agreement. Such agreements need not smack of illegality. There is no law to prevent business men agreeing among themselves to use business-like methods in building an industry.

A PROMINENT middle western ice cream manufacturer has for years used the slogan, "It's a Food, not a Fad," in advertising his ice cream. We have always liked that slogan, in fact we believe it carries the message that must be carried to the consumer, and impressed upon him, before ice cream will be consumed in the home in quantities satisfactory to the ice cream manufacturer.

Ice cream long ago passed the "fad" stage, but it is still looked upon as an unnecessary article of human diet in the average American home. Money spent for it is charged up on the family budget under the item of luxuries—at least mentally.

Why should this condition prevail? Ice cream is a dairy product and dairy products are looked upon as wholesome, even necessary human foods. Why should the addition of comparatively small quantities of ingredients put there to please the palate cause it to lose its identity as a dairy product? Butterfat is the most expensive ingredient in any dairy product, ice cream included. Why is its presence in ice cream so little appreciated?

These questions suggest their own answers. The ice cream manufacturers of this country, as a rule, have been content to let their product compete with unnecessary articles of human food instead of insisting upon having it listed as one of several manufactured dairy products all of which are accepted in the American home as valuable foods with one exception—ice cream.

The milkmen of a far western city have pooled their advertising money for a period of four months. They will advertise milk, but no particular brands of milk. Of course, they will emphasize the food value of milk. The thought behind the national ice cream advertising movement is the same. We hope that in carrying out any such advertising campaign the men who are in authority will keep in mind the fact that ice cream is a milk product, and that the favorable attitude of the consumer toward milk may be cashed in on—why not?

IT'S time to get everything in readiness for the busy months ahead. A better way is to keep ready all the time, but it's the "get ready" time of year in many dairy plants. During the next few weeks there will be much tearing down and building up, installing new equipment, painting, primping and slicking up in general. Men in the ice cream business are anticipating their requirements and laying plans for larger sales.

Any time of year is a good time to do these things, but the early springtime is perhaps the most suitable season for a general overhauling. The wear and tear incident to the winter months, when weather conditions generally prevent any extensive repairs, and the accumulation of debris, both material and mental, make the coming of the springtime a season of "housecleaning."

It is more than a habit. It is a response to one of Nature's laws. It is the loosening of fetters forged by Old Man Winter. It is the shout of freedom expressed in a practical way. It is the expression of renewed faith in industry, especially the dairy industry. It is the ice cream manufacturer's challenge to the business world that he is going after a bigger business in a bigger way.

So let us encourage a still greater observance of this "get ready" season. It is good for us. It is good for business. It is good for the ice cream business.

THERE are some retail dealers of ice cream who are taking advantage of the widespread interest in refrigerated cabinets to play one ice cream manufacturer against another. The retailer tells the manufacturer who is furnishing him with ice cream that "So-and-So" has offered to put in a free cabinet, and "what are you prepared to do to hold my business?"

Of course, not all retail dealers are liars when they report such a proposition, but some of them are. It's a good plan to call Mr. Competitor on the telephone and verify such a report before getting excited. Let everybody keep their feet on the ground and this refrigerated cabinet problem is going to be solved to the everlasting benefit of the ice cream manufacturing industry.

NORTH DAKOTA ASSOCIATION OFFICERS.

The following officers were elected at the ninth annual convention of the North Dakota Ice Cream Manufacturers' Association, held at Fargo, Feb. 17 and 18, 1925, as follows:

H. C. Schulte, Mandan, president; Frank O. Knerr, Fargo, vice-president; Harry K. Geist, Grand Forks, secretary-treasurer. In addition to the above officers, who automatically become directors, the following two directors were elected: M. Nielson, Rugby, and Harry Christian, Fargo. The delegate and director to the national convention is Harry K. Geist, Grand Forks.

How many Ice Cream Cans have you bought since 1919

?

That was the year the *Electric Weld* can was brought out.

Since that time there has been nearly as many **New Type** cans put on the market as there are "new model spring hats."

All of them "were" the "best," but most of them have fallen by the wayside.

The "Electric Weld" has been on the market five years. There are over a million in use and each one has the same basic construction features as the first one made

JOBBERS AND WAREHOUSE STOCKS IN ALL PARTS OF THE COUNTRY

Minnesota Manufacturers Take Important Action

Vote to Promote National Advertising Through Association Officers and Agree to Handle Refrigerated Cabinet Question Same Way. Keen Interest and Large Attendance Mark Fourteenth Annual Convention

SOME folks may find special interest in discussing whether our country should join a league of nations of some sort, while others may take pleasure in discussing baseball or prize fights, or solving cross-word puzzles, but to the scores of icee cream manufacturers who gathered in state convention in Minneapolis last week these mighty problems meant absolutely nothing, for the time being at least. There was just one big problem, and they were determined to solve it.

The fourteenth annual convention of the Minnesota Association of Ice Cream Manufacturers was the occasion for a splendid outpouring of ice cream manufacturers, supply men and others interested, not only from Minnesota but from all the adjoining states and Illinois. The New Nicollet Hotel was convention headquarters.

OFFICERS AND DIRECTORS.

W. W. Dunn, Jr., St. Paul, president.
C. E. Kester, Hutchinson, vice-president.
Nels. Baden, Wadena, secretary-treasurer.

These three officers, together with Peter Mortensen, Albert Lea; D. T. Carlson, Willmar; N. F. Russell, Duluth, and Robert Rasmussen, Mankato, constitute the board of directors.

W. R. Cammack, St. Paul, was elected state director to the National Association of Ice Cream Manufacturers.

When President Dunn called the convention to order it was plainly evident that every delegate present seemed to feel that the best meeting ever held by the Minnesota association was just getting under way. Happy in hopes for the best year in business, and serious minded because of the big problems to be solved, these men (and Mrs. Vanderbie, without whom a Minnesota convention would not be complete) clearly indicated that they were there for real business.

Pointing out the possibilities of developing a bigger tourist business in ice cream, Perry S. Williams, representing the Minneapolis Civic and Commerce Association, extended the usual welcome to the delegates, and made a "hit" by making worth while suggestions, and making his talk short, instead of sounding the praises of his city. He thus passed up an opportunity which few men under like circumstances could have passed up.

Introduced by the chairman as "our old friend from Duluth," N. F. Russell of the "Zenith City," in a very happy talk, responded to the address of welcome and fully lived up to his reputation as an entertaining speaker.

The reports of the secretary and treasurer were disposed of in short order and President Dunn then briefly reviewed the work of the association for the past three years, during which time he has served as president.

Mr. Dunn, at the outset, emphasized the importance of the meeting, especially the second day's session, when action would probably be taken that would either cement the members more closely together or split the association wide open. He also called attention to the value of a trade association, and urged members to cultivate greater confidence in each other.

Fred High of Chicago, heralded as "publisher, editor and philosopher," in an inspiring address, backed up President Dunn's advice and enlarged upon it to the delight and profit of everybody present. Mr. High is not only "publisher, editor and philosopher," but he is also an orator with a real message for business men. While he had little to offer of special interest to ice cream manufacturers, he offered an abundance of inspiration and good advice for every man in business.

Mr. High called attention to the autocratic power of health boards in our cities and advised ice cream manufacturers everywhere to "put their houses in order," if necessary, and make politicians afraid of them by building up the public's confidence in their product. "One of the best talks I ever heard," was the comment by an

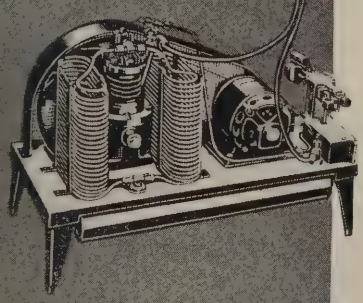
Investigate— Air-Cooled Frigidaire Ice Cream Cabinets

It's Air-Cooled

Ice cream manufacturers have been quick to appreciate the great advantage of Air-Cooled Frigidaire Cabinets.



Frigidaire Air-Cooled Compressors *use no water*—no plumbing connections are required. This makes them independent of local water conditions. They are easily and quickly installed—can be placed in another room on the same floor or in the basement. They are easily moved. They cost slightly less than water-cooled cabinets of similar size and capacity.

Air-Cooled Frigidaire Cabinets are serving thousands of stores efficiently, quietly and economically. They are products of General Motors, and are backed by a strong service organization of 2500 men located in every part of America.

Write for the facts and descriptive literature.

DELCO-LIGHT COMPANY

Makers of Delco-Light Farm Electric Plants, Electric Pumps, Electric Washing Machines and Frigidaire Electric Refrigeration

PRODUCT OF GENERAL MOTORS

Frigidaire
ELECTRIC ICE CREAM CABINETS

Frigidaire Cabinets give you the greatest flexibility of equipment because they can be used with either air-cooled or water-cooled compressors. The Frigidaire water-cooled compressor can be placed in an enclosed section, added to the cabinet itself, or can be located in another room on the same floor or in the basement.

Refrigerated Soda Fountain Not Complicated

Reasonable Inspection Service Will Almost Eliminate Repair Service, Discloses Convention Speaker

THE mechanically refrigerated soda fountain is not one-tenth as complicated as the most simple automobile, is not subject to "a fractional part of the wear, tear and abuses that an automobile receives," and hence requires "nothing like the same amount of service," it was declared in a speech before the Ohio convention in January by W. A. Schulte, sales promotion manager of the Russ Mfg. Co., Cleveland. He added that a reasonable inspection service will almost entirely eliminate repair service, and that the cost of operation can be considered as almost negligible.

W. A. SCHULTE.

The speaker named the following four benefits that he believes are sure to accrue to the manufacturer whose dealers have refrigerated fountains:

First. You accomplish the very desirable elimination of salt and ice packing.

Second. You insure delivering to the consumer the original quality that you impart to the ice cream.

Third. You place the responsibility of property ownership where it belongs.

Fourth. You accomplish all of this without capital investment.

ALTHOUGH Mr. Schulte said he has talked, during the last three months, with hundreds of ice cream manufacturers, large and small, in different parts of the country, who were frank to say they had found relief from mechanical refrigeration, he warned the Ohio delegates against what he called "a new set of intolerable conditions, that will in individual cases be far more demoralizing than any existent heretofore." This condition would come about, he added, because of the "unbusinesslike practice of giving away something for nothing."

The manner in which these cabinets are established is purely an economical matter, the speaker pointed out, but he added that it did not matter whether the individual manufacturer decreases the price of ice cream where delivered into mechanically refrigerated units. He said the question should be answered by what the cost and profit sheets show, which policy has been followed in many sections of the country where a state of equilibrium has been attained.

DEALERS who are buying less than 1,500 gallons of ice cream a year, are manifestly not logical prospects for mechanically refrigerated fountains, he said. The investment is not justified by this amount of business. He added:

"Just insofar as you give full consideration to the dispenser's broad requirements, he will profit in the long run. It is perhaps an indisputable statement that the increase in consumption of ice cream has run parallel with the structural development and widespread use of the soda fountain. It is fair to assume that anything which might tend to reduce the speed of service and detract from the appearance of the fountain layout, will certainly not help sell ice cream.

"Hence, when ice cream is dispensed from an electric cabinet in a store of the type where retail trade can be taken care of on a 100 per cent basis only by the mechanically refrigerated fountain, your interests suffer because your dealer's interests suffer.

"If this were not so, we would find the ordinary salt and ice cabinet in general use today in connection with the bottle or pump box, or some other such make-shift arrangement, instead of soda fountains.

"Whatever part you may finally assume in the matter—whether or not you ultimately come into the actual field of sale of fountains and equipment, the fact remains, as you doubtless have already discovered, that you are in position to advise constructively and educate your trade along the lines of mechanical refrigeration. In fact, many of your customers will largely depend upon you for correct guidance."

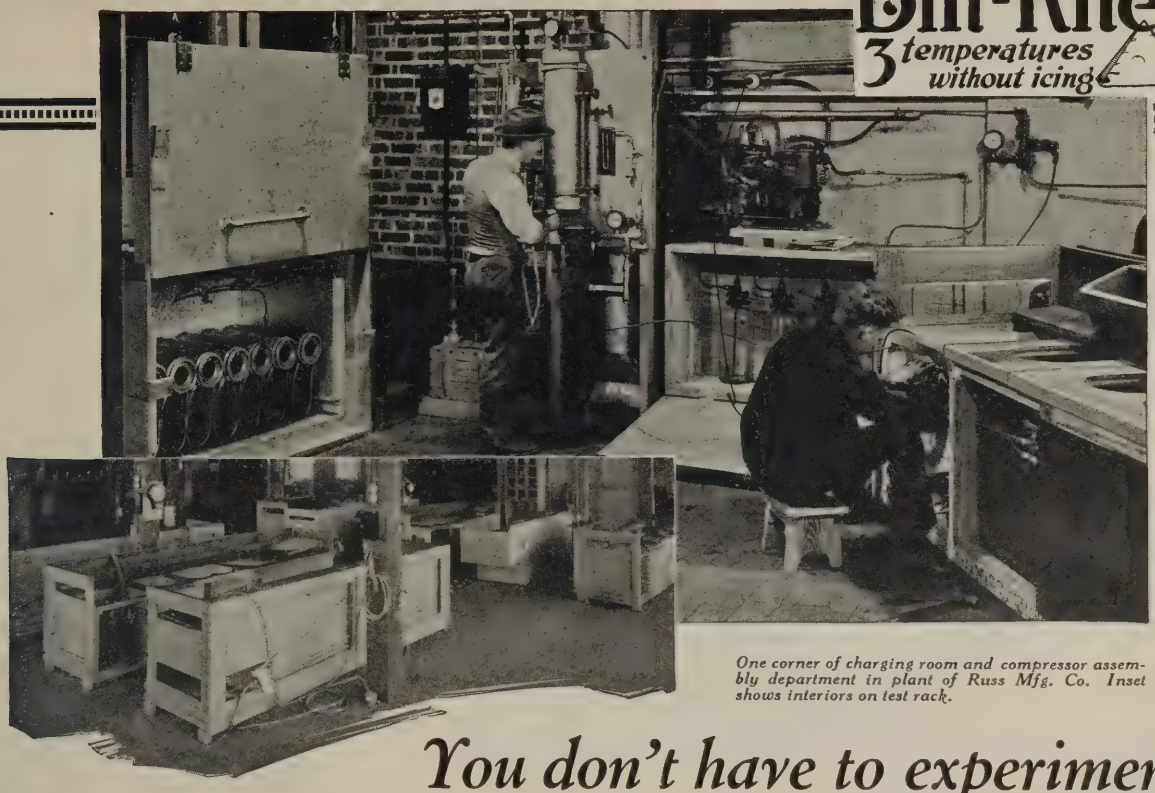
Uniform Standard Important

Once the ice cream mix is properly standardized, the remaining procedures in preparing the mix are comparatively easy to control, it was pointed out in an address given before the Nebraska ice cream manufacturers' round-up at the University of Nebraska, Lincoln, in January, by Prof. Benjamin I. Masurovsky. His speech dwelt upon the importance of uniform standards.

He pointed out two main reasons why manufacturers should standardize properly:

"First, if a definite standard is employed, then standardization will contribute much to insure uniformity in the finished product. Second, we must standardize on principles of economcs. For instance, figuring in dollars and cents the value of butterfat and solids not fat in the mix, we find that for every 100 gallons of mix, one per cent above the standard requirement in butterfat will amount to about $4.50 and every extra per cent of solids not fat will amount to about $1.10, making it a total of about $5.60 loss per 100 gallons of mix or 200 gallons of the finished product. Suppose that the season's output is 100,000 gallons of ice cream. This would mean that a loss of $2,800 is due to neglectful standardization. This in itself is sufficient reason for testing your ice cream ingredients and standardizing the ice cream mix."

A good slogan for the ice cream industry, Prof. Masurovsky said, would be "Quality Always." This slogan he suggested for individual use in applying to the manufacture of ice cream. Emphasis is placed upon quality, he said, because "quality sells the product and promotes demand which in its turn means better business and rapid progress in the development of the ice cream industry."



Water is not generally thought of as being a part of ice cream but it nevertheless plays a very important part, the water being the carrier of all the soluble ingredients of the mix.

WALKER-NIZER PATENTS

Bilt-Rite

3 temperatures without icing

One corner of charging room and compressor assembly department in plant of Russ Mfg. Co. Inset shows interiors on test rack.

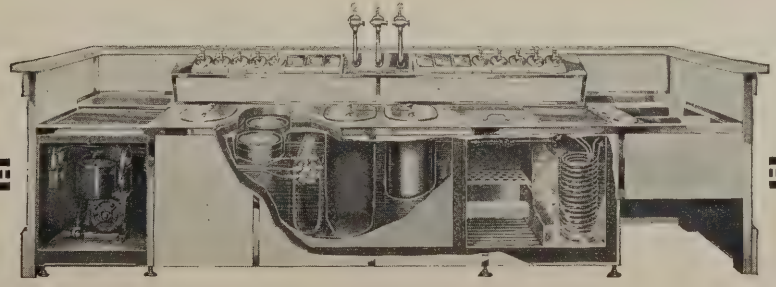
You don't have to experiment with mechanical refrigeration!

The BILT-RITE fountain is a *proved* success

UNINTERRUPTED service through the entire summer of 1924—that's the record of about 100 Walker-Niser type fountains sold last spring.

It's the 100% Mechanically Refrigerated Fountain—the BILT-RITE—the first of its kind on the market—the only one with a background of a season of commercial usage.

Simple, efficient, economical, dependable—that's what all owners testify. NO HAND ICING and yet perfectly conditioned ice cream; wonderful dry cold storage and ICE COLD fountain drinks. It is the fountain that produces maximum results with the smallest amount of mechanical complexity.



THE BILT-RITE is shipped to the purchaser as a complete outfit, with the refrigerating mechanism built-in. Every fountain is placed in operation at our factory and given an intensive three-day working test before shipment.

The three correct fountain temperatures are thus established, and all necessary adjustments made before the outfit leaves the testing rack.

Once set up in the purchaser's store, the fountain is ready for use without the uncertainties and delays that must follow where a refrigerating machine and fountain are delivered to the purchaser as separate units and assembled after delivery.

Why Doesn't the Ice Cream Industry Capitalize On Popularity of Dairy Cow?

Many public Figures give fine Lectures urging Milk for Children's Health

But do you ever hear anyone at large talking about the necessity of feeding children more ice cream?

A GREAT part of the development of the dairy industry is due to the particular sentiment that has been built up around the dairy cow. As the human family's great foster mother, the milk cow has been greatly exploited and often food experts of the land refer to her as "the agent of Nature's most complete food." Ideas through which the ice cream industry could capitalize upon this respect the country feels for the dairy cow are suggested in views held in this matter by A. C. White, president and general manager of the White Ice Cream Co., Flint, Mich., who believes the dairy cow is too little associated with this industry.

Against the present condition, The Ice Cream Review repeatedly has issued warning. For years ice cream manufacturers of the country have been persuading themselves that they are entirely separate from the dairy industry. In recent years, particularly in the last couple of months, the trend of sentiment in the industry has been back toward the industry's foundation—the cow.

But some tangible step should be taken to bring before the general public full realization of the great advantages of ice cream to the growing child, as already has been done in the case of milk, largely through the sentiment built up around the dairy cow. In connection with this, Mr. White makes this pointed observation:

"We all know that many children drink milk under protest, but I am offering a reward for any child who does not love ice cream," and then he goes on to raise this important question:

"How much ice cream containing 12 per cent of fat, 14 per cent of sugar, 36 per cent total solids will have to be consumed to derive the same body building energy that is produced by a pint of 3.5 milk?"

Mr. White seems to have started something. He must have been pretty sure of the support of The Ice Cream Review in view of the many times this publication has stood for both angles of his argument—the cow and the child, particularly as shown in the article appearing on page 147 of the January issue of the Ice Cream Review, in which was related the good work that has been carried on in New Orleans in the direction of a nutritional test of ice cream among children by E. B. Geisel, general manager of the Anheuser-Busch Co. Other articles on this subject have appeared in past issues.

BUT no less an authority than Prof. A. C. Baer, "technical editor" of The Ice Cream Review, and widely recognized as the country's greatest ice cream authority, comes to the support of Mr. White. The professor has suggested a way to calculate a comparison of the solids and food value between a pint of milk and its equivalent in ice cream. This was done to show that ice cream is, in all its essentials, a milk product. Mr. White, in a communication to The Ice Cream Review, brought out the fact that he has heard a great many talks by government agencies at chambers of commerce and other city meetings, and heard these experts recommend methods for inducing children and grown-ups to consume more milk—"but never under any such circumstances have I ever heard a talk on the necessity of consuming more ice cream."

With this thought in mind, Prof. Baer has gone to work and given us the comparative figures on milk and ice cream, as follows:

Comparative Figures on Milk and Ice Cream.

"One pint of 3.5 per cent milk weighs 1.075 pounds. 1.075 x 3.5 per cent contains 0.037625 pounds butterfat.

It would require .03135 pounds of 12 per cent ice cream to supply as much butterfat as is contained in one pint of 3.5 per cent milk, 0.037625 + 12 per cent.

"Reduced to volume 0.3135 pounds of ice cream is equivalent to 0.56 of a pint of ice cream.

"On the basis of total solids, 3.5 per cent milk will average 12 per cent total solids. One pint of milk would contain 1.075 x 12 per cent or .129 pounds of scolids. A pint of ice cream weighing 0.56 pounds @ 36 per cent solids would

THE Foundation of the Ice Cream Industry is the Dairy Cow — Widely Heralded as the Symbol of Dairy Health

contain .2016 pounds of solids or it would require 0.64 of a pint of ice cream 36 per cent solids to furnish the same amount of solids as contained in a pint of 3.5 milk.

"On the basis of milk solids in an ice cream mix containing 12 per cent fat, 14 per cent sugar and 36 per cent total solids, the 12 per cent ice cream would contain 21.5 per cent milk solids as compared with 12 per cent for 3.5 per cent milk. Thus, while a pint of milk contained 0.129 pounds of milk solids, a pint of ice cream would contain 0.1204 pounds of milk solids.

"From an energy point of view a pint of milk furnishing .18542 carbohydrate energy units, a pint of 36 per cent solids ice cream would furnish .2996 carbohydrate energy units. The protein units furnished by the solids in a pint of milk and in a pint of ice cream are practically the same.

"The above figures are based on ice cream weighing 4.5 pounds to a gallon."

HE WANTS TO KNOW why the ice cream industry does not get the free publicity that the milk industry gets.

"Who ever heard a speaker urging people to eat more ice cream, though speakers every day are urging folks to drink more milk?" asks A. C. ("Bob") White, Flint, Mich., manufacturer.

HE BACKS UP THE ARGUMENT advanced by "Bob" White, for Prof. A. C. Baer (shown here) gives some interesting comparative figures that show why the ice cream industry should capitalize upon the food value of milk. Prof. Baer is generally recognized as the world's greatest authority on ice cream.

SUCH thoughts as these remind us how wise it is for the ice cream industry to get back to its fundamental base. Several years ago an effort was made to have the National Association of Ice Cream Manufacturers hold its annual convention in connection with the National Dairy Exposition. At that time the attitude of the board of directors of the National Association of Ice Cream Manufacturers was that they could see no reason for having anything to do with the National Dairy Show, members frankly stating that they had no interest in the dairy business. No argument is being made here that the ice cream association should hold its annual conventions with the National Dairy Exposition, but every day we find more reasons why the ice cream industry should be interested in dairy affairs.

As late as two years ago, one of the large regional associations of ice cream manufacturers declined to take any action with regard to boosting the dairy industry. But in direct contrast to these positions, we find at an ice cream convention held in the past winter, when the matter of national advertising was brought up, the association was willing to support this campaign only on the condition that the campaign would be patterned much along the lines of the work that has been done by the National Dairy Council in the promotion of milk, butter and cheese consumption.

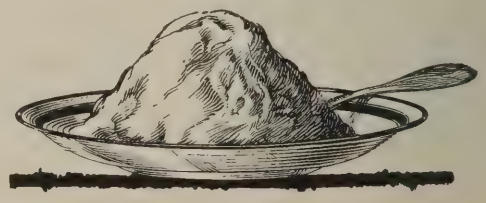
IT WOULD be difficult to think of any product in the work that has received more free advertising than has milk. By linking up the thought of milk and ice cream more than has been done in the past, the ice cream industry can gain much of the good will for its product that has been won by the milk industry, which already has established its products as one of the most wholesome foods in the human dietary. Most every city editor in the country, no matter how hard-boiled and how much averse to free publicity, has in his time

(Continued on page 106)

We learned Something from the Prince of Wales when he came over to pay his respects to Uncle Sam and his favorite dish—Ice Cream

Copyright by Underwood & Underwood, New York.

The jolly prince as he appeared on his visit here last fall. You might say our visitor showed himself to be a prince in every way—certainly a prince of good fellows.



How the Ice Cream Industry can Profit from a Prince's Lesson

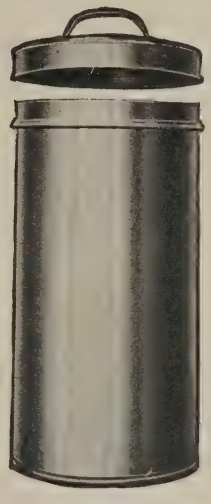
THE BOY WHO WILL BE KING came to America recently and found out that over here every boy is king when he has the price of ice cream in his pocket. Is happy as a king, anyway.

Ice cream is a delight that His Royal Highness was never so fully acquainted with until visiting America. For the English have only recently come to take to the frozen dessert.

But if he learned something on his trip to America about ice cream, the visitor left a few ideas for some of us to ponder over with great care. For this dapper, handsome, liable young prince of good fellows is one of the greatest salesmen in the world. He came over here on a mission of salesmanship—to sell one great nation and that nation's spirit to another great nation.

Now, read on and get some good business ideas from H. R. H. Edward, Prince of Wales, Order of the Bath—and master salesman.

PEPPY, popular, prince of Wales, left a lot of people talking about him when he left our shores. The prince's game went good over here, and there can be no doubt on that score. He got what he came for—to make a good impression. In other words, he wanted to build good will for British royalty and Britain's trade, especially Britain's trade.



The Prince's visit brought to light some suggestions that might be profitable to ice cream manufacturers of America. At least, such is the opinion of Roberts Everett, secretary and manager of The Association of Ice Cream Supply Men. In an address prepared for the North Carolina convention in January, Mr. Everett pointed out that the wise men of Britain capitalized upon the Prince's popularity, his youth, his charm, sportsmanship, his gracious manner, etc., by sending him over the seas to visit his American cousins. In other words, to use Mr. Everett's term, the prince was an "engineer" working for the advancement of his nation's trade. The speaker did not insinuate that the prince did anything improper—was careful to make it clear that he did not violate any laws. But the prince did play upon the emotions of the public "to attract and interest its intelligence" and to direct its dollars in the channels desired by those who did his planning.

HOW can the ice cream industry get to work to develop such public appreciation, community good will, recognition by those who have the dollars to spare? The first step in the "engineering" of an industry's

Can Iron Or Steel Be Made Rust-Proof?

The answer is, no. Iron and Steel cannot be made absolutely rust-proof yet.

BUT—and this is another of our important buts,—There is a Steel that excels in rust-resistance and gives greater durability. That Steel is KEYSTONE COPPER STEEL.

KEYSTONE COPPER STEEL is an alloy made by the addition of a certain percentage of Copper to well made Steel, thereby increasing its lasting and rust-resisting qualities under actual service condition. Its excellence is a well established metallurgical fact. The proof is conclusive.

K-W Type A Ice Cream Cans are made of this exceptionally durable and rust-resisting Steel.

This is just one more reason for making sure that the Cans you use are K-W Type A Ice Cream Cans.

Springtime Brings New Hope to Ice Cream Manufacturers

Improved Buying and Operating Conditions Seem to be Shaping Up for this Industry, as Better Weather Seems to be Promised, and New Progressive Business Measures Come Forth

SPRINGTIME is about to open what many ice cream manufacturers are led to believe will be this industry's greatest "season." It may be a little early for predictions, but indications at this time are, the ice cream industry has held up through the winter months better than at any time in the past. Leading members of the industry are hopeful that the coming spring and summer will find the ice cream industry "looking up" in every sense of the term. "It just naturally seems that a good ice cream year is in the bones," declared a prominent ice cream manufacturer of the Middle West.

Production figures for 1924 were not quite complete as this issue of The Ice Cream Review was going to press, but Washington officials, in an advance bulletin, estimated that the industry had shown a decrease in a number of spots last year. This advance report showed that the ice cream industry had emerged from a very strenuous period—just how strenuous, it remains for complete figures to show.

AS THE new beginning dawns for this industry with bright indications that an early spring will help start off things with a rush, it is interesting to look back over the past months and see just what the vital statistics show. While the advance statement of the department of agriculture is not necessarily accurate in its assertion that the industry production for 1924 will show a decrease under the preceding year, this communication will throw an interesting light upon the speculations that various members of the industry have made as to last year's output. The Washington department said:

"It has been noted that the consumption of ice cream for 1924 was slightly below that of 1923, notwithstanding the increase in population, on account of the very cool summer. The report for the first quarter and the percentage increase or decrease for the second and third quarters are enclosed. This percentage increase was obtained by taking a large number of factories for both 1924 and 1923 and ascertaining whether or not an increase was made. The complete reports for the second and third quarters of 1924 will be available in a short time."

THE report that T. R. Pirtle, assistant marketing specialist, division of dairy and poultry products, United States department of agriculture, submitted to this publication, showed that, with 2,420 factories reporting, production of ice cream in January, 1924, was 5,750,000 gallons, while in the same month in 1923 production was 6,052,000 gallons; in February, 1924, an output of 7,754,000, and in the same month in 1923, only 5,625,000; in March, 1924, 9,152,000, and in March, 1923, only 8,570,000 gallons.

For the second quarter, ending June 30, the agricultural department gives us these figures:

Number of factories reporting, 2,143. Production in April, 1924, shows an increase of 5.41 over the corresponding month in 1923; for May, a decrease of 8.91 below May, 1923 production, and June, 1924, a decrease of 12.35 under production in the corresponding month in 1923. The weighted average for that quarter showed a decrease of 7.65.

For the third quarter, ending September 30, with 1,691 factories reporting, July showed a decrease of 1.25 under production of July, 1923; August, a gain of 4.03 over the corresponding month in 1923; September, a decrease of 15.63 under September, 1923, production. The weighted average for the third quarter is given as 2.77.

The Ice Cream Review reports these figures without agreeing that there was a decrease last year under the preceding year's figures.

THE department of commerce takes a biennial census of manufacturers. The last census was for 1921, but on January 9 the department of commerce sent us a preliminary report for 1923 of the ice cream industry. The department says the biennial census will show that in 1923 the establishments engaged primarily in the manufacture of ice cream and water ices reported a total output valued at $258,666,575, an increase of 21.3 per cent as compared with 1921, the last preceding census year.

But the trouble with the report is, it includes considerable amounts of confectionery, cakes and manufactured ice, together with smaller amounts of miscellaneous commodities, manufactured as secondary products by these establishments. It may be that this is largely offset by the fact that ice cream and water ices are made

(Continued on page 58)

SELLING 5¢ worth of your ice cream is no novelty. Rather, it is the most popular way for you to sell ice cream. That is all the 5¢ dixie is—a nickel's worth of your best vanilla and orange ice packed automatically in an attractive little package. If you have confidence in the ice cream business you can have confidence in 5¢ dixies—they have come to stay!

5¢ DIXIES

The Ice Cream Soda, Sundae and Cone are not novelties. Neither is the dixie 5¢ package—filled with your best selling ice cream and fruit ice—a novelty. It's the same delicious cream your customers have been in the habit of buying. Packed in appetizing dixies, it is an attractive little helping for those who do not care for a large quantity.

Lots of people have an appetite for cream who do not want a pint or quart and may be too timid to ask for a nickel's worth of bulk. Just because the dixie enables this new customer to have his cream without embarrassment does not place it in the novelty "come and go" class.

When one of the large Middle West manufacturers said "putting out dixies is the best thing we ever did," do you suppose he felt that it was "a schooner filled with foam and nuthin else?"

If dixies had made money for you throughout a whole year and were still going strong, how would you feel about them? That's what they are doing for others. Write us and we will gladly tell you all about it. No secrets.

You'll Need These FREE Bulletins!

Send today for this group of bulletins. They will be mailed to you FREE AND POSTPAID.

Hot weather will put a strain on your sanitary measures. Bacteria trouble will break out suddenly in places that it's never troubled you before. The quality of your output will be in the balance every hour of these hot days.

These bulletins should be your constant guidance. When your patrons commence bringing in stinking cans, when your churn starts smelling "ripe," when your whey tank begins to mold, these bulletins will tell you instantly what to do to clear up the trouble.

PREVENTIVE MEASURES IMPORTANT

Wise butter and cheese makers and plant managers will take steps right away to keep bacteria trouble from occurring. Just a little B-K, the sodium hypochlorite sterilizer, put in rinse water for all equipment every day, will keep away off-odors and flavors, bacteria of mold and decay. This small precaution will keep your factory sweet smelling and purified all the time, and prevent the usual summer bacteria and mold trouble.

STANDARD FOR OVER 13 YEARS

B-K is the best known and most reliable sodium hypochlorite in the dairy field. Health boards and state officials recommend it. Its germ killing strength is always known and reliable. By following directions the same sure results in sterilizing are gotten every day. Used by our improved method with a compression sprayer, B-K is the cheapest reliable way that a creamery, milk plant or cheese factory, can sterilize.

Marked Improvement Shown at Canadian Competition

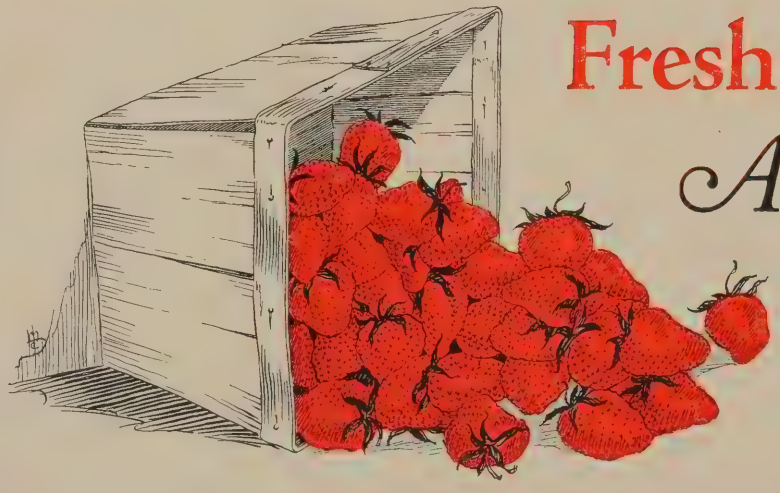
C. D. Flatt Wins First Prize. Morden Neilson is Judge

*By W. A. MAC LEOD**

THE ice cream manufacturers' competition as well as the ice cream scoring competition held in connection with the Saskatchewan Dairy Association convention showed a marked improvement in the quality of the entries and much closer scoring by the competitors. The first prize in the ice cream manufacturers' competition was won by C. D. Flatt of the North Battleford branch of the Saskatchewan Co-operative Creameries; S. Haire, Woodland Dairy of Alberta, was second; The Crystal Dairy, Lethbridge, Alberta, third; Saskatchewan Creameries, Moose Jaw, fourth, and Saskatchewan Creameries, Regina, Fifth.

Mordern Neilson, general manager of William Neilson's, Toronto, was the official judge, and explained that three entries which would have won second, third and fourth prizes were disqualified owing to their containing a very small percentage of solids above the standard set. He thought that this standard of 36 for solids was rather low as hardly any of the entries were over 40.

In the ice cream scoring competition Robert Hastic of the Saskatchewan Co-operative Creameries, Melfort, won first; Chris. Stilling, Saskatoon, second; A. Esbensen, Preeceville, third; E. C. Carr, Estevan, fourth; L. Stilling, Saskatoon, fifth, and S. Haire, Edmonton, sixth.



* Commissioner of Saskatchewan.

In the general discussion on the two contests Mr. Neilson said that there was apparently a tendency to set a standard for ice cream throughout the Dominion. Nearly all the entries were approaching that standard although some still had too much color, but in this respect showed an additional market improvement in the past few years. One of the most interesting addresses at this convention was by H. E. George.

Mr. George, who is ice cream expert of the Canadian Milk Products, Ltd., of Toronto, spoke on ice cream manufacturing, saying quality could not be over-emphasized. He added that ice cream is eaten for three reasons—because it is good, because it is cold, and because it is a nourishing and healthful food. The last of these reasons should be the most important. He felt that the appeal on this score will always be limited. As far as the second reason is concerned, all ice cream is cold, so that it is only by improving the quality that we can hope to get people to eat two dishes of ice cream where they now eat one. In substance he said:

"The difficulty is to balance the mix and not use too much of any one material in an effort to get a velvety texture. The best ice cream is the one made from the mix that has been properly balanced as regards every ingredient. We all give flavor the first place and the consumer usually judges ice cream by the flavor and it is therefore necessary to in-

from wedge-type doors

There are a number of definite and distinctive reasons why ABC Refrigerator Bodies keep ice cream, milk and other perishable products at the exact temperature desired—*on less ice and less salt than any other.*

The doors, for example.

All ABC Bodies are equipped with wedge-type doors built into the ice cream compartments. Wedge-type doors heavily insulated with non-pareil corkboard. Wedge-type doors with tightly built edges kept tight by built-in coil springs and curled hair padding. Wedge-type doors that swing true on automatically adjustable hinges. When the locks are thrown, these hinges draw the doors tight and keep them that way until the locks are released.

Thanks to these wedge-type doors, you can turn a hose into the ice cream compartment, wash it thoroughly, and let the wash water drain right out the door. No dipping or swabbing is necessary.

You want perfect refrigeration, of course—and at the lowest possible cost. You get it when you equip your trucks and wagons with ABC Refrigerator Truck Bodies. The experience of scores and scores of ice cream manufacturers, meat packers and dairymen proves that clearly and conclusively.

We shall be glad to send you all the facts about ABC Bodies, and some interesting comments by manufacturers who are using them to cut refrigeration and delivery costs to the lowest possible level. Simply say you want the facts. No obligation, of course.

Silver Anniversary to be Celebrated -:- -:- By National Association in October

Week of October 19 Decided Upon for 25th Annual Convention at Detroit

THE Silver Anniversary of the National Association of Ice Cream Manufacturers will be celebrated the week beginning October 19, which has been selected for the 25th annual convention at Detroit. Marking as it will a quarter of a century of history, this convention is almost sure to attract the largest attendance of any convention ever held, officials believe. They are making preparations in this direction.

Convention dates were decided upon in consideration of those members of the ice cream industry who attend the National Dairy Show. From the National Dairy Show at Indianapolis in October, delegates can go straight on to Detroit, since the dairy show is to be held just one week earlier than the ice cream convention.

By this arrangement, it was pointed out in an announcement issued by Secretary Fred E. Rasmussen, that delegates who must cover long distances to attend the dairy show and the ice cream convention, will not have to forego the pleasure of seeing one in order to see the other this year.

NATIONAL HEADQUARTERS NOW IN EAST.

The office of the secretary of the National Association of Ice Cream Manufacturers, effective March 1, is now located in the Telegraph Bldg., Harrisburg, Pa. Fred Rasmussen, who has succeeded N. Loewenstein as secretary of the association, has taken charge of his duties, and can be reached at that address. The association headquarters for several years were at 155 N. Clark St., Chicago.

EXHIBITORS at the National Dairy Show also will be enabled to send their machinery and equipment straight on to Detroit for the ice cream convention, it was pointed out. While the executive committee of the national association is making plans for its convention dates, results were being awaited by officials of the Southern association and other bodies in the industry. For this reason it is expected that conventions throughout the industry this year will be marked by lack of confusion, such as that which has prevailed in the past, when so many times two or three conventions have been held at pretty nearly the same date, thereby considerably cutting down the attendance.

This will be the association's first visit to Detroit. Detroit won the 1925 convention over a large list of competitors at the past convention at New Orleans. Hotel Statler will be convention headquarters. Detroit is well equipped with hotel accommodations for the large attendance expected.

Announcement of the national association's silver anniversary convention is the first official act made by Fred Rasmussen upon taking over the duties of executive secretary, Mr. Rasmussen succeeding Mr. Loewenstein on March 1.

The secretary's announcement, in part, follows:

"In deciding upon this date, the executive committee has planned in co-operation with the national milk dealers' association and the National Dairy Exposition organization so that the convention will be the week following the National Dairy Show and the meeting of the national milk dealers convention, which will be held in Indianapolis from October 10 to 17.

"This arrangement makes is possible for exhibitors of ice cream equipment and supplies to move their exhibits directly from Indianapolis to Detroit. It will also be possible for ice cream manufacturers, who come long distances from the South, the Pacific coast or Canada, to attend the national convention, to first visit the National Dairy Show and for those interested to attend the international milk dealers convention.

"Detroit offers splendid facilities for the convention, both in the way of hotel accommodations and for the show which will be staged during the same week by the National Association of Ice Cream Supplymen.

"As this is the silver anniversary of the association, prophets are already at work predicting that this will be the greatest convention and show in the history of the industry and it will. As an association, we have a quarter of a century of rapid growth and progress, rich in experience upon which to build. The time and place is right. Important problems vital to the industry are pressing for solution, problems which must be solved by the men in the industry and only by exchanging of views can a satisfactory solution be obtained.'"

The president's announcements of convention committees, local committees, etc., is expected some time in the future.

ELECTRIC TRUCK INDUSTRY CONTINUES S. E. D. CO-OPERATIVE PROMOTING PROGRAM.

A well rounded storage battery transportation business development program will be conducted by The Society for Electrical Development in co-operation with the manufacturers of electric delivery trucks, electric industrial trucks, storage batteries and accessories during 1925. The activities of storage battery transportation promotion have been divided this year into two specialized programs—electric delivery truck promotion and electric industrial truck promotion. A tentative budget of $25,000 will be subscribed by these groups for this purpose.

HURTZ IS RE-ELECTED.

L. E. Hurtz of Omaha was elected president of Nebraska Ice Cream Manufacturers' Credit Association at the annual convention at Lincoln. Other officers elected are: John Gumb, Fremont, vicepresident; R. W. McGinnis, Lincoln, secretary-treasurer. The executive committee consists of George A. Kirk, Lincoln; G. I. Reed, Randolph; J. J. Chaplinick, Verdigree; Earl J. Taylor, York; G. R. Dodds, Superior; George Koons, Hastings, and Charles A. Clarke, Ravenna.

BONUS PLAN WON'T DO FOR DRIVERS.

By H. H. Johns, M-B Ise Kream Co., Dallas, Tex.

The bonus plan for paying drivers is, no doubt, a good thing, but we are of the opinion a man should be paid **each** month for what he is worth. A bonus is no more than paying a man at the end of the year the difference between what you have already paid him and what you think should have been paid.

We explain this to our drivers and pay each man what we think he is worth, and do not have a set scale for drivers. We arrive at his salary from actual figures showing his cost per gallon to deliver, number of complaints from his customers, condition of truck, number of minutes per stop and new business. With this method and actual figures to go by, we can show each driver just how he stands on the list and what he must do to make more money.

During the year we often put on a prize for the sale of special flavors, either ice cream or water ice. We do not figure gallons sold, as the routes are not the same in stops and gallons of ice cream sold, but make the prize for the largest percentage of customers sold. For instance, if a driver has 40 stops and places the new or special flavor in each stop, he is 100 per cent. If he gets it in only 20, he rates 50 per cent. We have had them to tie on 100 per cent and the next day they would work on competitive accounts to place the new flavors. By competitive accounts we do not mean accounts controlled by some other driver, but accounts of a competitive firm.

Our plant superintendent has a talk with each driver daily as he comes in off the route. We keep an accurate gallonage record and if a dealer is not keeping his cabinet full we call on the driver for an explanation. The writer personally greets the drivers on their return to the plant about three times a week. If they have had a good day they like to hear you compliment them and if business hasn't been good encourage them to start the next day with enthusiasm.

There are no "hard-boiled" methods around our place—they don't get you anywhere.

⚜

CANADIANS PLAN CO-OPERATIVE ADVERTISING.

The idea of co-operative advertising of ice cream is taking root in Canada. This plan was one of the features of the convention of the Nova Scotia Ice Cream Manufacturers' Association, which was held at the College of Agriculture at Truro, Nova Scotia, a few weeks ago. Probably the Canadians feel that if a girl of their dominion can name a slogan for the American ice cream industry to advertise, they can do some advartising for themselves to good purpose.

The association officers took steps to form an association comprising all the provinces on the coast line. This matter of organization would make the advertising campaign possible. A list of all the ice cream manufacturers in the Maritime Provinces was compiled, and the secretary was instructed to correspond with these manufacturers with the idea of effecting the Maritime organization.

R. B. McLennan, Truro, was re-elected president of the association. The secretary is Mr. Williston, Farmers' Dairy, Halifax. The directors are F. R. Hart, Polar Ice Cream Co., Halifax; W. E. Biden, Amherst, and Frey Murray, Stellerton.

Our Stand On Standards

"An 8 per cent minimum standard would mean greater consumption and would prosper proportionately all branches of dairying."
—V. F. Hovey

VERNON F. HOVEY.

TRUE TO THEIR COLORS

are these veteran champions of an 8 per cent federal butterfat standard.

"To no high minimum standard can the ice cream manufacturers agree without a compromise with conscience," Mr. Hovey told the American Dairy Federation, and though he won a great moral victory when that body acted on the matter, Mr. Hovey still is leading the fight for the low minimum standard that he and his association regard as fully justified.

John Cunningham was the original champion of an 8 per cent federal standard, having first led the ice cream industry in this undertaking in 1908—and is still in harness!

JOHN CUNNINGHAM.

A PARTIAL victory for the ice cream industry's stand for a national butterfat standard is the way leading ice cream manufacturers regard the action of the American Dairy Federation in passing a resolution on this matter at its annual convention. Although the dairy federation went on record as approving a 10 per cent federal standard, it must be remembered that the federation is composed of the butter industry and various breed associations, which have steadfastly held to a high federal standard.

The vote for a 10 per cent standard followed an address before the federation by Vernon F. Hovey, president of the National Association of Ice Cream Manufacturers. While the federation regarded this vote as a compromise with Mr. Hovey, that gentleman has not receded from his stand for an 8 per cent minimum standard, which represents the wishes of his association.

It is significant that when the resolution for a 10 per cent standard was put to a vote, Mr. Hovey directed attention to the fact that representatives of the ice cream industry were not voting.

The influence of different members of the federation has not been helpful to the cause of the ice cream men. Although Mr. Hovey still remains steadfast with his membership as to the justification for an 8 per cent minimum standard, there are reasons to believe the actions of the federation will do much to silence agitation for a 12 per cent standard, which is regarded by virtually the entire ice cream industry as being wholly unreasonable for a minimum standard.

AT ANY rate, the president of the national association has not lowered his colors, having "stood by conscience and played the game above board," to quote a declaration from him regarding his and the ice cream industry's position at the dairy federation meeting.

Pointing out that an 8 per cent minimum standard would mean greater consumption of ice cream, and consequently would prosper proportionately all branches of dairying and dairy manufacturing, the ice cream men's leader went into the fight to uphold points that his association feels are justified in every way.

When asked about a compromise, Mr. Hovey said:

"I do not think that the ice cream men will have any reason for changing the views they have expressed. If they should accept, without any aggressive opposition, any standard other than the one we have fought for, we do so by compromising our conscience as to the proper minimum standard. There is every reason for asking for an 8 per cent minimum standard. The fellow who talks too much usually does not get as far as the fellow who talks too little, but, gentlemen, I will say that I believe most of you, in considering this matter, think of average standards. Even the government officials themselves cannot get away from this viewpoint. I went down to a meeting of food officials in Chattanooga, and I heard a member of their own joint committee say, 'It beats h———, these fellows can't think of anything but average standards, when our only function is to set minimum standards.' We have no interest in average standards. Now the manufacturer himself can be depended upon to make that product for which there is a public preference. That has absolutely nothing to do with the minimum standard. Do not think of average standards; do not think that the standard for which we are asking is the standard

Rocky Mountain Organization Proposed

Manufacturers of States Adjoining Colorado May Meet with Colorado Manufacturers in Joint Convention at Denver as Result of Action at 1925 Convention

AN ORGANIZATION to be composed of ice cream manufacturers of the Rocky Mountains is in prospect as a result of action taken at the second annual convention of the Colorado Ice Cream Manufacturers' Association. Members of the industry in adjoining states will be invited to gather with Colorado manufacturers at the next annual convention of that body, which will be held in Denver, if the board of directors sees fit to take this action. At that time, under plans discussed at the past convention, the Colorado association will be re-organized to become the Rocky Mountain Association of Ice Cream Manufacturers.

In this way, officials pointed out, it is hoped to bring about better co-operation among manufacturers of the entire mountain region. The board of directors has in its hands the matter of extending the invitation. The membership voted that the invitation be extended.

THE members of the association, almost without exception, pledged themselves to contribute one-half cent on each gallon of ice cream sold to the fund for national advertising, which is being directed by the advertising committee of the National Association of Ice Cream Manufacturers. The real purpose of the plan is to bring ice cream as a food to the attention of the public, as coco-cola, sauerkraut, jello-o and other advertised products have been featured, delegates were told. In the discussion, virtually all members approved.

The convention opened in Pueblo at 10 o'clock Tuesday morning, Jan. 27, with the registration of members and a meeting of the executive board. After the registration the secretary made an announcement that the membership had more than doubled during the past year. The registration was followed by a luncheon given by C. B. Frink, prominent ice cream manufacturer of Larkspur and Denver.

At the first business session of the convention an address of welcome was given by Hon. John M. Jackson, mayor of Pueblo, who said that the people of Pueblo were glad to welcome the convention to the city because it had been organized in Pueblo. The response to the mayor's address was delivered by C. T. Myers of Alamosa, who, with E. B. Darrow of Pueblo and C. B. Frink of Denver, first organized the Colorado association. Myers told a number of interesting stories connected with the ice cream industry.

The secretary of the association, T. L. Carlson of Denver, read his annual report. He stated that the Colorado association was admitted to the national association last year and had received excellent mention several times in The Ice Cream Review, the association's official organ.

THE president of the association, E. B. Darrow, in his address, reviewed the organization and growth of the association. He thanked the supplymen for their co-operation in making the organization a success. Mr. Darrow dwelt upon the efforts of the association to promote better co-operation between manufacturers and between manufacturers and dealers. He stated: "The dealer's problem is usually your problem, and by helping him solve it, you are really helping yourselves." He concluded his address with a plea for better advertising of ice cream.

The secretary of the Colorado Creamery Butter Manufacturers Association, Dave Thomas, was unable to be present, but sent an interesting paper on "Co-operation," which was read before the convention by the secretary. Professor George Morton, state dairy commissioner, made a short talk on the relations between his office and the ice cream manufacturers, in which he said he had always received their fullest co-operation. He also spoke on several matters to come before the Colorado legislature, but said that none of these affected the dairy or ice cream industries.

In the absence of W. A. Schwindeler of the advertising committee of the national association, Secretary Carlson explained the plan of the national association to advertise ice cream as a real food. He expressed his regret that Mr. Schwindeler was unable to be present, because the matter would have been better explained by Schwindeler. The explanation was followed by a long discussion in which nearly all of the manufacturers had something to say in support of the plan. Final discussion on the matter and the receiving of pledges was laid over until the executive session of the second day.

The Iceless Ice Cream Age -:- -:- -:- —Has It Come?

Ice Cream Without Ice In Any Stage of Manufacture Is in Prospect, Some Manufacturers Believe

THE iceless age is indicated for the ice cream industry. At least, such seems to be the opinion of many men who have made investigations into the situation arousing from the coming of the automatic refrigerated cabinets. While many manufacturers believe that it will take some years yet—probably a great many years—before the iceless cabinet will be fully practicable for all needs, the consensus of opinion seems to be that iceless refrigeration not only is here to stay, but that in time to come, ice will be absolutely taboo in the ice cream industry.

Shipping ice cream without ice is by no means new to the industry. The advent of the iceless cabinets has merely given emphasis to this kind of shipping. The dry containers have been used to good purpose by manufacturers in various parts of the country for some time. These shipping bags have developed a number of friends in the industry.

C. A. Carver, of the Carver Ice Cream Co., Oshkosh, Wis., likes the iceless method of shipping ice cream, stating:

"We have been using dry containers for the past three years for ice cream shipments and found them very satisfactory. With the advent of the refrigerated cabinet we believe that there will be a greater use of dry containers for ice cream shipments for the reason that the customer will not require the ice he now receives with ice cream shipments under ice; furthermore, the saving in express rates will increase the use of the dry container.

"We are absolutely convinced that they are practical and that the use of them results in a saving both to ourselves and to our customers."

THE advent of the refrigerated cabinet was the momentum that is giving the iceless shipping container headway, it was pointed out by an interesting address at the Nebraska convention in January by H. M. Landroth, president, the Real Ice Cream Co., Fremont, Nebr. He spoke on the subject of "Iceless Shipping of Ice Cream." Regarding the canvas bag, hte speaker declared that his company tried out these bags in an experimental way and found that they would keep ice cream in good shape from six to eight hours with a temperature averaging between 90 and 95. He added:

"Allowing for packing about an hour before train time, we would estimate that cream could be shipped in these bags for a distance of one hundred and fifty miles with good train service if the customer were on hand to pick them up on arrival.

"There are a great many angles to be considered in the matter of shipping in canvas bags. If they are a good thing, we should naturally help them along as they will come in spite of us. What we want to do is to make them a servant instead of a master.

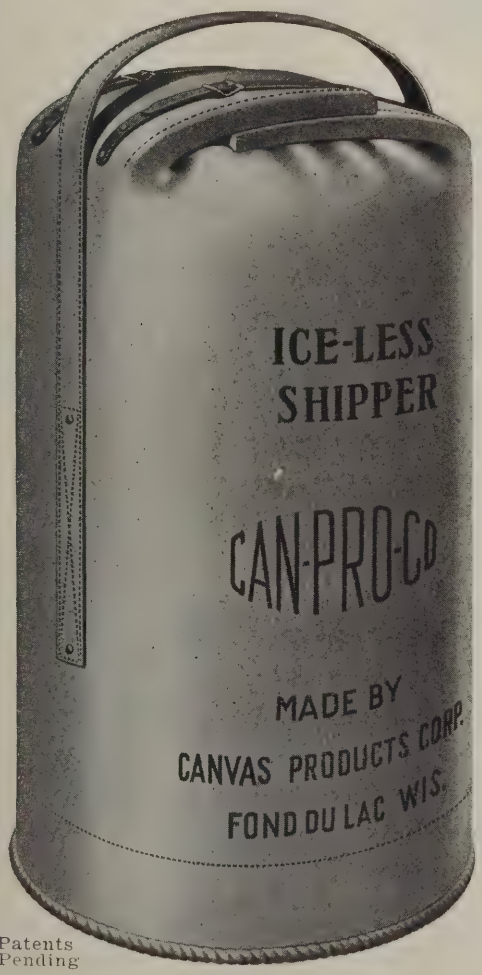
"Dealers within the shipping radius, especially those who have refrigerated cabinets, will want cream shipped in these canvas bags on account of the saving in express charges. Those who do not have cabinets will probably find the saving in express greater than the loss of ice and salt and they will also be easier for them to handle. The majority of them could save drayage by hauling them in their own cars."

FROM the angle of the manufacturer, this method of shipping ice cream makes the labor cost of handling in the factory considerably less, and in addition there is the saving of ice and salt, the speaker pointed out. Although the life of the bag is probably shorter than that of the tub, the expense of tub painting, re-hooping and putting in new bottoms is eliminated through the iceless shipper.

The speaker had no figures on the upkeep of the iceless shipper. He could not say whether the dealer would return them as promptly as the tubs, whether he would wash and dry the cans thoroughly so the bags would not become "all messed up."

THE speaker brought out that manufacturers in going into this form of shipping ice cream have an excellent opportunity to do away with an old evil that has grown up in the industry. Manufacturers have all been more or less lax in impressing upon the dealers the necessity of taking the proper care of cans and tubs, and if this matter is not impressed upon the retailer in the matter of iceless shippers, there will be a tremendous burden upon the manufacturer, Mr. Landroth said. He added, that there should be some plain mark of identification on each bag. He recommended that an invoice charge be made for the bags at so much each and a receipt demanded for the "empty" returned before passing credit on the bag.

It was Mr. Landroth's opinion that iceless shippers are a step forward, "but not the entire solution."



Following this speech, the Nebraska manufacturers adopted a bag charge of fifteen cents on each shipment and went on record as approving a charge on the invoice of three dollars for every shipment going out. This charge of fifteen cents is less than half of the average express saving to the retailer.

Unless a protective agent is used in ice cream the small crystals, formed by the watery portion of the ice cream when frozen, become larger and the ice cream soon becomes coarse and unpalatable. Gelatine forms a thin protective coating about these crystals which inhibits their growth and helps the ice cream to remain smooth and velvety in appearance and taste.

"There is Nothing Better Under the Sun"

THE Can-Pro-Co Ice-less Shipper weighs less than ten pounds. The height of this container is less than 24" and the diameter is 12", made for regular twenty-quart cans. You can ship Ice Cream to your customers at less than half the former express charges. Think of this tremendous saving. Think of the ease of the delivery. No salt or Ice. No packing. Just drop the cans of cream into the container, buckle it up and you're ready. Load your truck. Any truck will do. Pile them up like cord wood, and you'll be surprised how many you can load. One man does the work of three. One truck carries the load of four as formerly.

Creating Human Interest in -:- -:- Ice Cream Through Women

Does the Public Realize and Appreciate Necessity of Knowing How, Where and Under What Scientific and Sanitary Methods Ice Cream—"A Pure Food"—is Manufactured?

*By A. A. COMEY**

WOMEN and children constitute the largest body of regular everyday ice cream consumers. Statistics gathered over a period of two years' time conclusively prove this statement. Let us, therefore, segregate the women from the children and discuss first the women as ice cream consumers.

It is quite true that women usually require a dessert after practically every meal, with the possible exception of breakfast. On the other hand, many women attend afternoon teas, card parties, etc., and during the course of the day it is not at all unusual for women to drop into a hotel, cafe or restaurant, or at a soda fountain to obtain a little lunch after shopping. This being true we are now confronted with the important factor of fattening foods, as far as the women are concerned. Since it is true they crave desserts, and it is needless to enter into a detailed discussion as to just what the women rightfully term fattening foods, is it not true that nine times out of ten, since the American women are all trying to retain a slender or semi-slender physique, that the statement is made hundreds of thousands of times each day to the effect by most of these women that,—"No, I do not want pie, cake or French pastry, because they are too fattening." Therefore, in many cases, ice cream will be selected, and occasionally some women will change their order to sherbet, giving as their explanation that ice cream is a food containing more calories than sherbets. Therefore, the ice cream manufacturer from the standpoint of the women still has a product known as sherbet which immediately fills the bill.

A. A. COMEY.

Raising Children to Eat Ice Cream.

There is quite a contrast between the situation today and what it was yesterday in regard to what mothers would let children eat. Ice cream has come into its own with the ladies and their children. The men still show a marked preference for soft drinks. But we have the women and children in our favor and since the women's word in the household is usually law in preparing meals or laying plans for a party, the ice cream industry is fortunate in such a booster, according to Mr. Comey, who adds:

"After arriving at this conclusion, we must consider the advisability of getting the women interested in our product. We must admit that the conservative woman of today is keen to see just what she wishes to buy. Very few women will call up the department store and state that they want a certain colored dress or blouse. When women buy steaks, or chops, or any food for the table, they make it a point first to locate a good reliable store where these products are sold. They will make several personal calls at this store and select these products before they will ever risk ordering any over the phone."

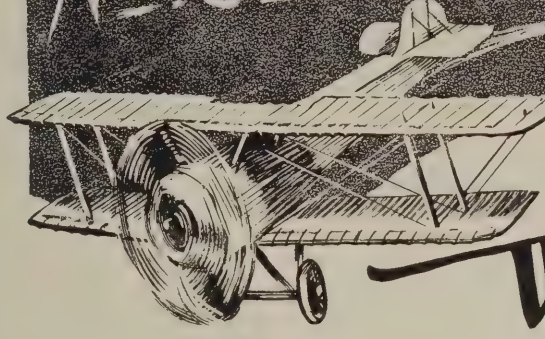
Mr. Comey then goes on to point out that women and children are interested in how, where and under what scientific and sanitary methods ice cream is manufactured? For this reason it is absolutely necessary for the ice cream manufacturer to put his factory in a good place, keep it clean, neat and of attractive appearance, both on the interior and the outside.

He then goes on to show how the Globe Ice Cream Co. aroused the public's interest in this way.

TAKE the children. Isn't it true that most women prefer to have their children eat ice cream or sherbets in preference to other delicacies for healthful reasons, and right here the housewife immediately begins to teach the children to partake of ice cream, and by so doing, she automatically teaches her children to be the future ice cream consumers of this country.

As to the men, I firmly believe they will usually show their preference for soft drinks, although it is quite true that some men eat ice cream, or ice cream sodas, regularly, but taken as a whole, the men show an astonishingly low percentage when it comes to ice cream consumption.

Now since we have the women and children in our favor, we must admit that the woman's word usually is law in the household when it comes to preparing the meals, or suggesting the bill of fare for the dinner, or for the party, and for this reason the ice cream industry is fortunate indeed in having such a strong booster for their product, known as ice cream, a pure food.



After analyzing the situation thoroughly, and arriving at this conclusion, we will now take up the advisability of getting the women interested in our product. We must admit that the conservative woman of today is keen to see just what she wishes to buy. In other words, very few women will call up a department store and state to the person in charge of a particular department that her size is so and so, and she wants a certain colored dress, or blouse, or coat, costing so and so much, sent to her home as an outright purchase. On the contrary, if she does call up this store she wants the particular garment sent out on approval, or she decides to go on a shopping tour and visits this store for the purpose of seeing just what she is going to buy.

As another comparison, most women either make it a point when they buy steaks, or chops, or any food for the table, to first locate a good, reliable store where these food products are sold, and she will make several personal calls at this store and select these food products. In some cases, after this storekeeper becomes well known to the housewife, she immediately tells him—"Now,

HUDSON'S No. 52 Concentrated

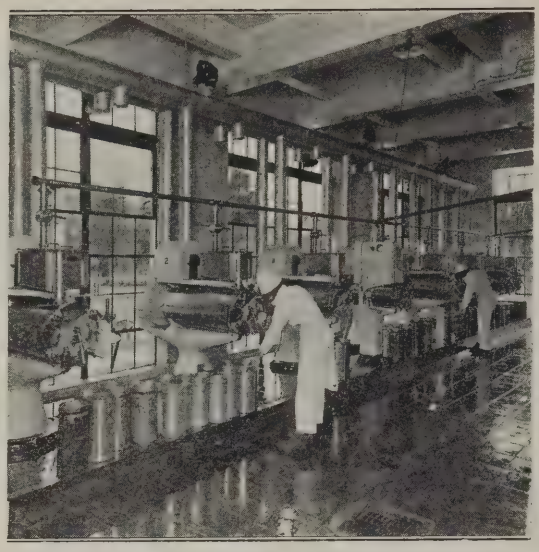
Making the World Look Up

ICE cream manufacturers everywhere are striving to attract the attention of the public to their products. That means increased sales—provided the flavor is also attractive and satisfying.

When you can make consumers smack their lips after eating a dish of your ice cream you have won an important sales battle.

You can win public favor by using HUDSON'S Ice Cream Flavor! It never fails to make itself liked and wanted. HUDSON'S No. 52 Concentrated has a distinguished, pleasing, teasing flavor all its own. Furthermore, it goes farther, lasts longer and costs less in a season's run. It does not freeze out.

Let us ship you a sample gallon of Hudson's Concentrated No. 52, or a sample keg of Hudson's Ice Cream Flavor No. 52 Special—express or freight prepaid to your City. You may return same to us if not entirely satisfactory.



The Hudson Manufacturing Company

GABE S. WEGENER, President & General Manager — INCORPORATED — ESTABLISHED 1888

Vanilla Products

119-121 North Union Ave., CHICAGO, U. S. A.

Public is Beginning to Appreciate the Importance of Knowing How, Where and Under What Scientific and Sanitary Conditions Ice Cream—"A Pure Food"—is Manufactured

Here is a View of Sunny Freezer Room of Handsome Daylight Plant of Globe Ice Cream Co., Los Angeles, of which author of this article, A. A. Comey, is Vice-President

George, you know the kind of food products I want, and if by chance I should telephone for you to send some products out, I want you to make certain that you select for me the kind of food I always buy from your store." Therefore, this again proves that the housewife is always vitally interested in her food products.

IS IT not true that women and children, and quite a few men, are interested in how, where and under what scientific and sanitary methods ice cream—a pure food—is manufactured? Of course, they are! So then it becomes an absolute necessity for the ice cream manufacturer to first locate his factory in a good location. Second, this factory must have a clean, neat and successful appearance, both on the exterior and the interior. By this I do not mean that the ice cream manufacturers should tear down their present plants if perchance they are of the older type. That is not at all necessary, but it is necessary to spruce up and present a clean appearance both on the inside and outside of your plant. Paint is cheap, and colors are numerous.

Therefore, the manufacturer who happens to be operating an old plant can, if he appreciates the necessity, improve his present plant without going to any great expense. Oftentimes I have seen old plants made into comparatively new plants—the improvement displayed was almost unbelievable. A manufacturer who considers this important item seriously, if he has not been successful in the past, will start immediately on the road to success when he adopts this policy.

The manufacturer who decides to build a new factory should use every precaution during the course of its construction to cash in on every little detail feature involved in his plant. An ice cream factory need not be expensive to be attractive. The only reason why no money was spared in constructing the well-known Globe ice cream factory in Los Angeles, Calif., was due to the fact that we considered the best type of a building possible would be the cheapest in the long run over a period of years.

WE AROUSED the public's interest in the Globe Ice Cream Co. the moment we decided to go into business. The news was broadcast in the columns of the newspapers and by means of various other advertising mediums, to the effect that we would have an elaborate, elegant, scientific and sanitary ice cream plant for their convenience. Then we picked up item for item as we built, put it in the form of truthful news, and spread the word abroad to all the citizens of Los Angeles and vicinity, and by so doing we worked up a keen interest, especially among the women and children, and quite a few of the men. They would come out during the course of the construction of our building; they would talk it over in their homes, and this move of obtaining the public's interest brought phenomenal results.

When we were ready to open our doors to do business we invited the public to come and inspect our plant, and to our surprise 36,000 people visited our plant during the hours from seven to eleven p. m., to check up our statements and make an inspection. We held this

No Ordinary Name

Wherever you find a GMC Truck you will find, if you inquire, that it has a fine name for economy in operation.

The reasons are in the truck and in the resources behind it. Advanced features of design, and a sturdier structure, enable a GMC to do better work, at lower cost, longer.

The resources behind GMC efficiency are big, in a big industry. Here are a few of them:

Truck building experience as old as the truck industry;—development of overstrength materials and parts in General Motors Research Laboratories;—and, most important of all, the jealous care which guards the integrity and superior value of every General Motors product.

GMC is no ordinary name because GMC is no ordinary truck, and GMC is no ordinary truck because these and other GMC resources are pointed constantly at even greater perfection.

There is a new GMC booklet on motor truck operation and care, interesting to you whether you own fifty trucks or only one. Ask for it.

Another Joint Coast Convention in 1925

Invitation of Pacific Association to Meet Together at Portland Accepted by California Association

ANOTHER joint convention of the ice cream manufacturers of the Western Coast will be held next winter. This was decided at a meeting of the directors of the California and Southwestern States Ice Cream Manufacturers' Association on Jan. 31.

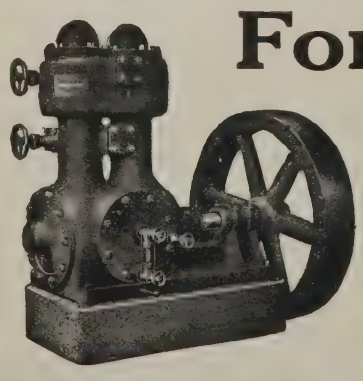
At that time the California association accepted the invitation of the Pacific Ice Cream Manufacturers' Association to meet with that body in joint convention at Portland. The time of the meeting is to be definitely settled between officers of both associations some time later.

From the outset it was seen that the first joint convention of these two associations, held at Oakland in December, 1924, in connection with the Pacific Slope Dairy Show, was to be a huge success. Many will add that they believe this will develop into an annual event, though officials of the associations have made no statement regarding this.

No bills affecting the ice cream industry have been introduced in the California State Legislature during the present session, it was reported at the directors' meeting by the legislative committee. The secretary was requested to ask all active members to sign and return their pledge for the national advertising campaign.

J. H. Kugler, secretary-treasurer of the association, issued a bulletin following the meeting, in which it was stated that the committee appointed to consider and act upon resolutions introduced at the Oakland convention, were unable to make definite recommendations, and he said that these resolutions will be considered at the earliest practicable time.

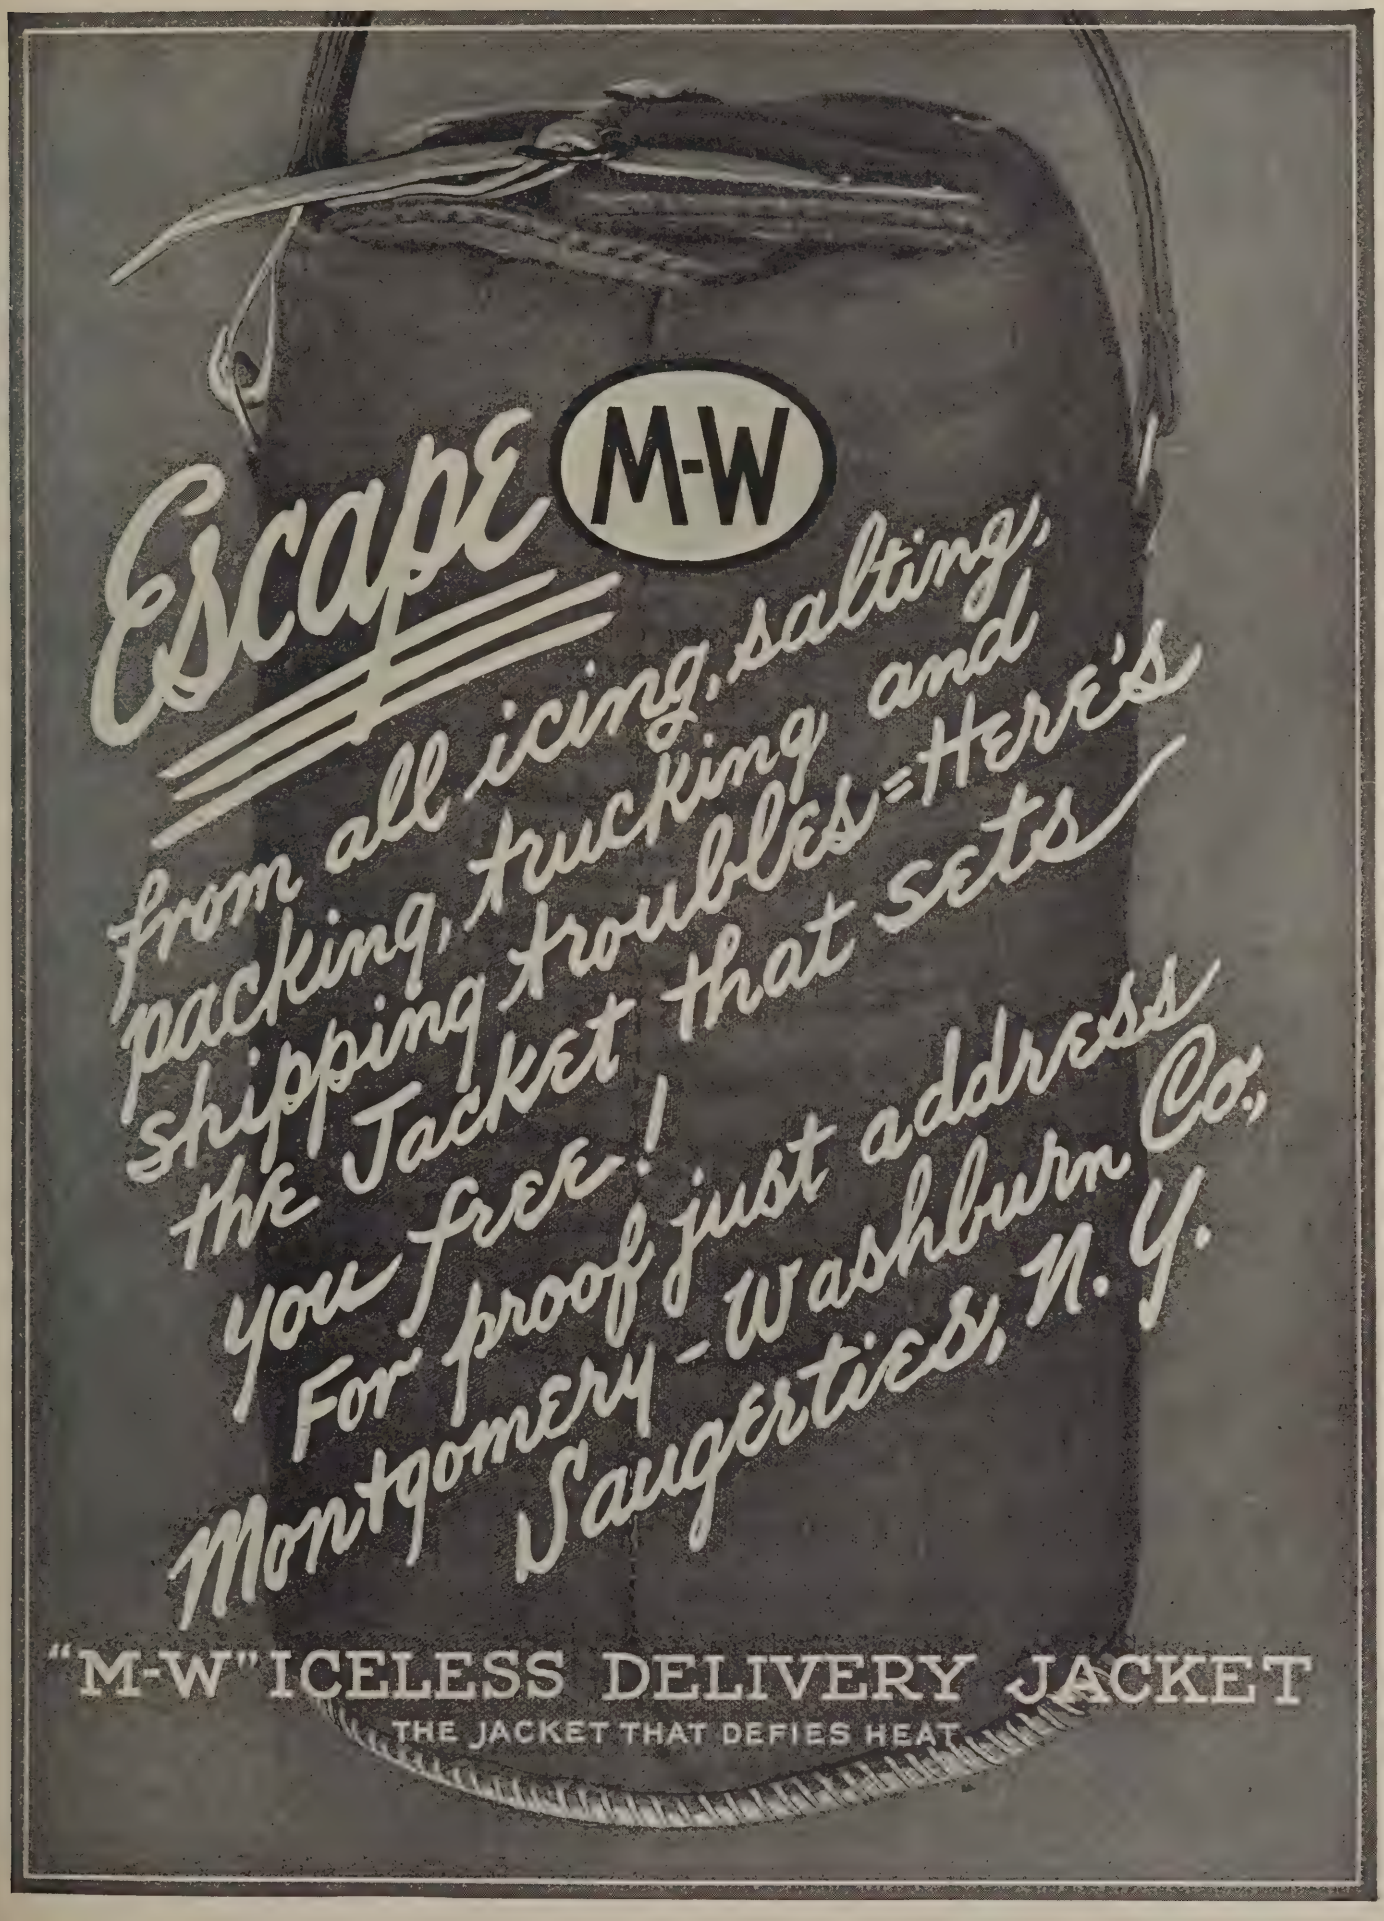
It was further announced that President Frank H. Ames has appointed an executive and advisory committee. The committee is composed of L. J. Christopher and C. J. Alfred.



FRANK H. AMES,
President, California and Southwestern States Ice Cream Manufacturers' Association.

JAY H. KUGLER,
Secretary, California and Southwestern States Ice Cream Manufacturers' Association.

BERT H. WALKER,
Secretary, Pacific Ice Cream Manufacturers' Association.



For Lasting Satisfaction

York
Refrigerating Equipment

One reason why there are so many installations of York Refrigerating Equipment is that its satisfactory working condition does not pass with the seasons. York Equipment does not mean satisfaction until the first signs of wear show up, but a year in year out dependable service that stands the strain of rush seasons without injury to its long life.

Let us show you just why York Equipment lasts longer.

Waltham System

[PATENTED]

A COMPLETE SYSTEM OF REFRIGERATION FOR ICE CREAM DISTRIBUTION

HARDENING ROOM UNIT
Note the two types of cartridges being hardened, for cabinets and for soda fountain inserts.

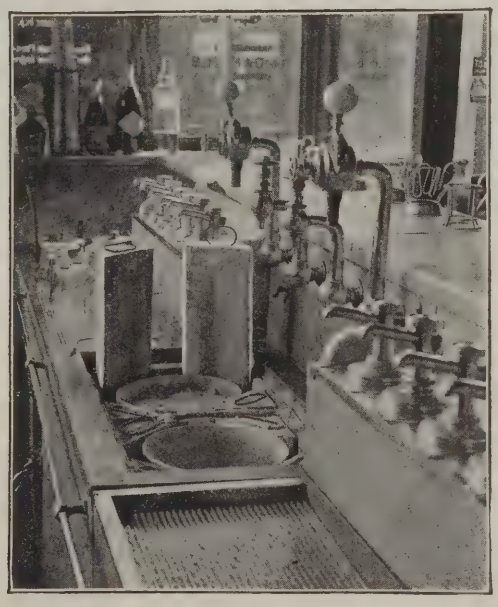
Iceless
Saltless
Non-Mechanical

Refrigeration is stored energy. It takes power to produce this energy. Under the Waltham system your power is concentrated in your own plant. This is one economy. With a complete insulated system from hardening room out to your dealers and back to hardening room this power is conserved with minimum leakage. On a 48-hour system the Waltham cartridge returns to your hardening room with much of its refrigerant still intact. This is another definite and unique economy of the Waltham System.

WALTHAM DELIVERY BODY
This 240 gallon body carries the cream, cartridges for refrigerating the body in transit, and cartridges for the dealer's cabinets and soda fountains. It brings back the cream cans and cartridges for re-freezing.

A New Economy and Efficiency at Every Point in the Distribution of Your Ice Cream

Waltham System



[PATENTED]

ICE CREAM DISTRIBUTION WITHOUT ICE OR SALT OR INDIVIDUAL MECHANICAL EQUIPMENT

Just so much refrigerant is required to distribute your cream and hold it in your dealer's store till consumed. By the Waltham System this refrigerant is provided through the use of the Waltham cartridge, insulated in transit by the Waltham body, and maintained in the store by the Waltham cabinet and soda fountain insert. This is done more economically, with greater system efficiency, and with less equipment investment than by any system hitherto offered to the ice cream trade.

WALTHAM CABINET
Waltham cabinets are supplied in one to four hole sizes.

SODA FOUNTAIN INSERT
The soda fountain insert can be used with any standard soda fountain.

Write for facts based on actual experience.

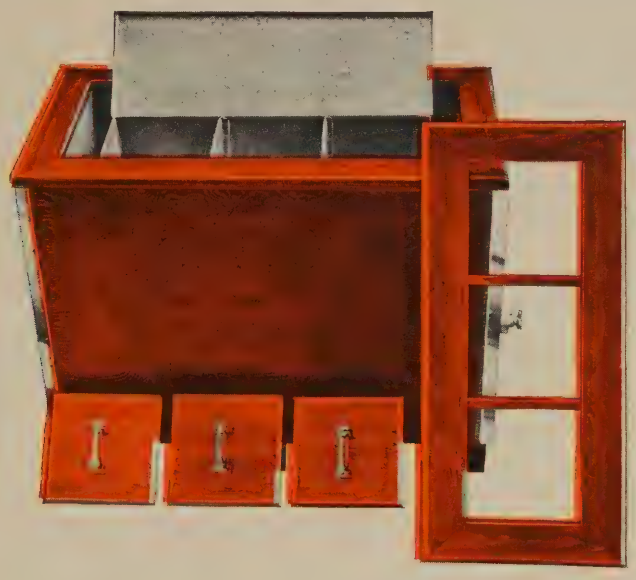
WIDE REPRESENTATION AT PENN SHORT COURSE.

From Chicago, Ill., and Spartanburg, S. C., to State College, Pa., is quite a jump, but distance did not prevent Frank Zimmerman of the Southern city and Edward R. Paul of the Windy City attending the ice cream makers' short course given by the Pennsylvania State College, January 26 to February 6, 1925.

Thirty men actively engaged in the ice cream industry as manufacturers or salesmen were enrolled in the course. New York state had four representatives, while Maryland, Illinois, Ohio and South Carolina each sent one man to the course, in addition to the 22 men from the Keystone state. W. C. Payne of the Payne Ice Cream Co., Buffalo, N. Y., was sent to Penn State by the Micro-Organisms of the salesmen's club of the ice cream supply men's association.

A new organization, called the Serum Solids Club, was formed by this year's short course men. Following the precedent of the supplymen, the club will give two scholarships to worthy ice cream makers who wish to attend the two weeks course next winter.

Besides the regular class work, feature talks were given by Prof. R. A. Dutcher on "Vitamines;" by N. M. Thomas, president of the salesmen's club, on his "Experiences in the Ice Cream Industry," and by Robert Rosenbaum of The David Michael Co., on "Vanillas in Ice Cream." The regular work was taught by Professors W. H. Martin, C. H. Dahle, of the dairy faculty, and James Weber of Charleston, W. Va.



One of the feature events of the course was a banquet attended by the members of the class and faculty. After listening to the interesting talks given by the speakers, plans were made for the next meeting of the organization, to be held at State College, Pa., next fall.

WHAT IS THE COST.

In the delivery business you spend about 25 per cent on every dollar you spend in your business, but you do not find everyone that gives a delivery department or motor vehicle department 25 per cent of their attention. They have got it and they forget it is more or less a necessary evil and instead of going into it, gathering the proper statistics, keeping figures and costs so that they might regulate their delivery department intelligently, they just let it drag on. Now, I have kept statistical figures for about eighteen months on the particular fleet that we are operating now and while these figures may vary from figures kept by other people in different localities on different deliveries they do this for us: They help us to make a comparison; they tell us which vehicle will operate the most economically under any condition that we might want to examine or go into. If you want to cut your costs, your delivery costs, it is necessary for you to have every cost entering into that delivery, whether it be for horse-drawn vehicles, motor trucks, or gas trucks, or electric trucks.—From California and Pacific convention address by F. L. Sargent.

BOSTON PLANTS BUY ELECTRICS.

Three dairy plants were among the industrial concerns that bought electric trucks in Boston during 1924. These concerns operating in the dairy industry are H. P. Hood & Sons, Ernest Haines Ice Cream Co., and the Neopolitan Ice Cream Co.

Froznpure Tests Ten

—Then decides to use them exclusively

"After having heard a good deal about your A-B Ice Cream Cabinet, we decided to try them and ordered a sample lot of ten," writes C. F. Hoppe, manager, the Froznpure Ice Cream Co., of Louisville, Ky.

"We put these in special places, kept strict tab on them and, after a careful watch, decided your cabinet could be run 48 hours on one icing, holding the cream in perfect shape.

"Had no trouble with leaks and gave our customers perfect satisfaction. We have decided to use them exclusively from now on."

"Exclusively from now on" is the usual result when ice cream manufacturers test A-B Ice Cream Cabinets alongside other makes. Such tests quickly prove that A-B Ice Cream Cabinets will save more ice and more salt than any other pack cabinets you can buy. And for a reason!

An unusually effective insulating material surrounding the ice and salt chamber on all four sides keeps cold air inside the cabinet and warm air out. Even the lid is fully insulated, and fits tight.

Cream compartments are square and perfectly dry. All sizes of bulk ice cream can be inserted with greatest ease—square pockets permit carrying all package cream in compact facility.

Full details and prices gladly furnished on request.

Gentlemen:

We acknowledge receipt of your letter of August 18th instructing us to place our future orders direct to Los Angeles in order to effect a saving.

We want to commend you on the product you are manufacturing and, without any hesitancy, wish to say that it produces the best orange sherbet we have ever made in the fifteen years we have been in business.

We have never been able to get a commercial product which would equal the product we would make from fresh fruit purchased locally. Yours not only equals it, but actually surpasses it on test. When a fellow makes a good product, we believe in telling him about it.

Very truly yours,
HERSHEY CREAMERY CO.,
E. N. Hershey
Treasurer.

Three of Seven 350 Gallon Baird Bodies on G. V. Electrics.

The Baird Refrigerator Body Gives

BELOW-ZERO temperatures — light weight — sturdy construction throughout — moderate price and low cost of operation — these characterize Baird Refrigerator Bodies.

Constant below-zero temperatures not only keep ice cream indefinitely without deterioration, but will harden soft cream. On days of peak demand Baird Refrigerator Bodies relieve congestion in the hardening room.

Baird Refrigerator Bodies are lighter than any other of equal capacity. Clumsy bulk and weight have been eliminated without any sacrifice of strength. After other refrigerator bodies have become heavy through constant absorption of moisture the Baird Refrigerator Body, being thoroughly waterproofed, retains its original light weight.

The prices of Baird Refrigerator Bodies are moderate. They are sold on terms to meet your convenience. The saving during the first three months in labor, ice and salt, and truck maintenance will exceed the price of the body.

To operate a Baird Refrigerator Body is to know that no more economical nor more satisfactory refrigerator body can be had at any price. You can depend on Baird Refrigerator Bodies for trouble-free, economical delivery.

Lasting Satisfaction—

THE POLAR PRODUCTS COMPANY purchased six Baird Refrigerator Bodies last year for use on routes in New York City where traffic is heavier and delivery conditions more difficult than anywhere else in the country.

At the close of the season, Mr. J. H. Humbert, president of the Polar Products Company, told our Mr. Baird:—

"We are entirely satisfied with our Baird Refrigerator Bodies. You can refer any prospective purchaser to us."

The fact that Mr. Humbert has just ordered his seventh Baird Refrigerator Body is an added proof of his satisfaction.

Rasmussen Lauds Co-operative Spirit By Supplymen's Association

-:- -:- *NEW SECRETARY IS GREETED* -:- -:-

THE new secretary of the National Association of Ice Cream Manufacturers, Fred Rasmussen, was introduced to the supply industry at the sixth annual business meeting of The Association of Ice Cream Supply Men. The meeting was held at Hotel McAlpin on January 20, New York City.

Mr. Rasmussen paid tribute to the effective co-operation that has existed between the national organizations and the inter-dependent manufacturing and supply branches of the industries. He expressed the hope and belief that this co-operation would be increasingly intensive and broad.

Oliver S. Jordan was re-elected president of the association. Roberts Everett is secretary and manager. The board of directors named H. H. Miller of the H. H. Miller Industries Co., vice-president, and Thomas D. Cutler, The Ice Cream Trade Journal, treasurer.

The association's activities successfully carried on in the past few years were reviewed in reports submitted by the president, the treasurer, the secretary-manager, committee chairman, and by the president of the association's affiliated salesmen's club, N. M. Thomas.

The association reaffirmed its policy opposing, "on economic grounds affecting both the ice cream manufacturer and the supply houses," to state and regional expositions.

Following the election of officers, the committee appointments, etc., were announced by President Jordan as follows:

Membership Committee.

B. B. Scott, chairman; J. L. Nelson, S. E. Perkins, K. W. Schantz and Albert McDougal.

Exposition Committee.

K. W. Schantz, chairman; Albert McDougal, Thos. J. Stewart, L. B. Esmond and Roberts Everett.

Vigilance Committee.

W. L. Cherry, chairman; L. B. Esmond, Robert Scule, Thomas D. Cutler and H. A. Keiner.

Finance Committee.

O. S. Jordan, chairman; H. A. Keiner and H. H. Miller.

"The association is not solely an exposition organization," Oliver S. Jordan, president, stated in his address. He explained the association's action in holding no exposition in 1924 by saying that various conditions, "over many of which the supply field had no control," lead to this action. A comparative poor ice cream year developed, which was one reason.

In every fundamental respect, "the association is as strong as at any time in our history," he said. He believes the year ahead promises "even greater activities."

THE ROAD TO GREATER PROFITS

Another Big "Kist" Scoop!

the Frozen Sucker

WHEN the Citrus Products Company makes an announcement, everyone in the Industry knows it is something well worth heeding.

All indications point to an era of unusual prosperity for the Ice Cream Manufacturers in 1925. The National Advertising Campaign will undoubtedly play a large part in bringing about increased Ice Cream consumption.

Last fall it became apparent that Ice Cream Manufacturers were in need of a new source of added revenue to recoup losses resulting from the backward sales of 1924. Our entire organization studied the problem and searched for a solution which would bring new impetus and a rush of added profits to the Industry. Finally we found the answer to the problem.

And that answer was, the "FROZEN SUCKER."

The Frozen Sucker isn't a new thing by any means. It has been the source of added profits for a long time to Ice Cream Manufacturers here and there, all over the Country. But it is new to many for the simple reason that no one apparently has ever taken note of the glowing possibility at hand and presented the Frozen Sucker opportunity to the Industry in a complete and comprehensive manner.

And yet Manufacturers who had gone into this proposition were reaping from *$50.00 to $500.00 a day in added profits*, **without tying up any of their Freezer Equipment,** and without any adverse effect on their Ice Cream Sales. All that's needed to manufacture the Frozen Sucker are inexpensive molds in which the Suckers are frozen.

We have coordinated the proposition in the interest of our customers and have a source of supply for the necessary mold equipment, sticks and wrappers. We are ready to furnish you with FREE advertising material to exploit the proposition in your town, under our Friendly Agreement plan by which you enjoy the exclusive rights on "Kist" Flavors and "Kist" Flavored Frozen Suckers.

HERE ARE JUST A FEW OF THE MANUFACTURERS WHO ARE CASHING IN ON THE FROZEN SUCKER:

M B Ise Kream Co. of Dallas, Texas; Houston Ice Cream Co. of Houston, Texas; Terry Dairy Co. of Little Rock, Arkansas; Rieck-Mc Junkin Dairy Co. of Pittsburgh, and allied Pennsylvania plants; Horn Ice Cream Companies of Baltimore, Md., Norfolk and Richmond, Va; Pangborn Co. of Fort Worth, Texas; French Bros. Bauer Co. of Cincinnati, Ohio; Peters and Jacoby of Allentown, Pa.; Williams Ice Cream Co. of Scranton, Pa.; Hill Ice Cream Co. of Benton Harbor, Mich.; White Ice Cream Co. of Minot, N. D.; Model Creamery of Redlands, California.

We want you to know about this great scoop — absorb it and seize your opportunities. So use the coupon at the bottom of this page. Fill it in and mail it for full information.

Don't hesitate—some other Manufacturer may get ahead of you and secure exclusive rights in your territory.

There's no time to waste, if you want to get in on the big profits awaiting you in this proposition. Send in the coupon now!

MILWAUKEE, WIS.

IMPORTANT WORK COVERED AT ILLINOIS DAIRY COURSE.

"One of the important questions that I came to get the facts on was answered the first day that I was here, and it would be almost impossible to estimate the value of this course to my plant." This is the way Joseph Gourley, superintendent of the ice cream plant of the Ideal Dairy Company, Evansville, Ind., voiced appreciation of and satisfaction with the annual two-weeks dairy manufacturers' short course, held at the college of agriculture, University of Illinois, January 26 to February 7. His problem was governing overrun and keeping it uniform. His satisfaction of the course was typical of that shown by the 32 other buttermakers and ice cream manufacturers from Illinois, Indiana, Wisconsin and Missouri who came to the institution for help on their important problems.

A. O. Mitchell, general superintendent of the Rusetos Ice Cream Co., Chicago, was especially well impressed with the thoroughness that the agricultural college has shown in investigating different dairy manufacturing problems and spoke highly of the instruction which was given during the two weeks.

Bern Duffner, secretary of the ice cream division of the DeSota Dairy, Ice and Supply Company, DeSota, Mo., and of the Duffner Ice and Ice Cream Company, Festus, Mo., who attended the short course last year, explained that among other things the course gave him an opportunity to get a few new facts on manufacturing ice cream which would make it possible for his plant to keep pace with the constantly changing tastes of the public.

Throughout the course the importance of quality was stressed. One of the features of the course proved to be the new facts the dairy department of the agricultural college has worked out in the extensive investigations it has made of different dairy manufacturing problems.

Students had the full use of the college's dairy manufacturing plant, which is recognized as one of the best of its kind, while instruction was given by staff members of the college dairy department and by a number of prominent commercial men. An outline of the work covered has been given this publication as follows:

The course started off in the laboratory with the testing of milk, cream, buttermilk, after which B. A. Stiritz, associate in dairy manufacturing, discussed the care of cream and the matter of sampling and grading. This was followed by more work in the laboratory in which milk and cream were tested for acidity.

Other laboratory periods in the college dairy plant during the remainder of the first week were given over to the analysis of butter, the grading of cream, the handling of cream before pasteurization, churning, the propogation of starters, experimental churnings, the checking of cream stations and the scoring of butter.

In the lectures during the first week Mr. Stiritz discussed the handling of cream before pasteurization, the pasteurization of cream and the composition of butter and its control; Prof. A. S. Ambrose, assistant chief of dairy manufacture, talked on the making of starters and the ripening of cream, churning, and the packing and marketing of butter; Dr. H. A. Ruehe, head of the college dairy department, outlined important pointers in the judging of butter; F. A. Jorgenson of the Pioneer Creamery Company, Champaign, and G. G. Roberts of the Navajo Milk Company, Galesburg, spoke on creamery side lines, such as the handling of eggs and making of condensed buttermilk, and A. C. Rubin of the Peoria Creamery Company, Peoria, discussed problems involved in cream procurement.

In the classroom, P. H. Tracy, first assistant in dairy manufactures, discussed the standardization of the ice cream mix, the use of improvers, and the defects in ice cream; Prof. Ambrose talked on the principles of ice cream making, the use of binders and fillers, the freezing of mixes, gelatine and the use of the homogenizer; Dr. Ruehe took up the matter of refrigeration and the judging of ice cream; C. H. Snow

Public Approval

the final test

THE final test of the popularity of your Ice Cream is the public's approval of it. No matter what improvement you have made in the quality of your Ice Cream, The Vanilla flavor in it imparts either that distinctive flavor which the public approve and take to or a mediocre flavor which may condemn your Ice Cream because of off taste.

There is a particular Vanilla which fits your Ice Cream better than any other, dependent upon the mix you use. We offer you the result of our labor along this line in the following three Compounds.

Cosco

MEXICAN BEAN VANILLA COMPOUND

Made up special for Ice Cream manufacturers who use what might be called a perfect mix, meaning by that, a high percentage of Sweet Cream in conjunction with Milk. Contains a high percentage of the Mexican Bean in its base. The same results as pure vanilla would give you for your pure Sweet Cream and Milk Mix but with economy in cost. 1½ ounces to a forty-five pound mix.

Cosco

COMPOUND H VANILLA

Made up special by this organization after much experiment for a reconstituted mix. Will entirely cover up the defects which naturally accompany the use of butter, skim milk powders, etc. 1¼ to 1½ ounces to a forty-five pound mix. Dollar for dollar the most reasonable priced Vanilla you can use for a Homogenized mix.

Cosco

DIAMOND E VANILLA COMPOUND

A special blend of beans in its base with fortification which makes it especially adaptable for use in the average mix. A special blend of Vanilla Beans in its base and skillfully reinforced makes this compound a type particularly adapted for general Ice Cream use. 2½ to 3 ounces to a forty-five pound mix. Its individuality of flavor has won admiration everywhere.

If you are really sincerely interested in improving the quality of your Ice Cream, it will be well worth your while to write for our proposition and prices.

Edward Perisho, Paris; Grant Wise, Jr., Greenville; B. W. Werts, Urbana; Le Roy Goeken, Alton; Myron L. Fritscher, Centralia; W. F. Stram, Le Roy; Clarence Ernst, Charleston, and T. Will Turner, Urbana.

Those from the other three states included Joseph Gourley, Evansville, Ind.; Robert J. Luick, Milwaukee, Wis.; John L. Martin, Evansville, Ind.; Bern Duffner, DeSota, Mo., and Fred Boehm, also of DeSota.

Carolina Committees Appointed

Association committees for 1925 have been announced by the North Carolina Ice Cream Manufacturers' Association, by Secretary A. E. Dixon. L. A. Corning is chairman of transportation committee. Chairmen of the other committees are: George L. H. White, Raleigh, legislative committee; E. L. White, Wilmington, code of ethics committee; L. L. Taylor, Ruthrerfordton, resolutions committee; T. C. Reed, Greensboro, refrigerated cabinets committee; J. G. Baldwin, Durham, membership committee; Geo. L. H. White, Raleigh, entertainment committee; A. E. Dixon, Fayetteville, national advertising committee; A. H. Nathan, Charlotte, attendance committee.

The committees follow:

Transportation—T. A. Corning, Hamlet; H. C. Hines, Kinston, and G. E. Wilkinson, Salisbury.

Legislative—Geo. L. H. White, Raleigh; W. S. Pollard, Durham; W. J. Shuford, Hickory; L. Nizer, Raleigh, and C. E. Landreth, Winston-Salem.

Code of Ethics—E. L. White, Wilmington; H. R. Swartzell, Wilson, and Earl Wilson, Gastonia.

Resolutions—L. L. Taylor, Rutherfordton; Hans Broby, Raleigh, and R. L. Burrage, Charlotte.

Refrigerated—T. C. Reed, Greensboro; C. E. Landreth, Winston-Salem, and L. A. Corning, Hamlet.

Membership—J. G. Baldwin, Durham; Jno. O. Royal, Sr., Goldsboro, and S. L. Smith, Leaksville-Spray.

Entertainment—Geo. L. H. White, Raleigh; L. Kizer, Ralleigh; A. E. Dixon, Fayetteville; H. R. Swartzell, Wilson, and W. S. Obenshain, Charlotte.

National Advertising—A. E. Dixon, Fayetteville; C. E. Landreth, Winston-Salem, and H. C. Hines, Kinston.

Attendance—A. H. Nathan, Charlotte; J. C. Grimes, Lexington, and G. E. Wilkinson, Salisbury.

A BRIGHT FUTURE.

Ice cream is a wholesome, nutritious, delicious food when made from carefully selected raw materials, with a correct formula and manufactured in a suitable manner. With our present heterogeneous manufacturing methods, every producer making a product that he feels suits his individual needs, * * and also without any definite concerted purpose in advertising, still the consumption of ice cream is increasing wonderfully each year. With about 300,000,000 gallons in 1924, we may look forward to a bright business future.—New York state convention address of C. H. Kimberly.

Our general sales manager says—

"Our fundamental policy is to study your requirements and recommend Walkers only where they fit—where they are the best truck investment possible for you." The success of this policy is demonstrated by the fact that 80% of Walker sales are repeat orders.

Twenty-six Walkers on 9 repeat orders prove the belief of the Carry Ice Cream Company, Washington, D.C., in the fitness of Walkers for ice cream delivery. Investigate the Walker—leading Electric. Ask the users in your own field.

Tennessee Association Organizes The Dairy Interests of Volunteer State

Ice Cream Manufacturers Join Organization to Promote Manufacture of Dairy Products

ORGANIZATION of the ice cream and dairy interests of Tennessee was perfected at a meeting at Nashville February 2, when ice cream manufacturers, creamerymen and milk dealers took steps to work together for the upbuilding of dairy manufacturing in the Volunteer state.

This organization, which will operate along the lines that the Kentucky association is conducted, with the vice-president of each division acting as chairman of that division, named H. B. Wilkinson of the Nashville Pure Milk Co., Nashville, Tenn., its president. The association adopted the name, "The Tennessee Dairy Products Association." Leading ice cream manufacturers of the state are in the association, including Frank B. Stuart of the Sani-Seale Co., Knoxville, who is vice-president and W. E. Drake of Nashville, and H. G. Dutlinger of Memphis. The latter two are directors. C. S. Rose, who is connected with the Union Ice Cream Co., Nashville, was named treasurer of the association. The association deferred electing a secretary until steps can be taken to have a regular employed secretary.

Just like is done in the Dairy Products Association of Kentucky, the Tennessee association will have vice-presidents to represent each division of the industry, these vice-presidents acting as chairman of that respective division.

ONE of the first steps the association took after organizing the association was to endorse the program of the national advertising committee. This gives the national advertising proposition almost a clean sweep in the South, virtually every southern state association having pledged its support.

J. W. Clopton, secretary of the Southern Association of Ice Cream Manufacturers, and one of the outstanding men in organization circles, was the principal speaker of the meeting. Carlton Ball, secretary of the Dairy Products Association of Kentucky, also attended the meeting and gave some valuable information regarding the operations of his association.

Together with David C. Adams, state dairy inspector, and several others, members of the new organization visited the capitol and called on the governor to ask his help in securing the necessary appropriation to enforce the regulations incorporated in a bill that has been prepared and is now before the state legislature.

"I feel that this is the best move that the Tennessee manufacturers have ever made and it should prove a big success," said the Southern association's secretary, Mr. Clopton, following the meeting.

FRANK STUART,
Vice-president.

Officers of Tennessee Dairy Products Association

PRESIDENT,

H. B. Wilkinson, Nashville Pure Milk Co., Nashville.

VICE-PRESIDENT,

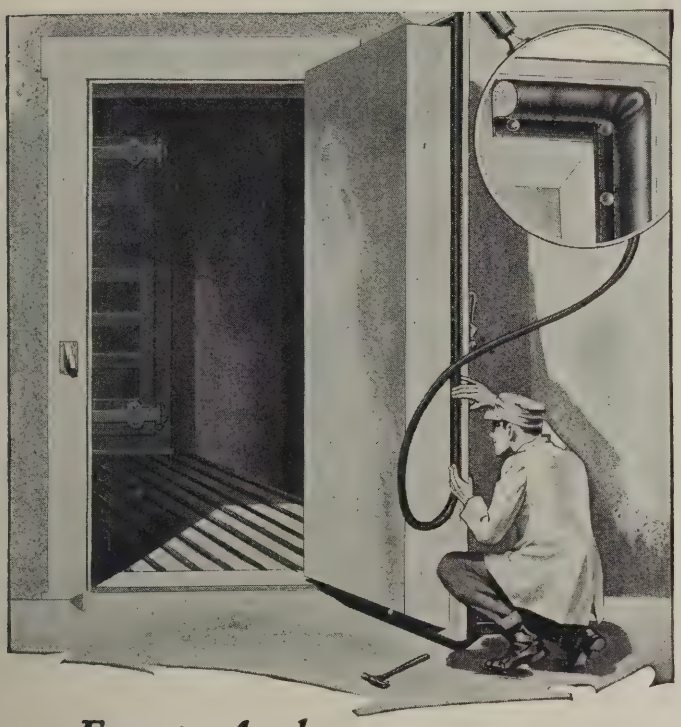
F. B. Stuart, Sani-Seale Co., Knoxville.

TREASURER,

C. S. Rose, Union Ice Cream Co., Nashville. Secretary will be appointed later.

DIRECTORS,

W. E. Drake, Nashville and H. G. Dutlinger, Memphis.



W. E. DRAKE,
Director.

NO SECRET.

There is no secret in the ice cream business; any man who makes a good merchandise and sells it under the proper environment will, in the end, succeed. There is no such thing as the best ice cream. I think most all ice creams that are manufactured under ideal conditions, as they should be, will find favor in the eyes of the public, and personally I am absolutely opposed, from old experience, to trying to praise your article—"Why not eat mine? The other fellow's is no good!" I think the man who advertises in that fashion is merely hurting the industry directly and himself indirectly. An advertising campaign in ice cream today, I think offers perhaps the greatest possible reward to any association that goes into it.—From California and Pacific convention address by Carl Plaut.

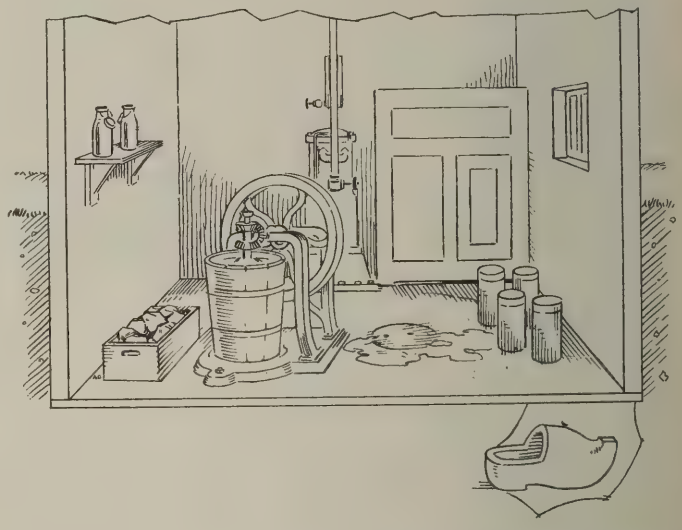
New Orleans Home of Neopolitan Ice Cream

A Trade Pioneer, Louis Runkel, Advances Claim of 1924 Convention City to Early Honors in Ice Cream Industry

ANOTHER claim to the honor of being the first city to manufacture ice cream in America was brought to light at the national convention in New Orleans in November. Louis Runkel, for many years identified with the chocolate industry, took an easy chair between sessions at the convention and brought to mind reminiscences of the ice cream industry covering a period of a half century.

Mr. Runkel's disclosures add new lustre to the South's part in the early stages of the ice cream industry. It is generally known that it was a Southern lady, Dolly Madison, who first introduced ice cream in this country by serving it at the White House.



Louis Runkel was born in New Orleans. His first experience was in one of the first chocolate factories established in the South, which was established by his uncle, Daniel Lopez, in 1846. This gentleman made the first display of chocolate in 1870 at the Vienna exposition, taking one of the first prizes in chocolate making.

Under the name of Runkel Brothers this plant is now operating in New York City.

For 35 years Louis Runkel was vice-president of the Cocoa and Chocolate Manufacturers' Association of the United States.

A Frenchman named Manessier was the first in New Orleans to build a garden in which ice cream was served at tables. The entire structure was made of glass. It was located in the old French quarter at Royal St. at the intersection of Orleans. This gentleman also inaugurated the idea of supplying residences of the French part of the city with ice cream. He had a wagon to travel the city and dispense ice cream at the low cost of five cents for a small amount on a piece of paper on the order of the cone system.

THE ice cream idea came from France. Mr. Runkel's disclosures indicated that the product is a misnomer by the name it goes by today. The original name was "Creme a la glace," the literal translation is iced cream. The Frenchman, Manessier, confined himself entirely to the manufacture and sale of ice cream, made according to the original French formula, which still is made and sold extensively in New Orleans. The food value of ice cream was realized at the outset.

Before the introduction of modern ice cream machinery, the product in New Orleans was made entirely in hand ice cream freezers. The original name of these freezers was from France, they being called sabotiere, which was taken from the word sabot, which means wooden shoe in French. This name came about for the reason that the position of the man making ice cream, which was made on the ground floor in wooden shoes. The shoes were used to protect the feet from wet and salt, which hurt leather shoes and was hard on the skin.

The ice machine was a Southern development. The

Steel Means Strength

WHEREVER strength is needed—*steel* is used. Bridges, skyscrapers, railroad cars—*steel* for strength, economy and long life.

In Edison Batteries the grid plates, tubes, poles and containers—every metal part—are built of nickel-plated steel. Small wonder that Edison Batteries "stand the gaff" of hard street truck service, regardless of adverse operating conditions: and outlast two or three lead-acid batteries in similar service.

Leading Electric Street Truck Manufacturers gladly furnish Edison Batteries.

The Greatest Invention of the Greatest Inventor

In 1898 Thomas A. Edison first started work on the development of a storage battery free from the self-destroying diseases of the lead-acid type. After hundreds of thousands of experiments, the Edison Steel-Alkaline Storage Battery was perfected and marketed in 1909.

Now, after 16 years, over 55% of the batteries used in heavy industrial service—street trucks, industrial trucks and tractors, and mine locomotives—are Edison Steel-Alkaline Storage Batteries. Truly a wonderful tribute to the economy and satisfactory service of the product and to the genius of the inventor.

Built like a watch,
—Rugged as a battleship.

city of New Orleans was the first city to develop machines for making artificial ice. This opened up the way for the manufacture of ice cream on a large scale. Prior to this time ice had to be brought to Louisiana from Maine and distributed from ice houses. The machine which played such an important part in the development of ice cream was the invention of a French engineer, Carre, and was constructed along the lines of brine machines. This was in the sixties. In later years a system was developed in New York by a man named Delavergne, who used the machine that was operated with the compression and ammonia system with addition of a system of oil going through pipes.

NEOPOLITAN ice cream, according to Mr. Runkel, was the invention of an Italian. The name of that product comes from the fact that this Italian, Ignacio Allegretti, was a native of Naples. He patented this product as Neopolitan brick ice cream in the eighties. Ice cream, as the product is made today, was developed in Philadelphia and was called Philadelphia ice cream. To provide for further progress, it was found necessary to increase the flavoring of ice cream beyond the use of vanilla.

Ice cream was just becoming a familiar line of business in New Orleans when Mr. Runkel, together with thousands of other young men of his age, donned the gray uniform and followed the hosts of Robert E. Lee. The principal flavor at that time was vanilla. This product was easily obtained in those days, as it came from Mexico.

The development of the industry, naturally, suffered when the Civil War came, but at the close of the Civil War it was taken up with renewed interest.

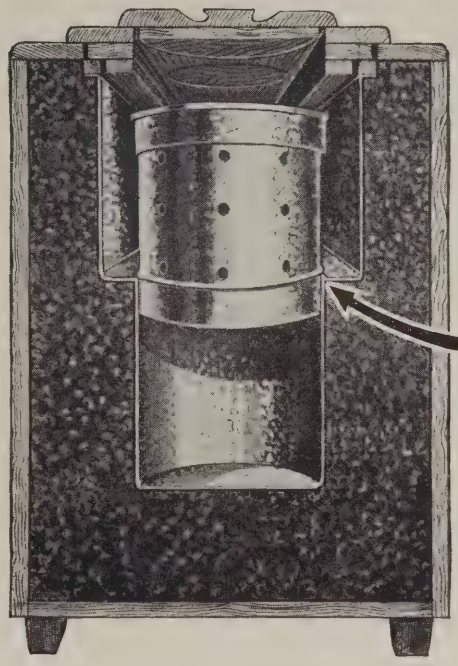
Mr. Runkel was standing on the corner of the famous Canal St. when the news was received that President Lincoln had been shot. He recalls how people sitting down over ice cream plates at that time were unanimous in claiming this to be a shame, indicating the love generous foemen held for "Honest Abe."

Two years before Mr. Runkel had answered General Beauregard's call. He was one of 80,000 men from Texas, Mississippi, Louisiana and Alabama to congregate at the confederate camp in New Orleans. He was "marker," which means guide, in the 71st Louisiana regiment.

⚜

SCORE: 1 BUTTERMAKER, 1 ICE CREAM MAKER.

Providence did more than smile on the home of Mr. and Mrs. C. P. Taylor, Girard, Kan.,—laughed right out loud, in fact. Twin boys arrived a short time ago and H. A. Roselle, proprietor of The Roselle Ice Cream Co., feels confident that there will be no shortage of competent material for buttermakers and ice cream makers in his organization in the future. Mr. Taylor is butter and ice cream maker for Mr. Roselle, and is a graduate of the Oklahoma College of Agriculture, where he specialized in dairy manufacturing under Prof. Baer.



The Ice Cream Review extends heartiest congratulations to all concerned.

Right Here Is where you Save!

In all standard cabinets the ice and salt compartments extend the full depth of the cylinders. In the new Jamison Cabinet it extends *only half-way down.* Pure corkboard insulation, waterproofed, replaces one-third to one-half the ice and salt required by all other cabinets. It's a patented Jamison feature that means dollars to you.

30 to 50% More Insulation ~ Less Ice and Salt

JAMISON puts insulation where you put ice and salt. Very simple—but wonderfully effective. Effective in saving you just about half the ice and salt that you will use with almost any other cabinet—and effective in giving you a greater degree of maintained frigidity than you are getting now. Which means not only less ice and salt — *but fewer service trips.*

Sounds fine, doesn't it? But listen to this. A limited group of manufacturers have *lready* made extensive tests of this remarkable cabinet. *Over 700 of them have been in use for over two years.* And in every—*every*—case the amount of icing required has been reduced by 30% OR MORE.

Less ice and salt, fewer service trips, fewer trucks, fewer service men—a big slice taken right out of your operating costs and transferred to your gross profits. Something to think about—isn't it?

Get the Facts

We aren't interested in hasty decisions. All we want is a chance to prove that this new Jamison product is fully as good as it looks and sounds. The first step is to send for this little folder describing and illustrating the cabinet in detail. Write us today.

Hagerstown ~ ~ Maryland ~ ~ U. S. A.

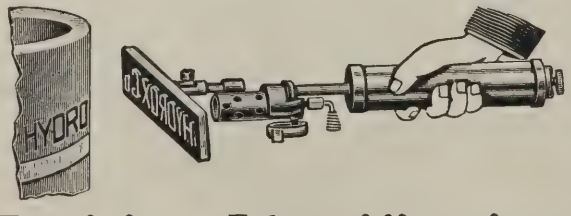
Varied Program at Michigan Convention

Iceless Cabinets Form Principal Topic.
Wilson Re-elected President

THE annual meeting of the Michigan Association of Ice Cream Manufacturers was one of the features of the joint gathering of the Michigan Allied Dairy Association at Michigan Agricultural College, East Lansing, Mich., February 2, 3, 4 and 5. The ice cream manufacturers' sessions were featured by interesting discussions on topics now uppermost in the industry. Prof. P. S. Lucas, associate professor in dairying, Michigan Agricultural College, spoke on "Recent Studies with Gelatine for Ice Cream Making." Frank W. Gentleman of the Gardiner Advertising Agency, took the place on the program of Will A. Schwindeler, chairman of the national advertising committee, and Mr. Gentleman addressed the convention on the national cooperative program the national association is about to launch.

As has been the case at other conventions this past winter, the Michigan manufacturers were more interested in the iceless cabinets than any other topic. This subject was covered from various angles from R. F. Calloway, Frigidaire Corp., Columbus, O., speaking on "Refrigerated Cabinets and Why;" N. J. Dessert, Detroit Creamery, Detroit, "Our Experience with Refrigerated Cabinets;" the same subject by A. E. Williams of Williams Ice Cream Co., Saginaw. N. Loewenstein, secretary National Association of Ice Cream Manufacturers, Chicago, spoke on "The National Association." V. G. Piper, Piper Ice Cream Co., Kalamazoo, and Geo. E. Norward, Norward & Trump, Flint, spoke on "Refrigerated Cabinets from the Standpoint of the Ice Cream Manufacturers." T. H. Broughton, director bureau of dairying, spoke on "Michigan Ice Cream." L. S. Wilson, Port Huron, was re-elected president of the association. The other officers and directors follow:

Leroy S. Wilson, Port Huron, President.
A. E. Williams, Williams & Co., Saginaw, V.-Pres.
Ralph Sullivan, Battle Creek, Mich., Sec'y.-Treas.



Directors—N. J. Dessert, Detroit Creamery Co., Detroit; G. P. Cowan, Arctic Ice Cream Co.; L. Freeman, Freeman Dairy, Flint; Leroy S. Wilson, Port Huron; J. W. Kelly, Grand Rapids; F. W. Sullivan, Battle Creek; J. J. McDonald, Artic Ice Cream Co.; V. G. Piper, Piper Ice Cream Co., Kalamazoo, and A. E. Williams, Williams Ice Cream Co., Saginaw.

THE convention was further marked by the usual interesting exhibit by the Michigan Dairy Boosters. The ice cream manufacturers' convention sessions were held in the lecture room in the bacteriology building of the Michigan Agricultural College. The boosters' exhibit was held in the college auditorium. There were about sixty booths.

The activities of the Michigan Dairy Boosters consisted of a dinner and business meeting, and they spared no efforts in entertaining the ice cream men.

The following new members have been announced by the Michigan Dairy Boosters:

Roberts Cone Co., St. Joseph, Mo.; Consolidated Cone & Wafer Co., Chicago; U. S. Gelatine Co., Milwaukee; Capitol Machine Co., Lansing; Paterson Parchment Paper Co., Passaic, N. J.; Van Houten, Inc., New York; Chalfant Can Co., Fort Wayne, Ind.; Individual Drinking Cup Co., Brooklyn; Detroit Retinning Co., Detroit, and Liquid Carbonic Co., Chicago.

to some extent by establishments engaged primarily in other industries.

The department values such products thus made outside of the industry in 1921 at $29,062,614, an amount equal to 13.6 per cent of the total value reported for the ice cream industry.

UT this year is another story. The weather outlook in virtually every part of the country, is highly promising. The wretched weather conditions that prevailed last year are likely to be reversed.

It is generally argued that undue cold and rain was the principal factor in our troubles in 1924. General business was in fairly good condition in all sections, particularly in the South, where a good price for cotton put everybody to buying, and in the middle West and the middle Atlantic sections, where industries kept pretty well opened up.

The business outlook for this year is for conditions at least as good as prevailed in 1924.

There are many reasons to believe we are off toward new high levels for ice cream production.

Z·E·R·O
Refrigerator Bodies
STANDARD OF THE WORLD

WHEN a work of any description is acknowledged to be supreme in its field, it inevitably becomes the object of comparison.

¶ There is nothing unusual in this. It befalls any product which has won the reputation of being surpassingly fine.

¶ Invariably there are those who imitate and claim equality with it, and who seek to profit through its high repute.

¶ But in their efforts to duplicate the original, they neglect to duplicate the skill and artistry which give it distinction.

¶ They succeed only in imitating the lesser details, the shell and semblance of the reality; they never attain to its deep, inner excellence.

¶ They are barred from reaching this goal by the natural law that the follower can never be the leader; that he who is content to tread in the leader's footsteps can never by any chance overtake him.

¶ The Ice Cream Manufacturer, sitting in impartial judgment is not deceived by unsupported claims, and does not accept them as a substitute for performance.

¶ The Ice Cream Manufacturer knows that comparisons are never sought with the commonplace but always with the best, and they serve only to confirm and strengthen allegiance to the leader.

¶ With our daylight factory equipped with modern machinery and skilled workmen we are making prompt deliveries.

Dakotans Favor Minnesota Plan of Handling Cabinets

THE Minnesota proposal for handling the ice cream cabinet situation met with favor at the annual convention of the Ice Cream Manufacturers' Association of South Dakota, which was held at Sioux Falls, February 3 and 4. This plan, which seems to be meeting with general favor throughout the Northwestern states, was presented to the association in a letter from W. W. Dunn, president of the Minnesota State Association of Ice Cream Manufacturers, who could not appear to fill his place on the program.

C. C. Totman, in his speech before the convention, pointed out that the advantages of iceless cabinets are the elimination of ice, better keeping of the product, the reduction of service trucks by manufacturers, and greater attractiveness of retail stores. Among disadvantages he named, "too great an investment for the manufacturer if he carries the load, unfair competition, unfair practices, danger of furnishing still more expensive complete fountain equipment, expense, and high installation and removal costs."

National advertising was discussed by John Farrell, secretary of the Minnesota state association. Mr. Farrell telling why he favored national advertising as a means of boosting ice cream consumption.

P. W. Crowley, secretary of the Iowa association, speaking on national advertising, said:

"To make people eat more ice cream is only in line with a natural desire. This health-giving food would then take the place of dessert, candies and confections. At the present time the average person eats 78 dishes a year which he enjoys immensely when he stops to think about it." The speaker believed that the campaign could be conducted at a cost of a half cent a gallon.

If ice cream advertisements are attractively presented in national periodicals, as several other commodities have been in recent years, the speaker believed that ice cream sales would be materially increased. Newspaper publicity, the use of booklets and various other means were held forth as desirable for bringing the confection before the public.

He related how Florida had doubled the consumption of grapefruit in ten years through national advertising. Mr. Crowley took the place on the program of J. E. Finneran.

ON ACCOUNT of the inability of W. P. Dunn, Jr., president of the Minnesota association, to be present to talk on the subject of iceless cabinets, C. C. Totman substituted. Besides reading a special letter from Mr. Dunn, and reviewing the talks and discussions of the special meeting of the Northwest Ice Cream Manufacturers, held Dec. 16, 1924, he expressed some personal opinions of the situation and outlined in an impartial manner the major advantages and disadvantages of the use and introduction of iceless cabinets.

Mr. Dunn's letter explained the Minnesota plan as follows:

"The agreement accepted by our membership present at the special meeting, held Dec. 16, has gone the rounds of the state and, with only two exceptions at this writing, all the manufacturers are solidly behind a program to remain inactive until our regular state convention, Feb. 19 and 20, at which time we will receive the report of the investigating committee and the data on operating cost, efficiency, etc., of the several cabinets and fountains now in operation in our experimental room in Minneapolis.

"It is now certain that our manufacturers will either decide to ignore the question for another period of six or eight months, or, if forced by reason of competition, accept a standard form of sales contract which will give the manufacturer a return of at least 50 per cent on his investment the first year the cabinet is in the dealer's hands.

"Everyone is alive to the certainty that complete fountain units will be available within the next twelve months at a price so close to the present price of refrigerated cabinets as to give the dealer this proper and permanent installaion with assurance of value received, and financing propositions already offered by fountain manufacturers to ice cream manufacturers for helping the dealers equip with efficient fountain installations assures an early stability in the distribution question to the advantage of the ice cream manufacturer who stands pat.

"So many, many manufacturers interviewed and heard from by letter have expressed themselves frankly as having been fools to jump into the cabinet game precipitously, every one giving the excuse that competition forced them into it, makes it doubly necessary that ice cream manufacturers stand closely together and keep in constant touch with each other to offset unethical practices of cabinet salesmen, and it is this phase of the problem that is keeping me at my desk communicating caution and patience in answer to complaints that are founded only on fiction."

New Officers and Directors

PRESIDENT,
William G. Arlt, Rapid City.

VICE-PRESIDENT,
W. C. Gagnon, Huron.

SECRETARY-TREASURER,
C. C. Totman, State College.

E. R. Binder of Yankton was elected as one of the board of directors, replacing W. C. Gagnon. The other four members were re-elected, as follows: E. E. Skoug, Sioux Falls; M. M. Carpenter, Aberdeen; M. Langenfeld, Watertown, and F. J. Herrick, Mitchell.

At this time members went into closed session, with discussion of the cabinet question, led by H. E. Shipley, assisted by W. E. Gagnon and others. Many angles of the situation were discussed, but adjournment came shortly after midnight without any very definite conclusions being reached.

On the following morning the annual scoring contest was held at the Crescent Creamery. Professor W. B. Combs of the dairy department of the University of Minnesota scored and commented on the quality of twelve entries of ice cream. There were samples containing high and low overrun, and others containing high and low fat content and with various percentages of total solids, which enabled the judge to point out the importance of uniformity in standardization, as well as the need of controlling overrun and using with precision the various flavoring materials. Professor Combs used the following score card, which was compiled by him with Professor Washburn and others:

Flavor	55
Body	20
Texture	15
Color	5
Package	5
Total	100

NORTH, EAST, SOUTH AND WEST—"REVIEW" IS LIKED THE BEST.

DAKOTANS FAVOR MINNESOTA PLAN OF HANDLING CONVENTION.

(Continued from page 60)

Bacterial counts are neglects, on the ground that if ice cream is very objectionable in this respect the flavor of the ice cream will be more or less seriously affected.

After this demonstration the members assembled at the Cataract Hotel and Professor Combs spoke on homogenization and viscosity of the mix. He reviewed data on the homogenization of part of the cream, and all of the cream before adding the other ingredients of the mix. He showed charts which indicated the relative viscosity of cream and of mixes when viscolized at various temperatures, ranging from 110 to 145 degrees. These data seem to indicate that the greater viscosity is obtained with a temperature of 110 degrees. He stated that the viscosity of cream followed much uniformity in increase or decrease with various temperatures of homogenization, but that in following up this work with the complete mix there was very little uniformity in the data.

WM. G. ARLT, President.

C. C. TOTMAN, Secretary.

I. J. BIBBY, Past President.

Mutual understanding among ice cream manufacturers will make it possible for the iceless cabinet to serve both ice cream manufacturer and the retailer, it was declared by Mr. Totman. He pointed out that not only is the consuming public more pleased with this better service, but the retailer receives much benefit in the way of elimination of the discommodius old style system of servicing with ice and salt. He continued:

"Concerning the subject of rental and sales contracts I should say that there should be as much uniformity as possible in their makeup and use. This is one of the points of great concern to the manufacturers of ice cream who contemplate putting out cabinets. If there is a maintenance of proper trade spirit I believe that all of the ice cream makers can see the real advantage in this. It would seem with a more complete and thorough understanding of the proposition that the ice cream men could see the possibilities of the future to a reasonable extent and realize that it is not in the taking of temporary gains or advantages of competitors that will in the end be the result of greatest benefit to themselves or to the industry.

"The one outstanding objection to the ownership and installation of cabinets by manufacturers of ice cream is the fact that this procedure is used as a weapon against a competitor. It seems to me that one of the primary objects of trade association is the fostering of the friendly spirit and also of co-operation, and anything which interferes with this development must necessarily be considered seriously in thought and deliberation. Mechanically refrigerated cabinets were not invented to work to the disadvantage of any one; they are one of the advents of progression of the present day. For ice cream men to use them in any unregulated manner and to resort to cut throat practices in taking competitors customers is decidedly unethical to say the least.

"It should be the object of everyone interested in the introduction and use of these cabinets to inform themselves in every way as to the advantages accruing from their use, and to study the costs of their operation and to learn of the merits and demerits of the various cabinets offered on the market. Not only can purchasers learn from salesmen but they should take advantage of the great number of articles appearing in the trade press as well. The trade associations of the various states have had many addresses on the subject of cabinets and these have been followed by discussion that, without doubt, has served to give the manufacturer a much clearer understanding."

AT THE conclusion of this address the members again went into closed session and tried to arrive at some understanding of the cabinet situation and to complete the business before them. The results of the discussion, and the business transacted, were as follows: A member of the Nebraska association presented a contract for the use of iceless containers in shipping ice cream, and an additional clause was inserted in this contract upon suggestion of F. J. Herrick of Mitchell, placing the risk upon the purchaser in case of delayed deliveries due to delayed trains, etc.

This revised contract will be submitted to the members and board of directors for final approval. It was decided also that the secretary obtain from the Minnesota association copies of rental and sales contracts for cabinets which they may agree upon, believing that these will be adaptable for use in Dakota. The members will receive copies of these for their approval.

If it is decidded that they are practical and adaptable they will be adopted by the South Dakota association, officials announced after the conference, adding, "This will be of mutual advantage to both the Minnesota and the South Dakota people, and it would no doubt prove to be a fine thing if all the Northwest states would adopt some uniform contract."

F. J. Herrick of the Turner Creamery Co., Mitchell, was elected as state representative on the board of directors of the national association. The secretary was authorized to take out membership for the ensuing year in the national association.

Gowing-Dietrich

Mr. E. G. Dietrich, President and Treasurer.

Our Syracuse retail store for the convenience of our local patrons. We have complete stocks of needed supplies always on hand.

Occasionally one of our customers will travel hundreds of miles to see Mr. Dietrich personally and secure his disinterested advice on new equipment. Of course, he is always glad to meet and assist them.

But your own orders receive the same fair, honest care in our hands whether you call personally at the office or not. Our experts are always ready to lay out the new installation for you, and our years of experience are always at your service.

RESOLUTIONS.

The association unanimously adopted the following resolutions:

First. To the men from outside our organization who have been so largely instrumental in making the program of this convention a success, and who have given us so liberally of their time and effort, we extend our most sincere appreciation and thanks.

Second. To the officers and members of the South Dakota Dairymans' Association, who have increased the pleasure and efficiency of our meeting by arranging their convention to be held at the same time, we express our appreciation of their courtesy and our good will and co-operation.

Third. To the state dairy department and its efficient secretary and his deputies, we extend our thanks for their efforts to aid us, and, especially, in the care and return of our containers.

Fourth. To the president and secretary, and to the officers of our association, who have carried the load of the work during the past year, and to whom the success of the association is largely due, we extend our heartiest vote of thanks.

Fifth. We wish to maintain, and increase if possible, the high standard of excellence shown in the manufacture of South Dakota ice cream, and we deplore any attempt to lower the standards of quality and purity which have been set. We believe, however, that an ice cream equally satisfactory in every particular can be made with a fat content uniform with the standard set in neighboring states. We urge the co-operation and support of all our membership in promoting legislation that will be of assistance in meeting the competition to which we are subjected.

Sixth. We express our thorough appreciation of the courtesy of the Sioux Falls butter and ice cream manufacturers, and the Sioux Falls Chamber of Commerce, for the many courtesies shown us during our convention.

(Signed) W. C. GAGNON.
F. J. HERRICK.

OUR STAND ON STANDARDS

(Continued from page 26)

according to which all ice cream will be made. As a matter of fact, the average ice cream will be much in excess of any standard adopted. Competition will cause that to be true. If you set a 14 per cent standard, the fellow who wants to do better than his competitor will make 16 or 18 per cent. Do not think of average standards, gentlemen. Please be good enough to think of minimum standards when you consider this matter."

INTEREST was added by the appearance before the convention of John Cunningham, Chicago, the "original 8-per-center," this gentleman having propounded that theory in 1908.

The situation, as presented by Mr. Hovey, is—

"In seeking the ideal minimum standard, which the ice cream man believes is an 8 per cent standard, he is prompted by selfish motives only because he will get maximum consumption when making a product that is deserving of public confidence, and a product that can be eaten by children 365 days in the year, with the same benefits that would be derived from the regular consumption of milk. We ask for an 8 per cent standard as requiring the making of a product that is a properly balanced food, and as requiring the making of a product that is a properly balanced food, probably the best balanced ice cream for children and invalids. Now, it has not been a half-considered matter with us. It has been a matter that has been fully considered, one upon which we have spent thousands of dollars in our investigational work. Gentlemen, if we do not know what we are talking about, we should not be in the ice cream business, and if we do, we believe, as a member of this organization, we are deserving of pour support, and if we do not get it, we would like to know the reason why."

Experimental work by the United States Department of Agriculture in regard to preference for plain ice cream and gelatine ice cream has shown that the ratio is a little less than 3 to 1 in favor of the product with gelatine.

Ice Cream Industry Advertised in Food Journal

The ice cream industry received advertising in food circles in an article published in a recent issue of The American Food Journal, the article being prepared by a member of the staff of The Ice Cream Review. The title of the article is, "The Race for America's Dairy Dollar," and that part of it pertaining to ice cream follows:

"America has no competition in the manufacture of ice cream. This country is known among Europeans as the ice cream nation. It is estimated that 275,000,000 gallons of ice cream were made in this country last year (1923). While the frozen product, of course, cannot be exported, the United States is introducing ice cream in the Orient by shipping the mixed ingredients to be received and frozen. This is being done only on a small scale, however, by a few ice cream manufacturers on the Pacific coast.

"Only in late years has England taken up the manufacture of ice cream to any considerable extent and even now it is difficult for the average Britisher to take seriously this typically Yankee product. The British parliament early this summer was thrown into much merriment by the introduction of a bill making it lawful for ice cream to be sold after 9 p. m.

"The mention of ice cream in Europe is considered just as much a jest at Uncle Sam as the mention of beans in this country is considered as an excuse for a laugh at Boston. Americans traveling abroad find it difficult to buy the ice cream sodas and sundaes so popular in this country.

"Thus, the growth of ice cream's popularity in America has caused the frozen product to be identified with our national life just as beer is associated with Germans; beef with Britons; wine with the French; spaghetti with the Italians, and with the Scotch that particular brand of whiskey that has been so popular since long before Annie Laurie gave her promise true. Europe probably has heard of us more in connection with ice cream than with baseball and Bunker Hill, other institutions more or less dear to the American heart."

ICE CREAM CO. IN AD CONTEST.

The International Ice Cream Co. has joined with the business institutions of Schenectady, N. Y. in a prize contest for amateur ad writers. In this contest boys and girls will compete for a $50 weekly prize for the best ad in the campaign.

In describing its product, for the benefit of contestants, the International Ice Cream Co. has the following to say:

International ice cream is made in Schenectady and may be obtained from most of the retail stores about town. "Wherever one sees the sign, "Quality First Always," they are sure of finding International ice cream and they may rest assured of a delicious treat or dessert. Only the best of ingredients are used in the manufacture of this product and many of these ingredients are tested in the laboratory of the company. Ice cream is fast becoming the national dessert and many are finding it not only nutritious but quite healthful. If you are not familiar with this particular product just try some and then write what you think might be used as advertising material by the International Ice Cream Company."

No state in the United States has a butterfat standard higher than 14 per cent. On the other hand, one state, Missouri, which once had a 14 and 12 per cent standard, has lowered that standard to 8 per cent. There are 16 states that recognize an 8 per cent standard.

WHAT

MAPLEINE

OFFERS

Makers of Ice Cream

1. Flavor the public likes and repeats on

Mapleine is a proven flavor, not a new and untried experiment. It has made good as an ice cream flavoring—manufacturers who use Mapleine have a flavor they can depend upon for results. Mapleine Ice Cream is one of the staples and sells in a class with strawberry and chocolate.

2 A profitable flavor

Mapleine's concentrated strength makes it one of the most profitable flavors that can be used. 2 ounces flavor and color 10 gallons of finished ice cream at a cost of 1½c a gallon—less even than a good vanilla.

3. Will not freeze out—holds through storing

A week, two weeks or a month in the sharp room makes no difference with Mapleine Ice Cream. Its flavor will not freeze out or change in quality, no matter how long the ice cream is stored.

4. Combines attractively with other flavors

Mapleine is especially effective in combination bricks because it blends so deliciously, and the cost is very small compared with the fancy flavors.

With Mapleine obtainable, why accept a substitute?

Write us or order of your jobber, and remember, genuine Mapleine is always identified by the Crescent Trade Mark.

Standards Fight Endorsed in Ohio

Buckeye Manufacturers Also Pledge Support to National Advertising Campaign and Take Further Action on Iceless Cabinets.

ENDORSING the National Association of Ice Cream Manufacturers' fight for an 8 per cent minimum standard for butterfat in ice cream, pledging support to the national advertising campaign, and giving very thorough discussion to the matter of iceless refrigeration, the Ohio Association of Ice Cream Manufacturers held probably its most eventful convention at Columbus during the last week of January.

In connection with the ice cream standard, which was discussed by Vernon F. Hovey, president of the national association, the association adopted a resolution urging the national body to continue its stand for an 8 per cent butterfat content. The association also heard J. J. Smith of Ohio discuss this subject.

Following an address by Frank W. Gentleman, speaking for W. A. Schwindeler, chairman of the advertising committee, the association adopted a resolution endorsing the plans and policies of national advertising, "when such alterations have been made as indicated, are being considered." It was the wish of the convention that closer correlation be developed between the executive committee of the national association and the advertising committee of that association.

IN REGARD to discussions on refrigerated cabinets, a resolution went through providing for the association to maintain the policy that the dealer should pay for the electric current. Delegates seemed to be well agreed that ice cream manufacturers should co-operate very closely in introducing iceless cabinets in any new territories, and that careful observance should be given to only install cabinets in stops selling in excess of 1,000 gallons in so-called rural stops.

The convention was marked by a large attendance. The registration showed 87 manufacturers and 120 associate members to be present. The joint banquet held on the evening of January 28 was attended by 390 persons.

The day of trade secrets in the ice cream industry is passed, according to John Schubach in the president's annual address. He spoke very highly of the good work done in group meetings that have been held in Ohio in the past year. He lauded the plan to advertise ice cream on a national scale, and then in reviewing the industry's progress, he said:

"There was a time in our industry, and not so many years ago, when we were called upon to defend ourselves and our business from the attack of those who sought to direct our industry, but through the co-operation and building of our association to a well organized body, we are able to direct and build the industry from within itself to a position where the consuming public can have confidence in our purpose."

The banquet was the outstanding feature of the Ohio Convention.

One of the outstanding addresses of the convention was that by Prof. R. B. Stoltz of the Ohio State University, who discussed "Constituents of Ice Cream Mix." "The quality product today is far superior to what it was in the past—better than it was five or ten years ago—and the time of the hit and miss practices has passed," the speaker declared.

He stressed the value of trade education. His address appears elsewhere in this issue.

"THE Present Situation with Regard to the National Ice Cream Standard" was the subject of V. F. Hovey, president of the National Association of Ice Cream Manufacturers, in one of the most important speeches of the convention, the national president explaining the activities of the joint committee on definitions and standards, stating that it was composed of three men from the department of agriculture; three from the Association of American Dairy Food and Drug Officials, and three from the Association of American Agricultural Chemists. As a convention in Duluth on

something new in Cherries!

How many times have you wished for a new type of Cherry that would have the following advantages?

—more of a REAL natural cherry flavor.

—containing juice of 100% flavoring value which can be used, not drained off and wasted.

—only two quarts needed for a 5-gal. mix.

—no added flavor needed.

—no added color needed.

Such a Cherry is now ready! Best of all, it actually costs less to use this better Cherry.

Let us send you one dozen No. 10 cans of this new Special Cold Pack "Home Grown Cherry." If it doesn't measure up to your expectations in every way, return the unopened cans and our entire charge to you will be canceled.

Mail the coupon for prompt shipment.

When filtered the liquid gelatine is hurried to these great wheels and after a single turn is dropped directly into barrels. Our patent process requires less than 5 minutes from filters to barrel. The old tunnel drying process requires 16 to 48 hours.

The Preference of the Industry

Because of the matchless quality, adaptability and uniformity, produced only by our highly scientific wheel-dried process, *Ucopco* Wheel-Dried Gelatine is now *outstanding!* Already the choice of a predominating number of manufacturers in the gelatine-using industries, it is constantly gaining ground as each new user becomes convinced of its merits. Investigate *Ucopco* at once.

August 23, 1924, the Association of American Dairy Food and Drug Officials met and proposed a 12 per cent butterfat standard for ice cream, and a minimum weight standard of 4¾ pounds to the gallon, which was unanimously adopted.

As soon as the proposed standard came to the attention of the national association, Mr. Hovey said, they appointed a committee on standards, which met in Washington to prepare their case and meeting with the joint committee. The committee from the national association came to the conclusion that they could not conveniently support any fat standard other than an 8 per cent standard, but they would go part way with them in getting a proper weight standard. They felt that the ice cream industry should be developed upon firm ground, and should co-operate with the officials in correcting any abuse within the industry and do everything that would bring about the economic conduct of the ice cream business. The national committee felt that the question of a weight standard should not be settled quickly. They were able to prove to the joint committee that there is not necessarily any relation between weight and value. They were able to show the joint committee

RESOLUTIONS.

This committee recommends to the committee on resolutions that this association approves the proposed national advertising campaign, with the recommendation that the supervision and direction of this campaign be left to the executive committee of the National Association of Ice Cream Manufacturers.

The National Advertising Committee of the Ohio Association of Ice Cream Manufacturers,

B. A. Millikin, Chairman,
S. M. Ross,
J. H. Schindler.

RESOLVED: That the Ohio Association of Ice Cream Manufacturers approve the efforts of the national association in obtaining a minimum federal butterfat standard of 8 per cent with proper proportions of non-fat milk solids and that it is the sense of the meeting that no compromise involving a higher standard be accepted.

WHEREAS: The National Association of Ice Cream Manufacturers has ruled that only members of that association may use the slogan.

RESOLVED: That the Ohio members of the national association be urged to use it wherever possible so as to give it the widest publicity and secure the maximum benefits accruing therefrom.

RESOLVED: That the district meetings be continued during the ensuing year and that we recommend that not less than four meetings be held in each district and as many more as may be necessary or desirable.

RESOLVED: That the Ohio Association of Ice Cream Manufacturers co-operate with the national association in the adoption of a uniform system of accounting.
